SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons

HAVE JUST PUBLISHED:

Strange Case of Dr. Jekyll and Mr Hyde.

By Robert Louis Stevenson, author of 'The New Arabian Nights,' etc. Cloth, $1.00; paper, 25 cents.

Without being a ghost story, or in fact falling under any of the hitherto recognized categories of strange and weird imaginations, it is likely to furnish the most hardened with a genuine thrill, by one of the most singular and original conceptions that ever entered the mind of even this writer of tireless fancy.

My Study, and Other Essays.

By Professor Austin Phelps, D.D., author of 'The Theory of Preaching,' 'Men and Books,' etc. 1 vol., 12mo, $1.50.

These essays fall into two classes; one deals with religious and doctrinal themes, and the other discusses historical or secular subjects, but always with a distinctively Christian purpose. More than a hundred pages are given to a series of eloquent essays on the subject of future retribution. Other essays are deeply spiritual and edifying, and all are marked by a vigor of thought and mastery of expression that make them delightful reading as regards the style alone.

The Illustrated Library of Wonders.

A new and revised issue of twenty-four volumes, containing over a thousand beautiful illustrations. Each volume 12mo, complete in itself. Sold separately at $1 per volume.

NEW VOLUMES:

WONDERS OF ACOUSTICS.
THUNDER AND LIGHTNING.
POMPEII AND THE POMPEIIANS.

Manual of Musical History.

By Frederick L. Ritter, author of 'Music in America' and 'Music in England.' 1 vol., 16mo, cloth, 75 cents.

A serviceable little book, which will both accompany and introduce the more minute studies in the author's larger works.

The Book Buyer.

An Illustrated Monthly Summary of American and Foreign Literature. One Dollar a Year.

Each Number Contains:

PORTRAIT OF A WELL-KNOWN AUTHOR. *Engraved for The Book Buyer.*
ILLUSTRATIONS FROM NEW BOOKS.
LONDON NOTES.
READINGS FROM NEW BOOKS.
NEWS AND NOTES.
EDITORIAL NOTES.
REVIEWS OF NEW AMERICAN BOOKS.
FOREIGN NOTES.
LIST BOOKS OF THE MONTH.
SPECIAL ARTICLES ON LITERARY AND BIBLIOGRAPHICAL TOPICS.

January Number, with Portrait of President Noah Porter, now ready.

"Full of news, presented in a very attractive form."—*N. Y. Tribune.*

"It is an absolute necessity to thoughtful and careful book buyers, as a guide of unquestioned taste and discretion."—*Memphis Appeal.*

"It helps to a speedy choice the buyer of limited means, who, having but little to spare in literary luxury, wants to make that little go as far and be as useful as possible. To those who are thus dainty in their literary tastes, and to whom the question of cost is a serious matter, the Book Buyer will be found to be an invaluable assistant."—*San Francisco Examiner.*

**** These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

BAKER'S

Breakfast Cocoa.

Warranted *absolutely pure Cocoa*, from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

Historical Poetry

OF THE

Ancient Hebrews.

TRANSLATED AND CRITICALLY EXAMINED

By MICHAEL HEILPRIN.

Vols. I. and II. 8vo, cloth, price of each volume, $2.

Extracts from Remarks of the Press:

"The notion has somehow got abroad that the scientific study of the Bible is inconsistent with the most tender reverence for its contents, or with their persistent fascination. But the reverence of Mr. Heilprin for the subject-matter of his criticism could hardly be surpassed; and that it has not lost its power to interest and charm, his book itself is ample evidence, which will be reënforced by the experience of every intelligent reader of its too brief contents."—*Nation, New York.*

"Because Kuenen is as undogmatic in his realm as Darwin is in his, and because Mr. Heilprin, like his leader, has the humility as well as the boldness of science, they, and such as they, are our best present guides in the tangle of early Hebrew literature."—*Rev. W. C. Gannett* ("*Unity*," *Chicago*).

D. APPLETON & CO., Publishers,
1, 3, & 5 Bond Street, New York.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of the *Nation* has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates, the bindings generally counting for nothing. Volume I. has readily brought $10 and upward when complete, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in the *Nation*.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XL. comprising the first half-year of 1885.]

Poets of America.

With full Notes in margin and careful Analytical Index. By Edmund Clarence Stedman, author of 'Victorian Poets,' etc. *Third Thousand.* 12mo, $2.25; half calf, $4.50.

CONTENTS: Early and Recent Conditions; Growth of the American School; William Cullen Bryant; John Greenleaf Whittier; Ralph Waldo Emerson; Henry Wadsworth Longfellow; Edgar Allan Poe; Oliver Wendell Holmes; James Russell Lowell; Walt Whitman; Bayard Taylor; The Outlook.

"Mr. Stedman brings to the task an unusual familiarity with the whole of our literature, unusual acquaintance with the tools of the poetical guild, and a very keen notion as to how those tools have been used abroad as well as at home. . . . The studies themselves are admirable. They show a conscience which takes in good work and, at the same time, considers the humanities—which remembers what is due to art, and what must be granted to human frailty."—*The Critic, New York.*

"The appearance of this book is a notable event in American letters. No such thorough and conscientious study of the tendencies and qualities of our poetry has been attempted before, nor has any volume of purely literary criticism been written in this country upon so broad and noble a plan and with such ample power. . . . Mr. Stedman's work stands quite alone; it has had no predecessor, and it leaves room for no rival."—*New York Tribune.*

"Mr. Stedman's temperament, training, and experience eminently fit him for the execution of a critical work on the poets of America, or, indeed, the poets of any land. He has ingrained honesty, breadth of apprehension, versatile sympathies, exact knowledge, and withal he is a poet with a poet's passion for beauty and love of song; and so he is a wise critic, a candid and luminous interpreter of the many-voiced muse."—*The Dial, Chicago.*

"Such a work involves many kinds of talent, great patience, and ample scholarship; above all, it involves genius, and if the quality of this book were to be summed up in a single word, this one pregnant word comes first to mind, and remains after fullest reflection. . . . As a body of criticism this volume stands alone in our literature, and is not likely soon to have a companion."—*Christian Union, New York.*

"It is indeed refreshing to come upon a volume so devoid of the limitations of current criticism, so wholesome, so sane, so perceptive, so just, and so vivifying as we find in this collection of essays on the 'Poets of America.' . . . The volume may indeed be regarded as epoch-making. Its influence on our national literature is likely to be both deep and lasting."—*The Literary World, Boston.*

"The book is one which the student and lover of poetry cannot deny himself."—*Christian Register, Boston.*

Other Books by Mr. Stedman:

POEMS. New Household Edition. With Portrait and Illustrations. 12mo, $2; cr. 8vo, full gilt, $2.50; half calf, $4.

HAWTHORNE, AND OTHER Poems. 16mo, $1.25.

FAVORITE POEMS. 32mo, 75 cents.

VICTORIAN POETS. 12mo, $2; half calf, $4.

WORKS. In three vols. 12mo, gilt top, the set, $6; half calf, $12.

EDGAR ALLAN POE. With Portrait of Poe. 18mo, vellum, $1.

ELIZABETH BARRETT Browning. An Essay. With Mrs. Browning's Favorite Poems. 32mo, 75 cents.

G. P. PUTNAM'S SONS,

27 and 29 West 23d Street, New York,

PUBLISH THIS WEEK:

The Life of Henry Fawcett.

By Leslie Stephen. Octavo, cloth extra, $3.00.

"An exceptionally interesting record of a very exceptional man."—*London Spectator.*

"The story is remarkably interesting. . . . There is not, even in the instances of Lincoln and Grant, much that is more thrilling than is unfolded in Mr. Stephen's delineation of the growth of such a man as Henry Fawcett proved himself to be."—*The Times.*

The Story of the Nations.

Vol. III.—THE STORY OF THE Jews. By Professor James K. Hosmer, of the Washington University in St. Louis, author of 'The Life of Samuel Adams,' etc. Large 12mo, with thirty-five illustrations and two maps, cloth extra, $1.50.

CHIEF CONTENTS: The Earliest Records—The Morning-Time in Palestine—Israel at Nineveh—Sennacherib—Judas Maccabæus—The Beauty of Holiness—Vespasian and Josephus—Titus and the Ruins of Zion—How the Rabbis Wrought the Talmud—The Holocausts in Spain—The Bloody Hand in Germany—The Frown and the Curse in England, Italy, and France—Shylock—The Casting Out of a Prophet—Israel's New Moses—The Money Kings—Montefiore—Hebrew Statesmen—A Sweet Singer in Israel—Some Harmonious Lives—Our Hebrew Contemporaries.

"Here are details of exterminating warfare, of sharpest torture, of bitterest cursing. Here are presented sages, as they study the darkest problems; poets, as they thrill the human heart-strings with marvellous subtle power; characters shining in the very beauty of holiness; characters, too, black with malignity most appalling—all this stands in the record. To present Israel faithfully, these traits must be given, and the attempt has been made to present Israel faithfully. It is a tale full of thrilling fascination and fruitful instruction—a tale, however, that sobers and requires soberness in its readers, the maturity that comes when childhood has been left behind."—*Extract from Author's Preface.*

PREVIOUSLY PUBLISHED IN THE SERIES.

I.—THE STORY OF GREECE. By Prof. James A. Harrison, of the Washington and Lee University. 12mo, fully illustrated, cloth extra, $1.50.

"An exceedingly well-told story."—*N. Y. Nation.*

"The reader will become familiar with the gods as well as the men of Greece, with the social life and amusements as well as with the political conflicts and crises of a wonderful people. The volume is delightful reading."—*Brooklyn Eagle.*

II.—THE STORY OF ROME. By Arthur Gilman, author of 'A History of the United States.' 12mo, fully illustrated, $1.50.

"The story is well told, and the interest admirably sustained. . . . The book is a fascinating one for young and old."—*Charles Dean, Vice-Prest. Mass. Hist. Soc'y.*

NEARLY READY.

Vol. IV.—THE STORY OF CHAL- dea. By Z. Ragozin. With eighty illustrations and maps. Large 12mo, cloth extra, $1.50.

CHIEF CONTENTS: The Mounds of Mesopotamia—The First Searchers—Layard and his Work—The Ruins—The Book of the Past—The Library of Nineveh—Nomads and Settlers; the Four Stages of Culture—The Great Races—Chapter X. of Genesis—Turanian Chaldea—The Beginning of Religion—Cushites and Semites—The Beginnings of History—Babylonian Religion—Legends and Stories—Traditions of the Creation—The Temptation—The Flood—The Tower of Babel—Parallels between the Chaldean Narratives and those of the Hebrews, etc., etc.

"The Story of Chaldea" deals with the most fascinating of subjects: the dawn of civilization, the beginnings of man's knowledge or imaginings of his own origin and of his relations with his Creator, the first data for the history of mankind, the causes and times of the separation and migrations of races, the points of contact or parallelism between the narratives and traditions of the Old Testament and the records (now rescued from the tablets in the Mesopotamian Mounds) of the tribes from which the Hebrews separated themselves.

Problems in Philosophy.

By John Bascom, President of the University of Wisconsin, author of 'The Science of Mind,' etc. 12mo, $1.50.

How We Treat Wounds To-day.

By Robert T. Morris, M.D. 16mo, cloth extra, $1.00.

RECENTLY PUBLISHED.

Songs of Sleepy Hollow.

By Stephen Henry Thayer. 16mo, cloth extra, $1.00.

"The author is a true poet in sentiment and feeling, and he is able to give to those thoughts which possess his own soul such expression that others feel and know them. . . . Verses characterized by a poetic inspiration which touches the heart and thrills the soul of the reader in sympathy with the author."—*N. Y. Observer.*

*** *New lists sent on application.*

G. P. PUTNAM'S SONS, Publishers, New York and London.

The Nation.

NEW YORK, THURSDAY, JANUARY 7, 1886.

The Week.

THE Boston *Journal*, while printing in full the speech of Senator Evarts at the Merchants' Association dinner, which was mainly occupied with the silver question, finds it "impossible to say whether he would vote for the repeal of the law providing for compulsory silver coinage." Not daunted by this difficulty, however, the *Journal* overhauls the report of the Paris Monetary Conference of 1881, and quotes two extracts from the speech made by Mr. Evarts in that meeting, which it thinks will suffice to answer the question which the distinguished orator failed to answer at the Boston dinner. After due and careful examination of both the Boston speech and the two extracts, we are unable to agree with the *Journal* that the deficiencies of the former are made good by the latter. We beg to remind that painstaking newspaper that it is one thing to favor international bi-metallism, and quite another thing to favor the repeal of the compulsory-coinage law. When, therefore, the *Journal* declares that a person who supports the former must necessarily hold "that this result is deferred rather than hastened by the continuance of compulsory silver coinage," it runs ahead of the orator and ahead of any known facts. Nearly all the supporters of the Bland-Allison Bill favored international bi-metallism. The first Paris Conference was authorized and called by the very bill which set the compulsory coinage going, and the second conference was authorized by the same party that authorized the first. So it is a *non-sequitur* to say that the supporters of international bi-metallism are in favor of repealing the Bland Act. The truth is that some of them are in favor of repeal and others not. Which class Mr. Evarts belongs to has not been made known by himself, although he occupied considerable time at Boston with the silver question.

At one point in his speech Mr. Evarts appeared to be on the very threshold and verge of declaring his opinions on the matter under discussion, but just as he had roused expectation to the highest pitch he disappeared in a cloud and made himself invisible, like an Eastern necromancer. The most that he could say that was intelligible was, that the question is to be decided by the nation and not merely by Congress, and that the nation is to act upon Congress by pressure on the one side and on the other. There is nothing so certain to secure results in Congress as pressure in cases where Congressmen do not know which side they are on. No law in physics can be relied upon with greater confidence. We should be inclined, therefore, to award to Mr. Evarts credit for a notable aphorism if he had told us which of the two sides was likely to develop the greater amount of pressure. If he had even told us on which of his own sides he felt the most pressure, we should have been wiser than we are. We suggest now that he make a speech and tell what his views really are on the silver question. Pressure is all very well in its way, but it should be borne in mind that there are many people who do not know on which side they ought to press, and that they look to Senators and Representatives in Congress to tell them. The Boston *Journal* hints that Mr. Evarts is holding back his views for delivery in the Senate, not wishing to anticipate himself by a premature announcement of them. This is quite possible, but, however lucid his exposition of them may then be, we shall still think that he has done himself an injustice by not contributing something beforehand to the pressure by which his vote is to be decided.

A few years since a tempest broke loose in the West and South on the head of the Secretary of the Interior in consequence of his endeavors to put a stop to depredations on the timber lands of the United States. Mr. Schurz was charged with every sort of infamy, including cruelty to women and children, because he had sent out a few special agents to report facts and to obtain evidence for the prosecution of the more unprincipled violators of the law. The Senate of the United States took up the matter, and several speeches were made in which the Secretary was denounced as a Prussian and a despot, as an oppressor of the widow and the fatherless, and as a tool of railroads and grasping monopolies. If he insisted that the laws were made to be enforced against individual woodcutters, he must have a private motive, and this could be no other than a desire to hold the Government timber for the eventual enrichment of soulless corporations. The spectacle presented, as a consequence of this endeavor to put a stop to a peculiarly injurious form of theft, was not an encouraging one to his successors in office, yet it is believed that some very valuable forests were saved from destruction, and that considerable money was turned into the Treasury that would otherwise have gone to swell the profits of lumber companies and railroad contractors. It was never proved that any widow was prevented from collecting dry twigs sufficient to boil her dinner, that being the dreadful apprehension of Senator Sargent, of California.

The same kind of a tempest has now broken on the head of Commissioner Sparks of the General Land Office. That glaring frauds have been and are daily committed under the homestead, preëmption, and timber-culture acts, involving millions of acres of land, and that these frauds militate against the actual settler more than against anybody else, has been matter of common notoriety for years. Yet so much has public attention been taken up with "forfeited land grants" to railroad companies that no effective action could be secured to protect the public domain against a far greater evil. Whatever may be said of forfeited or forfeitable land grants, none of them involve the crime of perjury. The facts upon which a railroad makes claim to land under act of Congress are open, patent, and cannot be concealed. They are triable before the Land Office and before the courts, and they are not so numerous that they cannot all be tried. Not so the fraudulent seizure of land under private entries. Here nearly everything depends upon the oath of the entrymen, and the cases are so numerous that only now and then can one of them be tried by way of sample. The result is that perjury has become the common method of acquiring title to the public lands, and the beneficent intentions of the homestead, preëmption, and timber-culture laws have been to a large extent frustrated and brought to naught. But this is not the worst. Numerous cases are reported where bona-fide settlers have been driven from their claims by fraudulent entries alongside of them, made by "cowboys" in behalf of cattle companies, cutting the settlers off from the water courses and isolating them from the society which they expected in time to collect about them.

Our wood-choppers must be protected. Their gallant efforts to cut down our remaining forests must be encouraged. We have given them a bounty of 20 per cent. as against the pauper woodchoppers of Canada, but that is not sufficient. The pauper bag-manufacturers of England are selling sugar sacks to the Cuban planters at such low rates that the Cuban demand for hogsheads has been cut down to a mere nothing, and the cooperage industry is crippled. Acting upon the grand theories of protection and the noble principle of asking Congress to do something whenever anything goes wrong in trade (for which we have so many valuable precedents), the hogshead makers have petitioned for a discriminating duty of one-quarter of a cent per pound on sugar imported in sacks, in order to compel the Cubans to buy our hogsheads. This is a fine idea. It is apparently borrowed from an old English statute which, in order to help the weavers in a period of depression, required that all corpses should be buried in woollen shrouds.

The prohibition in Mr. Edmunds's Utah bill of female suffrage in the Territory has brought him into collision with Mr. Hoar, who maintains that all women not "plural wives" ought to have the franchise, and points with pride to the results of female voting in Wyoming and Washington Territories. Mr. Edmunds offered a sort of compromise by promising to support the majority of women in any State or Territory in demanding the franchise; but, under this rule, should he not take the sense of the Utah women before abrogating the local law which has enfranchised them?

If any Republican in the country is qualified to speak with knowledge regarding the situation in the South, it is certainly ex-Gov. Daniel H. Chamberlain, of South Carolina, who discusses the present aspects of the Southern question with noteworthy candor in the January number of the *New Englander*. Mr. Chamberlain takes the somewhat unnecessary pains to expose the impossibility of curing the trouble by Senator Sherman's quack remedy, prescribed on the stump last fall, of reducing the basis of representation in those Southern States where

the Republicans do not poll as many votes as the party managers at the North think they ought to poll, and rightly concludes that there is no practicable constitutional remedy. He then points out—and it should be remembered that it is the Republican ex-Governor of a Southern State who says this—that "the evil in question is plainly the result of the want of intelligence, experience, and good judgment on the part of the class who are deprived of the right to vote, and of the race prejudice and political ambition of the class which inflicts the wrong, intensified and made reckless, in respect to the right to vote, by the insupportable corruption and maladministration of most of the Southern State Governments from 1868 to 1876." He confesses that such results as we now see at the South are inevitable "whenever in any community those who hold nearly all its property, intelligence, and experience in self-government are set against those who are for the most part without property, education, or experience of public affairs." Such being the case, the course for those who sincerely want to see a better state of things is, in his opinion, to "abandon all efforts to prolong, through party proclamations and appeals, a controversy which has resulted so disastrously to those in whose interest it has professedly been carried on," and to leave the problem to solve itself, through the progress of intelligence, as, by the admission of all, it is now doing. In short, the true policy, in Mr. Chamberlain's view, might be summed up in four words, "Furl the bloody shirt."

The Pacific Coast delegation in Congress has agreed upon a new anti-Chinese bill, which is intended to make it still more difficult than it is now for a Mongolian to surmount the wall of exclusion which has been built against his race. The San Francisco *News Letter*, however, does not think that the proposed changes would accomplish much, and says that "the home of the oppressed of all nations has got to erect many more barriers before it will succeed in keeping the little brown man out." Meanwhile there are some signs that public sentiment in California is beginning to revolt against the un-American warfare upon foreigners from China, which the worst foreigners from other nations have been thus far permitted to wage by native citizens. The editor of the San Francisco *Argonaut* tells the truth in such plain words as these:

"The refuse and sweepings of Europe, the ignorant, brutal, idle offscouring of civilization, meet weekly upon the sand-lot in San Francisco, to determine whether respectable, industrious foreign-born citizens and native-born Americans shall be permitted to treat Chinese humanely and employ them in business vocations, or unite with this idle and worthless foreign gang in driving them into the sea."

The inaugural address of Mayor O'Brien, of Boston, fully justifies the confidence of the Mugwumps whose votes gave him such a large majority last month. After referring to the great responsibility imposed upon the Mayor by the new charter, and remarking that if the Mayor employs this power to stop waste and extravagance, he makes determined enemies of men whose sole object is public plunder, he describes his own course during the past year and lays down his policy for the coming year in these plain words:

"Regardless of threats, regardless sometimes of adverse criticism from parties who do not understand the true facts, I have given no quarter the last year to any who have abused the trusts confided to them, and, with such an emphatic endorsement from my fellow-citizens, I feel encouraged to go on with the work. Political tricksters who have merely some selfish purpose to gratify, will receive no countenance from me, no matter what party they may be identified with for the time being."

Mr. O'Brien shows that he clearly understands the cause of bad city government when he says that "it is by yielding to these men, on account of the few votes that they control, that municipal governments, in all the large cities of the country, have become a synonym for waste and extravagance and corruption"; and he points out the only way to secure reform, in this admirable passage:

"If political parties put unscrupulous men to the front, they ought to be voted down. If political parties make combinations with men whose morality and integrity are questionable, such combinations should be discouraged and discountenanced by every good citizen. If no quarter is given to men who have no moral principle behind them, who connect themselves with leading parties merely for plunder, they will soon be stamped out, and the business of the city will be conducted, like any other large corporation, on business principles."

The Democratic papers which felt so sure a few weeks ago that Mugwumpism was stamped out, are invited to study with attention these words of Boston's Democratic Mayor.

We find in the Boston *Herald* some remarks addressed to General Butler in reference to the alleged shortage in his accounts with the National Soldiers' Home, which are so pertinent that an early and specific response from him appears to be in order. The *Herald* alludes to the fact that the Military Committee of Congress reports a shortage in the accounts of $200,000 in bonds and $21,000 in cash, and thus comments:

"General Butler is getting along in years, and whether we consider him or the Soldiers' Home, a part of whose endowment seems to have disappeared, there is a demand for prompt action. General Butler has testified before a Congressional committee that he kept some of the accounts of the Home with his own private accounts, and appears to have profited by holding large balances belonging to the Home; and the question now is whether he abstracted the funds of this worthy institution and used them for his own benefit. We should be sorry to believe that a man credited with large wealth would yield to such a temptation, however much he might love money, and General Butler, who seems to have no political purpose to serve at present, cannot afford to live under the imputation of theft, especially theft of this particularly infamous character. Let us have the question settled in the courts."

This is very disagreeable talk for the General to hear from a newspaper which is printed in the city where he lives, and which is the most widely read journal in the State of which he was a few years ago the Governor. As the lifelong friend of the soldier, as the avowed champion of the laboring man, and as only a year ago the candidate of the People's party for the Presidency, he cannot afford to remain quiet under a direct intimation that he has stolen money from soldiers, and, what is much worse, disabled soldiers. By all means let him take the matter into the courts.

The *Evening Post* prints an article, translated from the Berlin *Nation*, on the general fall of prices of which the whole civilized world is complaining, and we commend it cordially to the attention of those who think that it is possible to put prices up by some piece of fancy legislation. It is not scarcity of gold or silver, or any other form of currency, which is making things cheap. Money in any form is not scarce. It is abundant, and can be had at low rates by any one who thinks he can employ it profitably. Gold is not scarce, and cannot, in the nature of things, be monopolized by any one country. Whatever is the currency of the civilized world, wherever it may be, lies at the order of any nation which is in unusual need of it. No matter in what treasury or bank gold may be, any country which wants it can have it by lowering the prices of the commodities it has for sale. In fact, gold goes around the world, like the "ocean tramps," in perpetual search for a good market. It never rests or stagnates anywhere. Any community can have it by offering to sell cheaper than its neighbors. Moreover, there is little or no prospect that we are going to see again what we used ten or fifteen years ago to consider high prices. The chances are that we are now passing through a period which ten years hence will be considered by those who look back a period of high prices. The means of transportation and of communication have been so much improved, and are improving so rapidly, that whenever in any corner of the globe signs of dearness or scarcity in any commodity show themselves, it is speedily deluged with supplies from every other corner. The gradual disappearance of the great commission houses in every country illustrates the cheapening process as well as anything. Formerly foreign trade was almost entirely carried on by these houses. Dealers in other countries relied wholly on them for their information about the home market, and sold their goods through them. Now every dealer learns all he wants to know about foreign markets by telegraph, and makes his offer directly by the same medium, so that transactions which used to take from three to six months are arranged in an hour or two.

In fact, dearness, that is, difficulty in procuring the good things of this life, and above all the kindly fruits of the earth, is being rapidly hunted out of the world by civilization. Every discovery, every invention, cheapens first one thing, and then and in some degree all others. There is no use in trying to stem the tide by playing tricks with currency, or piling up high tariffs. These are only the temporary expedients at best. The volume of supplies which human industry now creates every year is too great to be long stayed by any dam that any one nation can construct. The grain and cotton trade, which we commented on a week ago, illustrate this admirably. The monopoly which we enjoyed in these things is clean gone, and it is gone because steam and the advance of order have opened up vast fertile regions which were fifty or even twenty years ago, for all practical purposes, as far from the great markets of the world as if they were in the moon. And yet we are only beginning to tap the new sources of supply. We are getting from India only a fraction of the quantities of cotton, wheat, tea, and coffee which she will probably turn out in ten years from now. The same thing may be said with regard to other commodities, of South America, of our own great Northwest, of New

Guinea, and above all, of Central Africa. The productiveness of all these vast regions is simply a question of railroads and soldiers to keep order. The notion that we can save ourselves from them by "poor man's money," or scarcity patents like the tariff, is simply an immense hallucination. The cheapening process is one which has been going on, now slowly, now rapidly, ever since the western world began to recover from the fall of the Roman Empire, and it will continue to go on until the human race has exhausted its powers of extracting sustenance and comfort from the earth. We shall of course every now and then have a good deal of squealing over it from various sects of economists and socialists, who think they can now and then get the better of nature by acts of Congress; but, like the squealing we are now listening to, it will pass. Nature has in her time disposed of a great many cranks and visionaries, as well as of a great many types and species, and to her they may be safely left.

Interesting evidence that the average length of human life has been steadily increasing for some time past is deduced from a comparison of the ages at death of Yale College graduates early in the eighteenth century and late in the nineteenth. Mr. Dexter's recent volume on the annals of that institution from 1701 to 1745 shows that of 473 graduates during that period 153 lived beyond 70 years—that is to say, 32 out of every 100. On the other hand, of 672 alumni whose deaths were reported between 1875 and 1885, there were 271 who had passed their seventieth year—or 40 out of every 100. To put it in another way, during the first half of the eighteenth century a graduate stood only 32 chances out of 100 of becoming a septuagenarian, while in the last quarter of the nineteenth century he stands 40 chances out of 100 of reaching that age. The gain in longevity is naturally greatest among educated men familiar with the laws of hygiene, but this showing is hardly more striking than that recently made in England of the extent to which the average of human life has been prolonged within the past forty years.

The action of the Virginia Legislature on Saturday will relieve Northern Republicans of one apprehension aroused by the victory of the Democrats in the November election. It will be remembered that the Republican Convention in Virginia last July adopted a resolution in favor of generous appropriations by the Legislature for pensions to disabled rebel soldiers. This became one of the chief issues in the canvass. The Richmond *Whig*, the Republican organ, insisted that the only way for the voters to insure such pensions was to elect a Republican Legislature, and it appealed to the record in support of this claim. It declared that "it was the Bourbon usurpers who killed the bill in the last General Assembly to appropriate $10,000 to aid in establishing the home for Confederate veterans," while "the Republicans did their best to pass it;" and it recalled the damning fact that at the extra session in 1884 "Mr. Hazlewood, Republican, introduced a bill to appropriate $65,000 for the relief of enrolled and certified disabled soldiers of Virginia, and the Bourbon usurpers killed it." The pledge of the Democratic Convention to remember the faithful Confederate soldiers was denounced as unworthy of belief when made by a party with such a record. The overwhelming victory of the Democrats must have aroused the keenest apprehensions regarding the fate of these rebel soldiers, and the Republican organs have been fully prepared to denounce the successful Bourbons for their expected infidelity to the Confederate cause. But the organs are not to enjoy the satisfaction of saying "I told you so." The Democrats have really turned over a new leaf, and a bill was passed on Saturday which makes as liberal an appropriation for the relief of disabled soldiers as could have been expected if the other party had been in the majority. But the organs have one consolation left—they can at least "point with pride" to the adoption of the policy of pensioning rebel soldiers by the Virginia Democrats as only another illustration of their claim that Democrats everywhere are always imitating Republicans.

The beginning of the American opera season on Monday evening was an event of national importance, and we are glad to see that it is so generally recognized as such by the press of the city. The artistic merits of the performance are considered elsewhere in these columns. The projectors of the undertaking gave an admirable proof of the sincerity of their purpose in the character of their first night's work. There was no clap-trap and no attempt to score a cheap "popular" success. The management had other works in their repertory much more likely to make a "hit" than the one chosen, but they wisely preferred to set their standard first and then show the resources of their company afterward. They are aiming to found an American school of music, not simply to make money out of a season of opera, and they are evidently convinced that the best way to succeed is to avoid spread-eagleism and do simple, earnest, and thorough work. They have shown at the outset that America can furnish a conductor, an orchestra, and a chorus second to none in the world, and that is surely a firm foundation upon which to build. They are confident of showing within the next few weeks that America can furnish solo artists, also, who will not fall far short of this high standard. Whatever the measure of their success, the patriotic character of their endeavors entitles them to the heartiest public support and coöperation.

The *Christian Intelligencer* says: "The sensation of the year has been the revelation by the *Pall Mall Gazette* of moral rottenness among the upper classes of English society." A Christian intelligencer ought not to make such statements, especially in the last week of the year. There is no truth in this one. The *Pall Mall Gazette* has made no such revelations. There may be moral rottenness among the upper classes of English society, but the *Christian Intelligencer* knows no more on the subject this year than it knew last year. But it is true that the *Pall Mall Gazette* did make "a sensation" by the publication of some stories of extraordinary indecency.

The reported Conservative scheme of local government for Ireland, consisting of County Boards and a "Central Council," will probably fail disastrously from the outset, for the simple reason that no representative bodies can be made to work without the approval and support of their constituencies, and the Irish will now accept nothing which cannot be called a "Parliament"—that is, which will not have more extensive authority than will be bestowed on a "Central Council." In fact, it is interesting, though melancholy, to see how faithfully Englishmen are following the old lines in dealing with this new and most serious Irish crisis. First, there is the scoffing, abusive stage; then the furious, coercive stage, both of which have been passed in this case. Then comes the stage of considering whether there is not something reasonable in the Irish demands, followed by a small offer, that is, an offer of all that the most anti-Irish Englishmen can be got to agree to. This the Irish accept, but only as an instalment, and keep up the row. Then come savage denunciations by the English press and orators of Irish "ingratitude," accompanied by magazine inquiries into the nature and origin of Irish ingratitude, and its connection with Celtic blood, and then after awhile all begins over again. The argument behind Parnell, which works while he sleeps, and which every day makes greater inroads into the English mind is, "How does an Ireland like the present one contribute to the strength and unity of the Empire?"

M. Leroy-Beaulieu has been raising a great outcry in the *Économiste Français* over the responsibility towards savings-bank depositors incurred by the French Government. The Treasury takes charge of all the funds of the banks, and guarantees 3½ per cent. on them. It holds now the enormous sum of $444,800,000, all of it, of course, payable on demand. It is estimated that not over one-half of these deposits belong to poor persons. The other half belongs to shopkeepers in good circumstances, who, in order to get over the law limiting deposits to $400 for each person, will often have a book for each member of the family in both the ordinary and postal savings banks, and in savings banks in different localities, so that their united claims will sometimes amount to $4,000, $5,000, or $6,000, all of which they can call for at any moment, and on all of which they receive a higher interest than any other demand loan on equally good security will bring. Attempts have often been made to get this interest reduced, but they have always failed before the fear of offending the working classes in the large towns. This demagogy is now producing its natural result. It has burdened the Government with an immense floating debt, a large part of which might be called for peremptorily at some serious crisis in national affairs, and compel once more a suspension of payments as in 1848. M. Leroy-Beaulieu finds in the Treasury practice of treating the deposits as cash on hand an evil almost as great, because it constitutes a resource outside the regular budget which is constantly tempting the Finance Minister into small extravagances.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 30, 1885, to TUESDAY, January 5, 1886, inclusive.]

DOMESTIC.

CONGRESS reassembled on Tuesday. Senator Beck, rising to a personal explanation in the Senate on Tuesday afternoon, said he had made no attack on the President as regards the silver question. All he opposed was the policy of locking up so much money in the Treasury. He said then, and he was not sure that he did not believe now, that if a cyclone came and scattered all this money to the winds of heaven and the people gathered it up again, it would be better than the present policy. That was all he meant

Contrary to expectation, Speaker Carlisle did not announce his committees in the House on Tuesday.

The bill introduced in Congress proposing to allot the lands in severalty to the Indians in the Indian Territory and open up the country to settlement, is creating much excitement among the Cherokees. The opposition to alienating any lands belonging to the Cherokee Nation is intense. Their National Council has adopted resolutions declaring: "That the United States has not now and never has had any right to appraise, take, or purchase any unoccupied portion of these lands, or to appraise any occupied portion or acquire any right therein, save by and with the consent of the Cherokee Council of the Nation."

When the Sub-Treasury in this city opened for business on Saturday morning, Mr. C. N. Jordan, the Treasurer of the United States, was present to take charge of the office. Mr. Acton refused, however, to turn over the office to him, upon the ground that he should be exposing his bondsmen to loss until he could turn over the office to an officer appointed by the President and confirmed by the Senate. For an hour no business was done, the vaults being under seals placed there on Thursday by Mr. Jordan. At 11 o'clock Mr. Jordan, as Treasurer of the United States, took the responsibility of breaking the seals and beginning business. Mr. Acton made no objection, and Mr. Jordan took control.

It is believed that the President will nominate ex-Comptroller Andrew H. Green to be Assistant Treasurer of the United States in this city.

Mr. Valentine P. Snyder, who had been advanced through several positions in the Treasury Department, was on Wednesday appointed Deputy Comptroller of the Currency in place of J. S. Langworthy, resigned.

Secretary Manning gave another proof on Saturday of his adherence to the reformed civil-service system. The case of Owen Kellar, of Ohio, whose appointment as clerk after a successful civil-service examination Auditor Chenoweth and Congressman A. J. Warner, of Ohio, tried to prevent, will be remembered. Mr. Kellar was on Saturday appointed a permanent clerk, having served satisfactorily through the six months of the probationary period.

Mr. Cannon, Comptroller of the Currency, intends to accept one of the eligible offers that have been made to him to go into the banking business in New York. He may not retire for some months, and it has been intimated that the Administration would be glad to retain his services. Probably he will wait until the silver discussion has taken shape in Congress, and until Secretary Manning has had ample time to select a competent successor.

The boycotting of Democratic fourth-class postmasters is reported at the Post-office Department to be increasing. Citizens in some places refuse to mail letters or to purchase stamps at the home offices, and thus reduce the compensation of postmasters. The number of offices under a boycott of this kind is said to have reached 300.

The croakers will find it difficult to believe that under the administration of the Civil Service Act a colored man has secured admission to the Post-office Department. John T. Morton, of Arkansas, however, who was recently notified by the First Assistant Postmaster-General that he had been selected for appointment as a $1,000 clerk, proves to be a colored man. His papers showed that in the examination he had been graded 73, and was a school teacher. Nothing more was known about him; his race was unknown. The Revising Board of the Civil-Service Commission had no knowledge of the applicant, except what appeared upon the record.

The United States Supreme Court has dismissed the appeal of Paymaster-General Smith, holding that an officer of the army or navy may be tried by court-martial for actions which are demoralizing in their nature or tend to bring the service into disrepute, though such actions may have no direct connection with the military duties of the defendant as an officer of the army or navy.

The Court of *Alabama* Claims adjourned *sine die* on Thursday. On the previous day it completed its final lists of awards in the war-premium cases, signed them, and made formal delivery of them to the Secretary of State, who is required by law to certify them to the Secretary of the Treasury for payment *pro rata*. The exact amount found due was $10,705,371 43. The interest added raises the amount to over $16,000,000, but this has only been calculated in order to comply with the strict letter of the law; nobody expects to get a cent of interest, and not much more than 50 per cent. of the principal. The total expenses of the court will amount to about $400,000. This includes over $150,000 for printing, etc., made obligatory by the law, and a like amount for the services of special counsel in all parts of the world where testimony has had to be taken. The expenses of the previous Court of *Alabama* Claims, which had only one class of claims to deal with—those covered by the Geneva award—and the aggregate of whose business was less than one-fourth of that of the present court, were $254,000.

Governor Hill's inauguration at Albany on Friday was conducted with great ceremony. He was escorted from the Executive Mansion to the Capitol by a long procession. Judge Learned administered the oath of office, and the Governor then made a long speech, closing by promising to be as much a reformer as Governor Tilden was.

The canvass for the Speakership of the New York Assembly practically closed on Sunday in favor of General Husted, and at 11 o'clock on Monday forenoon the surrender of the Erwin camp was formally made. Early in the morning Mr. Erwin's friends held a conference, and, after looking the situation in the face, decided to give up the contest. Mr. Arnold, of Otsego, one of Erwin's chief workers, was delegated to go to General Husted bearing the white flag. This mission Mr. Arnold accomplished successfully. Erwin entered his canvass for reëlection as Speaker with popular sentiment in his party opposed to him by reason of his action as Speaker last winter. In addition to this, for some ulterior reason, he had against him one of the strongest arrays of party managers that has been seen in Albany for years.

Both branches of the Legislature met at noon on Tuesday, and organized by the election of the caucus candidates—Mr. Pitts for President pro tem. of the Senate, and Mr. Husted for Speaker of the Assembly. The Governor's message was received and read. The most significant thing about his utterances is that even he feels the necessity of commending the work of civil-service reform and urging its continuance. He takes practically the same ground this year as last in favor of municipal reform in New York, urging the wisdom of giving the city the power of self-government, and pledging his coöperation for all genuine reform measures. He utters the usual commonplaces about industrial interests, and throws a sop to the "labor vote" by saying that the Legislature "should generously favor whatever concerns the welfare of the toiling masses." On the prison-labor question he has nothing new to say. He recommends the abolition of the Board of Regents, as being the regents of a university which has in fact no existence, and the transfer of their powers and duties to the Department of Public Instruction; the abolition of the Board of State Charities and the creation in its stead of a single Commissioner of Charities; and the abolition of the State Board of Health and the substitution for it of a single Health Commissioner. The first public appearance of Lieutenant-Governor Jones and Secretary Cook, the former in presiding over the Senate, the latter by delivering the oath to members of the Assembly, is generally commended. Mr. Jones's address was conservative and in good taste.

Mr. Frederick Cook, the new Secretary of State, and Comptroller Chapin on Friday awarded the legislative printing to the Albany *Argus* Company.

The new Board of Aldermen of this city was organized on Monday and received the message of Mayor Grace. The Mayor says that it is doubtless true that the cost of the government of the city of New York is in excess of what it should be: one cause for this is alluded to in the question of legislative interference which the Mayor discusses. But that New York is misgoverned to anything like the extent claimed by the Council of Reform, is not true and cannot be maintained. The Mayor considers that the Park Department has done well and made a fair showing.

Among the articles of incorporation filed with the Secretary of State at Albany on Monday was that of the American Pasteur Institute of New York City. The objects of the Institute are the gratuitous care and treatment by the Pasteur system of inoculation, or such variations thereof and improvements thereon as science may develop.

Ohio Republicans say that before the election for United States Senator in that State it is the intention to unseat the Democratic delegation from Cincinnati in the House, which will give the Republicans a working majority on joint ballot. The plan of the Sherman managers is to postpone the Senatorial election until this can be done. Otherwise the majority would be so small as to make a combination against him possible.

The Connecticut Supreme Court has decided that Yale students who are residents of New Haven only as students cannot vote there.

Major Kellogg, with a detachment of United States troops from Fort Ringgold, on December 29 routed a large band of Mexican revolutionists from the State of Tamaulipas who were occupying an island on the Rio Grande River near Rome, Texas, which belongs to the United States. The revolutionists crossed over to the Mexican bank of the river, and, under cover of darkness, took possession of the famous neutral island which has caused so much contention between the United States and Mexico.

The Lancaster National Bank, of Clinton, Mass., has closed its doors pending an investigation. The President, William H. McNeil, it is reported, has fled to Canada. The institution has been placed in the hands of the Bank Examiner. His investigation so far indicates that McNeil is an embezzler to the amount of about $100,000.

A fire in Detroit on Friday destroyed the immense seed warehouse of D. M. Ferry & Co., White's Theatre, and several buildings belonging to the estate of E. A. Brush. The total loss is more than $1,000,000, the greater part of which falls on D. M. Ferry & Co.

John B. Raymond, ex-Delegate to the Forty-eighth Congress from Dakota, died on Sunday at the age of forty-one.

Professor Charles E. Hamlin, of the Harvard Museum of Natural History, died at his home in Cambridge, Mass., on Sunday, of

pneumonia. He was sixty years of age, and was graduated from Waterville College when twenty-three years old. He was Professor of Natural Sciences in Waterville until about fifteen years ago, when he was called to the Harvard Museum of Natural History. In that department he was one of the best informed men in the country.

N. D. Wendell, who was elected Treasurer of this State on the Republican ticket in 1879, died suddenly at Albany on Tuesday. He was fifty years of age.

J. B. Lippincott, of Philadelphia, the well-known publisher, died on Tuesday.

FOREIGN.

Mr. George Otto Trevelyan, formerly Chief Secretary for Ireland, made a speech at Stratford on Wednesday evening. He said that there could be no half way between the complete separation of Ireland and absolute imperial control. Unless it was intended to keep the care of the law and order in the hands of the Central Government it would be better to repeal the Union Act. He condemned the proposition to give Ireland a Parliament and at the same time allow Irish members in the English Parliament. Mr. Trevelyan said that he was willing that a fairly elected Irish Council should be given the control of education, public works, and the poor laws, and that additional money be raised by taxation if more than the Exchequer supplied should be required.

Earl Cowper, who was Lord-Lieutenant of Ireland from May 5, 1880, until April 28, 1882, under Mr. Gladstone's Administration, has written to the London *Times* in regard to the Irish question. Earl Cowper says: "Home rule, for its own sake, is not desired by the Irish. Any one can see by a perusal of the Irish newspapers published during my own term of office in Ireland that they do not reveal a single mention of the home-rule scheme, but are solely involved in discussing the question of rents. The late Mr. Isaac Butt, who may be called the originator of the national and home-rule movement, and Mr. William Shaw, ex-member of Parliament for the city of Limerick, who was a member of the Home Rule League, but withdrew from that body in December, 1881, failed to attach the Irish people to their schemes, and Mr. Parnell will meet with the same fate, except in an appeal to their pockets. The strike against the payment of rent will soon be a bigger difficulty for the Government to deal with than was ever the home-rule question, and must eventually interfere with imperial interests."

Michael Davitt, in a recent interview, said: "If home rule is granted to Ireland, it is difficult for me to see how the Irish members can continue to sit in the Parliament at Westminster, unless the colonies are similarly represented in that body. The appointment of a prince of the royal family as Viceroy of Ireland would be a mistake, as Ireland requires a statesman of tact and brains to administer the Government, not a royal show."

The *Pall Mall Gazette* on Saturday said it was able to announce that Mr. Gladstone was ready to entertain a feasible proposal from the Marquis of Salisbury to concert jointly for a settlement of the home-rule question. The *Gazette* urged a coalition of the Liberals and Conservatives to deal with the subject.

Lord Randolph Churchill has submitted to the Cabinet a proposition for the reform of the administration of the Government in Ireland. The scheme is supported by the Earl of Carnarvon, Lord Lieutenant of Ireland, and by Baron Ashbourne, the Lord Chancellor. The project involves abolition of the viceroyalty and the Castle Executive, and the placing of Ireland on the same footing as Scotland, having a Secretary in the Cabinet. If the Cabinet adopts the measure, it will be presented to Parliament, together with the scheme for local government which has already been decided upon.

The Conservative local government measure to be laid before Parliament as drafted gives to Ireland a household franchise for electing county boards and for electing a central council. The proposition that the Crown should have the right to nominate a part of the council was abandoned. The measure also provides that the county boards shall have control of the traffic in liquor, and that the central council shall have a voice in appointing the magistracy. Parliament will meet on January 21.

Mr. Ruskin writes to the *Pall Mall Gazette* on the Irish question, "Would it not be well to take some account of the following uneradicable virtues of the Irish race in our schemes for their management? First, they are an artistic people, and can design beautiful things and execute them with indefatigable industry. Secondly, they are a witty people, and can by no means be governed by witless ones. Thirdly, they are an affectionate people, and can by no means be governed on scientific principles by heartless persons."

Frederick Harrison, in the annual address before the Positivist Society in England, said that the British Constitution since the franchise had been more democratic than the Constitutions of France and America, with less real reserve power. The Government had become the committee of a huge democratic club called the Commons. There was urgent need to form public opinion independent of politics and Parliament. Positivists favored a national government for Ireland, with legislative and executive power, but he trusted that the latter would not be purely democratic.

A proclamation was on Friday issued in England and India formally annexing Burmah to the British Empire. England cedes to China part of Upper Burmah, in order to make the Chinese and Indian frontiers contiguous.

General Prendergast, commander of the British expedition in Burmah, has arrived with his forces at Bhamo, 150 miles north of Mandalay, and met with a cordial reception from the Burmese and Chinese merchants. A strong British force will garrison Bhamo.

The minor Shan States have formed a coalition and are threatening to occupy Upper Burmah. Six hundred British troops have been despatched to that part of the country to suppress any such movement.

A report was current in London on Sunday that a number of fanatical followers of the Mahdi had penetrated the British lines at Suakim and attacked the soldiers in the streets of the town. It is stated that furious fighting ensued, in which a number of the English were killed or wounded. The Government, it is said, has suppressed the report of the affair, of which no further particulars have transpired.

British men-of-war have been ordered to blockade the coast of Egypt from Massowah to Suez in order to prevent the importation of arms and ammunition into the Sudan for the Arab rebels.

A despatch from Koyeh, on Wednesday, says: "Lieutenant-General Stephenson, commander of the British forces in Egypt, who recently arrived here with large reinforcements, attacked the rebels who had been menacing the garrison for several weeks. A three hours' fight ensued, resulting in the British troops capturing a village near Koyeh. The rebels were completely routed. The cavalry pursued the enemy. Two guns and twenty banners were captured. The English lost one officer killed and twenty-one men wounded. The Egyptian allies of the British lost six killed and thirteen wounded." The Arabs are estimated to have lost 600 men. They are reported to be flying in the direction of Dongola.

Henry M. Stanley does not believe that Bishop Hannington, the missionary seized by the King of Mombasa, in central Africa, has been put to death. The chief danger, he says, lies in the ambition of the whites.

The Walt Whitman fund in London amounts to £115.

The twenty-fifth anniversary of the accession of Emperor William to the throne of Prussia was celebrated quietly in Berlin on Sunday. The Emperor held a reception, which was attended by all the foreign ambassadors and diplomats in the city. In his conversations with the foreign representatives the Emperor avoided making political allusions. The Emperor gave an especially warm welcome to Prince Bismarck and Count von Moltke, and to General Viscount Wolseley, the representative of Queen Victoria. The Emperor stood throughout the reception. The city was gayly decorated with bunting during the day, and was illuminated in the evening.

Arrangements are in progress for a meeting of the Emperor of Germany, the Emperor of Austria, and the Czar during the manœuvres of the Austrian army in Galicia the coming summer.

The death is announced of Professor Johannes Minckwitz, the historian and poet. Professor Minckwitz was born in 1812 and had been Professor at the Leipzig University since 1861. He wrote a text-book on German versification, of which six editions have appeared. He was a well-known translator, wrote some original poetry, and edited the literary remains of Platen.

There is a wide breach between M. Brisson and President Grévy. It is rumored that the former has written to the latter refusing to lend himself any longer to a combination the object of which is to impose upon him lasting discredit. M. de Freycinet has not yet succeeded in forming a new ministry, but from present appearances it will contain most of the members of the Brisson Ministry. He has secured the support of the Radicals for his programme.

The treaty of peace between France and Madagascar, it is reported, cedes territory to France, surrenders the northwest ports which France originally claimed, and gives the French Government supremacy over the foreign relations of Madagascar.

Pasteur has undertaken at his own cost to cure eleven people who have been bitten by a mad wolf in western Russia.

An agreement has been arrived at between Madjid Pasha, the special envoy of Turkey, and Prince Alexander respecting the union of Bulgaria and Eastern Rumelia. It has received the concurrence of the Powers.

The Balkan Conference at Constantinople has been abandoned, Russia refusing to guarantee the independence of the union of Bulgaria and Eastern Rumelia.

A band of Spanish Republican revolutionists made an attempt on Friday to destroy a railway bridge in the Sierra Morena Mountains. Five members of the band were arrested.

Orangemen and Irishmen have resumed hostilities in Conception Bay, Newfoundland. An Orange mob recently attacked two of the released Riverhead prisoners at Courages Beach, wounding them fatally. There is great excitement in Harbor Grace, and a riot is anticipated.

At Matamoras, Mexico, on Saturday, the defeated candidate for Mayor, Torres, took possession of the town with a mob of supporters, and prevented the candidate who had been declared elected by the State Congress from taking his office. In the afternoon the mob fired on the Chief of Police. The city is still without any legal government.

REASONS TO BE THANKFUL.

THERE is hardly any good Republican who voted for Blaine in 1884, who may not do something for his own political education by giving a portion of whatever time he sets apart for meditation at the beginning of the new year to the consideration of the fears about his country from which the experience of 1885 has delivered him. There were intelligent men—we knew many of them ourselves personally—who thought one year ago that the election of a Democrat to the Presidency would produce some terrible financial disaster so great as to threaten social order. We can recall one wealthy and still active and prominent Republican who predicted with much solemnity in November, 1884, that in one year from that date workingmen would, in the bitterness of their suffering, be knocking down and robbing the well-to-do in the streets of this city, without interference from the police. We know of another who, in a fit of mingled rage and despair, offered to sell his securities at fifty cents on the dollar.

All through the country districts, particularly in New England, there rested on the souls of Republican men, and particularly on the souls of Republican women, the shadow of a great fear, with which the Republican orators and journalists had for many years filled the air. How deep this shadow was, may be estimated from the fact that, in spite of the thorough knowledge of the machinery of their own government possessed by Republicans, vast numbers of them were thoroughly persuaded that a Democratic President would, in some manner, suddenly lower the tariff and thus produce a commercial crisis. Many of them forgot the power of Congress over the tariff, and the absolute inability of the President to touch it, as completely as if they were Frenchmen or Turks, and had never read the Constitution. The old gentleman who predicted the street robberies, and the gentleman who offered to sell his property at half price, had in their mind's eye a general closing of the factories brought about by some mysterious move of a Democratic Administration, the exact nature of which they had probably never thought out for themselves. The bulk of the party was, in fact, in that most melancholy of all situations in which the citizen of a free democratic country can find himself—a situation in which he sees at every election all that he holds dear put in imminent peril, in which the question is not which of two parties will best administer the Government, but whether the Government itself will last more than three months.

The result was that Republicans went to the polls and mounted the stump in the alarmed, if not desperate and reckless, frame of mind of men who feel that they are on the eve of a battle which will dispose of both life and fortune. A long succession of political contests conducted under such conditions would of course in the end have proved fatal to constitutional government. Men long tormented by such fears finally become ready for any refuge from them—even despotism itself. The man who firmly believes that only one of the two parties into which his fellow-citizens are divided can be safely intrusted with the Government, is really half ready for some change which will make popular elections an idle form. The deliverance of the country from this hideous nightmare during the past year is, we do not hesitate to say, a blessing only second in importance to the suppression of the rebellion, and hardly less necessary to the safety, honor, and welfare of the nation. For it all Americans, of all parties, ought at the opening of the new year to be profoundly thankful. It means at last real peace and real security.

Only one degree less valuable is the deliverance from the Southern bugbear, which also the past year has witnessed. Nothing but actual experiment would have sufficed to destroy the old tradition of the slavery period that the Southern people had interests different from or opposed to those of the North. There was in the Republican party a widespread belief that if they got into power, or if a President were elected by means of their votes, they would in some manner, which (as with regard to the power of the President over the tariff) few examined seriously for themselves, take immense sums of money out of the Treasury—one estimate of the amount was $3,000,000,000—and divide it among themselves, partly as compensation for the emancipated slaves and partly as compensation for other damage sustained during the war. How they would get hold of this money, how they would persuade people to lend it to the United States, if it were not to be secured by taxation, and how they would manage to have the taxation borne by the North exclusively and not by the South, was never explained, and probably few people ever asked themselves. The phrase, "the Confederacy again in the saddle," was in fact considered a sufficient answer to all cynical demands for minute particulars.

Moreover, although it was the pride and boast of the Republican party that the war had destroyed slavery, and although it was a cardinal article in the Republican creed that it was slavery which made the South hostile to the Union, nevertheless until last year the fact that slavery was really dead was never thoroughly brought home to the minds of the voters. Very much like the man who still feels pains in the leg he has lost by amputation, the party still felt the pangs of the old South in their bones, and nothing but a Democratic triumph would ever have relieved them. In the imagination of multitudes, the Yanceys, the Rhetts, the Brookses, and all the other fire-eaters were still brandishing their plantation whips, and preaching the degradation of labor, and threatening dissolution for the sake of the peculiar institution. Cleveland's election may be said to have banished all these phantoms from the Northern brain. There is no sect of Republicans so strict that one cannot raise a smile in it by speaking of "rebel claims," or produce silence and a little shamefaced melancholy by asking, "How is business?" or what Cleveland is going to do with the tariff. In short, the country is entering on 1886 with a freedom from care and anxiety and dismal forebodings such as it has not known since the agitation against slavery began; and this great salvation we owe—so mysterious are the ways of Providence—to the very recklessness with which the Republican party defended itself. In nominating Blaine it took counsel of no thing but its fears, and yet the very badness of the candidate at last has brought it peace.

NEWSPAPER LYING.

THE President's somewhat vehement letter about newspaper lying contains only one inaccuracy, and that is in saying that "there never was a time when newspaper lying was so general and so mean as at present." We think on the whole there is less just now than there has been for twenty-five years. The lying in the late canvass was, of course, tremendous, owing to the character of the Republican candidate. It was not possible to save him or defend him without a woful disregard of truth. But this was an exceptional period. For many years we think there has been a tendency to improvement. Twenty years ago there were editors who were rather proud of lying if they made money by it. The number of these is much reduced. Some of them are dead, and others have turned over a new leaf, and have become more truthful as they have grown older.

But the lying of the press which the President denounces must exist as long as there is a strong public demand for it; and that there is a strong public demand for it nobody can deny. In the first place, the public itself lies a good deal, or, if that be too strong a word, tells a great many stories that are not true. One often hears the newspapers denounced for their inaccuracy by people who are themselves guilty of inaccuracy almost every time they open their mouths to narrate anything. The way "things get wrong in the newspapers" is in fact simply a repetition of the way they get wrong in the mouths of nearly every one who retails the gossip of the day. The stories one hears at dinner-tables and "at the Windsor," and in brokers' offices, and in clubs, about things of which the story-teller has not personal knowledge, are distorted, exaggerated, embellished, docked, or lengthened, just as they are in the most reckless newspapers. In fact, human nature and not editorial or "reportorial" nature, is at the bottom of most newspaper inaccuracy, although it is freely denounced by persons who themselves cannot give a straight account of anything outside their own business

Moreover, there is in the worst newspaper lying—that is, lying about the private lives and character of individuals—so much money that it is almost asking too much of newspaper proprietors to ask them to refuse to indulge in it. One of the most melancholy social phenomena of the day is the appetite of a large portion of the community for odds and ends of gossip, no matter how dirty or how ghastly. The venders of it find that it does not, as far as the returns are concerned, make the slightest difference whether it is true or false. In fact, they find that corrections or contradictions of amusing or thrilling stories only bore their readers, and therefore they do not make them. The more of such stuff a journal publishes the "newsier" it is considered. This is, in fact, so much the case that the word "news" has ceased in the journalistic vocabulary to connote truthfulness. It means simply something which, no matter how big a lie it may be, the reader has not seen before, and which is likely to entertain him for two or three

minutes. The condition of mental vacuity and vapidity, not to say imbecility, to which a very large portion of the youth of the great cities is being reduced by dawdling over this stuff every day, as their only intellectual food, is something which moralists may well contemplate with concern, for the appetite is stimulated by the food. The more of it a man swallows the more he wants and the less interested he becomes in the serious things of life, in the real affairs of the nation, in the great events of the day, in the doings and sayings of leading men, and the progress of great movements, and the ups and downs of his own race. A person who spends twenty minutes of his morning reading a minute account of the suicide of a drunken washerwoman, without caring in the least whether it ever occurred, and greatly enjoys it, is in no mood, even if he had any time left, for the discussion of any topic, no matter how grave, which does not touch his bank account.

It must be remembered, too, that nothing does more to encourage and promote the habit of mendacity in the press than our system of party warfare. "Loyalty to party," as it is called, is so strong among us that most newspapers have, in order to live, to make devotion to the party one of their chief features, and it is melancholy but true, that there is no party which will tolerate a truthful "organ." An Organ may be allowed to avoid lying for its own side, but this is as far in the direction of the veracities as it is ever allowed to go. Truth-telling about the other side is never permitted. It is essential, in order to keep its place, and get the party advertising, and be circulated by the Committee, that it should at least suppress all news which seems likely to reflect credit on the other party, or, if it publishes it, comment on it in such a manner as to make it seem false or discreditable. A party editor may not be required to go further than this, and invent lies of his own, but if he does it of his own accord, he certainly does not suffer in the eyes of the managers, many of whom find it as difficult to see how to get along without lies as to get along without spoils.

On the whole, therefore, we think the President would have been more just and accurate if he had said that there never was a time when the demand for lies was greater than it is now, and when more money and fame could be got by manufacturing and circulating them, and when the market for trivial and minute lying about accidents and offences was more buoyant, and when discovery and exposure damaged a newspaper liar less in the eyes of his customers.

THE INDIANS' LAST STAND.

THE person unfamiliar with the history of the North American Indians who reads Mrs. Jackson's 'Ramona' will be very apt to conclude that the writer's descriptions of the terrible wrongs to which her Indian characters are subjected are the fanciful pictures of a novelist. If he follows the same writer through the pages of her purely historical work, 'A Century of Dishonor,' he will be forced to confess that the actual wrongs to which tribe after tribe has been subjected by the Government of the United States have been quite as terrible as any that the novelist describes; but he will naturally comfort himself with the reflection that, unjust as has been our course in the past, we have, under the influence of Quaker Commissioners and a more general interest in the subject, formed an Indian policy that is founded on right and justice, and that when we punish Indians, they are not those who are accepting in good faith the means to become civilized that the Government offers them, but only murderous wretches who can be quieted in no way but by extermination.

But even this last position the observer will have to abandon after reading the latest report of the Interior Department, in which he will learn of Utes compelled to go to the mountains for game (because their agent had not rations enough for them to keep them alive and their reservation had been denuded of wild animals), and of their being attacked there without provocation by whites, their men, women, and children being shot down; of the "pitiable" condition of the Pueblos under white men's legislation; of the manner in which Indian tribes, nominally under the care of the Government, are left to the mercy of rapacious cattle-men in making pretended leases of their lands, the very agents of the Government, who are supposed to be the Indians' guardians, "sharing in the profits of these speculative transactions"; and of railroads running through lands to which the Indians have exclusive rights, "without having paid a penny to the Indians as compensation therefor." Finally, if the comforting thought be entertained that, with the present aroused public opinion, measures are certain to be taken to protect the Indian in his rights hereafter, it is only necessary to examine some of the bills already introduced in the present Congress to find out how delusive is even this last hope.

The principal part of the public domain set apart for the Indians is that which is appropriately known as Indian Territory. It comprises only about one-forty-fourth part of the land of this nation—surely a small enough part to assign to the remnant of that people who once possessed the whole. When the Indian Territory was selected as a place for a union of tribes, it was so far in the distant West that it seemed to be out of the way of the advancing civilization of the present century. We can give to the tyrannical power which forced the Cherokees away from their hereditary homes in Georgia at least this credit, that it believed that the new home selected west of the Mississippi was safe from the white man's greed. The mistake made was due simply to an inability to anticipate the filling up of the far West under the influence of mining attractions, railroad development, and the pressure of immigration. Already, with the century incomplete, the white man has gone beyond this new stopping-place of the Indian, and is demanding that "the requirements of civilization" be complied with as of old.

How it is proposed that this shall be done Senator Van Wyck, of Nebraska, has set forth in a bill which he has made haste to introduce. This bill, in brief, proposes to set up a Territorial government over the whole of Indian Territory, with a Governor, Territorial Legislature, etc., and to open formally to settlement by the whites the lands ceded to the United States by the Creeks and Seminoles in 1866 and the Cherokee strip, which have come to be known as Oklahoma. There is a sop to justice in the bill in the declaration that nothing in it shall be construed as impairing the rights of the Indians under the laws and treaties of the United States; but this would be meaningless verbiage if the bill became a law. Its practical result would be to turn over to white settlers land in the Indian Territory which the Government of the United States has no right so to dispose of; to wheedle the least intelligent tribes into selling other lands for a like purpose; and, by thus mixing up the white and red races, to cause that inevitable degradation of the latter which always follows such a union.

Secretary Lamar, in his very honorable and intelligent discussion of this subject, says: "Movements of population eastward and northward and southward have gone on with unprecedented rapidity, until every reservation is closed in and pressed upon by colonies of settlers, miners, ranchers, and traders. The practice of moving the Indian to more distant reservations can be continued no longer. He must make his final stand for existence where he is now. Unless he can adapt himself to the necessities of these new conditions, his extinction will be sure and swift." That he is adapting himself to such conditions in the Indian Territory, witness the rapid civilization of the Cherokees, who are again appealing to the nation to save them from another robbery; that he will never adapt himself to such conditions when brought side by side with the whites, witness the degradation of the Onondagas in this enlightened State of New York.

There is but one policy which this Government can adopt in regard to the Indian Territory consistently with honor and justice: that is, to hold it intact as the dwelling place of Indian tribes. "Keeping the Indian reservations from the settlements of white men," says Secretary Lamar, "is a policy which, in my opinion, should be more rigidly enforced." If that policy is to be the keynote of the present Administration, the theft from these Indians of their last possession by means of such a measure as Senator Van Wyck's will be at least postponed until the inauguration of a new Executive. The argument that the reservations in the Indian Territory are larger than the tribes on them need, furnishes no excuse for giving any part of them to the whites. The Federal Government holds them as a trustee for the Indians; and it will be a hundred fold better to let some acres remain uncultivated and unoccupied rather than that all shall be given over to the rapacity of white "boomers." With the increasing pressure of white settlers on the scattered reservations outside of the Indian Territory, it is fortunate that there is room within its boundaries for those whom "civillzation" is certain to displace at no distant period.

THE MODERN LANGUAGE ASSOCIATION.

BOSTON, January 4, 1886.

THE third annual meeting of the Modern Language Association of America was held here on December 29 and 30. The Association has a large and enthusiastic membership, but many of the leading colleges and scientific schools are still unrepresented at its meetings. In this respect it

fairly reproduces the prevailing interest in scientific and linguistic research. The papers presented covered a wide field, embracing the results of special investigations, methods of instruction, and the place of the modern languages in modern culture and in university education. With its continued existence the Association has defined more nearly its own aims. The broad domain presented by the French and Spanish languages, which still survive in this country, and the study of local dialects which is so important from an historical standpoint, afford an ample field for original research. At the earlier meetings the existence of the society was threatened by numerous representatives of schools and of fanciful methods of instruction, each of whom sought to give prominence to his theories, and this was followed by a warfare on the classics and classical culture. These two tendencies have happily disappeared, and the recognition of the value of the various elements in modern culture has been fully established. It remains, however, as a part of the future work of the Association, to secure a fuller perception of the necessity of instruction in modern languages in the smaller colleges, and their official recognition in the instruction of the secondary schools.

The meeting was opened by an elaborate paper on the "Place of Modern Languages in American Colleges," accompanied by a tabular statement of the amount of instruction given in French and German in the leading colleges, the requirements in those languages for admission, and the order of their study. It was shown that the smallest amount of instruction given in any college was eight per cent. of the entire curriculum, while in the larger colleges, such as Harvard, Cornell, Michigan, and Toronto Universities, a student might devote fifty-six per cent. of his entire course to French and German literatures. A marked advance was chronicled in the last few years, especially in the historical study of these languages. The excellent work done in the Canadian universities was commended. The paper, while disclaiming any purpose to discuss the value which should attach to the degree of Bachelor of Arts, mentioned incidentally that Dalhousie College, the Johns Hopkins University, the University of Oregon, Randolph-Macon College, South Carolina College, and Swarthmore College confer the degree of B. A. without any knowledge of Greek. Tulane University goes further and confers the degree for a commercial course and for one in the mechanic arts. Harvard University and the University of Toronto require an entrance examination in Greek; the Johns Hopkins University permits French and German to be substituted for Greek as a requirement for admission; nearly half the colleges present a course in philosophy for which the degree of Ph. B. is given, or an equivalent course in letters with the degree of B. L., in which Latin is required, and French or German substituted for Greek for admission.

A multiplicity of degrees was characterized as a curse of our educational system, and a reduction of the number of degrees and a unifying of their value were strongly urged as necessary to rescue our degree system from merited contempt. The paper insisted upon the necessity and wisdom of introducing thorough instruction in French and German in all our secondary schools, where there is now a waste of time and dissipation of interest by teaching superficially a perplexing variety of subjects which might better be pursued later. A mastery of the elementary subjects required for admission to college is not now attained. It is the law of educational history that the higher demands always condition and give direction to the lower, and the colleges should unite to elevate and give character to the instruction in all high schools and academies. Modern languages should be required for admission, both because they can be acquired better in early life, and because, if begun later, adequate time is not afforded to enable a student to obtain a comprehensive knowledge of their literature. The study of English upon the historical method was recommended, and in this and in later papers it was urged that English is more inadequately taught in the public schools than either French or German.

Next to promoting the interests of the study of the modern languages in the colleges and secondary schools, the work of the Association lies in original investigation. Several valuable papers of this character were presented. One of the most interesting was upon the "French Language in Louisiana, and the Negro-French Dialect," which contained a list of words, idioms, and grammar. The Creole French remained pure, as the youth were educated in France; French teachers and priests contributed to preserve its character, the services of the Catholic Church especially being an important element. The Acadian French of the Teche district has suffered manifold mutilation of forms. In the discussion which followed, the French of this region was said to have been in part Germanized from the presence of a German colony in the vicinity, and the word Teche was said to be a corrupt form for *Deutsch*. Mr. Cable's French, which he puts into the mouth of educated Creoles, was called "an absurd, contradictory, and impossible jargon." The French of the region of Acadia, in Nova Scotia, and on the St. Lawrence, was pronounced remarkably pure, although exhibiting the features of the original French language of the period of colonization.

Two other papers of this character deserve mention, viz.: upon the "Collective Singular in Spanish," a use ignored in most French and Romance grammars; and "Remarks on the Conjugation in the Wallonian Dialect." A paper upon "The Place of English in the College Curriculum" was a vigorous plea for the scientific study of English, and for a larger recognition of its rights in college instruction. A paper on "Modern Language Study in Ontario" gave a valuable résumé of the system of education in Canada, and the successive steps by which the study of French and German had advanced in the public schools. Other papers, pedagogical in character, were presented upon "College Instruction in Modern Languages: What Should Be Taught?" "On the Use of English in Teaching Modern Languages," "Requirements in English for Admission to College," and "German Classics as a Means of Education." One of the best papers was on the "Real-gymnasium Question in Germany," in which an attack was made on the famous address of Professor Hoffmann. It presented forcibly the discussion in Germany which followed the "Berlin" report.

On the whole, the papers presented at this session were a distinct advance. The transactions of the last two meetings will be issued in a single volume. A congratulatory message was received and answered from the section of the Association of German Philologists and Schoolmen which is devoted to the modern languages.

THE IRISH ELECTIONS AND THE STRUGGLE IN ULSTER.

LONDON, December 22, 1885.

THE elections in Ireland have been not only the most dramatically interesting of all the recent contests, but the most momentous in their ultimate political results. Any one who had watched the tendency of events in that country might have foreseen them. Many English observers did foresee them. But they have struck the mass of Englishmen with a surprise which has not yet realized all they import.

When the last Parliament ended, Ireland was represented in the Imperial Parliament by about forty-seven Parnellites; nearly thirty Gladstonians, twenty of whom were moderate Home Rulers and the rest regular Liberals from Ulster; and twenty-five Tories. Now there are eighty-five Parnellites, eighteen Tories, and not a single Liberal. If we look at the geographical distribution of these members, we find that the Parnellites hold all the seats in Leinster, Munster, and Connaught (except the two for Dublin University), and in the Ulster counties of Donegal, Fermanagh, Cavan, and Monaghan. They have thus, while extinguishing the Liberals, driven the Tories into the northeast corner of the island. Of the seats in the three Roman Catholic provinces, twenty went to them unopposed. In the remainder, candidates, sometimes Tory, sometimes Liberal, were put forward by a recently-formed association of persons zealous for the British connection, called the Irish Loyal and Patriotic Union. But these candidates obtained in nearly every instance a very small fraction of the vote cast. In West Clare, for instance, while the Parnellites had 6,763 votes, the Loyalists had but 289; in North Cork the numbers were 4,902, against 102; in South Mayo 4,900, against 75; in East Kerry 3,069, against 30. In fact, the only constituencies outside Ulster in which the Loyalists made a tolerable fight were in the divisions of Dublin County and Dublin City. These numbers reveal such overwhelming Parnellite strength that many people blame the Union for having attempted such contests. They allege that their object was partly to put the Nationalists to expense, partly to get the case against legislative independence put fairly before the people; and argue that to have allowed seats to go uncontested would have been as damaging as to poll even the wretched minorities they have secured.

It is worth while to examine more closely the fortunes of Ulster, a region specially interesting, because its Protestant population will form one of the difficulties in the way of granting Mr. Parnell's demands. I have already observed that four out of her nine counties have been captured by the Nationalists. They are counties in which the Roman Catholic population largely predominates, and in Ireland religion has again become (except in the landlord class) an unfailing guide to political sentiment; and they are Roman Catholic because they lie furthest from that Scottish coast whence came the Protestant colonists of Ulster in the seventeenth century. In four other counties the Parnellites have effected a lodgment, capturing one seat out of the two in Derry, one out of three in Armagh, three out of four in Tyrone, one out of four in Down. Only Antrim remains untouched, while of the total thirty-one seats they obtained all but the half—fifteen against sixteen. Seen by the light, therefore, of this election, Protestant and loyal Ulster practically shrinks into the five northeastern counties, while even of these one, Tyrone, is three-fourths Nationalist. Of all their successes in the general election, this is the one which has given the Parnellites most pleasure. Ulster has been the crook in their lot, the home of a sturdy race who hated and defied them. Whenever they claimed to represent the Irish nation, Englishmen threw Ulster in their teeth, and asked what the Protestants of that province, energetic, industrious, pugnacious, would say to a repeal of the Union. In winning half Ulster, they therefore deem themselves to have taken a vast step toward the subjugation of the whole island.

How, it may be asked, has it happened that the sixteen seats which the Loyalist party has retained in Ulster have all been gained by Tories? Eleven Liberals ran, and every one of them was

beaten—a strange result, considering that it was Mr. Gladstone who passed the Land Act of 1881 which so greatly bettered the position of the tenant farmers. The causes are curious and deserve to be put on record. In the five Protestant and semi-Protestant counties of Ulster there are three parties nearly equal in numbers to one another: the Liberals, who are almost wholly Presbyterians; the Tories, who are either Episcopalians or Orange Presbyterians; and the Roman Catholics. In every constituency, except, perhaps, one or two divisions of Belfast, where Toryism is very strong, any two of these parties are numerous enough to outvote the third. At all previous general elections the struggle has been between the Liberals and the Tories, and the Roman Catholics have usually voted with the Liberals. This adhesion, while it gave the Liberals a temporary advantage, contributed to damage their candidates in the eyes of Protestants generally, because in Ulster religious animosities are still keen, and the ignorant Protestant looks on a Catholic as his natural enemy. This feeling, joined to the power of the Tory landlords over both their Protestant and their Catholic tenants, had given the Tories the large majority of Ulster seats up to 1880, when the Liberals, by the help of the Catholics, carried a good many. Then came the lowering of the electoral franchise, which in Ireland was a lowering in boroughs as well as counties. It might have been expected to work in favor of the Liberals, because the Episcopalians are chiefly in the richer classes. But it has worked against them. For while Liberalism is strong among the tenant farmers in the counties and the middle classes in the towns—persons who previously enjoyed the suffrage—the new voters, workingmen and agricultural laborers, are mostly either Presbyterian Orangemen or Roman Catholics. Now the Orangemen vote Tory, and the Roman Catholics obey with singular docility the bidding of their leaders—that is to say, of Mr. Parnell.

When the present general election approached, there was a prospect of a sort of triangular duel between the three parties, and the idea at once occurred to both the Protestant parties that, as their differences from each other were smaller than the differences which divided them from the Parnellite enemies of the Union, some sort of combination ought to be made whereby they should secure as many Ulster seats as possible for Loyalist candidates. One or two Liberal leaders talked of an arrangement with the Parnellites against the Tories, but the general Unionist and Protestant sentiment of the Liberal Presbyterians condemned such an alliance. Negotiations were accordingly instituted between the Tory and Liberal party managers. In two cases these negotiations led to a fair arrangement, which was honestly kept. The Liberals of North Tyrone promised to support the Tory candidate for that division if the Tories of East Donegal would support the Liberal in that division. Both observed their bargain, but while the Tory carried against a North Tyrone Parnellite by 400, the Liberal lost East Donegal to a Parnellite by 1,100. Elsewhere the Liberals were, as they say, jockeyed, or, at any rate, outmanœuvred by the Tories. In some places they ran candidates against a Tory, or against both a Tory and a Nationalist, and were beaten; in others, feeling their weakness, they left the Tory to fight the Nationalist and looked on. This happened especially in the two remarkable cases of Londonderry City and West Belfast. The Parnellites allege that the Liberal chiefs had promised that their voters should stand neutral in these constituencies, leaving Nationalists and Tories to fight it out. The Liberals deny the promise, and add that they could not control their voters, who are by no means so docile as the Parnellites. What is certain is that in these two boroughs the Parnellites attribute their defeat, in both cases by very narrow majorities, to the fact that some Liberals voted against them for the Tory candidate. This is probably true, and no one who knows the strong Protestant feeling of the Ulster Liberals will be surprised that many should have voted for a Tory rather than see the Parnellites make good their boast that they would capture seats in historic Londonderry and ultra-Protestant Belfast.

But the material point is that these contests determined the action of the Parnellites in the county constituencies, where the polling came on a later day. Already disposed to damage the Liberals in Ulster, as they were damaging them in England, resentment at their behavior in Londonderry and Belfast led the Nationalist chiefs to throw their voters everywhere on the Tory side. In Antrim, in North Down, in Londonderry County, the Catholics went for the Tories, and the Liberals were hopelessly routed. Another curious incident must be noted. In two divisions of Belfast there was a split in the Tory camp, and independent Orange candidates, representing the democratic working-class wing of the party, opposed the "regular" candidates brought forward by the hitherto ruling clique. The Tory strength was so great in these divisions that a Nationalist candidate had no chance. Accordingly, the Parnellites directed their men to vote for the Orange Democrats, as against both the regular Tories and the Liberals, and the surprising spectacle was witnessed of thousands of Roman Catholics casting their ballots for an Orange Grand Master (Mr. Cobain) in one division of Belfast, and in another for Mr. William Johnson, the most rabid Orange Protestant that even Ulster has produced, and who has won notoriety by nothing but his furious attacks on the Pope and the Catholic clergy. Such is the admirable discipline to which the Nationalist leaders have brought their army, even in a district where they are not supreme.

The impression produced by the elections on the Loyalist upper class in Dublin, and generally through the south and centre of Ireland, has been enormous. They are doing their best to minimize it to their own minds, and to the English, by declaring that the Nationalist League has skilfully organized itself so as to destroy freedom of voting. The enormous majorities recorded for Parnellite candidates are, it is declared, due simply to the coercion practised on the humbler class of voters by the Leaguers and the priests. Many have voted out of fear, many more have stayed away from the polls: the result is not to be regarded as an expression of the wish of the Irish people, but merely as a proof of the strength of the Parnellite organization, and so far as an additional reason for resisting, or even for suppressing it. Some of our journals and their Dublin correspondents, who do their best to misrepresent, no doubt quite honestly, Irish facts to English eyes, enjoy this kind of argument, and it is sometimes trotted out on English platforms. But it does not really blind the English. They perceive that a people, interrogated in the regular constitutional way, have returned, from four-fifths of the island, an all but unanimous answer, and they feel that they cannot, without far stronger evidence of intimidation than has yet been adduced, go behind that answer and deny its validity. They are therefore beginning to be much exercised in mind. Prima facie, the Irish seem to them entitled to have the self government they ask for. But would this self-government not land both Ireland and England in even greater difficulties than those of the *status quo?* While they ask this question, opinion in Dublin declares that nothing can well be worse than the *status quo.* All minds are unsettled, business almost suspended. There is a prospect of a general cessation of rent and a recrudescence of agrarian outrages. English government is beginning to be regarded, owing to the variations and vacillations of English parties, with something like contempt. The news, now generally believed though not formally authenticated, that Mr. Gladstone is prepared with a measure of home rule, has therefore startled Dublin less than England, for Dublin has begun to think all things possible. But it has startled Ulster most. For the respectable classes of Ulster, knowing and caring comparatively little about what passes in the rest of Ireland, have been living in what they now fear may turn out a fool's paradise of reliance on English sympathy. Y.

SARDOU'S "GEORGETTE."

PARIS, December 17, 1885.

YEAR after year I observe that French society abdicates in favor of the French stage. There are no *salons* left, but every night there are many theatres open. A new play by Dumas, by Sardou, by Pailleron, is a great event. There are still a few places where you can find a few discontented conservatives, a few dowagers, lamenting the wickedness of the time; but these modest meetings, to which only very few are admitted, where a new face always seems dangerous, do not recall the ancient *salons.* When society meets, it is only in great balls or routs, where you can shake hands, but exchange no words, and where you see your friends in the crowd of the anterooms or the staircases, while you are impatiently waiting for your carriage.

Society has lost its homogeneity, as well as its importance. The political parties are too much divided, and in each party there are coteries—what the English call "sets." The Élysée has its set, the Moderate Republicans have theirs; there are some Republican families, you might almost say dynasties, which keep their doors hermetically shut on the Radicals. In the world of finance, there are the *parvenus* and the *arrivés;* in the Faubourg St. Germain the fusion is not yet complete between the pure Legitimists and the Orleanists. It has become the fashion to remain as long as possible in the country, to stay during the hunting season in the châteaux (hunting has become as favorite a pleasure in France as it always has been in England). When people return to Paris they have, so to speak, no occupation; and then comes the time for the first representations. There is no good *première* without the presence of certain people. I have often asked myself what are the qualifications for the privilege of going to these *premières.* The press, of course, has many places; the great critics, such as Francisque Sarcey, of the *Temps,* are the lions of the occasion. On their judgment depends, in a great measure, the success of the play. But besides the critics and the journalists, there are many men of the world, gentlemen belonging to the fashionable clubs; there are the lions of the bourse, of the bank, of politics; and there are also many men and women who make a part of "Tout Paris" for no definite reason—familiar names, which come naturally to the pen of the persons who describe these *premières,* as they would describe a great race.

It is not unnatural that the dramatists should be very much afraid of this public of the *premières.* This public is thoroughly *blasé;* it is essentially frivolous; it has a very keen sense of the ridiculous; it is sometimes moved by a word, an attitude, an intonation; and it remains perfectly cold before scenes which are, in the writer's mind, the most pathetic. This public has a good and a bad influence. In my opinion, it has a good influence on the actors, as it will not bear anything false, pretentious, vulgar; it has a bad in-

fluence on the dramatists, because it inclines them constantly to look for new and extraordinary combinations of passions and of characters. One after the other our dramatists have brought on the stage types which were formerly excluded. Alexander Dumas gave the signal with the "Dame aux Camélias" and the "Demi-Monde." Sardou has within a few days brought out a new piece, which is called "Georgette," and it seems as if he had tried to walk in the footsteps of Dumas: he has brought before the public one of those social questions which inspire the eloquence and the wit of the author of "Les Idées de Madame Aubray" and so many other pieces of the same kind.

Georgette is, in my eyes, a type which ought to be banished from the stage. I can accept all sorts of passion, but the element of venality is one which I cannot accept easily. *Georgette* has been a dancer, she has sung in a music-hall, she has been notorious for the disorder of her life in Lyons and in Marseilles; she went under the name of the handsome Georgette. She has had a child by *M. de Cardillac*, one of her numerous lovers, an officer garrisoned in Marseilles. *Paula*, the child, is the heroine of the play. After her birth *Georgette*, the mother, is seized with a desire to accumulate wealth for the child, and to make a position for her. The courtesan is a good mother. This is not a great discovery in the field of morals: the 'Imitation of Christ' declares it in these admirable terms: "Something divine lingers in the most degraded being"; and it might say also: "There is something satanical left in the best of us."

Georgette, in order to make a good position for her daughter, had first to make one for herself. She continued her life of adventure, while *Paula* was young, then she got married in America, at Cincinnati, to a millionaire who left her his millions. With these millions she has bought an authentic and penniless old duke, *Lord Carlington*. We see her in the first act as *Lady Carlington*, a true duchess, devoted exclusively to her daugher *Paula*. You see at once what is going to happen. *Paula* is perfect, *Paula* is an angel, and she will inspire love in a gentleman. This gentleman will be ignorant of the past, he will not see in the *Duchess of Carlington* the circus-rider, he will allow himself to be led to the foot of the altar, till somebody comes who *knows*, and who informs his family of the true situation. And then we shall have to solve the problem, Can a gentleman marry the nice daughter of a courtesan?

Before going any further, I will say that I do not consider such a subject a moral or healthy subject. Let us suppose many things. Let us suppose that a *Georgette* can so completely transform herself that no eye can discover in her the slightest trace of her past degradation; that she can play the part of an honest woman to perfection. Let us suppose, also, that the world has become so wide, so enlarged, that her secret can be kept for years, and that she can enter the world with all the advantages of a perfect education and an irreproachable past. Let us suppose that there is no truth at all in the law of heredity, and there remains nothing in the daughter of the sin of the mother. It remains to be seen whether such a marriage as the marriage of the daughter of *Georgette* the courtesan, enriched by vice, with a gentleman, is one of those unions on which it is pleasant to look, and which seem to be made in heaven before they are made on earth. Such a marriage, if it did take place, would always appear something exceptional, fraught with danger, a perilous experiment. Why should we, then, examine such a case too closely? Why should the dramatist play with our best feelings and with our common sense? Why should he force us to go with him into a world of adventures, of shams, of lies? I am afraid it is because we want, nowadays, strong colors and brutal contrasts. We are not content with leaving virtue here and vice there; we bring them together, as a chemist brings together the acid and the base, and we do not care if the compound is an explosive.

Some secondary questions are raised in the play of "Georgette." She meets the gentleman who has known her in old times, and who exclaims at once, "*Georgette!*" She asks him to keep her secret. This gentleman, *M. Clavel de Chabreuil*, tells her, of course, that he will; but when he finds out that the *Duchess of Carlington* wishes her daughter to enter the family of his sister-in-law, he becomes embarrassed. He finds himself, like *Olivier de Jalin*, of the "Demi-Monde," between his intimate friend *Nanjac* and the *Baronne d'Ange*, and he behaves like *Olivier de Jalin*—he sacrifices the adventuress: he cannot, he will not, allow a marriage between *Paula* and young *Gontran*.

Sardou does not know how to treat such situations in the incisive manner of Alexandre Dumas. There is a scene between the young lover and *Clavel*, who has revealed the truth, before the lover's mother, which is painfully cold and sophistical. What do you think of a gentleman who says to his mother, "You will not accept *Paula* as a daughter-in-law, though one of our ancestors was the mistress of Henri IV., another was the mistress of Louis XV., and it is to this King that we owe our title"? "Ces choses-là," as the French say, "ne se disent pas"; and one would almost be inclined to say with *Bridoison*, in the "Mariage de Figaro": "Il y a des choses qu'il ne faut pas se dire à soi-même."

Of course, *Paula*, the perfect *Paula*, is totally ignorant of the past history of her mother; this loving, tender, devoted mother is in her eyes the ideal of perfection. But she cannot be kept in a fool's paradise for ever, and here we come to the master-scene of the drama—to the scene which will save the rest and console the spectator for the tedium, the triviality, the mediocrity of other parts. *Paula* begins by having a few doubts. There are things which she cannot explain to herself—the incertitude of her lover's family, the sudden coldness of its members. She becomes uneasy, she cross-examines a servant, and suddenly the light flashes on her eyes—a veil is torn. The actress who plays the part is very remarkable; she is Mademoiselle Brandès, a rising star. How intense is her despair, how noble at the same time! Her adoration is in an instant converted into horror. At this moment, *Clavel* comes—*Clavel*, who has betrayed her mother. She opens her heart to him, expresses her indignation, and then *Clavel* tells her that if she has herself such a high sentiment of duty, of honor, of all that is good, and honest, and virtuous, she owes it to whom? To this mother, who probably knew that the day would come when all the sentiments which she nursed in her child would turn against herself. The mother had prepared her own sacrifice; she had given all to her daughter, even the love which her daughter felt for her. She knew that the day would come when she would remain alone, and feel the weight of her own child's contempt. At this moment the mother enters; and *Paula*, moved by the words of *Clavel*, throws herself in her arms, and says simply, with many sobs, "My mother, my mother."

This is the great scene, the scene for which probably all the rest was written; and how does it all end? Sardou has not dared to accomplish the marriage. There is no end; the two mothers cannot agree, nor can they agree with their children; and while all is left in the air, and impossible conditions are made all round, a servant enters: "Dinner is served," and the curtain falls. You are free to imagine how time will amend the situation. Is *Paula* married by this time or is she not? You can give the solution yourself. Sardou does not distinctly give it, but he inclines to the negative. The drama of life has really no end, and the old rules of Aristotle were long ago despised and forgotten.

Correspondence.

REALISM AND IDEALISM.

To the Editor of The Nation:

Sir: The discussion on realism and idealism in the columns of the *Nation* has been a very interesting one, and Mr. Stillman's valuable contribution to it (No. 1070), in transferring the ground from literature to the plastic arts, tempts me into the field also.

There is so much mere word-juggling in discussions of this kind that Mr. Stillman's clear definition of realism and idealism respectively as work done from nature and work done from an inner conception, is of great service. I also accept his view that music is the most purely ideal of the arts, and that no "relation to the real" can be found in it. But when his reasoning carries him to the point of stating that "the more purely ideal a work of art is, the less it resembles nature," one is somewhat staggered. If he means this to apply to the plastic arts, how does he account for the fact that Pheidias, the greatest of idealists, attained a resemblance to the actual quality of *flesh* never equalled before or since in sculpture; or that the great Venetians impress one with the actual presence of a breathing, palpitating body in a way that the most realistic of Dutchmen cannot do? He says again:

"In the better epoch of Italian ideal painting and sculpture alike we do not find any study of the special individual head. . . . Giotto, for instance, is as free from any tendency to expression of transitory emotion as was a Greek sculptor of 450 B. C. Expression as a quality of art came in with the use of portraiture, and when art had become naturalistic to a certain extent, though not yet realistic."

The first question that occurs to one in reading this is, What does Mr. Stillman consider the "better epoch of Italian ideal painting and sculpture"? That of Giotto? But if the lack of expression and of individuality of head is to be the criterion of ideality, it would seem that one should go back to Cimabue, or further. Is it not true that the progress made by Giotto consisted in a return to nature and a closer study of the men about him, thus breaking away from the purely "ideal" types of the Byzantine artists? Is it not true that the succeeding artists were constantly approaching nearer and nearer to realistic truth until the culmination of Italian art in the sixteenth century; that the work of the "goldsmith school," sculptors and painters, which made possible the great ideal work of the Cinquecento, was preëminently portraiture? It would seem that there must be a flaw in Mr. Stillman's reasoning, and it seems to me that the key to his difficulty is in the term "naturalistic," which he does not define. What do we mean by a naturalistic school of art as opposed to an idealistic school or a realistic school? This is the question for which I should like to find an answer, and, if one could find it, I think the problem would be pretty nearly solved. My contribution to the desired solution is this.

The art of painting has two distinct sides: a purely ideal side, corresponding to music, and a purely realistic or imitative side. A work of absolute idealism would have to be confined to the mere *musical* arrangement of colors and lines, without any resemblance to natural objects. Such an arrangement might be very beautiful,

as in a Turkish rug, but surely we should not think it painting. On the contrary, a work of pure realism would be the literal imitation as closely as possible of natural objects, without any choice, arrangement, or composition. This we should recognize as painting, but it could not be called art. The instant the painter selects forms, balances colors, composes lines, he introduces a larger or smaller portion of idealism into his work, and becomes, in so far, an artist. The instant the artist introduces into his harmony of colors and lines the faintest reminiscence of any natural object whatever, he has put a certain portion of realism into his work, and is, in so far, a painter. The result is that we have in the art of painting these two elements constantly combined in constantly varying degrees; *pure* realism and *pure* idealism being almost impossible to find.

Now I believe that these two elements are equally necessary to the existence of the art, and that all progress in painting has been by a pendulum-like swing from one to the other. The art of the middle ages was very nearly pure idealism. The men of the Renaissance, in the joy of their rediscovery of nature, pushed art very far in the opposite direction. Then came the great schools of the sixteenth century, and particularly the school of Venice, and, profiting by all the knowledge of nature accumulated by the realists and adding to it themselves, they combined with it a profound idealism of their own and produced a *naturalistic* art, an art not less realistic or less ideal, but both *more* realistic and *more* ideal than that of their precursors. My definition of naturalism, then, is the reconciliation and presence in the same work of art in a high degree of the two elements, realism and idealism; and the highest degree of both qualities I believe to be characteristic of the greatest art, a perfect work being a work absolutely and thoroughly conceived by the imagination, no slightest detail being left to chance or the hazard of imitation, and yet a work in which every part so conceived should be carried out with an almost deceptive realism. Perhaps the nearest approach to such art which has ever existed is the best work of Titian.

If this argument be correct, it would follow that while it may be literally true that "the more *purely* ideal a work of art is, the less it resembles Nature," yet it is almost equally true that the more *highly* ideal a work of art is, the more it resembles Nature. KENYON COX.

NEW YORK, January 2, 1886.

A SILVER BASIS AND A BUSINESS BOOM.

TO THE EDITOR OF THE NATION:

SIR: One of your contemporaries declared last week, and has been quoted over the country, that if we fall to a silver basis it will make money more abundant and create a general boom, as in the case of the issue of a paper currency in the civil war.

Considering the proved facts regarding currency, it is difficult to understand what was in the writer's mind. Senator Beck's statement that it would be better for the country if a thief should steal 10,000,000 silver dollars and put them in circulation, than that they should be "hoarded" in the Treasury, is not more strange. That an abundance of money will not create a boom in trade, one would think sufficiently shown by the course of things the last year. It is apparent from that experience that a very large sum, even $100,000,000, could be imported into a country, and the only effect would be an advance in securities to the extent to which the money was invested. There would be no advance in general merchandise, as there would not necessarily be any increase of consumption.

But if $100,000,000 were taken from new mines of the average production, the sum represents the labor of about 200,000 men for a year, and this, when a new industry, added to the other industries, would create a demand sufficient to vivify the whole trade of the country. For such an additional industry, suddenly created, induces a general movement of men, bringing emigration, and also turning into active consumers the idle surplus of the population. As when the mines of California were discovered and thousands flocked to them, it was not the gold and silver added to the stock of the world that advanced prices of all commodities; it was the increased consumption, causing a demand so sudden and immense that it outran for a time all the hastened increase of production.

When a great war occurs, again a new, and also a very wasteful, consumption takes place. If the Government of the country issues paper money in quantity, as ours did, the mercantile prosperity that follows the demand produced by rapid and increased consumption is ascribed by many to the increased volume of currency. That does indeed, as in the case of new gold, and perhaps more quickly, increase the facilities of trading, but in itself is not the primal cause of the increased activity. It only oils the wheels.

Gold might pass out of the country in the ordinary course of trade not only without harm, but to advantage, even if to large amounts; because it would only go if too abundant for the wants of trade, and so a burden on it. But if any false position is forced upon the country, so that gold, the universal standard, is pushed unnaturally to a premium and then and therefore leaves the country, it leaves a vacuum behind it. It is not as if it were paid out for merchandise, and simply passed into new hands and combinations within the country. It goes, and whatever use it filled when here, the want of it for that use is felt, and everything in trade tightens.

Nor need any one suppose that because little gold circulates, its absence from the country altogether will not be felt. It does not circulate because our people prefer its representative in paper. But with the disappearance of gold, its representative will disappear also. Gold certificates will be collected of the Treasury, and the banks will be called upon for the stores which guarantee their issues and back their loans. The gold is the substance, the paper only the shadow, and with the substance goes the shadow. E. C.

December 30, 1885.

JEWS IN AMERICAN SOCIETY.

TO THE EDITOR OF THE NATION:

SIR: I have just read, in your issue of December 24, a letter headed "Jews in American Society," which contains an assertion that I know to be so utterly untrue that I feel compelled to ask for room in your columns to correct it. Your correspondent asks, "Do American ladies call on Jewish ladies and receive them at their houses? If they do I am not aware of it; on the contrary, I know that they do not, and would turn up their noses if they should meet them on terms of social equality." I see that this letter is dated in New York, and I frankly confess that I know nothing about New York society, but I do *know* that in Philadelphia, Baltimore, Richmond, Wilmington, Raleigh, and Savannah, Jewish families are received into the best society without a question, and I could mention numbers of cases where Christians of high social standing have married Jews. I have been told that in Charleston there always has been, and still is, a bitter social prejudice against the Jews, and an intimate friend of my own, a Jewess, once said to me that she would never live in Charleston on that account, for in her native place she associated with none but the best people. If your correspondent really wishes to know if American ladies visit and receive Jewish ladies, he can easily find out by making suitable inquiries in the cities I have mentioned. The names of the American ladies thus obtained will probably cause the noses of his fair friends to keep in their proper places whenever they meet a Jewish lady in future.

Yours respectfully, W. M.

BALTIMORE, December 28, 1885.

NEGRO PREJUDICE AT THE NORTH.

TO THE EDITOR OF THE NATION:

SIR: I value the *Nation* so highly that when any of its criticisms seem to me unjust, they are read with corresponding regret. A case of this kind occurred in the last issue. In your criticism of the treatment received by the Jubilee Singers from the hotel-keepers of Troy, you censure the landlords.

I feel as keenly as no doubt you do the insult to which these ladies and gentlemen of the Jubilee Singers were subjected; but the landlords are not the guilty parties. It is the people of the North, the guests of the hotels. They say very plainly to the landlord that unless negroes are refused the courtesies of the house, they will go elsewhere. With the landlord it is a question of business, not of personal feeling; and from the nature of his business, he is bound to make himself and his house agreeable to his patrons. If, therefore, parties present themselves who for any reason are decidedly objectionable to his guests, and will cause them to withdraw their patronage and ruin his business, there are sufficient reasons why he should close his doors upon the Jubilee Singers or anybody else: first, he should not be asked to injure his business, nor censured if he so conduct it that he succeeds rather than fails; second, his guests, as guests, have rights which he as a landlord is bound to respect.

In the instance under consideration, parties presented themselves to the landlords who, for reasons—extremely unjust, abominably unjust, the writer thinks—were yet decidedly objectionable to the guests of the hotels. The landlords were bound by common courtesy to close their doors—their alternative, to get out of a business that demands of them such unjust distinctions.

It is the unchristian spirit of the people of the North that compromises the landlord, and shuts out from society ladies and gentlemen whose sole misfortune is a black skin; and upon us who make the society of the North the censure should fall.

In fairness, and that a little light may be thrown upon some of the dark spots on our escutcheon, I would ask you to give this brief article a place in your columns.

Yours truly, SELAH HOWELL.

"INGLESIDE," HARVARD, MASS., January 2, 1886.

MOVABILITY OF STUDENTS.

TO THE EDITOR OF THE NATION:

SIR: A movement for exchanging professors in American colleges has recently been set on foot. Much would undoubtedly be gained by such an arrangement. Not only would the students, in a far greater degree than now, be accustomed to independent judgment; but their views on any subject would be broadened, and their tolerance of other people's opinions would be increased by listening to lectures by different men of varying opinions. So far there is certainly much to be said for the interchange of professors. But this system, if brought to its full logical development, would necessitate a more or less continual

change of residence of the professors and their families, with all the concomitant change of social relations, which could not fail to react unpleasantly on the home life, although the variety might at first be very agreeable. A constant change might impede or even prevent the original researches of many professors.

But this same object, viz., the extension of the independent judgment of the students, might be furthered in a slightly different manner. When we cannot conveniently move the professors, why should we not move the students? The average student, having no family, might almost as well spend one year in New Haven, another in Cambridge, etc., as stay all the four years of his college course in one place, if he could only be enabled in any case to count the work done toward his degree. Such an interchange of students is successfully carried on in Germany at the present day. An intelligent and discreet coöperation of the different institutions would of course be necessary. But so it would if the professor-exchanging scheme were carried into complete execution. The whole matter will be greatly facilitated, and will indeed only be possible, through the progress in the elective system, which, after having obtained complete control of Harvard, is now slowly gaining ground in most if not all similar institutions.

JOHN DITLEY FREDERIKSEN, Jr.

BOSTON, December 20, 1885.

THE TARDY APPEARANCE OF THE AMERICAN POET.

TO THE EDITOR OF THE NATION:

SIR: Mr. Stedman's introductory paper to his 'American Poets,' discussing the causes of the slow rise of poetry in America, is stimulating and suggestive. One in thinking of it, and calling to mind the conditions of other peoples, similar in history, becomes conscious of the existence of a possible law having much to do with the subject. The problem is not wholly new. The law, if such there be, seems elusive.

Do poets in exile or in prison sing as well? We recall Ovid, Tasso, and Hugo. The induction is narrow and scarcely germane. Has a Frenchman ever produced a poem out of France? What Spanish poet has arisen in the Spanish foreign colonies and countries? The one poet of Cuba is of African mothers, two or three degrees removed. What countryman of Camoens has sung in Brazil? What have Englishmen ever done out of England, save in the United States, and here, not only after they ceased to be Englishmen, but passed the natural time and then grew to be Americans? They deal well with Canadian, East Indian themes; but as Englishmen, not as Canadians, Indians, or Australians. Goldwin Smith and Edwin Arnold are Englishmen. A man born of American parentage may write of an American subject—or could once—and yet his book not be American. He must deal in American modes, use American utterance. This no man can assume, or yet wholly put off once he has grown to it or it has grown in him; it has become part of his unconscious self. Then he can write none but American books, no matter where educated or how cultured. Henry James is a notable instance of this.

This inner essential self seems a thing of slow growth. To change the essential Englishman to the inbred American took centuries—has but just been done, if it is yet accomplished. A race must have time to become indigenous, almost aboriginal, in essence, soul, and spirit, before the shy, elusive incitements to poetry, or to any high literary utterance, come to possess and inform it. They come from a given soil, of seed wind-sown, God knows when and how. The poetic germs seem the latest given, though native races first attempt their utterance. Poetic expression, quite essential, must also be given—at least its organs of speech; then a poet of some sort is possible, and not till then.

Given this law, poetry—any high form of literature—is not a colonial product of any people. That primitive peoples first use poetic forms makes nothing against the notion I venture here to suggest. I am sure the idea was in or near Mr. Stedman's mind. It may have seemed entitled to no place. The fact remains, in modern times, no colony and but one of the younger peoples has produced poetry—a literature. R.

WASHINGTON, D. C., January 3, 1886.

MITHRAISM.

TO THE EDITOR OF THE NATION:

SIR: In your "Notes" of this week the account of Mithraism, condensed from Orazio Marucchi, is somewhat incorrect. It was not "a form of Mazdeism founded by Zoroaster with the Zendavesta for its sacred book." Zoroaster's Mazdeism was pure Dualism. The worship of Mithra, or the Sun, like that of Anahita, or Water, was only introduced towards the end of the Achæmenian dynasty, when Mazdeism had been corrupted with Medic and Magian elements and Greek polytheism. The Zendavesta is what remains of the sacred books of the Mazdeans, but even the fragments which have reached us are of widely separated dates. The earlier Gathas, or hymns, attributed to Zoroaster, contain no allusions to Mithra or other subordinate gods, while in the later Yashts these are elevated almost to an equality with Ahura, or Hormazd. I should like to know what authority can be found for the conception that Mithra was a mediator between Hormazd and Ahriman, as I have never met with it.

Not less misleading is the assertion that "Mithraism became the great rival of Christianity." The rival of Christianity was not the Mithraic worship, but Manichæism—a very different faith, compounded by Manes of Buddhistic, Mazdean, and Christian elements. In it the Zoroastrian Dualism was profoundly modified and adapted to Jehovah and Satan, and nature-worship, such as Mithraism, became impossible, as the visible universe was the work of the Evil Principle. The savage death inflicted on Manes by Varahran I. and the extermination of his followers show the light in which the new faith was regarded by the Mazdeans. The most that can be said is, that the prevalence of the Mithraic worship in the Roman Empire facilitated the introduction of Manichæism.

It was perhaps natural that the early Christian writers, like Tertullian and Justin Martyr, should imagine that some of the Mithraic rites were borrowed from Christianity, but such influence as was exercised was rather in the opposite direction. What these writers regarded as an imitation of the Lord's Supper was the ancient Izeshne sacrifice, performed with the Draona or sacred cake, and the Homa-juice derived from the Vedic Soma sacrifice. This was followed by Manes; and the gradual modification of the Christian Eucharist from a substantial meal to the symbolical wafer and wine-and-water may reasonably be attributed to Manichæan example.

Very respectfully, H. C. L.

PHILADELPHIA, January 2, 1886.

Notes.

FROUDE'S new book of world travel, 'Oceana,' will be issued in this country by Chas. Scribner's Sons.

Macmillan & Co. make the tempting announcement of a new edition of the Writings of John Morley in eight monthly volumes, uniform with the Eversley edition of Kingsley. 'Voltaire' will lead the series.

'Letters to a Daughter,' by Mrs. Helen E. Starrett, is in the press of Jansen, McClurg & Co., Chicago.

Ginn & Co. will have ready in March 'The Philosophy of Wealth: Economic Principles Newly Formulated,' by John B. Clark, Professor in Smith College.

An English edition of Mrs. Sarah K. Bolton's 'Poor Boys who Became Famous' will be brought out by Hodder & Stoughton.

Among the firstlings of the opening year the *New Princeton Review* may well receive priority of mention. The January number justifies the announcement of the prospectus that this revived periodical "will be neither a magazine nor a quarterly." Mr. Charles Dudley Warner's opening paper, on "Society in the New South," might have appeared in any of the popular magazines, where the two final sections of the "Criticisms, Notes, and Reviews" would be out of place, while quite adapted to the old ideal of a learned quarterly. Dr. McCosh discusses "What an American Philosophy Should Be"; Dr. C. H. Parkhurst sets forth "The Christian Conception of Property"; Professor Young enumerates in a very lucid manner the "Lunar Problems Now Under Debate"; Professor McMaster describes "A Free Press in the Middle Colonies," being a tribute to William Bradford, the printer. Mr. Cable's vein is manifest in the unsigned short story of the number, "Monsieur Motte." "The Political Situation," likewise of unacknowledged authorship, is a rambling and inconclusive discourse, in which the urgency of putting down the Mormons and having more to do (in a national, self-asserting way) with "abroad" seems to lie most heavily on the writer's mind. We cannot praise the typographical beauty of the *Review*.

We have received the first number of the *Church Magazine*, published monthly by L. R. Hamersley & Co., Philadelphia. Two articles are significant: "Shall We Have a Colored Clergy?" by the Rev. Calbraith B. Perry; and "Civil-Service Reform," by C. Stuart Patterson.

With the present month begins the Johns Hopkins *Modern Language Notes*, a monthly (for eight months of the year), edited by A. Marshall Elliott and his associates, James W. Bright, Julius Goebel, and Henry Alfred Todd. English, French, and German alone occupy the attention of the writers for Number 1, which gives promise of a very useful medium for brief interchange of ideas, reviews, etc.

Several literary masks have been laid aside and several literary incognitos pierced recently. 'At the Red Glove' is now published in London in the usual absurd three-volume form, without Mr. Reinhart's illustrations, and with the name of the author—Mrs. Macquoid. "Professor Hoffmann," the author of that admirable text-book 'Modern Magic,' has written a story for boys called 'Conjurer Dick; or, the Adventures of a Young Wizard,' on the title-page of which he has put also his real name, Angelo J. Lewis. "Sidney Luska," who wrote 'As it was Written,' is a young New Yorker, Mr. Henry Harland; and the anonymous author of a clever satire, 'That Very Mab,' is a young English poetess, Miss May Kendall.

It is common for American publishers to put English poems into the hands of American artists to illustrate as best they may; but a reversal of this international borrowing is as yet infrequent. Among the English holiday announcements, however, was one of 'Maud Muller,' illustrated with twenty-one full-page colored designs by Mr. George F. Carline.

Mr. John Coleman, an English actor, who re-

cently put forth his 'Recollections of Charles Reade,' is about to publish the 'Memoirs of Samuel Phelps: His Early Struggles and Romantic Adventures (related by himself), with Some Record of His Artistic Life and Work' (London: Remington: New York: Scribner & Welford).

Our esteemed monthly contemporary, *Reform*, whose place of publication is Norden, Germany, and whose aim is to promote a simpler German orthography, has its "Practical Department" and its "Theoretic Department." The first aims to be *unterhaltendes und belerendes*, or, as we should say, entertaining and instructive; and in this laudable endeavor it gives an example of "Quaker sly" (*schlauheit eines kwäkers*) in its issue for December 15, 1885. The opening sentence reads thus: "In der gegend fon Philadelphia, der buchhändlerstat Amerikas, trib schon seit langer zeit ein raüber sein wesen." In the recent debate over the Quaker City in these columns we believe no one went so far in its defence as to call it "the booksellers' city of America," as *Reform* does; but some were inclined to allow, with *Reform* and with the *Nation*, that "for a long time a robber had been carrying on his operations" in that vicinity. *Reform* says: "Jim-Joi war sein name"; but our own impression is that he was called Protection.

Numismatics is a dry study, although the filling up of a series of coins or the acquisition of some single rare one is of passionate interest to the collector. But the science attains a certain elevation when it gives occasion to such generalizations as in M. P. C. Roberts's memoir on the making of coins in Gaul. He traces the course of Gallic mintage, as it spread from the south coast, having its origin in the imitation of the bronze coins of Sicily and the silver coins of a Greco-Iberian colony. Everything shows that there were many places where coins were struck, a separate coinage apparently for every little tribe, and a diversity of systems of weights and measures that called loudly for a metric reform. With the Roman conquest came uniformity and centralization. Three mints only were left. But under Frankish rule the old Gallic practice returned. Not cities only, but even lesser places struck their own coins, on which the name of the magistrate and the coiner appear, and sometimes of the coiner alone. With the strengthening of the monarchy at Paris of course the right of free coinage was again withdrawn. Here is a systole and diastole, an alternate disintegration and integration, that might please Herbert Spencer, and bring numismatics into the rank of the philosophical sciences.

Switzerland has lately struggled with the liquor question. On the one hand it was seen that the passion for alcoholic drinks was gaining ground. The fortunes made by distillers, the increasing numbers of tavern keepers, the records of crime, all showed this clearly. On the other hand, the direct taxes, by which much of the cantonal revenue is raised, have reached their limits, and are always unpopular, and the Cantons cannot raise indirect taxes without the consent of the Federation. It was thought, therefore, to kill two birds with one stone, at once replenishing the treasury and reforming the morals of the people. The project was naturally warmly opposed. The distillers, seeing their gains menaced by the proposed tax on alcoholic drinks, sent their clerks through the country to distribute pamphlets and money, and on election day furnished free liquor to all who would promise them a vote. The Socialists did not disdain to seek popularity by raising the cry that the law which would leave untouched the rich man's wine would deprive the poor man of his glass of schnapps, his sole consolation in his troubles, and other such stuff. But they did not succeed. On the 25th of October the law was adopted by a vote of 229,619 against 157,035, and by a majority of 15 Cantons to 7. It remains to be seen what the effect will be. American experience shows that fighting rum is by no means the simple affair that it appears to the inexperienced reformer.

In opening the general meeting of the Rumanian Academy in 1884 King Carol proposed the publication of an 'Etymologicum Magnum Romaniæ,' to contain every word found in old documents, traces of which might soon be lost, and, as a beginning, he placed at the disposition of the Academy the sum of 6,000 francs. Pursuant to this proposition, the Academy drew up a careful scheme of work, and intrusted the editorship of the work to one of its members, Mr. B. Petriceicu-Hasdeu, member also of the Imperial Academy of Sciences of St. Petersburg, Professor of Comparative Philology in the University of Bucarest, Director-General of the State Archives, a man of great learning and accomplishments, and well known to all interested in Rumania. It is expected that the work will consist of ten volumes of four parts each. The first part, A–Acàt (acacia), has lately appeared, which contains also the general plan of the work. In the introduction the editor briefly discusses three questions: What is etymology? How can languages be mixed? In what does the physiognomy of a language consist? He leans very greatly toward the predominance of the Latin element in Rumanian, a fact specially worthy of attention, because he has a profound knowledge of the chief Slavic languages. Whatever may be our opinions as to Mr. Hasdeu's theories, there can be no question of his knowledge and ability, and this dictionary, which has long been a desideratum, will be gladly received by all who are interested in the Romance languages.

Prof. Dr. Emil Schürer, of the University of Giessen, has just issued one-half of a second edition of his excellent 'Lehrbuch der Neutestamentlichen Zeitgeschichte,' first published in 1874. It appears under a new and, considering that the "Zeitgeschichte" does not embrace the history of Syria, Egypt, or any other country adjoining the cradle of Christianity, a more appropriate title: 'Geschichte des Jüdischen Volkes im Zeitalter Jesu Christi' (Leipzig: "1886"). Of the new edition, which is almost a new work, the second part is published first, the author having begun his rewriting where he expected most of it to be needed, with the intention of connecting both parts, as in the original edition, in one volume, which eventually proved impossible. The volume issued is, in fact, larger by two hundred pages (of the same size) than the whole of the 'Lehrbuch.' The new publication is incomparably more valuable to scholars, being prodigiously rich in quotations and references, and often expatiating on topics which were originally barely alluded to; but it is less handy for common or school use, and also less readable, owing to the intrusion of much dry detail into the text. A mere glance over it reveals the vast extent of the antiquarian labor that has been performed in this field, by Jewish and Christian scholars, within the last decade, as well as of the wonderful scrupulousness with which Dr. Schürer has followed it all up. The chapters on Pharisees and Sadducees, Essenes, and similar subjects show how ready he was to modify his most elaborate pages in conformity to altered critical views.

"M.," who inquired through these columns about art instruction for women in Munich, is advised to correspond with Frau Prof. F. von Lietzen-Mayer, Schelling Strasse 8, I, Munich.

The address is desired of "M. E. W.," writer of a communication in the *Nation* of November 26, 1885, page 445.

—The January *Century* has a scientific novelty in the shape of some curious and lifelike illustrations of extinct "feathered forms," of which a large proportion are purely imaginary restorations from fossil remains, and, by exhibiting to the eye what the eye never saw, make evolution graphic in a peculiarly impressive way. The number is, however, rather more noticeable for the brief articles which are becoming a pronounced feature of this magazine. Doctor Waldstein, in a very few pages, insists on the necessity of education for the artist as well as the public, and characterizes in very plain words the artist class as one of imperfect intellectual culture and unfortunately clannish instincts; and, in fact, there is no department of work in which a native dexterity, a mere bent and talent, is so unhesitatingly looked on as a guarantee of success by itself alone. There is a happy audacity in his speaking of the opinion that "we are at heart a materialistic people" as "long ago exploded." His didactic views are sustained by another short article containing notes of five of Carolus Duran's talks to his pupils, in which the necessity of thinking out a picture, as well as of reproducing forms, is the main point dwelt upon. The most vigorous article—one which enchains attention—is Mr. Linton's recollections and brief portraits of four revolutionary Republicans whom he knew in his Chartist days. His memory of them is an emotion that really burns with the true fire of the spirit, and hence sets before us the life and sacrifice of Lamennais, Mazzini, Worcell, and Herzen with extraordinary power.

—General Pope gives the history of the second battle of Bull Run as the leading war paper. It was impossible for the principal actor in a campaign which has been the subject of fierce controversy, to tell its story without feeling, and it is evident that time has not greatly softened his judgment of the conduct of Gen. Fitz-John Porter on that field. General Pope's view of it, whether the reader has taken one side or the other, is a necessary part of the debate. It is given with directness and vigor. A part of it which all will welcome is the new light thrown upon the general purpose of Mr. Lincoln at the beginning of the campaign, the circumstances of General Halleck's call to the chief command of the national armies, and the extent to which General Pope himself was acting under explicit orders in accepting the risks of a general engagement with Lee. The maps are numerous, and tend greatly to give order and purpose to the movements from August 26th to the 30th. The other illustrations contain two or three of the invaluable views from photographs of the country, and good portraits of Halleck, Sigel, Schenck, Grover, Kearny, and Stevens. Mr. Goss's "Recollections of a Private" are incidents of the same field, pleasantly told, and mingled with some broader criticisms of the campaign.

—The January number of *Lippincott's* comes to us with the new features that have been already announced—a simple and attractive cover, admirable type, with the line running across the page, and a strengthened list of contributors. This change brings the magazine boldly out of the border-land of provincialism which has been its habitat, into the group of the national magazines. Both editor and publisher are to be congratulated on the advance, and for the taste and judgment displayed in its manner. Any author who cares for the way in which his work is given to the public will be pleased to have it appear in this dress, and he may be sure of good company for his name in the table of contents. The invigoration of the staff, it is to be observed, is mainly from foreign blood, though there is promise given of some home infusion in the future. The improvement in the quality of the serial fiction is especially noticeable, but criticism of it belongs elsewhere in our columns. Grant Al-

len and Bourke Marston are the only occasional English writers of note in this issue, both of their contributions being distinctly Anglican; and Louise Chandler Moulton is the sole representative of the better American magazinists. By the way, we remark that it is unintelligible that such an inanity as "L. A. W.'s" lines should find space for itself in a number otherwise so well edited. The most excellent piece, to our thinking, is a bundle of excerpts from a half-dozen old *Westminster* reviews of George Eliot's, of which the critical value is great. Tennyson, Kingsley, Browning, Dickens, Ruskin, and Arnold are dealt with; and after the thirty years of examination they have subsequently undergone, the penetrating and catholic character of George Eliot's remarks on them, written in the way of mere quarterly review, comes out with great force, and to the honor of the splendid reputation she has achieved since penning them. In the case of Tennyson only her words proved deficient; in the others they forecast future judgment.

—The publications of the Boston Public Library are nearly always of the greatest use in those libraries which lack the means, or the energy, or the interest in bibliographical progress, to follow its example. Owing to the generous policy of the authorities, also, the special catalogues are sold at cost price, so that, in the case of the just published new edition (the seventh) of the Fiction Catalogue, any one who writes for it gets a large octavo of 238 pages for 25 cents, postpaid. Considering the large number of books enumerated, and the great variety of taste to be provided for, the most noticeable thing about the catalogue is the omissions. These are plainly divisible into two classes, the first consisting of books of a supposed immoral tendency, such as those of Zola, "Ouida," and Rhoda Broughton; and the second embracing books of all degrees of merit, but having this in common, that they are reprinted in this country only in the form of the cheap "libraries." No other explanation than their typographic form occurs to us for the exclusion of such works as the recent novels of W. E. Norris, E. D. Gerard, R. Buchanan, R. C. Francillon, P. P. Jephson, W. Besant, etc. As to the moral test, the taste of the censor seems to have been somewhat capricious, as, for instance, Balzac's 'Eugénie Grandet' is excluded, while 'César Birotteau' is admitted; and if it is the young who are to be protected, a nice point is raised by the retention of 'Tom Jones' and the tabuing of Rhoda Broughton.

—As regards the technically bibliographical features, we find in the present edition a considerable advance on all former works of the kind, especially in giving the real authorship to anonymous and pseudonymous books, though even easily accessible sources of information have sometimes been neglected. Thus no notice is taken of the fact, made public a year and a half ago in the *Nation* and elsewhere, that 'The Picture in my Uncle's Dining-Room,' 'The Old M'sieu's Secret,' and 'Where Shall He Find Her?' are all translations of Mme. Reybaud's 'Mlle. de Malepeire.' Elsewhere we find two translations of one of Erckmann-Chatrian's stories catalogued as distinct works. As to pseudonyms, the practice is most inconsistent. There can be no better test of a cataloguer's habit of mind than the way he treats "George Eliot" and "George Sand." Both these ladies were and are known by their pseudonyms only, not merely on their title-pages, but in every aspect of life, except, of course, in their family relations. The average reader knows not that they had another name, while, even with the literary class, it requires an effort of memory to recall what the names were. And not only is this true, but it is recognized as true by those whose opinion and example should determine the practice of cataloguers, viz., their literary executors, as is shown in the publication of George Sand's (not Mme. Dudevant's) correspondence, and in her husband's life of George Eliot (not Mary Ann Cross). We are pleased to see that the Boston cataloguer takes this view as regards George Eliot, though in the other case he follows the doctrinaire theory of always placing an author's books under the real, even if practically unknown, name, at whatever cost of convenience. As regards pseudonyms in general, we observe but few errors or omissions. "E. Oswald" (Bernhardine Schulze), "Marie Oliver" (Carrie L. Brown), "Moritz v. Reichenbach" (Valeska Bethusy-Huc), and "Margaret Vandegrift" are passed as real names, while "Rita," though marked "pseud.," has not, bracketed with it, the author's name (Eliza [Gollan] von Booth). In the case of Miss De la Ramée (Ouida) the name is spelled, in disagreement with other cataloguers and compilers, Rame, and, what is more remarkable, it is alphabetized under R. According to all rules, if the owner of the name is English, it should be placed under D (as De Quincey, De Vere, etc.); if French, under L.

—The 10th of December was a peculiar day at the French Academy. Letters gave precedence to Science in a body whose origin was purely literary, and whose course of action has always been removed from scientific researches. M. J. Bertrand, a mathematician, the successor of J. B. Dumas, a chemist, took his seat for the first time and was welcomed by Louis Pasteur. It is a gratification to see scholars whose lives have been devoted to science thus honored by the highest literary body of France, and showing themselves worthy of that honor by a purity, precision, force, and even artistic grace of language that leaves nothing to be desired. The reception speech of M. Bertrand was grave and temperate in its tone. Although he touched upon the chief merits of his predecessor, he did not make a panegyric of such warmth as might have been expected; but even in this the orator was true to his severity of manner, to his scientific precision. The answer of M. Pasteur was a happy contrast to the speech of the recipiendary. After felicitously and warmly congratulating the new member, and summarily stating his claims to the honor conferred upon him, he passed on to dwell upon the labors of J. B. Dumas. He spoke of him more in the tone of a loving disciple, an impassioned admirer, than in that of the director of the Academy. This personal note and the emotion of the speaker added not a little charm to the highly-finished speech of a man on whom the eyes of the world are now fixed.

—In the days of his prosperity, Mr. Henry Villard, among numerous charitable, philanthropic, and educational foundations in his fatherland, provided the means for publishing collectively the earliest historical documents relating to his native city of Speyer, in Rhenish Bavaria. The work, undertaken at the instance of the Pfalz Historical Society, was intrusted to a relative of Mr. Villard's, Mr. Alfred Hilgard, and has been executed with the utmost scrupulousness and intelligence, producing a fine quarto volume, 'Urkunden zur Geschichte der Stadt Speyer' (Strassburg: Karl J. Trübner). Neither the collections of Remling (1852-53) nor of Lehmann (1711) rendered the present one superfluous, in which both public and private sources have been drawn upon, with the general aim to elucidate the external relations of the city to other Rhenish cities, to neighboring princes and knights, and to the course of German history, as well as the municipal contests, lay and spiritual. Happily, while the French in 1689 left hardly one stone upon another, the city archives appear to have been remarkably preserved, and but few losses have occurred in the meantime. The first document goes back to A. D. 653, and the last of the 536 here brought together bears date of A. D. 1349, in which year the municipal government was reorganized on a pure guild basis. The text is either Latin or German, and the drift of it presents no unusual difficulties, while the contents afford a good deal of instruction and sometimes of amusement concerning things mediæval. Pacts between emperor, king, pope, bishop, and the city council, and leagues between Speyer and Mainz and Worms, for example, abound. So do ecclesiastical squabbles and contests over wood, marsh, and meadow; differences between bakers and millers, truces between clothmakers and weavers, and pledges of mutual support by the guilds; arbitrations; renunciations; privileges accorded to the cathedral or to the municipality; gifts to pious houses and to hospitals. Now and again, too, ferriage and tolls of the Rhine are in question.

—The Jews figure prominently in these records. Bishop Rüdiger gives notice in 1084: "Collectos igitur locavi extra communionem et habitacionem ceterorum civium, et ne a pecoris turbe insolencia facile turbarentur, muro eos circumdedi"; but this shepherdly care cost the flock annually "tres libras et dimidiam Spirensis monete ad communem usum fratrum." Typical is the pledge by King Adolf, in 1298, of all his revenues from the Jews of Speyer to insure his indemnifying the city for damages done by his troops in passing through on his Alsatian expedition: "Donamus vobis et tradimus . . . in totum iudeos nostros Spirenses . . . ita ut vos ipsos iudeos vice nostra utamini et fruamini totaliter." And in one instance a King "checks against" them so far as they were "not otherwise appropriated." In 1340 the Jews borrow of the municipality 1,100 pounds with interest at 100. The year before, on December 10, Bishop Gerhard took them under his protection for ten years on condition of an annual payment of 500 pounds farthings; and the next day the secular authorities offered a like protection for 300 pounds. In 1349, King Carl IV. relinquished to the city all his rights of property in the Jewish community. Interesting are the penal ordinances for the citizens at large. In 1314, for instance, as to opprobious language: "Wer ein mensche wider siner cristenheit schiltet und in nennet eins pherdes sun eder eins hundes eder eins andern vihes, der git fumf schillinge spirscher deme burgermesteren," etc. There was no ordinance, as now in some German cities, against piano-playing, but there being too much music in the streets at night—narrow streets, in which every note told—it was necessary to denounce the charivari of the strolling nocturnal bands: "das grosze unruge . . . vom disen nahtgengern, die nahtes gent mit phiffen, drumben, orgeln unde seiten spil," not to speak of *quinternen*, *rotden*, *vidlen*, and other ear-splitting instruments. The Rat, or city magistrates, regulated the wages of stonecutters, masons, roofers, carpenters, etc., as also the making of cloth—"Dicimus pannos debere fieri tali modo: . . . Item, omnes panni generaliter, qui hic parantur, habere debent in latitudine II ulnas." The warp must be hand-woven, etc. The appendices throw much light on these matters. There is an index of names, but no table of contents. Several photographic facsimiles adorn the volume.

STEPHEN'S FAWCETT.

Life of Henry Fawcett. By Leslie Stephen. London: Smith, Elder & Co. 1885.

"FAWCETT," writes Mr. Stephen, "had been for thirty years one of my most intimate and valued

friends. It would be strange if during that period I had not learnt to understand one of the simplest and most transparent of men."

In this sentence Mr. Stephen hits off, with exquisite skill, the most striking trait of Fawcett's character, and proves, if proof were needed, that he thoroughly understood the friend to whose fame he has raised the most touching, the most truthful, and, therefore, the most honorable of monuments. But a critic may doubt whether the clearly marked lines of Fawcett's genius may not (paradoxical as the assertion may sound) be a real hindrance to his being if not understood yet fully appreciated by the majority of Englishmen. There exists at the present day an unwholesome craving for biographical revelations, and in Fawcett there was nothing to reveal, just as there was nothing to hide. The present age feels a morbid delight in the sympathetic study of sickly, abnormal, tortuous, and inconsistent natures. In Fawcett everything was wholesome, regular, strong, and self consistent. He was all made of a piece. He was assuredly not without his faults and limitations, but his deficiencies were exactly the wants which one would expect to find connected with his virtues. Whoever cares for nothing but what is strange and *bizarre* had better not occupy himself with the 'Life of Henry Fawcett': he will find nothing there to his taste. And even those readers of whom there will always, one may trust, be tens of thousands, on both sides of the Atlantic, who can value the greatness of a large and transparent nature, must yet be on their guard lest the simplicity should conceal the rarity of Fawcett's character.

He belonged in truth—and this is the point of view from which he may most fairly be criticised—rather to a past than to the present generation. He and his friends admittedly represented in opinion the traditions of utilitarian Radicalism. But Fawcett was bound by something much closer than mere similarity of dogma to the school of Mill and of Bentham. He would, both from his virtues and from his deficiencies, have been perfectly at home with Bentham, with Mill, with Buller, with John Austin, or with Macaulay. We can scarcely feel as if he was really of the same make as the men with whom he was connected in actual life. The generation who have admired Carlyle, Tennyson, Maurice, Kingsley, and Ruskin, Newman, and Gladstone, is not the world in which, if one judged merely by natural affinity, one would place Fawcett. Mr. Stephen tells us that Fawcett could not understand why political economy should, even in derision, be called the "dismal" science. He did not feel the force of a nickname which has done more to discredit the scientific investigation into the laws of wealth than all the fallacies propagated by all the paradox mongers who for the last fifty years have flourished, and do still flourish, to the increase of the intellectual confusion of an already confused enough world. Fawcett would probably not even have understood how any sarcasm could have more weight than an argument. He did not share the feeling, perfectly intelligible at any rate to men such as Bagehot or Professor Seeley, or his own biographer, Mr. Leslie Stephen. He belonged, in short, to a type of character as common among the great men of fifty or sixty years back as it is rare in the present generation. The best way to understand him is to examine what were the traits which, while they marked him off from his contemporaries, also made him exert so much influence among men who felt, without knowing it, the lack of the gifts which he possessed.

The two features which pervaded his whole nature were simplicity and strength—a quality which is far more closely connected than most persons believe with clearness of mind and consequent singleness of purpose.

In every part of Fawcett's conduct the simplicity becomes apparent. Clear, certain, ascertained truths, whether of mathematics, logic, or of political economy (which, like law, is only a form of applied logic), were the things which really commanded his intellectual interest. Even in his own sphere as a political economist, he did not, we gather from Mr. Stephen as from our own slight acquaintance with Fawcett's works, shine by the novelty or the subtlety of his thoughts. He was absolutely wanting in the flexibility and adaptiveness of Bagehot. He had little of that desire for the reconciliation of opposite views which gives a singular interest and occasionally imparts a curious weakness to the speculations of Mill. But to put against these merits, Fawcett's clear strong mind held the doctrines which he had mastered with a tenacity and a faith utterly foreign to a generation most of whom, like Mr. Brooke in 'Middlemarch,' think every dogma true "up to a certain point," or, in other words, indolently accept doctrines which they only half believe because they have not energy to carry any doctrine whatever out to its full consequences. With Fawcett, on the other hand, to believe a view to be true was the same thing as to be willing to act upon its truth. We have no doubt that he would have sympathized with the somewhat grotesque indignation displayed by James Mill when John, then certainly not more than nine years old, wrote an essay containing the statement that something was "true in theory, but not true in practice." Fawcett, indeed, had too much genial kindliness to punish a child for a logical error, but the idea that a thing could be at once true and not true, a doctrine to hold, but not a doctrine to live by, was utterly repugnant to his whole tone of mind.

With the great thinkers of the eighteenth century Fawcett firmly believed in Reason, and was prepared to make Reason, as far as she would carry him, the guide of his life. This earnest desire to follow out in practice the truths which his mind grasped, is visible both in his dealings with others and in his conduct of his own life, and it is this simple acting upon simple convictions which so greatly distinguishes him from the crowd who have neither definite beliefs nor fixed courses of action. The truth, for example, that self-help and thrift are virtues, would probably be admitted by any man who can understand the meaning of words. But the number of persons who, either in giving charity or in the views they take of policy and legislation, are really guided by a desire to promote independence or economy, is infinitesimally small. With Fawcett, on the other hand, the belief that thrift and independence were essential elements, both of individual and of national prosperity, was a principle which regulated all his views, both of benevolence and of policy. It is curious to see, as one follows Fawcett's political career, what simplicity and vigor the genuine adherence to very elementary economical or moral axioms could give to the conduct of a member of Parliament. At every turn he tests measures proposed for his acceptance by the criterion of their effect in promoting or in undermining independence. No doubt this consideration is not the sole matter to which politicians must give attention, and Fawcett's adherence to too exclusive a test no doubt sometimes led him wrong: but the tenacity with which he held to a truth that he had realized was sufficient of itself to raise him from a politician to a statesman. The rule, moreover, which he applied to others he applied to himself. To rely upon himself, not to yield to the hardest strokes of fate, to practise self-help on the grandest scale under the most difficult of all circumstances, was the one supreme effort, as it was also the final triumph, of his life.

A reader, however, may say that at this point our criticism passes from the simplicity to the strength of Fawcett's character. The remark is true as far as it goes, but the matter well worth observation is that the directness of Fawcett's intellect stands in intimate connection with the force of his will. No one, of course, could have conquered in the contest with an obstacle which, like blindness, seemed at first sight an absolute bar to Fawcett's intended career, who had not been endowed with extraordinary physical nerve and courage. You could hardly see him walk without knowing at once that he was one of the boldest of men. But lack of physical bravery is after all not the main cause of hesitation: *Hamlet* did not want pluck or nerve. The true reason why the men of the nineteenth century seem deficient in resolution is that they are paralyzed by the worship of inconsistent ideals. Many men can act strenuously enough to obtain what they ardently desire. Feebleness in action generally means want of strong desire for a clearly perceived end. Half of Fawcett's superiority lay in the clearness and in the simplicity both of his intellect and of his desires. His power, moreover, with others as probably over himself, was in more ways than one increased by his blindness. We are no believers in the optimism which sees a disguised blessing hidden under every palpable misfortune. To the sufferer, at least, the disguise is in general thick enough to render the blessing absolutely invisible. But a calamity which cannot be called a blessing may be an opportunity. The blow which for a moment struck down Fawcett, and would most assuredly thoroughly have crushed any weaker man, enabled him to show both to others, and—a thing of even more consequence—to himself, the heroism which was in him. He fell back, almost from the moment at which he was struck blind, on his own belief in self-help; and the difficulties of his contest with fortune either displayed or created a concentration of power and depth of character which may have been a surprise even to his own heart. It is easy at any rate to believe that had he retained his eyesight, he would have risen at the bar and have ended life as nothing much above an energetic Q. C. in receipt of an income of five or six thousand a year, and, had his true public spirit lifted him to something higher than mere forensic success, he might probably have died without the knowledge that he had within him something of heroic stuff.

Mr. Cotter Morison has, if our memory does not deceive us, remarked of Macaulay that the ease and prosperity of his life deprived him of the opportunity of displaying or practising on any grand scale that high care for the public welfare, and that sturdy independence, of which one can see traces in his character and in the acts of his early political life. This opportunity for greatness was never wanting to Fawcett. Even had he only succeeded in occupying the position of a professor, he would have done more than could have been accomplished in his position by one man out of a thousand. To have held firmly to the resolution that he would take part in politics, and to have become one of the leading statesmen of the day, was not only to achieve a feat which could hardly have been performed by one man in a million, but—a thing of much greater moment—was to brighten the possibilities of existence for every man afflicted with blindness. Nor is it unnatural to believe that the concentration of thought and action forced upon Fawcett gave additional depth to his convictions, while his misfortune increased his sympathy with the sufferings of others. Mr. Stephen dwells upon the chivalrous nature of his friend, and it is clear enough that as Fawcett lived on, the chivalry and the gallantry of his nature increased. As a politician

he displayed some considerable defects. He does not appear to have been strong either in foresight or insight. Such prevision as he exhibited consisted not so much in seeing into the facts before him (he never, for instance, completely understood the educational difficulty presented by the collision of theological beliefs), but in his strict faith that economical and moral truths would sooner or later produce their effects, whether men liked these effects or not. But if he was not endowed with any prophetic spirit, he raised politics far above their ordinary level, both by his intense interest in the claims to consideration of classes who, like the inhabitants of India, find it difficult to make their voices heard in the English Parliament, and by his combined belief both in democratic progress and in the necessity that the democracy should hear the truth. He was, in short, one of those men who, to use Mr. Stephen's words, "fear to speak an insincere word, and fear nothing else." The simple clearness of his intellect and the direct energy of his conduct almost blend together. Truthfulness and strength become perfect sincerity displayed in the highest form of public spirit.

The very words "public spirit" lead us on to a peculiarity in Fawcett in which he resembled a past generation, and was unlike the men of his own time. It is, we take it, pretty clear that neither religion, nor certainly theology, had much hold on Fawcett's heart or intellect. It is of course impossible for any one to speak with certainty of the hidden feelings and aspirations of any man, and least of all of one who, transparent as he was, seems to have practised considerable reticence in matters of feeling. Still, it is probably not rash to say that Fawcett's interests were a good deal more secular than religious. Some critics of his life seem to have found a difficulty in understanding how a person devoid of all care for theological dogma could yet have risen in many ways so much above the moral level of ordinary men. The end of an article is certainly not the place in which to discuss the problems presented by the contrast between the secular and the religious ideal. One historical fact, however, may in this connection be fairly noticed. The philanthropists or reformers of the eighteenth century, such as Voltaire, Condorcet, Turgot, or Bentham, were either sceptical or indifferent on all matters of theological dogma. But no error is more misleading than the idea that such men were without enthusiasm. The desire for reforms which should benefit mankind, the passion for enlightenment, zeal for the propagation of utilitarian morality—these and other forms of public spirit were their religion. With Fawcett, as with them, public spirit was a true form of faith.

Incidents and Anecdotes of the Civil War. By Admiral Porter. D. Appleton & Co. 1885.

Admiral Porter is not only a distinguished naval commander, but he is also well known as a writer of romances. In this book he has combined the two qualities. The book reads quite like a romance, and yet it is confined solely to the naval exploits of himself and others during the war. It repeatedly disclaims the idea of being in any sense a history, though the Admiral tells us more than once that he has written a history "of all the events that came under my cognizance during the conflict, which may or not be published at some future time." This book is just what its title denotes, a series of anecdotes of the war, a string of old sailors' "yarns," most capitally spun, and sufficiently related to great events and great people to give them a never failing interest. Some of the language which represents the remarks of Grant and Sherman and others is not to be considered in the light of a verbatim report, nor are the anecdotes themselves to be judged by the standard of accuracy to which they would be subjected if they were put forth as deliberate historical statements. "These reminiscences are simply for amusement"; as such they must be judged, and there can be little doubt of their being considered a success, or of their value as throwing a side light—and sometimes a strong one—on nearly all the important naval events of the war. The relief of Pensacola, the capture of New Orleans, the operations near Vicksburg, the Red River Expedition, the capture of Fort Fisher, and the final operations on the James River—in all of these Admiral Porter was a chief actor, and he has something new and entertaining to say about all of them.

His opinions about men and events are very freely expressed, though he evidently endeavors to avoid anything that might appear spiteful or malicious. When he comes to speak of Butler and Banks, however, this requires a great effort. He cannot refrain from ridiculing at great length Butler's famous plan of knocking down Fort Fisher by exploding a powder ship in the inlet abreast of it. Some rebels who deserted on the night of the explosion were brought before the Admiral, and he questioned them as to the effect. "It was dreadful," said one of them; "it woke up everybody in the fort." For Banks and his Red River expedition he has hardly less contempt, and he more than intimates that the whole expedition had no military object, but was simply a gigantic cotton speculation. Having written his own "strictly true and complete account of the Banks campaign" (which, however, he has no intention of publishing at present), he reminds Banks that he has never yet made his report, and playfully suggests that "perhaps the General, in his declining years, may think it worth his while to use the talents he is known to possess in an eminent degree, to write a history of that campaign."

Of Lincoln and Grant, and Farragut and Sherman, the Admiral cannot say too much. His respect for them is profound, and his admiration hearty and genuine. He considers Grant's campaign in rear of Vicksburg "the most remarkable and most successful military operation of the war"; and as no accounts of it have ever been written which he considers at all satisfactory, he dashes off eleven pages of poetry in order to describe it properly. The passage of the forts below New Orleans is equally great in his mind as a naval effort, and his praises of Farragut are lavish; but he claims for himself the honor of first suggesting the expedition to the authorities in Washington, and of proposing Farragut's name to the President as the best man to command it. In order to refute the statements of the late Secretary Welles concerning this matter, the Admiral narrates in great detail the circumstances under which his proposals were made.

Of Sherman he speaks in the tone of intimate comradeship, as he well has the right to do, for no two men ever worked more earnestly and heartily in accord for a great cause than these two. They are now the only survivors of the great chiefs of the war time. "Old Tecumseh and myself still hold on, two tough old knots, with a good deal of the steel in us yet, and quite enough vitality to lay out any number of those who pride themselves on what they can do."

None of the Admiral's entertaining stories, however, have the pathetic interest of his last two chapters, in which he describes his intercourse with Mr. Lincoln in March and April, 1865. When the President saw that the war was nearing its end, he left Washington and came to City Point, in order to be in close communication with General Grant, and to be free to act without consulting his Cabinet. He arrived on March 24 and returned on April 10, only five days before his death. His last two weeks were thus passed on board of Porter's flagship, entirely unattended. He declined peremptorily all requests from his Cabinet to be allowed to join him, and refused to see the Vice-President when he came to visit him. He seemed to find in the Admiral a congenial spirit, and sat with him by the hour discussing the events of the day and telling the stories of which they reminded him. Toward the latter part of his visit the Admiral grew very anxious as to the safety of his guest, and never allowed the President to be out of his sight for a moment, night or day. With him—and with him alone—Mr. Lincoln entered Richmond while it was still in flames, the day after the surrender. Owing to a chapter of accidents they reached the city in a rowboat unannounced; on landing they started to walk through the streets.

"There was a small house at this landing, and behind it were some twelve negroes digging with spades. The leader of them was an old man sixty years of age. He raised himself to an upright position as we landed, and put his hands up to his eyes. Then he dropped his spade and sprang forward. 'Bress de Lord,' he said, 'dere is de great Messiah! I knowed him as soon as I seed him. He's bin in my heart fo' long years, an' he's cum at las' to free his chillun from deir bondage! Glory, Hallelujah!' And he fell upon his knees before the President and began kissing his feet. The others followed his example, and in a minute Mr. Lincoln was surrounded by these people, who had treasured up the recollection of him caught from a photograph, and had looked up to him for four years as the one who was to lead them out of captivity."

The rest of this extraordinary and ever memorable visit is told in equally graphic style. It forms a picture well worth preserving, and all the more valuable in that it is drawn by the sole survivor of the scene. While they remained in the vicinity of Richmond several suspicious persons attempted to board the Admiral's ship. One of them, he thinks, was Booth. The frequent recurrence of these visits thoroughly alarmed the Admiral as to the President's safety, and when the latter expressed his intention to return to Washington, the Admiral sent two ships with him as far as Baltimore, and directed the commanding officer never to leave his side until he saw his charge safely in the White House. The mission was successfully performed, and the officer returned to Hampton Roads and so reported to the Admiral. But Porter could not free his mind from the idea, after what he had seen at Richmond, that the President's life was in danger. He therefore determined to go to Washington, take advantage of the intimacy lately established between the President and himself to dissuade him from exposing himself in public, and communicate his suspicions to the Cabinet. Had he started a day sooner perhaps he might have saved the President's life. When he reached Baltimore he heard that the President had been assassinated a few hours before.

The Founders of the American Republic: A history and biography, with a supplementary chapter on ultra-democracy. By Charles Mackay, author of 'Life and Liberty in America,' etc. Edinburgh: William Blackwood & Sons. 1885. Pp. 434.

Dr. Mackay's account of the founders of the American republic is agreeably written, appreciative, and generally accurate. The founders under consideration are Washington (in two chapters), Adams, Jefferson, Franklin, and Madison. Perhaps he rates Jefferson too high, and does not do full justice to Adams as a political thinker certainly he takes pains to set forth all Adams's personal foibles and defects of temper, and says not a word of Jefferson's faults of character, which we suppose to have been as great and as manifest. We think, also, that he undervalues

Washington's intellectual powers and military abilities. But if Washington and Adams are depreciated, it is only by comparison with the hearty admiration bestowed upon the other three.

It is not necessary to read the chapter upon "The Dangers of Ultra-Democracy," because we all know well enough what those dangers are, and we do not see that Dr. Mackay tells us anything about them which we have not already been told a hundred times. Nevertheless, the chapter is worth reading, if only to see what notion of the war of the rebellion it is possible for an intelligent Englishman to entertain in the year 1885. The author is a hearty believer in the rights of nullification and of secession, which he considers the corner-stone of our liberties, and represents General Jackson (of whom he gives an account which reads like a caricature) as a fanatical champion of centralization. We cannot quite make out, however, whether he regards nullification and secession as a right under the Constitution, or only as the natural right of revolution. We suppose the latter, inasmuch as (p. 359) he speaks of the "compact" established by "the Washingtonians, Federalists, and Centralizers," as holding "its ground, after a certain unstable fashion, till the election of Mr. Lincoln." Apparently, then, the Constitution in operation until 1861 was the work of Washington and his school, and they were certainly no believers in nullification. If, then, secession was an act of revolution, it is hard to see why the supporters of the Union are censured for suppressing it.

In the following extract the author's confusion of ideas has resulted in a remarkable confusion of language; but we hasten to say that it is the only ungrammatical sentence we have met with, Dr. Mackay's style being as a rule clear and correct: "From the very first the friends of these conflicting principles were at variance, and on more than one occasion the upholders of the rights of the several States and commonwealths that claimed to be supreme within their own boundaries, and called themselves Democrats, was at issue with the Washingtonians and Federalists, who called themselves Republicans, and would have established what was virtually an autocracy and not a democracy, if their idea of the one Republic, paramount to the thirteen Commonwealths, found acceptance" (p. 359). On page 393 he says that "The time has come when the whole truth should be told, not alone as to the real origin, but as to the conduct of this unfortunate and needless war." Dr. Mackay's qualifications for accomplishing this desirable task may be judged from his statements that Bell, as well as Douglas and Breckinridge, were Democrats (p. 389); that Theodore Parker's was the "one only voice" raised in denunciation of Webster's pro-slavery attitude; that Mr. Lincoln's name "had scarcely been heard of beyond the limits of the State of Ohio" (p. 389); and that "the Southern army was composed of none but volunteers" (p. 395).

In other parts of the work we find a few errors, most of them of no importance. On page 101, Cornwallis's occupation of Yorktown is stated to have been after Washington reached Williamsburgh. On page 139, Washington is said to have been called from his retirement to take command of the army, "in view of an approaching rupture with Great Britain," it being really on occasion of an actual declaration of war against France. On page 362 the Hartford Convention is said to have "loudly and all but unanimously expressed its determination to secede from the Union [but how could a convention secede from the Union?] unless the central Government agreed to a peace with the mother country." Curtis for Custis (p. 25); Artemus for Artemas Ward (p. 63), confounding the humorist and the General; Poor Robin for Poor Richard (p. 296); and Livingstone for Livingston (p. 373) are no doubt slips of the pen; but as to the assertion (p. 401) that "the will of a bigoted and cruel majority led, in Europe and America, to the burning of witches," we should be glad to have mentioned the instances, with their date.

To expose all the errors and misstatements of this closing chapter, it would be necessary to quote nearly the whole of it; but we have room for only the following extraordinary paragraph, which, we think, requires no comment. It refers to the years before the rebellion:

"Mr. Horace Greeley, the celebrated editor of the New York *Tribune*, who exercised a powerful influence over the Anti-Slavery and Republican party of the North and West, openly and persistently advocated separation. In lines that were continually recited in speeches and writings by the Abolitionists, he described the American flag as a 'flaunting lie' and 'a blood-stained rag' that ought to be torn down from every battlement and steeple in the North, and that should be hoisted half-mast high in sign of its degradation, in every American ship on the ocean. He advocated the independence of the Northern States, or any portion of them; or, if independence were not attainable, their incorporation with Canada, and a return to their allegiance to the 'Old Country'—anything rather than continuance in a union with the Southern States, that maintained and endeavored to extend negro slavery."

Now, Horace Greeley ran for the Presidency against General Grant, and on page 403, by way of depreciating Jackson's and Grant's qualifications for this office, we are told that their military achievements "proved sufficient to render nugatory those which were founded upon the culture, experience, and wise statesmanship of the vastly superior men who were opposed to them."

A History of the United States for Schools. With an introductory history of the discovery and English colonization of North America. By Alexander Johnston, author of a 'History of American Politics,' Professor of Jurisprudence and Political Economy in Princeton College. Henry Holt & Co. 1885. Pp. xx, 473.

Professor Johnston tells us in his preface what is the special purpose which has led him to add another to our many school histories of the United States. It is, in a word, because they all more or less miss the end of a text-book of history. They are in great part story books, vainly trying to compete for the pupil's interest at the imaginative period with books devoted to that single end. "History," he says, "is a task and a method of mental discipline; our school histories attempt to relieve it, as no one attempts to relieve grammar or arithmetic, by story telling." To the colonial period has been hitherto assigned an inordinate space. So much room has been given to Smith and Pocahontas, Putnam and the wolf, "that the real history of the United States is cramped, marred, and brought to a lame and impotent conclusion." "For much the same reasons, other topics not essential to the main subject, such as the tribal institutions of the Aborigines, and the Spanish conquests of Mexico and Peru, have been left untouched." Certainly; why not? Why should our school histories, or, for the matter of that, our grown-up histories, confound the Western Continent with the United States? Why should they give the impression that the history of the soil we live on is continuous from 1497 to 1587—a time when it is practically a blank? It comes to this, that boys and girls know who Cortes or Atahuallpa was, and do not know who William Tyndale or Henry of Navarre was; and yet if United States history for schools must include the sixteenth century, the two latter should be among its central figures, and not the two former.

Let us hear another capital paragraph from Professor Johnston's preface: "As the book is not intended to be a story book, so it is not intended to be a picture book. The pictures in this volume have been introduced with regret, and only as a yielding to the present prejudice, which denies an effective audience to the school history not so illustrated. It is to be hoped that the time will soon come when the space now surrendered to the graphic additions of the average schoolboy's pencil will be utilized to better purpose." Perfectly true. In fewer words: school committees can be persuaded by pictures to "introduce" a book, over the convictions and perhaps protests of competent teachers, who know them to be a nuisance and a humbug.

The preface quoted entire would be the best introduction and recommendation to this excellent text-book, which is intended to teach the rising citizens of the United States what their country is and has been in her steady, peaceful development. The critical periods and the brilliant exploits have not been omitted—they have been alluded to with appreciation and spirit in their right places; they have been mentioned in such a way as to tempt any one who loves such episodes to find out more about them. But they are exhibited as episodes—the occasional threads of gold or black in the cheerful but not gaudy fabric that forms the staple of our true history. As we took occasion to remark in a review of another meritorious history of the United States, we have in our national records abundant room for sentiment, but not an inch for sentimentality—the *sentiment* of Mme. de Staël, which Castlereagh so well translated by "blarney." Professor Johnston's book strikes us as preëminently manly—for that matter, womanly, too; it is not the childish article which would apparently suit some "eminent educationists" who think a teacher's business is to amuse the little ones, and keep them amused up to the time when they have children of their own.

Where all is good it is hard to specify; but we would particularly select the development of the Southern colonies, the land operations of the war of 1812, the political movements from 1838 to 1848, and the comparative exhibition of the campaigns of the Civil War, as especially indicative of impartiality and due proportion in the writer's mind. In these, and indeed throughout, the writer is careful to put in, properly subordinated in type, the little circumstances so likely to be overlooked. We open at random, and find on page 167 a capital paragraph about the Jeffersonian Republicans; on page 286, a valuable note about city police; on page 318, a significant remark about the common necessity to McClellan and Lee of protecting the capital.

A variety of things we could wish altered or away. Must Governor Arnold's poor old mill again be inflated to bolster out the Vinland myth? Maclure determined the Northwest Passage in 1850 (not 1854). The States-General of France should not be named a Parliament (surely Professor Johnston knows what the French Parliaments were); and the King who got rid of it in 1614 was Louis XIII., not Louis XIV. It should be recorded that Endicott was reproved by his General Court for cutting out the cross, and that he submitted. The original form Carolana for Carolina is omitted—probably by a misprint. It is news to us that "William the Testy" was ever *Sir* William Kieft, or that *Sir* John Burgoyne was present at Saratoga. The romance of "Evangeline" ought not to have been allowed to stand as history with no allusion to Mr. Parkman's corrections. It should have been stated that Virginia ratified the Constitution most probably in the belief that she was the ninth State, while New York held a very different position, taking no part in the first Presidential election. But we have no wish to seem to detract from the merit of the book—the best

school history, as it seems to us, which has yet been presented to the public.

Literature. By Herman Grimm. Boston: Cupples, Upham & Co. 1886.

THE men of letters in Germany are regarded as rather learned than cultivated, and are oftener spoken of as scholars. There have been some shining exceptions—some who recall the delightful humanism of Humboldt, and give us a new view, that has always something of surprise in it, of the capabilities of the intellectual life in the country of the professors. Herman Grimm is one of these men of culture, and the collection of his essays which is here translated is a sort of contribution which Germany seldom makes to foreign literature. The volume opens, pleasantly to American readers, with two articles, written at a score of years' distance from each other, upon Emerson, in which the author's own experience in being captivated, and his attempts to persuade some of his friends to acknowledge the charm, are told with an attractive mingling of criticism and humor; and the tribute to Emerson's genius, being the confession of a singularly sincere and simple mind, has a directness, spontaneity, and clearness which is to be commended to the notice of Emerson's American eulogists. The remaining essays are upon Voltaire and Frederick the Great, in connection with whom Grimm exposes the shallow facility of Macaulay's essay, and Dürer, Bettina von Arnim, and Dante's relation to the patriots of Italian unity. There are also some loosely-joined papers upon the brothers Grimm, the author's father and uncle, which make the most agreeable portion of the volume.

There is no need to speak of each separately. Grimm is a discursive writer, and has the ease of movement that characterizes a mind familiar with ideas and principles. His culture seems to be that of art and history, and reflections upon these in a general and comparative way strew his pages. The book is singularly free from prejudice; and even in dealing with the characteristics of the intellectual activity and interests of his countrymen he points out limitations and defects with what to our eyes seems wisdom, much as Renan occasionally enlightens the French in regard to themselves. So much serenity and suavity in literary style, so many penetrating and illuminating sentences dropped by the way, such intellectual clearness and refined utterance, are rare in any country; and though the topics of this volume are as a whole of slight interest to us, and limited value, one has the feeling, on laying aside the volume, that he has met with a man of exceptionally fine perceptions, human sympathies, and catholic interests, whose excellence of nature the essays but faintly report. The book itself, however, will prove remote from most readers.

The Postulates of English Political Economy. By the late Walter Bagehot. Putnams. 1885.

THE opening essay of this little book, which gives it its title, may be cordially recommended to all readers who do not see to their own entire satisfaction what Political Economy means and what it teaches. If, as is probably the case, such readers have been confused by the conflict of schools, and by the popular attacks upon the current system which we have imported from England, they will find in Mr. Bagehot a teacher who will clarify their ideas, and place the subject before them in such a light as to compel conviction. The most valuable feature of the lesson is that it does not leave the opposing side of the argument in misty confusion, but begins by showing the learner its strongest points. Indeed, we cannot but think that Mr. Bagehot exaggerates the difficulties in the way of the Political Economy of Smith and Mill being accepted outside of England. The comparison should rather be made between two methods of viewing the subject, both of which are found in all civilized countries, than between England and the Continent. A large majority of the recognized economists of Germany, France, and America are in substantial accord with our author, while it can hardly be claimed that the masses even in England are unanimous for the English system.

The objective point at which Mr. Bagehot aims is contained in the proposition that our system of economics "is not a questionable thing of unlimited extent, but a most certain and useful thing of limited extent." It is not a system of universal theorems, like those of geometry, but a set of theorems applicable solely to modern commercial peoples. However imperfect it may be, it affords the only method of foretelling the effects of new conditions upon the interests of the world. This is emphasized by comparing its method with other methods which men have attempted to apply to the case—the "All-case method," for example. This might have been put yet more strongly by showing that the limitations and imperfections which opposing writers so much dwell upon are common to all the sciences, are in fact necessary features of all generalized knowledge, physical as well as moral.

The two essays on the transferability of labor and capital, which form two-thirds of the book, were originally published in the *Fortnightly Review;* and it is intimated by Mr. Alfred Marshall, who supplies the preface, that they were intended as part of a book having for its object to free English political economy from the discredit into which it had fallen through being often misapplied. Although the restricted field which they cover prevents their having the value of a systematic work, they are well worth careful study as examples of the true economic method indicated in the opening essay.

The great value and the great charm of the whole book lie in the fact that it is the work of a man of business who supposes himself talking to men of sense, and who points out to both opposing parties the common ground on which their view and methods can be reconciled.

BOOKS OF THE WEEK.

Adams, O. F. December: A Collection of Poems. Boston: D. Lothrop & Co.
Almanach de Gotha. 1886. New York: Westermann.
Gillow, J. Biographical Dictionary of the English Catholics. Vol II. Catholic Publication Society.
Grimm, H. Literature: Essays on Emerson, Voltaire, Macaulay, etc. Translated by Sarah H. Adams. Boston: Cupples, Upham & Co.
Griswold, W. M. General Index to the *Nation*, Vols 31-40, October, 1880-October, 1885. Bangor, Me.: Q. P. Index. $1.25.
Havergal, Frances R. Christmas Sunshine. Boston: H. H. Carter & Karrick. 75 cents.
Hale, Lucretia P., and White, Margaret E. Three Hundred Decorative and Fancy Articles for Presents, Fairs, etc. Boston: S. W. Tilton & Co.
Harcourt-Roe, Mrs. J. H. The Bachelor Vicar of Newforth: A Novel. Harper & Bros. 25 cents.
Hardaway, W. A. Vaccination and Small-pox. St. Louis: J. H. Chambers & Co.

Young, Rev. A. Carols for a Merry Christmas and a Joyous Easter. Catholic Publication Society.

Fine Arts.

"TAMING OF THE SHREW."

IF any one had predicted, five or even three years ago, that on the 4th of January, 1886, two German operas, one by Wagner and the other by a disciple of Wagner, would be produced in this city; that the tickets for *both* the new operas would be sold for the first two performances before the date of the first; and that this first representation would attract an audience of at least 6,000 spectators, at the two houses, he would have been voted a mad visionary whom one could not safely allow to roam at large. Yet this seeming miracle has been accomplished.

We have now in this city two excellent opera companies, whose aim is not to make money by showing off the vocal tricks of a prima donna and a tenor, but to familiarize the public with the greatest works of the greatest composers, interpreted in the most conscientious manner, and with no more regard for financial results than is consistent with the natural desire to clear expenses. The devotees of fashion and the lovers of music have, as it were, formed an informal association for the mutual realization of their respective aims and desires; and in a republic where state support of the opera is out of the question, such combinations doubtless represent the most satisfactory state of affairs that could be realized.

The company which has taken up its abode at the Academy of Music lays special stress on the national side of the enterprise. The name first chosen for it was "Opera Sung by Americans," or "Opera in English"; but, for the sake of euphony and to emphasize the patriotic element, this was changed to "American Opera." The repertory is to be international, with a leaning toward German opera. If there is no American name in this list, it is due simply to the fact that the country has so far produced no dramatic composer who has felt sufficiently inspired to write a grand opera regardless of the prospects of immediate performance. Wagner was snubbed on all sides early in his career, but the confidence in his genius led him on, whenever an opera was rejected, to seek consolation in composing another, confident that his day would come. The existence of a special "American Opera" company may prove a potent stimulus in rousing dormant musico-dramatic powers; but until a really meritorious work is forthcoming we shall have to be contented with such things as come to us from the effete monarchies of the Old World. And,

after all, there is nothing in this borrowing inconsistent with the name of "American opera." For is not the essence of American nationality internationality? This country is peopled by emigrants from all parts of Europe, and if we ever have a "national" opera, it is to be hoped it will be international — uniting Italian sensuousness and French piquancy and clearness of form with German harmonic depth, variety, and dramatic vigor and realism.

Like the opera, most of the members of the orchestra were originally imported, though the majority have become American citizens. The conductor, also, was born in Germany, but Mr. Thomas came to this country at so early an age, and his name has become so identified with the progress of music in America, that it would have been as impossible to find a man more appropriate from the national point of view as it would be from the point of view of competency and experience. The remaining factors of the complicated operatic organism are almost purely American. The scenery, which receives special attention, is all painted by well-known native artists; the majority of the ballet are Americans, and the same is true of the chorus. And in regard to the leading vocalists the rule has been more strictly adhered to, that they must be natives of this country.

It is this last clause in the constitution of the American Opera Company that will have to bear the brunt of criticism. Perhaps it would have been wiser to follow simply the successful example of Carl Rosa, and give opera in English without reference to the nationality of the singers. But in some respects this experiment would have been less interesting, and at any rate we shall now no longer be open to the reproach that we leave the recognition of American vocal talent entirely to foreigners. Some of the vocalists in the American Opera Company have had wide experience as opera singers, while others have been suddenly promoted from operetta to grand opera. Until they have become accustomed to their new sphere it is therefore but just to make allowance for inevitable shortcomings. No such allowance, however, need be made in the case of Mme. L'Allemand, who takes the part of *Katharine* in the "Taming of the Shrew," not only because she is an experienced opera singer, but because her *Katharine* is a most clever and fascinating impersonation. Her dark style of beauty, together with the taste shown in her make-up, enable her to look her part to perfection. The mingled surprise and indignation are in the early scenes depicted in her face as realistically as her sweet, piteous humility when she has been tamed. She embodies Professor Dowden's conception of the character: "*Katharine*, with all her indulged wilfulness and violence of temper, has no evil in her; in her home-enclosure she seems a formidable creature, but when caught away by the tempest of *Petruchio's* masculine force, the comparative weakness of her sex shows itself; she who has strength of her own, and has ascertained its limits, can recognize superior strength, and, once subdued, she is the least rebellious of subjects." Mme. L'Allemand's voice is somewhat guttural in its lowest notes, but in its upper register it is delightfully clear, rich, sweet, and flexible. Mr. Lee's *Petruchio* cannot be said to be characterized by a "tempest of masculine force." The humorous possibilities of the part, too, are much greater than they seem in his hands; yet he takes pains with it and sings it satisfactorily. Miss Bensberg's *Bianca* is not a striking impersonation, but has its points of merit. Mr. Hamilton's *Baptista* is in one respect, and an important one, superior to any other rôle, viz., in distinct enunciation. Mr. Fessenden (*Lucentio*) and Mr. Stoddard (*Hortensio*) are well known to the New York public, and scarcely anything needs to be said of them beyond remarking that their parts were well fitted to their capacities.

One of the most interesting features of the performance was the fact that Mr. Theodore Thomas made his first appearance in many years as an operatic conductor. From the circumstance that he has no superior as a concert conductor it does not follow that he is specially qualified to be a good operatic conductor. There are specialists in conducting, as in everything else. But there is a class of conductors who are equally able as concert and as opera directors, including Bülow, Jahn, and Hans Richter; and Mr. Thomas gave indubitable evidence on Monday evening that he belongs to this class. His method of conducting is as quiet as at a Philharmonic concert; for his rule is to do all the difficult work at the rehearsals, so that no frantic gesticulations are needed when the public performance is given. Under his command his admirable orchestra—which is of course the best that has ever been heard in opera in this country—brought out all the beauties and subtle details of the score with marvellous distinctness. The chorus, also, contains, perhaps, better vocal material than has ever been brought together here, and everywhere gave evidence of the most careful and intelligent training. The ballet made its appearance in a special divertissement arranged by M. Bibeyran to the delightful rompish music of Rubinstein's Bal Masqué.

By choosing Goetz's "Taming of the Shrew" for the initial performance, Mr. Thomas added, to the many debts of gratitude our audiences owe him, the opportunity to become acquainted with one of the most successful operas of modern times; but at the same time he imposed on his singers a task of extraordinary difficulty, for there is hardly a single work in the operatic repertory that makes at the same time so many demands on the singer's vocal attention and his duties as an actor. In some respects it is even more difficult than Wagner's "Meistersinger," which inspired it; for in Wagner's opera the words are so neatly fitted to the song, and the melodic current is so broad, that the singer is irresistibly carried along with it; whereas in Goetz's opera the words and music do not so necessarily amalgamate, nor is the musico-dramatic current so irresistible. This is indeed the weak point in the "Taming of the Shrew," that both as a whole and in most of its details the music does not reflect the spirit of the text. It is often too serious, not to say sombre, for so sprightly and humorous a dramatic substratum. But if Goetz lacks Wagner's sense of dramatic fitness and his stirring climaxes, he succeeds better in imitating his declamatory precision and vigor and his symphonic orchestral accompaniment. In the orchestra lies the chief strength of Goetz. Many of the numbers have great individual merit, and throughout the opera there is a subtle attention to details and an esprit worthy of a French composer. It is stated that Goetz at first wrote the score without drums and trombones, but added the trombones when the opera was produced in Vienna. Subsequently he seems to have also added the drums, for they were in use in Mr. Thomas's orchestra. Musical readers need hardly be told in conclusion that Hermann Goetz was, like Bizet, one of those gifted and promising opera composers who seem to be fated to die young. His opera was first produced in 1874 at Mannheim, when the composer was thirty-six years of age. Two years later he died, leaving an unfinished opera score, "Francesca von Rimini," which was afterward completed by a Herr Frank.

"THE MEISTERSINGER."

THE first production in America of what will some day be Wagner's most popular opera is an event of historic significance. The performance itself, too, was of a very high order of merit, and therefore most enjoyable. In view of the fact that the German Opera Company, during their recent absence in Philadelphia, gave a performance every evening, it was to be feared that sufficient time would not remain to rehearse Wagner's comic opera properly. It is a work of extraordinary difficulty, as may be inferred from the fact that when it was first produced in Munich under Dr. Hans von Bülow, in 1868, eight months were devoted to its preparation, during which sixty-six rehearsals were held.

No wonder that a few days ago the last rehearsal of "Die Meistersinger" at the Metropolitan, which lasted eight hours, revealed a number of weak points. But it also revealed another thing—Herr Seidl's extraordinary genius as operatic conductor. Every weak point was "spotted" on this occasion—for he knows the whole score by heart—so that when it came to the public performance, the smoothness and animation of the ensemble was little short of a miracle, it being hardly necessary to make any allowance for the difficulty of the task, the limited number of rehearsals, and the unpropitious state of the atmosphere. Herr Seidl was deservedly and repeatedly called before the curtain, with the principals, after each act; for the enthusiasm of the audience was such as is only witnessed at a Wagnerian *première;* and a Wagnerian audience is sufficiently intelligent to recognize the supreme importance of having a conductor of Herr Seidl's energy and ability. Although we have heard "Die Meistersinger" more than a dozen times abroad, and although in Vienna and Munich, where the opera has been on the repertory for a number of years, some of the details are placed in a clearer light, yet for general animation we have never heard a performance superior, if equal, to Monday evening's; and this is in the first place due to Herr Seidl's thorough appreciation of Wagner's intentions. He put so much variety and "go" into his *tempi* that the performance never dragged for a moment; and although the necessary cuts were not so extensive as those made in some German cities, the opera lasted only four hours and twenty minutes, including waits.

Of the vocalists it must be said in general that they were equal to their tasks. Frau Kraus's *Eva* is one of her most satisfactory impersonations, and Herr Stritt's *Walter* is the best thing he has done here yet. Herr Staudigl sang *Pogner's* address nobly, and Herr Fischer was an impressive *Sachs*, though suffering from hoarseness, which prevented him from fully justifying the reputation he has secured in this rôle abroad. Brandt made as much as possible of the rôle of *Magdalena*, and the naïve and sportive *David* was well acted and sung by Herr Krämer, the husband of Frau Krämer-Widl, who made his début on this occasion. The comic part of *Beckmesser* was in the hands of Herr Kemlitz, who, without over-acting, brought out the grotesque humor of his part in a realistic manner. Much praise must be awarded the chorus of apprentices and the general chorus for their contributions to the success of the performance. Even the immensely difficult comic choruses of cobblers, tailors, and bakers in the last act were well done. It should be stated that in this scene the chorus was strengthened by the voluntary coöperation of a number of the active members of several of our leading German societies whose enthusiasm for Wagner, and their desire to have him correctly appreciated by American audiences, led them to submit, without any other recompense, to the arduous labor of rehearsing.

To sum up: the indications are that "Die Meistersinger" will soon become a favorite of the New York public, and never again be allowed to be absent from the repertory.

NEW BOOKS.

A NEW VOLUME OF STEPHEN'S DICTIONARY OF BIOGRAPHY.

DICTIONARY OF NATIONAL BIOGRAPHY. Edited by Leslie Stephen.
Vol. 5. Bicheno-Bottisham. 8vo. $3.25.

"Of the general value of the work to Americans, we need hardly speak. In great part it is the history of our ancestors, and in the achievements of Englishmen in science, literature, art, and politics, we have the warmest and closest interest. No public library will think of omitting this work from its list, and the number of subscribers among those who know the value of a good private reference library will undoubtedly be large."—*Christian Union.*

THE SIRENS THREE. A Poem Written and Illustrated by Walter Crane. 4to, Bds., $3.50.

THE PARADISE OF DANTE ALIGHIERI. Edited with Translation and Notes by Arthur John Butler. 12mo, $3.50.

LECTURES INTRODUCTORY TO THE STUDY OF THE LAW OF the Constitution. By A. V. Dicey, B.C.L. 8vo, $3.50.

"Lawyers will easily anticipate the insight, the clear and precise handling of the subject, the lucid statement, the wit, and the quite perfect legal style that mark these lectures. . . . Although the conceptions of constitutional law in this book are in some respects radically different from ours, there could hardly be a better introduction to the study of our own than it offers; its constant reference to our methods, and to those of France, Belgium, and Switzerland bring out the significance and flavor of much in all those systems which would otherwise be only half understood or feebly grasped."—*Nation.*

BAD TIMES. An Essay on the Present Depression of Trade, with Suggested Remedies. By Alfred Russel Wallace, LL.D. 12mo, 75 cents.

"An exceedingly forcible and lucid presentation of the various causes which have contributed to bring about the depression which has been so severely felt in Europe, and to some extent in America, during the last decade, and there are coupled with the presentation some very timely suggestions of a remedial nature. . . . No intelligent reader can fail to gain a better comprehension of the social problem of to-day, or fail to receive a certain inspiration from the suggestive treatment which Mr. Wallace has given to the subject."—*Chicago Morning News.*

HISTORICAL SKETCH OF THE DISTRIBUTION OF LAND IN England, with Suggestions for some improvement in the law. By William Lloyd Birkbeck, M.A. 12mo, $1.50.

THE SEVEN GIFTS. Addressed to the Diocese of Canterbury in his Primary Visitation. By Edward White, Archbishop. 12mo, $2 00.

Houghton, Mifflin & Co.'s NEW BOOKS:

PROGRESSIVE ORTHODOXY.

1 vol., 12mo, $1.

This volume contains, with some additions, a series of papers which have appeared in the editorial department of the *Andover Review*. The essays treat subjects which are regarded as fundamental by all Evangelical Christians—The Incarnation, The Atonement, Eschatology, The Work of the Holy Spirit, The Christian, The Scriptures; and they treat these in the spirit and with the methods of what is now known as Progressive Orthodoxy.

THE CANTERBURY TALES. By Harriet and Sophia Lee. *New Edition.* 3 vols., 12mo, $3.75.

A new and inexpensive edition of a work which formerly enjoyed great popularity. The London *Spectator*, on their republication in Bentley's Standard Library, welcomed them with peculiar heartiness, saying: "There is scarcely any educated person of this century who has not, at some time or other, drawn a sincere pleasure from these pages." In this tasteful form they can hardly fail to have a new lease of popular favor.

TEN GREAT RELIGIONS. Parts I and II. By James Freeman Clarke, D.D. *New Edition.* 2 vols., crown 8vo, price reduced from $3 to $2 each.

These two books contain an admirable statement of the distinctive features of the great religions which have held or still hold sway in the reverence of mankind, and a comparison of these with Christianity. Their ample information, candor, and sympathetic treatment render them peculiarly valuable and trustworthy; and in this new and cheaper edition they should have a very wide circulation.

4 Barclay St., New York.

J. E. B. STUART.

Life and Campaigns of Major-General J. E. B. Stuart, Commander of the Cavalry of the Army of Northern Virginia. By H. B. McClellan, A.M., late Major, Assistant Adjutant-General, and Chief of Staff of the Cavalry Corps, Army of Northern Virginia. With a fine Portrait of General Stuart and several admirable maps. 1 vol., 8vo, $3.

"It is fortunate for the memory of General Stuart that the work of putting into complete shape his connection with the war was consigned to Major McClellan, who, during almost the entire period of his campaigns, bore to General Stuart the closest possible military and personal relation. . . . Major McClellan places, not only the Confederate soldiers and people, but all students of history under obligation for this new addition to the accounts of the war."—*Louisville Courier-Journal.*

"Major McClellan furnishes not only an absorbing narrative, but a most valuable contribution to the history of the late civil war and to the general field of military history. His style is direct and graphic, and evidences a regard for detail and accuracy suggestive of Kinglake."—*The State, Richmond, Va.*

"Major McClellan's account of his chief is excellent."—*New York Times.*

OUTLINES OF Universal History.

By GEORGE PARK FISHER, D.D., LL.D.,
OF YALE COLLEGE.

1 vol. 8vo. 690 pages.

This work, designed as a text-book and for private reading, is a clear and condensed narrative, brought down to the present year, comprising not only a record of political events, but also a sketch of the progress of literature, art, and science from the beginning of history to the present time.

It contains full lists of books for reading and reference, and is furnished with 32 historical maps, mostly colored, and many of them folded.

The lucid arrangement, together with the use of different sizes of type, has rendered it possible to bring together a great amount of matter within a brief compass, and in a readable form.

Extra cloth binding, with leather back. Price by mail, postage free, $3.00.

The Winter Resort of the South.

Send for descriptive pamphlet. H. PHOEBUS, Prop'r.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

In regular book form, ready for use by any bookbinder. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, post-paid.

These covers will fit all volumes from XXXIII. to XL., *i. e.* since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering state the volume-number wanted.

Address Publisher of the *Nation*, Box 794, New York.

IN any family, whether large or small, but es- pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address Publisher of the *Nation*.

A General Index to the Nation.

Vol. I.—From July, 1865, to September, 1880. $2.50.

Vol. II.—From October, 1880, to October, 1885. $1.25.

No trade or other discounts. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794, New York, or Q. P. INDEX, Bangor, Maine.

Scribner & Welford's

NEW BOOKS.

Across the Jordan ;

A Record of Recent Exploration in the Holy Land.

By G. Schumacher, C. E., with Additions by Laurence Oliphant and Guy le Strange. In 1 vol., demy 8vo, with nearly 150 woodcuts, cloth, $2 25.

GOLDSMITH'S VICAR OF

Wakefield. Being a facsimile of the First Edition published in 1766 by Francis Newberry. With a Preface by Austin Dobson, and a Bibliographical List of all the known English editions; and of translations into foreign languages. 2 vols., fcp. 8vo, in paper boards with printed label, price $5.

The facsimile is accompanied by an interesting preface by Mr. Austin Dobson, in which the history of the writing and publication of the book is told, and also the seriously comic circumstances under which the MS. was brought to light and disposed of by Doctor Johnson, to the relief of his much harassed friend. Following the Preface is a Bibliography of the 'Vicar,' which, it is believed, is th e first complete Bibliography of the work that has been attempted.

ILLUSTRATED BY GEORGE CRUIKSHANK.

OLD "MISCELLANY" DAYS:

Stories by Various Authors. Reprinted from "Bentley's Miscellany." I vol., 4to, with Thirty-three full-page Illustrations on Steel (only once worked nearly fifty years ago) by George Cruikshank. Cloth, $8.40.

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons

WILL PUBLISH ON SATURDAY:

The History of German Literature.

By Professor William Scherer. Translated under the supervision of Prof. Max Müller. 2 vols., 12mo. $3.50.

Professor Scherer's is the first history of German literature worthy to be called at the same time masterly, in a scholarly sense, and popular. It is already a recognized authority of the highest rank in its own country; and this translation, with the sponsorship of the first of Anglo-German scholars, will occupy a place among our own means of instruction which there has been nothing else to fill.

"Professor Scherer has written a history of German literature which is as full of entertainment as it is of instruction, and comprises within a convenient space all that is important to know of German literature."—*Prof. H. H. Boyesen.*

Endless Punishment.

By Professor W. G. T. Shedd, D.D. 1 vol., 8vo. $1.50.

Dr. Shedd has performed a valuable service in writing this book, which contains a comprehensive and most able defence of the belief of the Church upon the subject. The argument for endless punishment has never been more cogently and clearly stated.

God's Revelations of Himself to Men.

As successively made in the Patriarchal, Jewish, and Christian Dispensations, and in the Messianic Kingdom. By Samuel J. Andrews, author of 'The Life of Our Lord Upon Earth.' 1 vol., crown 8vo. $2.50.

Dr. Andrews has written a clear and scholarly history of the different ways in which God has revealed himself to man. In showing the increasing fulness of these successive revelations, and in pointing out their relations to one another, he has followed the most interesting line of study in all historical theology.

How to be Happy though Married.

Being a Hand-book to Marriage. By a Graduate in the University of Matrimony. 1 vol., 12mo. $1.25.

"We strongly recommend this book as one of the best of wedding presents. It is a complete hand-book to an earthly Paradise, and its author may be regarded as the Murray of Matrimony and the Baedeker of Bliss."—*Pall Mall Gazette.*

**** These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

Charles Scribner's Sons,

743-745 Broadway, New York.

Teachers and Students

SHOULD EXAMINE:

I. A MANUAL OF EXERCISES for Translating into German. By A. Lodeman, Professor of German in the Normal College at Ypsilanti, Mich. Arranged to accompany Brandt's 'German Grammar.' 50 cents.

"Of proper length, graded according to the difficulty, accompanied by all the aid needed and no more, these exercises go to make up a model text-book."—*Trinity Tablet, Hartford.*

II. A GRAMMAR OF THE GERMAN Language. For High Schools and Colleges. Designed for beginners and advanced students. By H. C. G. Brandt, Professor of German and French in Hamilton College, formerly of Johns Hopkins Univ. 12mo, cloth, $1.50.

"As a scientific grammar it ranks among the best works yet written. Giving as it does compactly and methodically the more recent results of research in German philology and phonology, it cannot fail to prove a valuable aid in the higher departments of study."—*H. M. Kennedy, Professor of German, Polytechnic Institute, Brooklyn.*

III. A HIGH SCHOOL AND College Reader of German Literature. By W. A. Rosentengel, Professor of German in the Univ. of Wis. 12mo, cloth, $1.50.

"Comes to fill a want I have long felt. I shall use it with my higher class to illustrate my lectures on German Literature, covering as it does the whole ground, with biographical sketches and illustrative passages."—*W. H. Appleton, Professor of Greek and German, Swarthmore College, Pa.*

IV. MATERIALS FOR GERMAN Prose Composition; or, Selections from Modern English Writers. With grammatical notes, idiomatic renderings, a general introduction, and a grammatical index. By C. A. Buchheim, Professor of the German Language and Literature in Kings College, London. 16mo, cloth, $1.25.

"Certainly no book of the kind has more to recommend it as a practical and theoretical guide in the art of translating English into German."—*Boston Advertiser.*

V. GERMAN CLASSICS FOR American Students. A Series of Texts of the Masterpieces of German Literature, accompanied by an Introduction, a running Commentary, Critical Notes, and (where the text renders it desirable) Glossary. The series is printed in neat 16mo volumes, bound in extra cloth, and will include an Introduction by J. Morgan Hart, LL.D., Professor of Modern Language in Univ. of Cincinnati.

The following volumes are now ready:

I. GOETHE'S HERMANN AND DOROTHEA.
II. SCHILLER'S PICCOLOMINI (with map).
III. SELECTIONS FROM GOETHE'S PROSE.
IV. GOETHE'S FAUST. Part I.

Per volume, cloth, $1; paper, 60 cents.

"The series should have the widest sale possible."—*Pres. Franklin Carter, of Williams College.*

"The only properly edited German Texts yet issued for the use of students."—*Prof. Willard Fiske, of Cornell University.*

*VI. TABLEAUX DE LA REVO*lution Française. Selections from French Literature relating to the Revolution of 1789. Edited, with notes, by Profs. T. F. Crane and S. J. Brun, of Cornell University, with introduction by Pres't A. D. White. Planned for the use of students in French. 16mo, $1.50.

"I am highly pleased with the book. Besides its historical value, it is a most excellent book for young people to become acquainted with the French language as written and spoken in times of great excitement, thus avoiding the monotony of old classics. I shall certainly use it for my oldest pupils."—*Prof. Elie Charlier, Charlier Institute.*

"I have examined the work with great pleasure. I like the plan and its execution, and propose to adopt the work as a text book."—*Prof. W. L. Montague, Amherst College.*

*** Special terms for examination and introduction.
*** Full educational list sent on application.

G. P. PUTNAM'S SONS,

27 and 29 West 23d St., New York.

3321. 1-42

The Nation.

NEW YORK, THURSDAY, JANUARY 14, 1886.

The Week.

THE task devolved upon Mr. Carlisle in the arrangement of the House committees was perhaps the most laborious and embarrassing that has fallen to the lot of any Speaker in this generation. The Democratic party has for the first time in years found itself charged with the full responsibilities of government. It comes to this task not as a united body, having a clear programme and a settled platform of principles on the leading questions of the day, but with very marked divisions in its ranks on all the leading issues. This division is so marked that the leaders of the party are not even agreed on the question what is the leading issue. Mr. Bland and Mr. Warner hold that the silver question is the most important. Mr. Morrison and Mr. Randall would assign that place to the tariff, while the President perhaps esteems the civil service the most important. And upon all these issues there are deep furrows running through the party. Mr. Carlisle was bound to recognize these differences. He was bound also to give due weight to the Republican membership and to the Republican bias on these questions. It was incumbent upon him to make the organization fairly representative of the opinions of the House as he understood them, and at the same time to avoid or minimize any elements of discord between the legislature and the executive. All this was to be accomplished by assigning to certain places on the committees which prepare legislation for the final judgment of the House, 325 men, all of whom have ideas of their own fitness more or less at variance with those of the Speaker.

At first blush this might seem to be an impossible task, no less than that of handling a kaleidoscope so that a turn of the instrument should present a predetermined picture to the eye. In the presence of so difficult a problem we think that Mr. Carlisle has done very well. His success can only be determined by the outcome. Judgment cannot be pronounced upon his work until its results are shown in legislation, but according to outward appearance he has vindicated the confidence reposed in him as a judicious and conservative statesman. The Committee on Coinage engages the larger share of public attention, and this fact goes far to settle one question of the highest gravity. It proves that the silver question *is* the leading issue of the day. It shows that the public are willing to place the tariff, the civil service, and all other things behind it and to settle that first. This is no inconsiderable gain to the cause of honest money. Two years or even one year ago it was with the greatest difficulty that Congress could be brought to consider this subject at all. The opponents of compulsory coinage could scarcely get a report from a committee in either house for or against the continuance of the coinage. The House Committee was dead against any change. The Senate Committee did finally, and at too late a day to accomplish anything, report a bill to suspend the coinage after eighteen months, provided there should be no international agreement for bi-metallism meanwhile. Now everybody is on the *qui vive*. Everybody expects action of some sort, and everybody is prepared for it. The Committee on Coinage named by the Speaker appears to us to be not decidedly in favor of a suspension of the coinage, but sufficiently so to bring on a fight, and to give the initiative to those who agree with the views of the President and the Secretary of the Treasury. If this is the true color of the Committee, it is all that the opponents of compulsory coinage could properly ask.

The Edmunds bill for the correction of the Mormons, in the form in which it has passed the Senate, saddles the United States Government with the task of administering the property of a religious corporation by means of trustees appointed by the President and in no way responsible to the beneficiaries of the trust. This is proposed, too, by way of punishing all the members of a religious body, because some of them have committed offences already indictable and punishable in the courts. This extraordinary legislation was passed by 38 to 7, and the Massachusetts jurist, Mr. Hoar, had nothing to say against it except that it took away the suffrage from the Mormon women. We trust the House will deal with this remarkable measure as it deserves. In a country in which all forms of religious belief and worship are free, the punishment of whole sects for holding obnoxious opinions by seizing their property is, or ought to be, a monstrous thing. The only American way of dealing with a corporation offensive to the public interests is by winding it up. Government trustees for the management of its affairs would be a monstrous excrescence which ought not to be permitted for any purpose, however good. The Edmunds plan is one of those things which would never be dreamed of as against a considerable body of voters. It is the numerical weakness of the Mormons far more than their polygamy which causes it to be thought of.

Senator Eustis, of Louisiana, has introduced a resolution declaratory of the opinion of Congress that the $10,000,000 of bonds called by Secretary Manning, and to be paid off on the 1st of February, "should be paid in silver dollars." This is, we believe, exactly the number of silver dollars that was recently transferred from New Orleans to Washington by a war vessel in order to save express charges, the weight of the package being 330 tons. Now, in order to carry out Mr. Eustis's notions the *Swatara* ought to be loaded up again with her discharged cargo, and sent around the Atlantic coast and up the various rivers, with a detail of Treasury clerks on board distributing silver dollars to the owners of the called bonds. And for what purpose? So that the same dollars may get into the various express offices for speedy transmission to the nearest custom-houses and internal-revenue offices, and thence back to the Treasury from which they were taken. The cost of transporting silver dollars by express is $3 per 1,000. Consequently the cost of getting the $10,000,000 back again where they belong, and where they would inevitably go, would be $30,000, plus the cost of navigating the *Swatara* and handling the coin. Under the present system, a few checks are drawn by the Treasurer of the United States on the New York Sub-Treasury, and the whole business is done. It is this system that Mr. Eustis and Mr. Beck want to break up, because, in their view, it amounts to paying the bonds in gold, although no gold is actually used. They have the fantastic notion that if silver dollars are paid out, the bondholders will not get gold value, but only silver value, for their bonds, notwithstanding the fact that the Government is all the time redeeming the silver dollars in gold at the custom-house. It is probably due to some misconception upon this point that United States bonds were depressed in the London market when Mr. Eustis's resolution was telegraphed thither. There are plenty of capitalists in this country to pick up any stray lots of bonds dropped on the other side of the water under the influence of such a panic. But it will be something at which Mr. Eustis may always "point with pride," that he caused certain timid people in a distant country to lose a part of their money

---

Apropos of the recent shipment of a small lot of gold, the *Financial Chronicle's* London letter, dated December 26, says: "The announcement of the shipments from New York has come as a surprise here, and it is not yet quite understood. There is some doubt as to its being a bona-fide movement. It is considered here quite possible that the silver question and Stock Exchange speculation may have a good deal to do with the export, and hence has not that importance it would possess were it thought thoroughly a trade matter. We have at present quite enough money lying idle, and know not what to do with any increase in supplies. It would only augment the difficulty experienced in maintaining rates." And the London *Economist* of December 26, speaking on the same subject, says: "It seems hardly possible for the United States to send us much gold at present. Financial circles there are so permeated with apprehension as to the result of the compulsory coinage of silver that they would be certain to take alarm if gold in any quantity were to leave the country. There is, indeed, reason to believe that the present shipments were made with a desire to take advantage of this feeling of apprehension so as to exert a leverage on the stock markets." And in its financial report the *Economist* also says, noting the sudden advance of sterling in New York and the fact of one shipment of gold being arranged: "It seems probable that this movement is due to manipulation, possibly in connection with the Stock Exchange, and it is scarcely likely to attain any magnitude." The artificial character of the advance in sterling, and the lack of necessity for gold shipments in the week ending with December 26, seem to have been understood in London as clearly as by those of our own people

who know anything about foreign exchange. Unluckily, however, there are very many people who know nothing about foreign exchange, and therefore it is not difficult to produce a temporary scare in the stock market by an occasional manipulation of sterling. It ought none the less to be a difficult matter to secure the coöperation in such manœuvres of any banking firm with a decent reputation or decent connections in foreign countries.

The first formal Republican attack upon the Administration for its appointments to office was made in the Senate by Mr. Hale, of Maine, on Wednesday, and does not appear to have been damaging. His grievance, stripped of its cant, is that in a total of 37 Presidential postmasterships in Maine the President has made three changes, and that in 984 postmasterships not Presidential about 100 changes have been made. Mr. Hale finds no fault with the three Presidential changes, and gives the President credit for not making a "clean sweep." He is not capable of the fairness of giving the full number of the non-Presidential offices, but speaks of them as "a few hundred," and complains that out of the hundred changes made in these, eighty-seven of the new appointees had been recommended by one man, the Chairman of the Democratic State Committee of Maine. This chairman had levied upon all these appointees for his expenses incurred in going to Washington and securing the appointments. There is not the slightest evidence that either the President or the Postmaster-General had any knowledge of the chairman's doings. The Postmaster-General, as Mr. Hale admits, turned the matter over to his assistant, who appointed the men whom the chairman recommended. Mr. Hale calls this a "bargain and sale of offices," talks about it as not merely "muddying the waters" of public life, but "poisoning the fountain," and lifts up a cry for "pure civil-service reform." The only point about the changes which he is able to base his attack upon is the alleged collection of money by the chairman from the new appointees, and of that the Administration had no knowledge and cannot in any way be held responsible for it. When it is considered that there is in the State of Maine scarcely one Republican postmaster who has not been for years a Blaine worker and agent, and that, out of over 1,000 of these, all except about 100 are still in office, Mr. Hale's anxiety about the "poisoning of the fountain" is rather grotesque.

The boycotting of many newly-appointed Democratic postmasters in rural districts by the Republicans of their neighborhood is a curious illustration of the lengths to which party spirit will carry men. Less than a twentieth of the 50,000 postmasters in the United States are paid by salary; the compensation of all the rest depends chiefly upon the business of their offices, and especially upon the number of stamps which they cancel. If the people of a village refuse to deposit their mail matter at the local office, and either hand the letters which they write to a clerk in a railway postal car or send them to the post-office in the next town to be postmarked, they can deprive their own postmaster of nearly all his income, and leave him to do the work of receiving and distributing the mails without getting any adequate pay for his labor. Almost incredible as it seems to residents of a great city that people should take all this trouble to gratify a petty political spite, it is a fact that there are scores, and even hundreds, of little communities scattered throughout the land where this system of boycotting has been introduced by Republicans since Democrats were installed in the post-offices. A recent estimate by the Post-office Department puts the number of such cases at 300, and new instances are constantly reported. The system is most popular in small places where the majority of the people are Republicans, and the excitement which it causes in such villages has scarcely been paralleled since the war. Such performances cast a flood of light upon the condition of society in too many of the rural districts in this country.

The Baltimore Reform League have prepared a memorial to the Senate Committee on Indian Affairs in reference to the nomination of Morris A. Thomas as Inspector of Indian Agencies. This man Thomas is charged, among other things, with fraudulent bankruptcy and with an attempt to possess himself of the property of citizens of Maryland by methods little better than theft. One of the affidavits supporting these charges declares that when Thomas failed and went into bankruptcy, he helped himself to securities which had been placed in his hands merely for safe keeping, pretending that he had lost them in his business, but that when he was threatened with criminal prosecution he found them intact and handed them back to the owner. Other charges, of equal turpitude and supported by proofs taken from the court records and the official books of account of the city of Baltimore, were laid before the Secretary of the Interior, and were not answered by Thomas except by a general denial. The question is now an important one whether the Senate will "advise and consent" to such an appointment. There has been much "caucusing" among the Republican majority of that body in order to determine what course they ought to pursue with reference to the President's nominations in general, and more especially with reference to removals made on grounds of offensive partisanship. Those questions can easily be postponed. They are party questions, which are always in order. But the nominations of such characters as Thomas involve moral considerations weighing upon every individual Senator, no matter what party he belongs to. These considerations could not be put aside if the name of Thomas had been sent in by a Republican President. It will be surprising indeed if facts which would not be overlooked in such a case are ignored or lightly regarded in the case of a Democrat. If Thomas is confirmed, he must be confirmed by Republican votes. The responsibility of the Senate is exactly equal to that of the President, and it will not lie in the mouth of any Republican Senator to accuse the President of making any bad nominations to which he (the Senator) has given his advice and consent. To put the matter plainly, the Republican party has the power to prevent any improper appointment whatever in the higher grades of the public service, and it will be held to its responsibility. It will not be allowed to accuse the Democrats of offences to which it is itself a willing accessory.

Massachusetts has now had nearly a year's experience of the merit system in the civil service, and it proves to have worked as well there as everywhere else that it has been tried. The report of the Commissioners presents a mass of evidence of the practicability and advantages of the new methods. The largest number of appointments under the competitive system has been made in the State Bureau of Statistics of Labor and in the Boston Police Department. The chief of the former bureau bears witness that the force thus supplied to him is "very much superior to the one we should have been likely to have secured through the old method of personal application and the endorsement of friends"; that the attendance of these clerks has been more regular than that of any former employees; and that in intelligence, capacity, and attainment, as well as in attendance, the force provided by the new law "reflects the greatest credit upon the civil-service system." The Boston Police Board are no less hearty in their praise, witnessing that, from the certifications for appointment on the patrol force, they have been able to select men well qualified in every way for the service; that, in the matter of promotions, the new system brings to the top of the list those who, by their conduct, efficiency, and educational qualifications, have the highest claims to advancement; and that "it can be said emphatically that the application of civil-service rules to appointments and promotions in this Department has been attended with very satisfactory results." Incidentally, the Commissioners deal another blow at the silly old charge of the spoilsmen that nobody but college graduates would be able to get into office if men were required to show their fitness before being appointed. The whole number of persons who have applied for examination was 1,292, and of these 1,267 had received only a common-school education, the 25 who had been to college representing only 2 per cent. of all! Similar showings have been made in the Federal civil service and in this State, and it will require a very impudent spoilsman hereafter to repeat the ancient "gag" about college graduates in the face of such figures.

The report of the Massachusetts Commissioners is of especial interest in New York just now, because it bears directly upon the scheme which will be again pushed in the new Legislature to make a breach in the competitive system by exempting old soldiers from its operation. A similar attempt was made in the Massachusetts Legislature last year, but it failed, and the Commissioners clearly show from the records that the veterans need no such legislation. The Massachusetts statutes, like those of this State, give old soldiers the preference in appointments and promotions where they stand otherwise on an equality with other competitors. The demagogues have urged that the soldiers were not able to get "book learning" when they were young men because they were fighting for the preservation of the Union, and that consequently they would be unable to pass the examinations, which would be child's play for the college graduates. The records effectually dispose of this charge, for they show that the percentage of veterans who passed the examinations was larger than that of other applicants. The preference in ap-

pointment which they now enjoy, results in their getting a much larger proportion of places than others who have successfully passed the examinations with them. The report also points out that amendment of the law so as to exempt old soldiers from examination, instead of helping them to secure office, would have had just the opposite effect, since it would have enabled the appointing power to ignore them in cases where under the present rules they must be selected.

In most of the States the address to a new Legislature at the opening of its session is delivered by the new Governor, but in Ohio the retiring Executive also sends in a message a few days before his successor is inaugurated. The custom has much to commend it, especially when the outgoing Governor is a man so full of ideas as Mr. Hoadly, and the message which he sent to the General Assembly on Monday merits more consideration than it is likely to receive from a body politically hostile to him. What he says on the subject of civil-service reform is of general interest. Hardly any State in the Union stands in more urgent need of the application of reform. So thoroughly has the spoils system been accepted that minor officers and guards in the penitentiary are by law required to be appointed upon geographical principles, and the appointments have thus virtually been made by the representatives in the Legislature, or, in counties where they were opposed to the party in power, by the county executive committee of the dominant party. Naturally such a plan has worked very badly, and of 113 guards thus saddled upon the present warden, he has had to get rid of no less than seventeen for the good of the service. Governor Hoadly earnestly urges that the spoils system be abolished so far as the benevolent and penal institutions of the State are concerned. He says with truth that, so far as his own influence has gone, it has been exerted to prevent political reorganizations and changes in these institutions, but very properly holds that the necessary divorce from politics cannot be had without the aid of law. He therefore recommends that some system be adopted which will eliminate political considerations, giving his preference to the plan of competitive examinations adopted in the Federal civil-service law and the New York State law. As he reminds the Legislature, the Republican party of Ohio is pledged by its State platform "to extend this law to all grades of service to which it is applicable," and the public will watch with interest to see how it redeems this pledge.

Ohio is in about the same situation as New York regarding the employment of prisoners. The people two years ago voted to abolish the system of convict contract labor, and, as soon as a few outstanding agreements expire, this method of employing prisoners will come to an end. The financial results of the change in Ohio, as in New York, have been disastrous. The management of the penitentiary drew from the State Treasury only $47,247 more than it paid in during the year ending November 15, 1884, while during the year ending November 15, 1885, the deficit rose to $153,864. The pending question is whether the piece-price plan or the State-account system shall be adopted as the permanent policy, now that contract labor is to be abolished. Governor Hoadly points out, as Superintendent Baker, of New York, has just done, that the great objection to the State-account system is that it requires a costly plant and a large working capital. Besides, work on State account is certain to be a failure if political or partisan considerations control the choice of penitentiary officials, while even if these are eliminated, the plan of working a series of great factories by hired help, without the intelligent supervision of an interested master, has very little promise of financial success. On the other hand, the piece-price plan has the advantage of supplying the State with a market and with the intelligent supervision of interested manufacturers, while so far as it has been tried in Ohio it seems to work well. Governor Hoadly's opinion is that the management of the penitentiary must necessarily be tentative for some time to come; but the whole drift of his discussion of the subject goes to prove that the piece-price plan is the best substitute that can be found for the contract system.

The London *Daily News* announces the death of a lady from eating too much turkey, plum-pudding, and nuts on Christmas Day, and affirms that she was probably the last person who will die in that way, owing to the great change in the eating habits of the population. The practice of expressing joy or kindly feeling, especially at Christmas, by eating immense quantities of one or two things, is a mediæval custom which has lasted longer in England than in other European countries, and was temporarily stimulated or revived, the *Daily News* suggests, by Dickens, whose characters almost all indulge on festive occasions in a tremendous guzzle. The taste for this sort of excess has greatly declined in England. In fact, just now, we believe, it is rather "the thing" among men of the world to have delicate insides, and prefer a chop and a pint of Apollinaris to the most elaborate menu. In this country great feeding has always been rare, the popular taste running rather to nice unwholesome things like pie and doughnuts, than to large quantities of meat or drink. The Southern barbecue is almost the only relic among us of the great gorging of the early Anglo-Saxons.

The hotel, with its varied bill of fare, has, however, done a good deal to stimulate the American appetite, but it takes its pleasure rather in variety than in quantity. An American drummer surrounded by his breakfast or dinner at a "good house" is an alarming sight to those who do not know that he will probably not taste, or do more than taste, half the dishes he orders. What he really seeks in his order is the pleasure of having his whole possible meal "in sight" —something very dear to the plain feeder. This is really the great obstacle in the way of serving a dinner in courses—European fashion —at our tables d'hôte. When the first attempt was made to introduce it in Memorial Hall at Harvard, many of the country boys objected strongly, on the ground that they liked "to see their dinner," and therefore have the pie on the table while they were eating the meat. Then, too, it goes hard with an American to wait for a slower eater than himself before getting to the next dish. There is an excellent New Haven story of a Hartford business man so anxious to get back to work after his midday dinner that he asked his guest "whether he would mind eating his pie in the street."

The announcement that the Queen is going to open Parliament in person is another sign of her strong sympathy with the Conservatives. She opened it last when Disraeli was in power, and never once during Gladstone's last administration. The matter has no political importance, but it cheers up people in society whom the Radicals and the Irish are frighten ing.

Mr. Bryce, our London correspondent, explains that his reason for leaving his old constituency, the Tower Hamlets, one of the London boroughs now divided into seven, was not, as we suggested, any fear that the Irish vote would be thrown against him, or that he would not be returned easily, but that he desired a less laborious seat, if we may use the term. The demands of a metropolitan constituency on its member are very great both in the way of interviews and correspondence—so great in Mr. Bryce's case, who is one of the most conscientious and indefatigable of letter writers, as seriously to threaten his health. Under these circumstances he was glad to accept a very warm invitation from the Aberdeenshire Liberals, the more so as, being a Scotchman, he likes to represent a Scotch constituency.

A recent number of the *Révolté*, a French Anarchist paper, has an elaborate article calling for the destruction of all registries of births and baptisms as soon as "the social war breaks out," with the view of getting rid of the odious custom of giving people fixed and indelible names before their characters are sufficiently developed to show what names suit them. Our names, the writer says, ought to be in some sort a description of us, so that on hearing a person's name, you would get an idea at once of the kind of person he was They ought to change, too, as we go on in life, according to age, place, and circumstances. A man ought to have one name in his youth, another in middle life, and another in old age, and he ought to be able to change it as best suits "the mobility of his disposition" and changes in his manner of life. One man may find one name sufficient for his whole life, another may need as many names as he has shirts. The essential thing is that a man should be allowed to change his name when he pleases, and should not have any name, whether baptismal or surname, fastened on him by law, and no one should have more than one name. The writer points out that in family and professional and workshop intercourse, nobody has more than one name, and that generally a descriptive nickname, and this is therefore the natural revolutionary mode of distinguishing people. The way in which all this has been anticipated or illustrated in our local politics is known to all our readers. When we say Mike, Jake, Barney, Sol, or Steve, everybody knows who is meant, and what kind of man he is, far better than if his baptismal name and family name were set out in full.

SUMMARY OF THE WEEK'S NEWS.

(WEDNESDAY, January 6, to TUESDAY, January 12, 1886, inclusive.)

DOMESTIC.

SPEAKER CARLISLE on Thursday announced the House Committees. The Chairmen are as follows: Turner, of Georgia—Elections. Randall, of Pennsylvania—Appropriations. Morrison, of Illinois—Ways and Means. Herbert, of Alabama—Naval Affairs. Bragg, of Wisconsin—Military Affairs. Belmont, of New York—Foreign Affairs. Curtin, of Pennsylvania—Banking and Currency. Bland, of Missouri—Coinage, Weights, and Measures. Willis, of Kentucky—Rivers and Harbors. O'Neil, of Missouri—Labor. Mitchell, of Connecticut—Patents. Throckmorton, of Texas—Pacific Railways. Reagan, of Texas—Commerce. Cobb, of Indiana—Public Lands. Tucker, of Virginia—Judiciary. Wellborn, of Texas—Indian Affairs. Blount, of Georgia—Post-offices and Post-roads. Springer, of Illinois—Claims. Spriggs, of New York—Accounts. Matson, of Indiana—Invalid Pensions. Muller, of New York—Militia. Geddes, of Ohio—War Claims. King, of Louisiana—Mississippi River. Aiken, of South Carolina—Education. Eldridge, of Michigan—Pensions. Halsell, of Kentucky—Private Land Claims. Barbour, of Virginia—District of Columbia. Cox, of North Carolina—Reform in Civil Service. Dunn, of Arkansas—American Shipbuilding.

It is believed that the Coinage Committee on the issue between monometallism and bimetallism is to be classed as a silver committee. But it will be against an indefinite continuance of the coinage of the 412½-grain silver dollar under the Bland act by about 7 to 6. It will be in favor of some provision which will continue the use of silver in the currency without continuing the coinage of the Bland dollar. The Committee, however, would be decidedly opposed to the demonetization of silver. The Ways and Means Committee represents every shade of opinion upon the tariff, and every proposition that has thus far been submitted on the tariff question will find an exponent upon this Committee. It is understood that some kind of a tariff bill will be prepared at an early day. The Banking and Currency Committee is composed in about equal proportions of the friends and opponents of the national banking system. Upon the Committee on Naval Affairs and the Committee on Rivers and Harbors the advocates and the opponents of large appropriations alike find representation. On the Committee on Indian Affairs pains were taken to give representation to the advocates of the various plans for the settlement of the Indian problem. Mr. Cox, of North Carolina, the Chairman of the Civil-Service Reform Committee, is reported as saying that he is a thorough believer in the merit system, but that the Republicans who were in office before the system was established should be turned out, and be placed on the same footing with other candidates for office. He thinks that there is more dissatisfaction with the rules of the Commission than with the law.

The Chair laid before the United States Senate on Wednesday a letter from the Postmaster-General complying with the call of a recent Senate resolution in respect to the appointment of postmasters in Maine, alleged to have been procured through the influence of S. S. Brown, Chairman of the Democratic Committee of that State. The communication having been read, Mr. Hale said that before it went to the country he desired to say a few words with regard to it. It was every day becoming the belief of the people, he said, that the civil service of the Government should not be the result of party service. Above all, the country desired that we should have a pure civil service. There should be no taint of bargain and sale about it. The Republicans had expected to go out. The Administration had taken a conservative course, and the President, though pressed to make a general sweep of the postmasters in Maine, had declined. But the people of many places had waked up one morning in Maine, and found that persons had been appointed whom nobody wanted and nobody recommended. In one case it was found that the Chairman of the Democratic Committee, Mr. S. S. Brown, had given up his law practice, closed his office, and had come to Washington to attend to the distribution of patronage under the civil-service system. Mr. Hale acquitted the Postmaster General of any endorsement of Mr. Brown. Brown had come to Washington endorsed by the Democratic party, or its committees. The Postmaster-General had turned these matters of appointments over to his assistant, who relied on Mr. Brown. But the Postmaster-General had not made complete answer to the resolution of the Senate. He had not stated whether the wishes of the people had been respected in the new appointments—which was the *summum bonum* of the inquiry. No explanation had been made of the infamous system on which the proceedings complained of had been based. Senators Vest and Voorhees replied. The debate ended with a reference of the report to the Committee on Civil Service and Retrenchment, where it will probably stay.

Senator Vance, who has introduced a bill to repeal the Civil-Service Act, says that he is in earnest and will speak in support of it; that he does not expect many votes, because those who are against the law have not the courage of their convictions, but that he is convinced from private conversations that a majority of the Senate would be glad to have the law repealed.

Senator Wilson, of Iowa, on Friday reported favorably from the Committee on Post-offices and Post-roads the bill introduced by him to prohibit the mailing of newspapers and other publications containing lottery advertisements.

Senator Eustis, of Louisiana, on Friday introduced a resolution providing for the payment in silver dollars of the $10,000,000 bonds embraced in Mr. Manning's recent call.

The reports that Secretary Manning contemplates paying in silver any of the bonds recently called in are unfounded.

The Senate confirmed the nominations of the three Civil-Service Commissioners on Monday. When the nomination of Mr. Eaton came up Senator Logan made the point that Mr. Eaton was a "Mugwump," and that the spirit of the Civil Service Law required that one of the Commissioners be a Republican. Senators Evarts, Hoar, and one or two others vouched for his Republicanism. There are said to have been fourteen votes cast against him, one-half of which were those of Republicans. Mr. Eaton wants to resign his office on February 1.

Mr. Frye (Rep., Me.) introduced a bill on Monday in the Senate for the relief of the American merchant marine. It repeals the statutes requiring the payment of fees for marine documents, certificates of inspection, etc., and provides that the collectors whose duty it is to furnish these papers shall be paid by the United States. Masters of coastwise vessels are authorized to employ a shipping commissioner to ship crews. The liability limitation clause of the last Shipping Act is extended to vessels in interior waters and to those engaged in the coastwise trade.

The House on Tuesday adopted a resolution, calling upon the Postmaster-General for information as to the advisability of changing the existing method of compensating railways for the transportation of the mails. Some members of the Post-office Committee are of opinion that the present plan is too expensive, and that a system can be devised which, while more economical, would not interfere with the expedition of the mails. The Hoar Presidential Succession Bill was favorably reported in the House on that day.

Oliver P. Burger, who has been a clerk in the Post-office Department at Washington since September, has been dismissed for circulating postal cards saying that it was easy to get into the Government service under the civil-service rules, and offering to give the necessary information how to do it to those who were willing to pay for it.

The Ohio legislative caucus on Thursday night renominated John Sherman for United States Senator. The Democrats have abandoned their hope of defeating his election. The Mississippi Democratic caucus has renominated the two present Senators, George and Walthall.

The Democrats of the Ohio Legislature on Monday night nominated Allen G. Thurman for United States Senator, giving him 38 votes to 28 for Governor Hoadly.

In the Ohio House of Representatives on Tuesday the nine Democratic members from Hamilton County were unseated and nine Republicans put in their places. This action was ample assurance of the reëlection of Senator Sherman, giving him twenty-one majority on joint ballot. Both houses voted for Senator separately on Tuesday, Mr. Sherman receiving sixty-seven in the lower house and seventeen in the Senate, and Mr. Thurman forty-one in the House and twenty in the Senate.

The new rules and amendments to rules proposed by Speaker Husted to the New York Assembly on Wednesday create three new committees—one on appropriations, one on excise, and one on revision of bills. After considerable discussion the rules of 1885 were adopted, and the Speaker was empowered to appoint the three new committees, their powers and duties to be hereafter defined.

In the Assembly on Wednesday a bill was introduced incorporating the Grant Monument Association.

The threatened strike of engineers on the elevated railroads of this city was settled on Thursday by a compromise. The agreement signed concedes all that the men asked for in the original bill of grievances, except that nine hours will constitute a day's work instead of eight, and that the following clause, No. 9, is stricken out: "That no engineer shall be censured for failing to make time in foggy weather, thereby endangering lives of people and destruction of property, as has been done in the past."

Hundreds of negroes are leaving the Carolinas, Georgia, and Alabama for the West, owing to high rents, bad crops, and a defective tenant system.

A blizzard accompanied with intense cold and snow prevailed from Friday to Monday from Dakota to the Gulf and throughout the Eastern States. Railroad traffic was generally interrupted.

The widow of Gen. George G. Meade died in Philadelphia on Thursday.

Ex-Governor Benjamin Conley, of Georgia, died suddenly in Atlanta on Sunday in his seventy-first year. He was a Republican, and on Governor Bullock's flight in 1872 succeeded him by virtue of his office as President of the Senate. He was soon ousted by the Democrats, who ordered a special election.

FOREIGN.

Robert Giffen, LL. D., proposes in the London *Statist* a scheme which would enable home rule to be granted to Ireland without exposing the property of landlords to plunder, and without imposing any serious burden on the Imperial Exchequer. The plan is for the Imperial Government first to buy out every landlord in Ireland, giving him consols at par equal in nominal amount to twenty years' purchase of the present judicial rents; second, to give the land free to the present occupiers, subject only to a rent charge of one-half or two-thirds of the present judicial rent, payable to the new local authorities in Ireland; and, third, to relieve the Imperial Exchequer of all payments

now made out of it in connection with the local government of Ireland. The plan is, in fact, to throw the cost of the local government in Ireland upon Irish resources exclusively, and to give the Irish people the rent of the country for the purpose of conducting it. Taking the rent of Ireland as settled judicially at about £8,000,000, the consols at par to be given in exchange at twenty years' purchase would be £160,000,000, involving an annual charge of £4,800,000 upon the Imperial Exchequer. At present the Government expends annually upon Ireland for the local government close upon £4,000,000, exclusive altogether of the outlay for the army of occupation, for the collection of revenue, and other imperial matters which would still remain imperial. The position as regards Irish tenants would be, that where they now pay £8,000,000. they would have to pay only from £4,000,000 to £5,500,000.

Earl Grey, writing to the London *Times*, deprecates the concession of local government to Ireland, as he believes that such power would be made the means of oppressing all who dissent from the doctrines of the National League. The improvement of the condition of the people of Ireland, he says, must emanate from themselves; it must be brought about by provident habits and greater industry. It is the imperative duty of the Government to suppress outrages and violations of law in Ireland, and until that is accomplished all concessions to the Irish people will merely serve, like sweets to children, to stop their crying.

John Morley, Radical member for Newcastle on-Tyne, made an important speech on Thursday night, which is the first distinctive Radical utterance on Irish home rule. He said: "I have not come to develop a scheme of government for Ireland. That is for our leader. Whatever the *Times* may say, an whatever his assailants, secret and open, may say, I believe there is no man in this realm who is competent to take this task in hand except the statesman who has devoted the best part of his life to the amelioration of the condition of Ireland, and whose great abilities and human sympathy will be found the only means capable of solving the great Irish question. All that I would urge upon you is not to be misled by any idea that we are in a mere Parliamentary crisis. We are in a great national crisis." In conclusion he said: "If I am in favor of finding new ways of dealing with the Irish problem, of leaving the old rut, and of approaching that problem boldly, calling upon our statesmen to give some constructive solution of our difficulties, it is because I am persuaded that in that direction it is you must look for the strengthening of the empire; that in any other direction you will only weaken the empire, tie your own hands, and make yourself powerless for carrying out those great tasks which have been confided to this nation."

A number of unofficial Liberal members of Parliament have been making overtures to the Parnellites for the coöperation of the latter in raising a question as to home rule during the debate on the address in reply to the Queen's speech. Mr. Parnell declines to reply to Liberal overtures unless they are accompanied by an express agreement to grant Ireland home rule. The Parnellites will await the Government's proposals.

A conference of Parnellites in Dublin on Monday resolved to continue with an unalterable determination their struggle to secure the rights of Ireland. The consideration of the most important questions was postponed until the arrival of Mr. Parnell. Mr. Gladstone held a reception at Carlton Terrace on Monday evening. Earl Granville, Sir William V. Harcourt, Lord Hartington, Sir Charles Dilke, and Mr. Chamberlain were conspicuous by their absence.

Parliament opened on Tuesday. Large crowds had congregated in the vicinity of Parliament House, and when Mr. Bradlaugh and Mr. Gladstone arrived they were loudly cheered. The Right Hon. Arthur Wellesley Peel, who is a Liberal, was reëlected Speaker of the House of Commons without opposition.

The Government does not intend to prevent Mr. Charles Bradlaugh from sitting in the House of Commons as Member for Northampton.

The Queen's speech will not be submitted to Parliament until next week. It has been delayed in order that members who are at a distance from London may have time to make arrangements to be in their places if a debate should arise.

There is great distress among the poorer classes in Scotland. A meeting of 5,000 unemployed persons was held in Glasgow on Friday, and it was resolved to make an appeal to the wealthier classes. No Socialistic remarks were indulged in.

The proposed American Exhibition in London has been postponed for one year—from May, 1886, to May, 1887. It was discovered that the Colonial and Indian Exhibition, in which Englishmen take great pride and which is to be held this year, would probably prove disastrous to the proposed American show.

Ten thousand Burmese rebels are scouring the country within a radius of twenty miles of Mandalay and threaten to attack the town. Fears of an émeute are felt, owing to the great reduction of the British force at Mandalay by the withdrawal of troops for the expedition to Bhamo. Prince Alompra is at the head of the rebel force and claims to be king.

The work of widening the Suez Canal is delayed, owing to the refusal of the Egyptian Government to sanction a modification of the treaty so as to allow the interest on the proposed loan of £8,000,000 to be paid out of the loan itself, instead of from the receipts of the canal, as stipulated by the treaty.

The French Government will, at the request of the Panama Canal Company, send M. Rousseau, a trustworthy engineer, to inspect and report on the condition and prospects of the Panama Canal. If the report of M. Rousseau is favorable, a loan will be granted the company to push the work to completion. If it is adverse, the enterprise will be allowed to collapse, and the Government will assume the responsibility.

A new French Cabinet was announced on Thursday, but is not received with enthusiasm, though Clémenceau and Rochefort advocate giving it a fair trial. It is as follows: M. de Freycinet, President of the Council and Minister for Foreign Affairs; M. Sarrien, Minister of the Interior; M. Sadi-Carnot, Minister of Finance; M. Goblet, Minister of Public Instruction; M. Demole, Minister of Justice; M. Develle, Minister of Agriculture; General Boulanger, Minister of War; M. Aube, Minister of Marine and the Colonies; M. Baïhaut, Minister of Public Works; M. Granet, Minister of Posts and Telegraphs; M. Lockroy, Minister of Commerce. Lockroy and Granet represent the Radical element.

Count Alfred de Falloux is dead at the age of seventy-five. He has been prominent in France as a writer and politician. He was a Legitimist, but was one of the first after the flight of Louis Philippe in 1848 to recognize the new republican form of government. He was one of the Deputies who organized the resistance to the insurgents. On the election of Louis Napoleon to the Presidency he was made Minister of Public Instruction. In 1872, at Versailles, he proposed to demand of the Comte de Chambord the recognition of the tricolor and the acceptance of the Comte de Paris in default of the heir direct. This speech roused press discussion and party anger, until the Count found that the easiest way out was to declare himself "a proved Legitimist." His writings dealt with religion, politics, and agriculture.

During the latter part of December rebels destroyed the Catholic mission-houses at Ughean, Anam, and killed a French missionary and 500 native Christians. A column of French troops was sent in pursuit of the rebels. It overtook and routed them and captured their arms and ammunition.

The Powers have summoned Servia, Bulgaria, and Greece to disarm, promising them that Turkey shall follow their example. Servia has resolved not to make peace with Bulgaria until the question regarding the disposition of Eastern Rumelia by the Powers has been solved in a manner which will satisfy the wishes of the Servian Government.

Prince Alexander and the Porte have come to an understanding on the following conditions: That the union of the Bulgarians be recognized by the Porte; that the Bulgarian army be at the disposal of Turkey in the event of war with Greece or Servia; that tribute be paid regularly to the Porte; that the customs rights of the Porte be maintained, and that Prince Alexander go to Constantinople to be invested with the Governorship of Eastern Rumelia.

The Greek Government has made overtures to the Government of Montenegro looking to an alliance against the Porte. The King of Greece will leave his capital soon for the Thessalian frontier to inspect the army. It is supposed that this will be the prelude to the beginning of hostilities. Bismarck has warned Greece against war.

The financial difficulties of the Turkish Government are increasing. The soldiers are clamoring for their pay. It is proposed to issue paper money. The Military Council will instruct the commander on the Greek frontier to attack the Greeks if they make any hostile movement.

Emperor William has signed the Spirits Monopoly Bill and submitted it to the Bundesrath. The bill proposes to compensate those deprived of a livelihood through its operation on the basis of a two years' income to each person ten years in the trade. The traffic will be controlled by a monopoly ministry, which will appoint agents to do the wholesale vending of the refined spirits, the Federal States appointing the retailers.

Minister Pendleton has induced the German Government to rescind the order for the expulsion of German-Americans from the island of Foehr.

No news of the reported seizure of the Samoan Islands by the war ship *Albatross* has been received by the German Government. Germany adheres to the neutrality agreement with England respecting Samoa. The State Department at Washington has received no advices regarding the alleged seizure. The independence of Samoa has been guaranteed by a treaty between the United States, Germany, and England. It is asserted that Germany is merely settling her differences with the reigning King of Samoa, and when she has succeeded will restore neutrality.

Contrary to alarmist reports, the Pope is in excellent health.

A party of seventy Spanish rebels, including forty belonging to the garrison, seized Fort St. Julian, in Carthagena, on Monday, and wounded the Military Governor. Troops hastened to the scene of the disturbance, and the rebels fled to a small vessel in waiting in the harbor. They shouted for Zorilla and the republic. A man-of-war has gone in pursuit of them, and Carthagena has been declared in a state of siege. Several arrests were made.

The Belgian Senate has adopted a bill providing that newspaper telegrams and other news bearing editors' notices forbidding reproduction must not be reproduced without credit.

A fight has taken place between a body of Russian troops and a tribe who were crossing the Persian frontier to winter in Russian territory. The Persian Government is said to fear a Russian invasion of Khorassan.

MR. BAYARD AND THE FISHERY QUESTION.

NOTHING could be more flagitious and unwarranted than the recent attacks, led by a prominent Democrat in Massachusetts, on Secretary Bayard for his course in relation to the pending fishery question; and their virulence naturally suggests a suspicion of an intent to forestall anything like a calm discussion of the merits of the case by appealing to and awakening popular prejudices. But what are the facts in the case?

The fishing clauses of the Washington Treaty of 1871 having been abrogated on the 1st of July last by the action of Congress, the Treaty of 1818 (between the United States and Great Britain), determining the rights and privileges of citizens of the United States engaged in fishing in British American waters, again comes in force. In this treaty the United States renounced any right to fish "within three marine miles of any of the coasts, bays, and harbors of his Britannic Majesty's dominions in North America." The interpretation of this limitation—certainly on the part of English diplomatists—has always been "that the three miles meant miles to be measured from the headlands or extreme points of land at the entrance of bays or indents of the coast," and, therefore, that American fishermen had no right to enter such bays or indents to take fish, even if the fishing were done at a distance of more than three miles from the shore. It is also to be here noted that, in agreeing to such renunciation of fishing rights, the United States relinquished to Great Britain nothing more than it claims for itself — our admiralty jurisdiction by act of Congress extending within a marine league from our shores, while in 1806 our Government thought it not unreasonable that they should have exclusive jurisdiction "within the chambers formed by headlands, or anywhere at sea within the distance of four leagues; or from a right line from one headland to another" (see Madison's letter to Monroe and Pinckney, May 17, 1806). Judge Story, in his Commentaries, also thought that the United States had a right to claim maritime jurisdiction for fiscal and defensive purposes over waters on our coasts, even though included within lines stretching from quite distant headlands, as from Cape Ann to Cape Cod, and from Nantucket to Montauk Point, etc.

But although the United States has by its own legislation clearly acquiesced in the English interpretation of the Treaty of 1818, its fishermen—especially those engaged in the cod fishery off Newfoundland—never have; and ever since the ratification of this Treaty of 1818 the attempt on the part of British colonial authorities to enforce it has led to numberless collisions between our fishing vessels and the British coast-guard cruisers, with arrests and seizures of property, prolonged litigation and diplomatic correspondence; and in more than one instance the two countries, by reason of these disputes, have been led almost to the verge of war. Now it was under these circumstances that Congress abrogated the Treaty of 1871, and, with a carelessness in respect to detail that is not a little singular, fixed upon the 18th of July, 1885, in the midst of the fishery season, as the day on which the abrogation should take effect, and the arrangement for the season's fishing entered into in the spring by the American fleet be summarily broken up. It is to be borne in mind that the privileges granted to the Americans by the treaty covered not only the right of fishing along the shores and within the bays and headlands of the British colonies, but also the right to land for the purpose of drying and curing fish, for mending and drying nets, for the purchase of ice, bait, wood, and other ship's stores, and for selling and disposing of their "catch" if they found it profitable so to do—as is the case in respect to the catch of cod below a certain size. The result of this would have been that if the Canadian and Newfoundland authorities had insisted upon their rights, and had summarily compelled the American fishermen to desist from fishing in British colonial waters after the first of July, the business of the American fleet would have been mainly broken up, large losses would have been entailed upon its owners, and a feeling of bitterness engendered which it was clearly the intent of both Governments to avert.

That such a condition of affairs was imminent is shown by the circumstance that during the last winter a bill was introduced into the Canadian Parliament providing for two armed cruisers to protect the Dominion fisheries from encroachment consequent upon the abrogation of the treaty. Accordingly, early during the last year, at the promptings mainly (it is understood) of the authorities of Newfoundland, who had no desire to have their shores and waters made the scene of turmoil and possible conflict, a proposition was made to the Administration by the British Government, through its Minister at Washington, that the fishing ventures of the American fishermen in British colonial waters, commenced prior to the 1st of July, 1885, should be allowed to continue until the end of the fishing season the same as if the treaty had not been abrogated; on condition that the President of the United States would call the attention of Congress to the matter at its next session, and recommend the authorization of a commission on the part of the United States and Great Britain to consider the subject, and if possible settle the questions at issue in an amicable manner. It is for promptly acceding to this friendly proposition, with the sanction of the Executive, that Mr. Bayard is now abused and accused of having transcended his authority. The last charge rests upon the circumstance that in the memoranda exchanged between the two Governments it was understood, but not stipulated, that the same immunity accorded by Great Britain to the citizens of the United States engaged in fishing in British-American waters, should be extended to British vessels and subjects engaged in fishing in the waters of the United States; and this, it is claimed, Mr. Bayard had no right to do. But the shallowness of the pretence here set up becomes apparent when it is understood that if there is any fishing by British subjects within American waters—*i. e.*, within three miles of the shore—it is probably accidental and exceptional rather than intentional.

In short, the secret of this whole business—the abrogation of the treaty in the first instance, and the opposition to any attempt to settle any pending difficulties relating to the fisheries in a rational manner by another treaty—grows out of a desire to increase the price of fish food to the great mass of the American people by imposing high protective duties on the same. And the parties to this project start with the assumption that the British colonial authorities have not the same right to control their own local waters which this country claims and exercises in respect to its own waters, and scout the very idea that anything like a reciprocity of interest is involved in the controversy. As we seem to learn little in respect to any of the great questions of the day except through the hard school of experience, it would on some accounts appear to be desirable that no attempt should be made at present to renew the fishery treaty, in which case the American "Bank" fishermen would probably, in about six months, be calling for the protection of armed vessels, and the country, in addition to its present business embarrassments, would have the prospect of more or less serious complications with Great Britain to think about.

OUR FOREIGN LEGATIONS.

THE Troy *Times*, of which our late Minister to Vienna, Mr. Francis, is the editor, has a long article in answer to the *Nation's* advocacy of the abolition of our foreign legations. He pleads, on behalf of the legations, first "the wisdom of the fathers" who established them, forgetting that the fathers knew nothing about the electric telegraph and the compound marine steam engine. He next pleads that consuls cannot communicate with foreign governments at all, and we cannot by any legislation empower them to do so. This is true, but they can communicate with their own Government in about two hours from any part of the world, and their own Government can communicate with any other in about the same time, and settle claims for "damages suffered, illegal arrests," and so on, when serious, by special envoy. Mr. Francis—for we may presume it is he—further says that

> "From his friendly relation with colleagues of the diplomatic corps, the minister may learn essential facts respecting the movements and intentions of other governments oftentimes bearing upon important interests of his own country and upon affairs respecting the common interests of nations. The duties of the diplomatic officer are of grave character, and involve serious responsibilities pertaining to the intercourse and good understanding of nations."

A minister undoubtedly "may" learn such things, but, as a matter of fact, the American minister does not. We believe there has not been a case since the close of the war in which our ministers have sent home any news of importance to us about "the movements or intentions of foreign governments" which might not have been learned from the newspapers, except during Blaine's Chilian trouble, which he got up himself. If Mr. Francis knows of any other case, let him produce it. He further says:

> "It is not true that because our ministers, as a rule, do not speak several languages, and because the law requires them to appear at diplomatic assemblies in plain dress in contrast with the showy uniforms of colleagues, they are therefore subjected to the pain of ridicule and shame of

humiliation. The English language is spoken everywhere, and by the larger proportion of fairly educated persons abroad; it is spoken at the foreign offices with which ministers are in communication; it is largely understood and spoken in diplomatic and court societies. Our Government requires its ministers to write in English all notes addressed to foreign offices. Our ministers, though not generally skilled linguists, have no difficulty in making themselves understood, nor of understanding others with whom they have to deal in diplomatic intercourse."

Our charge was not that our ministers "do not speak several languages," but that, except in England, they rarely speak the language of the country to which they are accredited. At this moment we happen to have a minister in Paris who speaks French fluently, and have had of late several in Berlin who spoke German, but this state of things is rare. In the first year of the war, the American Legation at Paris, where the Confederate envoys were intriguing sharply, had not a single person who could speak French or read the newspapers except a hired interpreter, who, it was currently reported, sold Mr. Dayton's conversations with the Minister of Foreign Affairs to Slidell. Moreover, the English language is *not* "spoken everywhere," or "by the larger proportion of fairly educated persons" in any country. And our ministers *have* difficulty in making themselves understood—difficulty that in most cases amounts to impossibility. Mr. Francis must not suppose that his having filled a diplomatic post himself qualifies him to give flat denials in matters of this sort, of which every American who has visited a foreign capital is more or less cognizant. The truth is, that there is generally no worse authority on the position of the American minister abroad than the good soul who fills the place, and feels all the glory of it. Of what people are saying around him he generally knows nothing, and his brother diplomats are of course polite by profession, and take care of his self-love much better than he can do it himself. If he could get admitted sometimes to their inner gossip about him and his ways, it would make him a much better authority on the value of American diplomatic service than he is now.

Of course the explanation of all this is very simple. Qualifications for a particular place are hardly ever considered in filling our legations abroad. The considerations which govern the appointments are almost always considerations of home politics. One man gets this because he gave a good contribution to the campaign fund; another gets that because he stumped or wrote vigorously during the canvass, or because he lost his seat in Congress, and "hung round" a good deal. Why should a process of selection which has not the smallest relation to the work to be done produce any better results than we have described? Why should a rattling country editor, or rousing stump orator, or a wealthy business man necessarily make a good diplomatic officer? There is no reason in the world. If our diplomatic service, filled as it is, served its ostensible purpose fully, it would shake one's confidence in the principle of cause and effect. Everybody knows that the real reason why it is kept up is to furnish party rewards to politicians of some prominence, for whom nothing sufficiently dignified can be found at home. There is no real use for it. All the watching we need done can be done by consuls; any slight difficulties can be settled by telegraphic correspondence; any serious one by special envoys, who would be sure to be selected, and always are selected, with reference to their qualifications for the work to be done.

There is no day in the year, probably, under the present system, in which an American minister is not, in some quarter of the world, discrediting his country in the eyes of foreigners by his ignorance or bad manners. At this moment our Minister to Japan is a standing scandal. We have sent there a Texan cowboy sort of man, who thinks it fine and "American" to be brutal and insolent to his colleagues and the natives, who are themselves among the most polite and ceremonious people in the world, and who, far from knowing any language but his own, probably is rather proud of the fact that he does not. The social gossip of every city in Europe except London is full of funny stories and traditions of the queer people who come over to represent the United States. The following bit of news just received is a specimen of the materials for ridicule and amusement which American ministers are constantly furnishing their colleagues, in some capital or other:

"One of our naval officers on the west coast of South America writes home that Mr. Buck, the new Minister to Peru, has been guilty of appearing at an official dinner in a business suit. The dinner was given in his honor, and he was the only one of the guests who did not appear in evening dress. It was afterward disclosed that Mr. Buck did not have such a thing in his wardrobe, and the officer writes that he and other of the Minister's friends have since succeeded in finding one for him."

This gossip is now and then silenced for a while by the appearance on the scene of a thoroughly accomplished American, who knows how to fill his place; and occasionally such a man, like the late Mr. Marsh in Italy, is allowed to remain long enough at his post to efface all memories of any other kind. But these cases are rare. A new Administration comes in, and, presto! the courtier, scholar, soldier, gives place to some child of nature, fresh from the woods and bent on showing the effete societies of Europe how freemen ought to behave.

A STUDY OF "RING RULE."

THE closing number of the third series of the Johns Hopkins University Studies in Historical and Political Science has for its subject "The City of Washington: Its Origin and Administration." About half of the *brochure* is devoted to a study of the late Territorial Government (in which Alexander R. Shepherd held supreme dominion), and of its historical sequel, the triumvirate commission now charged with the administration of the city.

As the study is intended by its author, Mr. John Addison Porter, to be "suggestive rather than exhaustive," it might disarm criticism for its sketchiness if, unhappily, from the fault of his method, the writer had not made the latter half of his treatise almost as misleading for what it contains as for what it omits. In a prefatory note Mr. Porter explains that he has derived no special knowledge of his subject from any one of the numerous volumes on Washington. "In fact," he adds, "material for the study was chiefly obtained from local newspapers," the files of which at the Capitol are described as "very complete and of unusual interest to the student of American history and politics." In thus uncovering his method of research, Mr. Porter discloses at once the secret of the inaccuracy and insufficiency which we find in the whole treatment of what he calls "the reign of the Board of Public Works" in Washington while the star of Mr. Shepherd was in its brief and baleful ascendency. It is matter of notoriety that the "local newspapers" of Washington during that epoch, with a few transient exceptions, were conducted in the interest of the so-called "Washington Ring." So completely were these organs won over to the thick-and-thin support of the Board that its adversaries in Washington were at last compelled to seek the hospitality of journals in Baltimore and New York for the publication of their grievances. It is no matter of surprise, therefore, that in drawing his "material" from such partial authorities Mr. Porter has inadvertently fallen into anachronisms and errors of statement which would have been detected at once if he had made more careful reference to official public documents, equally accessible at the Capitol with the files of the "local newspapers."

We can notice only a few of the numerous inaccuracies in this part of the Study. Referring to the prosecution which in the year 1872 conducted the first inquisition into the methods of the Washington Board of Public Works, Mr. Porter says that it "failed to substantiate any one of the many counts on which it had boasted that it would secure the conviction of the Board." We do not know what the prosecution "boasted," but we do know that, in the unanimous judgment of the Congressional Committee charged with the investigation of that year, at least one of the "counts" *was* "substantiated"—the count directed against the unexampled profligacy of the Board in dispensing advertising and printing patronage to the "local newspapers." On this "count" the Board was "convicted," and, besides, its members were censured for not being "sufficiently mindful of the small extent of their jurisdiction," for not duly considering "the slender constituency upon which all the public burdens were to rest," and finally (what was really the gravamen of nearly all the counts filed by the prosecution) for not taking sufficient care "to have rigid economy prevail in every department." The Board, it is true, was continued in office, but with a public reprimand which to men of sensitive public virtue would have sounded rather like a rebuke than the "moral victory" which Mr. Porter describes.

After reciting how the Board signalized their "victory" by the display of "despotic powers"; how they built miles upon miles of sidewalks, carriage pavements, country roads, sewers, water mains, gas mains, etc.; how they laid a dozen different kinds of wood pavements, and how they planted no less than 25,000 shade trees—and all this in the short space of eighteen months—Mr. Porter concludes the glowing record with the still more glowing assertion: "In short, they *created* Washington as it is known to-day."

The slightest familiarity with the municipal history of Washington during the last eleven years would have protected the writer from risking such a stroke of rhetoric in a grave historical paper. What the Board of Public Works "created" for Washington, "as it is known to-day," can be chiefly found in an enormous public debt, piled up mountain high, beyond all precedent in even American municipal administration, and this, too, largely for "street improvements" which because of their utter worthlessness it has been found necessary to make over again under the present methodical and honest Government. We may instance the single matter of the fifty-odd miles of wood pavements. The first cost of these pavements was more than $4,000,000, a debt on which Washington is still paying interest, though the abominations of desolation have at last been entirely replaced by new pavements of good construction—the replacement within six years alone, from 1878 to 1884, having absorbed nearly a million and a half dollars ($1,420,250). Mr. Porter is equally at fault in his cosmogony of Washington when, after enumerating the sewerage system of the city among the "creations" of the Board, he pronounces it "adequate and complete." If he had turned to the annual report of the Commissioners of the District for 1884, he would have found that the sewers bequeathed to the present Government by the Shepherd Board were constructed on an erroneous theory of surface rainfall; that the largest of them was choked with backwater at every heavy shower; that at many points they soon fell in because of careless construction; that their bottoms soon wore out because laid with rotten bricks; and that even the roots of the trees sometimes struck through their tops as through common mould (Report for 1884, p. 176).

Mr. Porter says that at the beginning of the investigation in 1874 the Board "assumed a shrewd attitude," and professed themselves "entirely willing that the examination should be made." What attitude the Board may have shrewdly assumed in the "local newspapers" we know not. But it is a matter of public record that Governor Shepherd, in his own name, and in the name of his associates, formally and vehemently protested in a memorial to Congress against what he called "further needless and fruitless investigations." The first investigation was enough for him, and he thought it ought to be enough for everybody else. Mr. Porter says that up to the very end of the inquiry "it was a neck-and-neck race" whether the Shepherd Board or its opponents should win their case. On the contrary, the members of the Joint Congressional Committee made no scruple, toward the end of the scrutiny, in betraying their righteous impatience at some of the Board's irresponsible methods—an impatience which found expression in a unanimous report favoring the summary extirpation of the whole Territorial Government root and branch.

Mr. Porter infers the beneficence of "Ring Rule" in Washington from the fact that real-estate "operations" rose in the city from $4,000,000 in 1870 to $12,000,000 in 1873, without pausing to consider how large a part of this increase resulted from the "confiscations" of the Board, which forced property out of the hands of its owners into the maw of speculators. He praises the "foresight" of Mr. Shepherd "in narrowing many of the ways," as if that plan had not been already in partial execution; his "foresight" in "transforming the sewerage system" of the city, as if he had not left it so deformed that the real transformation came after him; and his "foresight" in adopting "concrete for the roads instead of Belgian pavements," as if, in his original and "comprehensive plan" of street improvements, formulated in 1871, Mr. Shepherd had not virtually excluded both, by holding that "the value of property in the District of Columbia would not warrant the general introduction of wood or other expensive pavements," or that, "if used at all, they should be confined to a few of the principal avenues." This was the "foresight" which presaged the construction, within less than three years afterward, of more than fifty miles of worse than worthless wood pavements, some of them stretching into the waste and uninhabited parts of the city, and costing, altogether, as has been already said, more than $4,000,000! Such was the "foresight" of the man whom Mr. Porter holds up to our admiration as a "master mind," many of whose plans showed "a positive genius for municipal administration." True, a committee of Congress, composed of enlightened Republicans and Democrats, after carefully scrutinizing his "municipal administration," unanimously reported that, as a cure for the abuses which had become organic in the Territorial Government, no remedy would suffice "short of its abolition." True, when President Grant, soon after the close of the inquest, nominated this "master mind" as one of the Commissioners of the District, the Senate of the United States summarily laid the nomination on the table with almost entire unanimity—there were only six dissentients, we believe. In spite of all this, Mr. Porter still holds that Mr. Shepherd, at the very crisis of his downfall, "had done more than any one man to make Washington beautiful and prosperous," albeit that, as we read on another page, "the people of the District were pumped dry." The prosperity of a city, accordingly, seems to be something which can be divorced from the prosperity of its inhabitants, and may sometimes be greatest when the latter are left "flaccid and drained," like mice in an exhausted receiver.

A DRIVE FOR TROTTERS.

The *Turf, Field and Farm* has an article calling for the provision of a trotting drive on the west side of the Park for light vehicles, and complaining of the favor shown the saddle horses in the exclusive use of a bridle path. There is no doubt that, considering the place which the trotting horse occupies as a national amusement, there ought to be some place near the city in which he could be shown and enjoyed by the very few who can own him; but the difficulty is that a special drive for trotters would be, were there room for it on the west side of the Park, which there is not, simply a racecourse, with all that the name implies. What owners of trotting horses want is a track to "speed" them on; for ordinary "jogging" the ordinary roads do well enough. But speeding means racing, and racing means the attendance of vast crowds, who would soon ruin any adjacent vegetation, and in fact destroy every semblance of a park. We can think of nothing just now better fitted to ruin the trees, grass, and shrubbery of the Park, and drive women, children, and quiet men away from it, than the introduction into it of a trotting course. If such a thing should be provided by the city, the Harlem Flats are the place for it. There is no place on the west side of the Park level enough for it.

The owners of trotting horses would do a great deal to ennoble and dignify trotting if they could somehow dissociate it from liquor. Nothing does more to degrade it as an amusement than the need which nearly every trotting man seems to feel of filling himself at some period in his jaunt with more or less rum, gin, brandy, or whiskey. The result is that roads frequented by trotters are sure to be lined with groggeries, which makes them always undesirable for the general public.

This alone would seem to make it necessary that trotters should have a park all to themselves, and there is no doubt that such a park or drive would be a great addition to the attractions of New York as a place of residence. All the great trotters in the country, as *Turf, Field and Farm* says, are apt sooner or later to find owners in this city, and there is naturally, both among strangers and residents, a strong desire to see them at work. A horse that any body is willing to give $20,000 or $40,000 for is always more or less of a curiosity, even if he cannot be seen showing off his paces, and there ought to be some better place to see him than the Seventh Avenue Boulevard, on which trotting horses now do their speeding. There is no good reason why better provision should not be made for them. All they need is a straight piece of road with a soft road-bed kept watered, with raised sidewalks for the spectators, and reserved exclusively for light vehicles. It would hardly be necessary to prohibit other pleasure carriages from entering it, as they generally have a wholesome dread of the trotting man doing twenty miles an hour on three or four cocktails, and priding himself on the closeness with which he can shave anything he meets or overtakes.

It would be mere affectation, however, to discuss the duty of the city toward trotters without mentioning that there is a moral view of the trotting horse which would make a good many taxpayers unwilling to go to any expense about him. In the first place, a really good trotter is always, or almost always, a rich man's toy. No person of moderate means can afford to own one. In the second place, the trotter in a very large number of cases causes the ruin of the poor young men who have a taste for him. As soon as a poor man gets a fancy for a fast horse, his bank or his till is very apt to suffer sooner or later. There is no more seductive form of extravagance. The man who begins modestly with a three-minute horse and thinks this is all he will ever desire, has not speeded him "on the road" or "talked horse" at the stable very often without a feeling that true happiness can-

not be had short of a two-forty horse; and the two-forty horse has not been enjoyed very long before a two-thirty or two-twenty horse is found necessary to a full and rounded life, together with a Brewster wagon, and costly robes, and a gorgeous white coat. These rises in the scale of enjoyment, of course, cost awfully. Every ten seconds of increase in speed has to be paid for at a tremendous rate, and there are few men of small means who, once started on this road of extravagance, have the courage to draw off before they "burst up." There are but few trotting horses in this city to-day which at some period in their career have not wrecked a fond owner.

And then, after everything has been said for the strain put on nerve and muscle by holding a trotter, or still more a pair of trotters, going at a high rate of speed, it still remains true that driving a wagon with legs tightly wrapped up, is not exercise for a young or middle-aged man of sedentary habits. It gives him fresh air and a gentle jogging, which are all that an old lady needs, but a man who has sat over a desk all day needs something much more active and stirring in order to be really well. We presume that, if the truth were known, the amount of "kidney trouble" among highly fed business men, fostered or hastened by confining their exercise to light-wagon driving, with frequent drinks on the road, would be found rather startling.

ENGLAND: MR. GLADSTONE AND THE IRISH QUESTION.

LONDON, December 31, 1885.

NOTHING was more surprising all through the late elections than the silence of both members and constituencies regarding Ireland. If you had asked any thoughtful politician which was the most serious question before the country, which would most tax the wisdom of Parliament, he would have answered, the question of Ireland. Yet candidates referred in few and vague words to the subject. Some did not refer at all. The practice of questioning them on their views has become common of late years, and sometimes this process of interrogation lasts for half an hour after nearly every meeting the candidate holds. They were questioned on all imaginable English and many foreign subjects, but scarcely at all about Ireland. Was this because candidates and members did not recognize the gravity of the position, or because they tried to turn their eyes away from a disagreeable subject, or because they really did not know what to think, wish, or propose regarding Irish troubles and demands? Probably all these causes had something to do with this strange silence, but the last cause most. Anyhow, we had this phenomenon of a whole nation ignoring, while it elected its governors, the first and chief problem those governors have to face.

The election was hardly over, and Mr. Parnell's Parliamentary strength perceived to have been doubled by it, when the newspapers began to discuss the situation, and men asked how the Queen's Government was to be carried on with neither English party in a majority of the whole House of Commons. Suddenly, about the 16th of December, it was announced in the press that Mr. Gladstone had made up his mind to propose a scheme of home rule—*i. e.*, a scheme for yielding to Ireland a separate Parliament. This statement did not come from him, and he declared it presently to be unauthorized and not to represent his mind correctly. Such a disavowal, however, admitted more than it denied. The inner circle of his party already knew that Mr. Gladstone's mind had advanced much on the question, so no one now doubts that he is prepared to create a new Irish Parliament in Dublin, though as to the details of the scheme, and the relation of such a Parliament to the imperial one at Westminster, he still stands uncommitted. How his view came out has not been fully ascertained, but it is generally believed that he addressed, in his capacity of Privy Councillor, a letter to the Queen, suggesting that the subject should be dealt with by Parliament, and offering to do his best to coöperate with the present Government in its settlement; that the Queen, as in duty bound, laid this letter before her Ministers; and that through them or some person about the court its contents, or an inaccurate version thereof, found their way to publicity.

The country was startled, needlessly and unreasonably startled, because the situation was already so grave that nothing Mr. Gladstone might intend could make it more so, and because those who had keenly scrutinized his previous utterances must have seen in which direction his mind was travelling. Startled, however, it was. Among most of the Liberals, respect for their leader and faith in his wisdom struggled with alarm at the novelty of the proposal. Having been accustomed to regard the Irish Nationalists as enemies, and having just suffered grievously at the polls from their hostility, they were not prepared to hear that these Nationalists were substantially in the right, and that the Irish demand ought to be granted. Their thoughts, their comprehension of the whole position, had lagged far behind those of the leaders who perceived the difficulty of resisting the wishes of so enormous a majority of Irish members as Mr. Parnell commands; and it was now first that they woke up to see facts as they are. The Tories were at first frightened, thinking it might be all up with their prospects; but after a day or two, when they perceived how much surprised Liberals also were, and how doubtful it was whether his party was prepared to follow Mr. Gladstone, they began to rub their hands in glee. Now, at last, had come that disruption of the Liberals for which they had been waiting and praying so long. Now was their arch-enemy delivered into their hands, abandoned by his followers, discredited before the country. The Tory press could ascribe his action to nothing but a fierce longing to get back to power: for the sake of this he was prepared to surrender to Mr. Parnell, and purchase his vote of eighty-six by sacrificing the unity and greatness of the empire. Stories flew about of secret communications between the Nationalist leader and the old man at Hawarden; even interviews were spoken of, although there is no foundation for any such tales. While the regular party men took this tone, the moderate Tories, and moderate Liberals no less, became seriously uneasy. They had all along thought an Irish Parliament a dangerous, indeed almost a fatal, experiment; and Mr. Gladstone's adhesion to the notion seemed to bring it within the horizon of practical politics. They acquitted him of being moved by the desire for office, because if that had been his object he would evidently not have written to the Queen and proposed to help the Government, but would have tried to turn Lord Salisbury out by Mr. Parnell's help before revealing his own purposes. But they thought his change of views (not understanding how far they had developed months and months ago) sudden and alarming, calculated to increase that distrust with which he has long inspired them. The more advanced Liberals, and those especially who have been attached to Mr. Gladstone personally, were disposed to consider fairly and favorably any proposal he might make. Still, they regretted the way in which this proposal had come out. It had the advantage, an immense advantage, of being recommended to the nation by his persuasive eloquence. It seemed to have been made, primarily to the Queen, incidentally, as it turned out, to the country, without consultation with some of his most important colleagues in the late Ministry. And in point of fact its disclosure was followed, after several days, by a letter from Lord Hartington, addressed to the Chairman of his Election Committee and published as soon as written, in which that statesman, who has hitherto been deemed Mr. Gladstone's heir apparent in the leadership, declared himself opposed to the notion of a separate Irish legislature. This letter, having been written after a consultation with Mr. Goschen and Sir William Harcourt, was taken to express their sentiments also, and produced no small impression. Since then the newspapers have been full of articles and letters on the topic, which, of course, dwarfs all others. There have been few speeches, because the Christmas holidays have intervened, and because men are waiting to express themselves in Parliament, which, it is now rumored, will proceed to active business soon after the middle of January.

A more perplexing position cannot be imagined. That nobody knows what will happen when the new House of Commons meets is the least part of the difficulty. Nobody seems to have any scheme for dealing with the Irish question, and yet it is plain that nothing else can be done while it stops the way. Hitherto the English advocates of home rule have, with few exceptions, been silent. Either they don't know their own minds on details, or they are waiting for Mr. Gladstone. Mr. Parnell is silent; so are his followers. Whether they have a practical scheme; whether, if they have it, they will propound it; whether their silence is due to internal divisions, or to a fear of the extreme or Fenian wing, reported to be not very strong at present in Ireland, but believed to be strong in America—all this is mere matter of conjecture. Accordingly, the assailants of home rule have it all their own way in our press. They descant on the difficulties, indeed, the perils, open and hidden, of an Irish Parliament, and they have an easy task, for those difficulties can hardly be overstated. They show how it would be necessary either to construct a new constitution for the three kingdoms in granting a separate legislature to Ireland, or else to admit an amount of independence scarcely short of complete separation, and they point out that there is no security that by either scheme friendly relations would be established between the two countries. The Duke of Argyll points out, in a letter full of his usual force and eloquence, that the parallel of the United States is inapplicable. Minor writers insist that to yield up the control of the police to an Irish authority would not merely endanger the person and property of any unpopular individual, but would enable such an authority to raise and drill a large armed force. The Protestants of Ulster—Liberals calmly, Orangemen fiercely, but scarcely more earnestly—insist that they must not be left to the mercies of an Irish Parliament, and predict civil war as the probable consequence of such an experiment. But while so much argument and invective are directed against the suggestion, no one deals with the other side of the question, and tells us in what manner the double problem which confronts us is to be solved.

It is a double problem because it has a Parliamentary side as well as a local side. Eighty-six members of the House of Commons, acting as a compact body on all occasions, will be able (unless checked by some new rules of procedure) to paralyze the House of Commons. It is not merely that they will be able to protract discussion to

interminable lengths, but that by the use of their votes they will make it almost impossible to carry on the ordinary business of the country, except by keeping a very large body of Ministerial members always in attendance. It is found hard enough now to keep the legal quorum of forty during certain hours of the evening, or when there is a dull subject under discussion; how much harder will it be to have at least one hundred always ready to outvote the Nationalists when they choose to make themselves disagreeable, which presumably they will do whenever they see their chance? Stricter rules may be introduced, but this is what the Tory party has hitherto objected to, lest the freedom of debate should be curtailed for all members; or the Nationalist members may be suspended, but what a mischievous precedent wholesale suspensions will set. As for the difficulties in Ireland itself, the painful experience of 1880, 1881, and 1882 enables us to realize them. If there is another strike against the payment of rent, if agrarian outrages reappear, as is to be expected, fresh coercion acts will be called for, and Ireland will again be dealt with as a hostile country. England is doubtless so much the stronger country that she can govern by the sword. But will the English democracy persevere in so governing? Will not every year aggravate the situation, till at last either home rule is conceded or the English have become so exasperated as to abolish representative institutions in Ireland altogether, and rule her as in the days of Cromwell?

The perception of these difficulties makes some of our politicians who see all the objections to an Irish Parliament slow to declare themselves against it. But for the moment the tide runs against Mr. Gladstone—or the plan attributed to him—even in his own party. Of the Liberal members of the new Parliament whose opinions have been ascertained, only a small minority express themselves in favor of an Irish legislature. The rest, while prepared to go more or less far in the grant of county boards and other reforms of local government, stand firm for the maintenance of the union as at present. In these circumstances a change of government does not seem likely to take place at the beginning of the session. But how will a ministry in a minority of eighty-two be able to live through a session, even if it receives support against the Irish from a section of its Liberal opponents? Y.

WHAT ARE THE CAUSES OF THE CONSERVATIVE REACTION IN ENGLAND?

OXFORD, December 26, 1885.

THE well-to-do classes in England have for the moment gone over to Conservatism. This is the prominent fact of the situation and the true result of the elections. The electoral returns, indeed, hardly show the full strength of the dominant Conservative sentiment. The Tory vote in the towns is balanced by the Radical vote in the counties, and (what is of more consequence) hundreds of men who either voted Liberal or did not vote at all, have become more than half Conservative in their hearts. There were many Liberal voters who would have felt a chastened satisfaction at the return of a decisive Ministerial majority. My aim in this letter is not to describe the present state of public feeling. It must be patent enough in every English newspaper which reaches New York. My object is to state briefly the causes which have brought about a condition of opinion as noteworthy as any which I have witnessed during my lifetime. They will not be discovered by even the most candid of partisans, but they are not hard for any one to find who stands outside politics and keeps open his eyes and ears.

(1.) The consideration which lies at the bottom of all the other causes which I am about to enumerate is that the Constitution of England has, for the last twenty years at least, been growing far more democratic than the average sentiment of educated Englishmen. The last extension of the suffrage has revealed to every one that the country, which is still governed by nobles and by rich men, has adopted or slid into a democratic polity. There is a momentary want of correspondence between the institutions and the habits of the nation. This want of harmony produces two results. Radicals like Mr. Chamberlain demand changes which correspond with the theory of a democratic constitution, but which do not really answer to the wishes of the most influential classes. Well-to-do persons, whether calling themselves Liberals or Tories, refuse to sympathize with innovations which may correspond with the form, but are at present alien to the spirit, of the Constitution. There is no need that I should show in detail how naturally this state of matters fosters Conservatism.

(2.) Mr. Gladstone's last Ministry has been a Government of failure. This is a point on which among fair judges no real difference of opinion can exist. Mr. Gladstone and his colleagues, when they went out of office, had not a friend left among Continental statesmen. They had sacrificed a great deal (rightly enough, in my judgment) to maintain the friendship of France, and yet they had nearly embroiled the country with the French Republic. Of the fiasco in Egypt it is painful and needless to say much. Gordon's death and the whole train of events which led to it are known to all the world, and will not soon be forgotten by large bodies of Englishmen. Last of all, their Irish policy had not conciliated Ireland. When it became known that not a single Liberal was returned for an Irish constituency, the political failure of Mr. Gladstone's Irish policy, which had long been suspected by observers, became visible to every one. Let it be noted that I neither mean to assert nor to imply that for the whole of these failures the Liberal Cabinet was responsible. A later generation will recognize the immense service rendered to the whole United Kingdom by the conduct of the Government at the time of the Phenix Park assassinations. To their Ministry's moderation and firmness it is due that the nation was not carried away by a burst of passion as natural as that which marked the outbreak of the Indian mutiny, and even more calamitous. But failure, even when excusable, is none the less failure, and a government whose guidance leads to disaster has no right to expect confidence or popularity. The late Cabinet, moreover, so mismanaged matters as to incur condemnation by whatever criterion their conduct was judged. Their policy in Egypt was at least as much opposed to the principles of Mr. Bright as to the principles of Lord Salisbury.

(3.) Mr. Chamberlain's radicalism may (it is possible) have gained votes for the Opposition in the rural districts. But it has shaken the allegiance of the Liberals in our cities. The shock given by his proposals did not arise nearly so much from their violence as from their inconsiderateness. Tory pamphleteers and orators accuse the Radical leader of dishonesty. In this, as is constantly the case with partisans, they miss their mark. The charge which, to judge from his acts and from his language, he cannot easily rebut, is want, not of honesty, but of knowledge. It is hard to believe that he understands these laws of political economy which he seems to think may be set aside as easily as an Act of Parliament can be repealed, and it is absolutely certain that a politician who, with a light heart, suggests the disestablishment of the Church of England, knows nothing of the sentiment prevailing among large bodies of his countrymen. Moreover, Mr. Chamberlain's recklessness is but an example of a vice which, from the nature of things, is apt to infect Radicals. A party which demands rights or privileges for the people is apt to assume its own necessary popularity; and leaders who rely on the support of the crowd constantly forget that the supposed opinion of the people is in many cases little better than a political fiction, and that even the support of numbers will not for any length of time, in a country like England, enable a politician to dispense with the confidence of men of common sense. The tone adopted by some extreme Radicals toward Mr. Goschen—a statesman whose influence and position have been immensely raised since the beginning of the electoral contest — is a specimen of the tone used toward the whole body of so-called moderate Liberals. These men have their defects, but the alienation of Whigs or moderate Liberals means the strengthening of Conservatism, and, should the alienation continue, the ultimate triumph of the Conservative party.

(4.) Among educated Liberals faith in Mr. Gladstone's judgment has vanished. There has always, indeed, lurked among Whigs and Radicals of the type represented by the late Mr. Fawcett a distrust of Mr. Gladstone's political methods. No one of common sense ever doubted or can doubt his public spirit. No one, except the writers in the *St. James's Gazette*, can believe that he is prepared to sacrifice the interest of the nation on the altar of his own vanity. But it is quite possible to believe, and thousands of Liberals do now believe, that the late Premier is wanting in balance, is guided too much by the impulse of the moment, and is, in some respects, essentially out of sympathy both with the creed of ordinary Liberals and with many of the strongest of English sentiments. He may no doubt be, as his admirers assert, morally superior to the mass of Englishmen. What is certain is, that somehow or other his character differs from the character of the men of whom he has been the leader. It is equally certain that nothing but the continued success of a statesman's policy will ever make him popular, or even tolerated, among a people whom he does not understand, or who do not understand him. That the policy of the Liberal Ministry has, apparently at least, led to failure after failure, I have already pointed out. That the peculiarities of Mr. Gladstone's genius or temper make him incomprehensible to the majority even of his followers, is apparent enough from incidents familiar to all your readers.

What, for example, can an ordinary Englishman of common sense think of the treatment received by Gordon? If the General was sent to Khartum with Mr. Gladstone's full cognizance and approbation, what is it possible to think, in face of the calamities which ensued, but that either the Prime Minister exhibited the most extraordinary lack of foresight, or the General (which, without further evidence, one is not justified in believing) was the victim of something like treachery? If, on the other hand, as I see suggested in the *Nation*, Mr. Gladstone sent the English hero to risk life and credit in deference, not to Mr. Gladstone's own judgment, but to the clamors of the London press, what can one think of the Premier's firmness or principle? Trifles, however, are, in matters of character, as significant as important transactions. All the world has been the witness to Mr. Gladstone's disastrous controversy with Professor Huxley. The controversy may be well termed a disaster for two reasons: it proves that the most eminent of English statesmen can write with dogmatic assurance on topics of which, from the nature of things, he can know little, and of which, after the Professor's rejoinder, there is reason to believe

that he knows nothing. It shows, further, that the pilot on whose political sagacity England will have probably to rely at as desperate a crisis as any through which the country has ever passed, is occupied with the interests of theology rather than with the immediate and pressing problems of politics. It is said on good authority that Lord Palmerston used seriously and with some temper to maintain that Bacon was the author of the plays attributed to Shakspere. If his Lordship had, while at the head of the Government, or even when in temporary retirement, published essays in support of the paradox by which he was captivated, he would assuredly not have retained the public confidence in his good sense.

Look, lastly, at the whole series of rumors, denials, and explanations which half reveal and half obscure Mr. Gladstone's attitude toward home rule. It were unfair positively to assume his responsibility for the conjectural statement of his views, but he certainly is responsible for his opinions still being a matter of conjecture. All England believes that he is favorable to some form of home rule. If this belief be well founded, then it is hardly possible to use language grave enough to describe the evil done to the whole United Kingdom by the mode in which the leader of the Liberal party has suffered his opinion on a matter of vital importance to be irregularly revealed. If, on the other hand, the general belief be unfounded, why is it that Mr. Gladstone cannot dispel the prevailing error? Lord Hartington has not half his leader's command of language, but Lord Hartington has contrived in a few plain sentences to make his position perfectly clear. This Mr. Gladstone cannot or will not do. It would be impossible not to attribute this failure simply to want of will, were it not for a hazy recollection that years ago, when an impertinent fanatic asked Mr. Gladstone whether he was not a Roman Catholic, Mr. Gladstone could neither leave the question alone nor dispose of it by a plain answer. Nor will Americans have forgotten the difficulty there has been found in defining satisfactorily Mr. Gladstone's attitude toward Southern secession. No doubt all this unconscious mystification (for such it may fairly be believed to be) arises from idiosyncrasies in the great statesman's character which are compatible with the highest talents, and also with indubitable zeal for the welfare of his country. But if American critics will consider how utterly impossible it would have been for Mr. Lincoln or Mr. Seward to have commanded the faith of the North, or, for that matter, of the South either, if he had from any peculiar turn of mind concealed his view of secession under unsatisfactory explanations or inconclusive denials of authoritative rumors that he contemplated granting to the South everything which the Confederates could demand except nominal independence—such a critic will understand why Mr. Gladstone, in spite of his great services to the nation, inspires among hundreds of his own followers every feeling of respect except faith in his judgment. A. V. Dicey.

THE "EUMENIDES" AT CAMBRIDGE, ENGLAND.

London, December 17, 1885.

To many that were present at the representation of the "Œdipus" given at Harvard in May, 1881, a doubt must have occurred as to how much of the impressiveness of the play was due to its ample and appropriate setting. Sanders Theatre, if not designed with a view to such uses, at any rate accords in its general plan with what is known of the Greek theatres. The arrangement of the orchestra space and the steps leading from it to the stage needed small alteration, while the great height and breadth of the proscenium arch furnished room for a scene of unusual grandeur, and the spaciousness of the auditorium gave to the spectator that sense of freedom that must have been felt by the Athenians, as they sat on the carved slope of the Acropolis to listen to the verses of Sophocles.

Without any of these advantages, the performance of the "Eumenides" of Æschylus recently given at Cambridge, by members of the University, proved deeply interesting. The little hall used for the occasion, and somewhat humorously named the Theatre Royal, is provided at one end with a stage about eighteen feet square. In front of this and only a yard lower, a space was arranged for the evolutions of the chorus; still further forward toward the audience sat the band. The tragedy was shortened, and divided into a prologue and three acts, for each of which there was a separate scene. The prologue showed a terrace looking off upon a rocky glen, the site of the Delphic Oracle. The *Priestess* appears, and, after a short invocation, enters to consult the divine voice, but returns immediately and falls to the ground horror-struck at what she has seen. The first act takes place in the interior of the shrine, a heavy Doric temple opening upon the sacred cave. The *Furies* are lying about the stage asleep, while *Orestes* clings for protection to the central altar, behind which stands *Apollo*. The god promises to protect the suppliant. To evade the fury of his pursuers he sends him, under the guidance of *Hermes*, to the temple of Pallas at Athens. The ghost of the murdered *Clytemnestra* enters, and with much effort arouses the sleeping *Furies*, who descend to the orchestra to sing their chorus of rage at the escape of their victim, and are then driven forth by *Apollo*.

In the second act *Orestes* reaches the Temple of Pallas—built in advanced Ionic style—and, invoking the protection of the goddess, falls at the base of her statue. The *Furies* enter one by one, tracking the victim by his footsteps. They discover his asylum, and sing a song of fury and vengeance. At the end of this, *Pallas* appears in answer to *Orestes's* prayer, and, having listened to both sides of his cause, promises to have it tried before a jury of Athenian elders. The *Furies* sing a third chorus, and are driven from the temple by the goddess, who stands at the door, spear in hand, and protects the suppliant with her glittering ægis.

The scene of the third act is the summit of the Areopagus. A herald having sounded the summons at *Pallas's* command, the goddess mounts her lofty seat, and the cause is tried. *Orestes* admits that he slew his mother, the accusing *Furies* urge the enormity of the crime, while *Apollo* testifies that he incited *Orestes* to commit the deed and gave absolution for it. The jury being equally divided, *Pallas* gives her casting vote for acquittal, and finally appeases the anger of the *Furies* by offering them a residence in her city and an honored place in its theogony.

While treated with unfailing earnestness, all the characters, except, perhaps, those of the priestess and the chorus, were played with marked and intentional formalism. The question precisely to what degree the Athenian actors were realistic in the presentation of their parts, will probably long remain open. On the one hand, we have the fact of their stilted shoes, their padded garments, and their rigid masks. On the other, in one of his dialogues Plato makes an actor talk of acting in a way that is hard to reconcile with any theory of merely conventional expression. Whether the young men at Harvard were right or wrong in their attempt to interpret Sophocles with all the help they were able to derive from action and elocution, it is clear that the Cambridge undergraduates adopted a different course with Æschylus. The speeches were delivered with calm dignity, and illustrated with slow and measured gestures. The result was far from being dull.

In addition to the chorus music and an orchestral prelude to each scene, the action of the play was accompanied by a running musical commentary, and if the spectator now and then found the formalism of the actors inexpressive, the music must have suggested the meaning to him. Although distinctly modern in quality, Mr. Sanford's composition admirably suits the spirit of the play, and, there can be no doubt, contributed much to its success. Especially was this the case with the awakening of the *Furies* and with their discovery of *Orestes* at the statue of Athena. Some scenes, however, received an almost melodramatic note from the excessive emphasis given by the kettledrum. The members of the chorus sang with spirit and apparent accuracy, and, besides acting out their own part with intelligence, greatly heightened the effect of several scenes on the stage by making inarticulate sounds, reinforced by the band. Although the smallness of the orchestral space and the insufficient difference in level between it and the stage seriously hampered their movements, they contrived in the choric dances to combine a pleasing rhythm of motion with a large measure of dramatic expression. Their dresses were grotesque without absurdity, and the judicious use of dull foil ornaments lent an effect of weirdness.

The chief characters were, of course, played by young men of marked athletic beauty. The *Apollo* in particular quite reminded one of the antique statues in many of his poses. But decidedly the most interesting figure in the performance was that of *Pallas Athena*, played by a "sweet girl graduate" from Girton College, whose acting in the "Electra," given there some time since, is said to have been of distinguished excellence. The young lady's picture of the clear-eyed goddess was charming in its exalted dignity and simple earnestness, and her soft precision of speech was most grateful to the ear. To one, however, accustomed to the Continental method of pronouncing Greek, or to that in use in our own colleges at home, the English sounding of the letters seemed often harsh, especially in the recurrence of the *ow* (cow) sound for the diphthong alpha upsilon, and of the *z* sound for sigma.

In the matter of the dresses, one felt a lack of intelligent supervision of the draping of the garments, and of sufficient rehearsal in wearing them. To reproduce on a moving model the effect of classic drapery, one must not only know the proper shape of each garment, but must also have a closer acquaintance with the nature of modern stuffs than is usually found within the walls of a college. In a few cases, however, the imitation of archaic stiffness was excellent, as in that of the Athenian herald, who looked like one of Flaxman's figures come to life.

As has been hinted, the scenery was rather unsatisfactory. It would doubtless be hazardous to attempt, with the imperfect material furnished by modern archæology, a reconstruction of the wooden prototypes of the Greek temple; but we need not on that account rest content with the ignorance and crude color sense of a provincial scene painter. The play would have been more impressive had its two temple scenes and the rocks of the Areopagus been painted less harshly.

It is in no carping mood that these few flaws in the representation of the play have been suggested. All who took part in the work showed obvious and conscientious earnestness, and their success was of the highest interest and impressiveness. L. E. O.

DAUDET'S 'SAPHO' DRAMATIZED.

PARIS, December 28, 1885.

ALPHONSE DAUDET holds a peculiar place in our modern romantic literature. He does not belong to the old-fashioned, somewhat artificial school, which may be said to be still represented by Octave Feuillet; he does not belong any more to the true naturalist school, which has Zola for its master. He is realistic without being systematically vulgar; he does not absolutely prefer odious, hideous, loathsome subjects and characters; he is not a pessimist, and there is in him an irrepressible touch of the gay, cheerful, and optimist South. Though he has ridiculed the South in his 'Tartarin' (which might be in many respects compared to the productions of Mark Twain), in 'Numa Roumestan,' and quite recently in 'Tartarin sur les Alpes' (a New Year's book of the season, which has met with much success, partly owing to its charming illustrations), Alphonse Daudet is a child of the South; there is no real sadness, no true melancholy in him. There is a vein of true sentiment, sometimes an outburst of real pathos, in some of his works: in 'Fromont jeune et Risler aîné,' in 'Jack'; but on the whole the balance always falls on the side of humor, gayety, and hope. What is very remarkable and even admirable in all Daudet's productions is what I cannot call otherwise than life. There is an extraordinary vitality and movement through all his work—no system, no elaborate style, no perception of effort; his descriptions are photographs, but they are not dry: "il y a de l'air," as the painters say of a landscape. His characters also have "de l'air": they are all more or less volatile, they have nothing statuesque, they are carried away on the current of life—a current which is sometimes so rapid that you can hardly follow it. In this respect also Daudet belongs truly to the South; he is not a dreamer, he is essentially an actor: "Act, act, in the living present."

There does not seem to be much system in his choice of subjects. He does not pretend, like Zola, to give us a new "Comédie Humaine." His receptive mind takes in to-day one thing, to-morrow another: he is a mirror. You can always recognize some living character in his novels; every Parisian knows who the 'Nabab' was, and can give the real names to all the characters of that novel, as well as to those of 'Numa Roumestan.' The poet of 'Jack' is still living; the verses which are cited by Daudet in the novel were really written by this poet "without a heart." I confess that I do not know whom Daudet had in view when he wrote his last novel, 'Sapho,' for this takes us into a world which is not familiar to me—the world of the studios of painters and sculptors. This world is, in many respects, quite apart. It is very different from the real world, though I hasten to say that the artists of very great eminence are a part of this real world; but the rising artists, the beginners, those who are only known in a small circle, form a sort of society which has a freedom unknown in the regular society. In dress, in manners, in almost all the details of life, this artistic world affects a license and has an originality which make it worthy of study. It is not the "demi-monde," but it has its illegitimate *liaisons*, which sometimes assume the seriousness of marriages. The women who are met among the painters, the artists, the literary men who live in their company, are not venal, and in this respect they are much superior to the women of the "demi-monde." They are more intellectual, more imaginative; they are living in a higher stage. They are to be seen on varnishing day, with their friends, as anxious as they can be themselves, as curious, as uneasy. There is something of the old "Bohemia" left in this world of painters, but it is no longer the "Bohême" of Henri Mürger, composed only of very young men and women: it is a Bohemia where you meet men with gray beards, and old models who have become semi-respectable matrons.

This curious world is very well painted in 'Sapho.' Daudet shows us a young diplomat lost in it, and falling in love with one of its stars. As usually happens, the innocent youth does not look back on the past, he only thinks of the present; he forms a *liaison* with Sapho, and it is only gradually that he learns that she has been the friend, the mistress, of almost all the men whom he meets; he becomes gradually disenchanted, a retrospective jealousy torments him, but he cannot break the chain. Daudet has painted in his novel very artistically the slavery of these curious connections formed outside of the social rules; his analysis is painful, minute, excellent. It was an unfortunate idea, however, to try to transform the novel into a drama, and, though Daudet has been helped in this attempt by a clever dramatist, M. Belot, "Sapho," as a drama, as it is now played on the French stage, is a failure.

The reasons for it are obvious. The character of the illegitimate marriage, if the word is allowable (there is a very coarse French word for it which I dare not repeat), is very peculiar. Its essential and necessary elements are habit and a certain sort of materialistic love, which also takes the form of habit. In a novel you can show a man struggling against this form of love, and you can show also the woman putting on him the shirt of Nessus, forcing herself on her lover, coming between him and his family, having Time for an ally, and habit and the natural laziness and weakness of a feeble heart. On the stage the element of time disappears; you must show us the human passions at their crisis. All the slow influences which bring a lover under a yoke, which by degrees destroy his sense of pride, of responsibility, which debilitate him and bring him always back, contented or discontented, at the feet of Sapho—all these influences disappear. The quarrels of lovers in Molière are delightful, but they are mere episodes, and they never deceive us; in "Sapho," the hero and the heroine quarrel in a very different manner. First the man takes *Sapho;* in another act he leaves her; in a third act, he takes her again; in the fourth, he takes her and leaves her again. This perpetual divorcing and marrying is very tiresome and very senseless, especially as, in a few hours, the author cannot explain so many revolutions of mind.

There is, besides, no real drama in the development of the character of Sapho. She has no morality, and it seems perfectly natural to her to leave one man and to follow another: she is unconscious of her own depravity. She wants a home, but it is indifferent to her whether this home is permanent or temporary. She is like a child who should consider any woman as a mother. If she has a preference, it is for the man who is the least worthy of respect; and the morality of the novel is only to be found in this secret preference. Sapho has had many lovers—poets, painters, sculptors; she has always in her heart preferred an unfortunate engraver, who has for her sake committed forgery, and who is in prison. She probably feels her superiority over a man who has made such a sacrifice for her, and when his term comes to an end she is drawn to him by an irresistible attraction. She abandons the young diplomat whom she has separated from his friends, from his family; who has become her slave; who has given up his career for her. She leaves him, and returns, without any apparent reason, to the man whom she despises, but who has been in prison for her.

The painful scenes which mark the development of the passion of the young diplomat, the heartlessness of Sapho, the tragical dulness and bitterness of their "faux ménage," are admirable elements for the novel, but they are totally unfit for the stage. The drama, as it is played, can only be endured by virtue of the secondary characters, who are very cleverly drawn, and are always amusing in Daudet's works. But is it not a singular eulogy to say that the secondary parts of the play are much superior to the principal? These secondary parts are essentially Parisian; they belong to a well-defined latitude; such as they are, they are perfect pictures of life.

I cannot much recommend this new system of drawing a drama out of a novel. In a pecuniary point of view there is certainly much to be said for it. There is no doubt that a moderately successful play will win for an author much more money than a very successful book. The railways bring every day to Paris an army of foreigners and of *provinciaux*, who fill all the theatres every night. A play with the name of Daudet, of Dumas, of Sardou, of Pailleron, will always make money, even if it is not good; and if it is good it will net its author a small fortune. Such considerations, however, do not concern the critic; and it is an undoubted fact that a bad drama hurts the novel which has furnished its elements. I had read 'Sapho' once with pleasure; after having seen the drama I tried to read it again, and I could not find my former satisfaction. There was something between the author and me; I could no longer give to Sapho, to her lovers, imaginary faces; I saw before me the actors and actresses who had personified their parts. Everything was changed; it was a new world, the vulgar world of a theatre. Nothing was left to my own mind. 'Sapho,' as I read it now, seemed like a new book, and a very inferior book. The finest thoughts are those which have never been expressed. There is also a certain ideality left in a printed book which is lost when the thoughts and the characters come before us in a living form. I would never advise a good novelist to succumb to this terrible temptation of the stage. The dramatist and the novelist ought to be different men; they require different qualities, and almost irreconcilable faculties. The dramatist needs precision, action, almost brutality; his color must be strong, often coarse; he must take us into the midst of passions and show us their culmination. The novelist has Time on his side: he can work like nature itself, he can reveal to us the most hidden springs of passion. He is a thinker, a philosopher. The dramatist is essentially an actor.

Correspondence.

THE COMMITTEES.

TO THE EDITOR OF THE NATION:

SIR: A full month, at least a fifth part of the average of Congressional sessions, has passed, and not only is no business done, but the committees who are to prepare the business, not to speak of doing it, have only just been announced. What a medley they form! Square men in round holes, and men that are not square in holes which at least ought to be so. There seems to be no pretence that they are made up with reference to the settlement of vital questions of national interest on broad principles of statesmanship, the object being simply to reconcile the furious jealousy of partisans, though why, for any honest purpose, any human being can want such positions it is difficult to perceive. If the Speaker has great power in this respect, he has to pay dearly for it. Daniel in the lion's den would furnish a fair comparison—that is, supposing the lions to

have given way to their natural appetites. But if the committees were not ready for business, business enough was ready for them. Bills by the thousand are heaped upon their heads, with no order of precedence and no standard of relative importance. Wrangling, intrigue, and anarchy are the only words which will describe the situation. It is this desperate struggle which has evolved the despotism of the Committee on Appropriations, the latter again resulting in the lamentable expedient which has been resorted to for relief.

The President is reported to have said, in relation to the silver question, that the subject had now passed beyond his control or direction; that he had not the slightest desire to influence in any way the consideration of Congress beyond the methods employed by him in his official message to direct their attention to the subject. If by this he means that he will not employ official favors to influence the votes of members, there can be nothing but praise for his decision. The supposed necessity of a contrary course is a curious reminder of the argument and practice which Sir Robert Walpole used in carrying on the British Government in a time of fearful Parliamentary corruption, a century and a half ago. It is to be hoped that we may find a shorter road to avoid the danger. But if the President means that, his functions being purely executive, it is not his business to help Congress and the country out of the slough into which they have fallen, it is much to be regretted that he should take this limited view of his duty. It was not to elect a mere mechanical instrument that ten millions of voters went to the polls in November, 1884. There is nothing extravagant in saying that he is bound to use every faculty and every discretion given to him within the Constitution and the laws to promote the welfare of the nation which has placed in his hands so solemn a trust. He, and he alone, more than any man or body of men in the country, has the power to open an avenue of escape. There would surely be no thing impertinent or revolutionary in asking Congress to take into serious consideration a report signed by eight Senators of both parties, approving of the admission of Cabinet officers to the floor of both houses.

At present the silver men have it all their own way. Expense being no obstacle, they can manufacture an apparent public sentiment at discretion. They can air their oratory in both houses without encountering any opponent able from his position to urge the national interest effectiyely against their schemes. They can block the action of the houses in the hundred ways offered by the legislative chaos. A Secretary of the Treasury joining in the debate, demanding precedence, or, as the French say, "urgency" for the question, with his responsibility for the national finances and backed by the national will, would soon put them in a different attitude. That is the way, and the only way, in which a satisfactory solution is possible of attainment.

There has been no President since Lincoln to whom such language could be addressed with any chance of success; but the increasing confidence of the country in the character and independence of Mr. Cleveland justifies the use of it.

G. B.

Boston, January 11, 1886.

THE PRESIDENTIAL SUCCESSION BILL.

To the Editor of The Nation:

Sir: I have not seen the text of the Hoar Presidential Succession Bill, or any summary of the debate on it, but on reading your remark that the Secretary of State, on becoming acting President, could appoint a new Cabinet (with the exception of the Secretary of State), I wondered who in the event of the Secretary's death after such a Cabinet reorganization would succeed him; the next member in order of the new or old Cabinet? If the latter, on what grounds, since he is no longer a Cabinet officer? Is there any provision for this contingency, and if not, have we not here another "interesting question"?

C. R., JR.

New York, December 25, 1885.

[The bill leaves no room for doubt on this point. Its language is: "In case of removal, death, resignation, or inability of both the President and Vice-President of the United States, the Secretary of State, or if there be none, *or in case of his removal, death, resignation, or inability, then the Secretary of the Treasury* . . . shall act as President." Of course this means the Secretary of the Treasury who is in office at the time when the Secretary of State dies, whether he be the appointee of the dead President or Vice-President, or the selection of the Secretary of State who has become acting President.—Ed. Nation.]

To the Editor of The Nation:

Sir: In a recent issue you took the ground that under the proposed new law the Secretary of State, should he become acting President, must nevertheless remain Secretary of State, just as a President *pro tem.* of the Senate, who should become acting President of the United States under the old law, would remain President *pro tem.* of the Senate. "The reason," you add, "in each case is the same, because it is only by virtue of holding the office of Secretary of State or President *pro tem.* of the Senate that he can act as President."

A similar interpretation of the Constitution of Maryland would leave this State at this moment without any one authorized to "discharge the duties of" Governor. The Constitution provides (Art. 2, sec. 7): "In case of any vacancy in the office of Governor during the recess of the Legislature, the President of the Senate shall discharge the duties of said office until a Governor is elected, as herein provided for"; namely, by the Legislature at its next session.

In accordance with this provision, a "vacancy in the office of Governor" having occurred some months ago, Mr. Lloyd, who had been elected President of the Senate at the opening of the January session, in 1884, assumed the "discharge" of "the duties of said office," and has continued to discharge them ever since, and will continue to discharge them, if he lives, till the election of a Governor by the Legislature at its coming session, some two weeks hence.

But Mr. Lloyd was elected Senator at the November election, 1881, and the Constitution provides (Art. 3, sec. 2) that each Senator shall "serve for four years from the date of his election." Now, Mr. Lloyd's successor in the Senate was elected on the 3d of last month, to "serve for four years from the date of his election." It follows, therefore, that Mr. Lloyd ceased to be Senator, and so ceased to be President of the Senate, on the 3d of last month; and that thereupon, if your argument is sound, his authority to discharge the duties of Governor was then vacated, and that the Secretary of State failed to do his duty under Art. 2, sec. 7 of the Constitution in not convening the Legislature to fill the vacancy.

E. J. Stearns.

Easton, Md., December 26.

[There is no doubt that the framers of the Maryland Constitution intended that the vacancy should be filled by the man who held the place of President of the Senate when it occurred. The language used is equivalent to saying "the *then* President of the Senate" shall become acting Governor and so continue until a new Governor is elected. The Federal Constitution does not provide that a particular officer shall succeed and hold the place until a new election, but only authorizes Congress to declare "what officer shall then act as President." It is a mooted question whether, under the law of 1792, a President *pro tem.* of the Senate who might succeed to the Presidency in this way would be entitled to discharge the duties of acting President in case his term as Senator expired before a new election for President were held; and this doubt constitutes a strong reason for changing the order of succession to a line of officers like the members of the Cabinet, who have no fixed term.—Ed. Nation.]

PLACE-SEEKING A POPULAR WEAKNESS.

To the Editor of The Nation:

Sir: It is very common talk among persons and in papers of the political proclivities which distinguish the *Nation*, that the people at large, those who do not expect office and do not want it, take little interest in the distribution of the governmental patronage so long as the public is well served by those in office. In this I think they are mistaken. I think the virus of the spoils system has infected very deeply the whole body politic of the country. Place-seeking has become a game in which a majority of the people are very much interested. Their sympathies are strongly enlisted with the contestants on their side. They feel very much as does a man who takes an interest in base-ball, and who, if a betting man, always stakes his money on the club which happens to represent the city in which he resides, and in any event, becomes intensely excited in the outcome of each game. Like some cutaneous eruptions, this strange manifestation is a symptom of deep-seated disease. The newspapers understand what the abnormal appetite of their readers demands, and publish long despatches every day from Washington acquainting their readers with the varying aspects of each struggle for perhaps a $1,500 per annum post-office. They describe the contest in much the same language a war correspondent would use in depicting a battle scene. To-day the friends of Smith, aspirant to the Postmastership at Podunk, "are fighting a gallant but hopeless battle." The next day "they have sent for reinforcements." Perhaps the day following, the succor has arrived in the shape of an influential delegation from the Podunk district armed with new affidavits, and "the tide of battle is turned."

If a change was impending in a $1,500 clerkship in any mercantile office, the newspapers would not spend their money freely in telegraphing and publishing facts and speculations as to the prospects of each applicant. Why do they do it in the case of a person seeking employment under the Government if the explanation I suggest above is not the true one? O. S.

Chicago, Ill., January 7, 1886.

THE DEATH-RATE FROM CONSUMPTION.

To the Editor of The Nation:

Sir: The argument of Dr. Henry B. Baker, the able Superintendent of Vital Statistics of the State of Michigan, rests mainly on the following point, which he thinks has been well established, namely: that the death-rate from consumption

increases rapidly after the age of fifty. This point, he says, was first demonstrated in the vital statistics of Michigan for 1870. Let us see how solid a basis these statistics furnish.

In the first place, how are the vital statistics collected in Michigan? By the Supervisors of each township, who make an annual inquiry of the inhabitants of their respective townships as to the deaths which have occurred during the year! Mistakes enough are made when the law compels the certification of the cause of death by the physician in attendance before a permit for burial can be obtained. By what figure shall we multiply these mistakes when the cause of death is reported by a member of the family in which the death occurred, very often months after its occurrence? The world over, many deaths from disease attended by wasting, the other symptoms being more or less obscure, are set down as due to consumption; and these cases are more likely to occur under the age of five and over the age of fifty. In Michigan, a young and comparatively thinly-settled State, one would naturally expect an undue proportion of these cases; and that such an expectation is justified by the facts, the subjoined figures will show.

Secondly, it clearly appears that all deaths were not returned. According to the report, the death-rate for Michigan in 1870 was only 9 1-3 per thousand, a rate which shows in a moment that, at the most, not more than three-fifths of all deaths can have been reported.

Thirdly, the total number of deaths from consumption in Michigan in 1870 is given as 1,451. Now, merely for the sake of argument, let us suppose that in these 1,451 are included all the deaths from consumption during that year in the State, and no deaths from any cause other than consumption. It is surprising that a statistician of reputation should venture to base any argument on such small figures, and they the figures for only one year.

Let us for a moment contrast the Michigan statistics for 1870 with those of Massachusetts for the years 1875–1884 inclusive:

	Michigan, 1870.	Massachusetts, 1875-84.
Total deaths from consumption.....	1,451	56,053
Under the age of 5 years.....	135= 9.3 per ct.	2,705=4.8 per ct.
Between the ages of 20-40.....	602=41.5 per ct.	27,801=49.9 per ct.
After 50.....	348= 24 per ct.	11,459=20.4 per ct.

A glance at these figures is enough to show that the Michigan statistics—and consequently the deductions drawn from them—are of very little value. The death-rate from consumption does not increase rapidly after fifty, but reaches its maximum between the ages of twenty and forty.

Doctor Baker asks for the statistics of the proportion of consumption to inhabitants at ages definitely stated, a distinction being drawn between the foreign and the native-born. I think that a table showing this could be made out from the Massachusetts registration reports, and regret that it is impossible for me to give the time necessary for its preparation.

Regretting that my demand on your space is so great, but promising to ask no more in connection with this subject, I remain,

Yours very truly,

FRED'K C. SHATTUCK, M.D.

BOSTON, January 8, 1886.

REALISM AND IDEALISM.

TO THE EDITOR OF THE NATION:

SIR: I have followed with great attention the discussion of realism and idealism. May I enter a protest against the meaning which Mr. Kenyon Cox in his interesting letter desires to give to the word naturalism? It is not that I do not accept Mr. Cox's distinction between realism, idealism, and naturalism; what I wish to protest against is the use of the word naturalism in the sense he uses it, because it would lead to confusion. The French, who are our masters in the fine art of criticism, whether of life or of literature or of art, and who have most carefully elaborated the terminology of criticism, have already adopted the word naturalism as meaning, in brief, ultra-realism. As romanticism is the revolt against classicism, so naturalism is the pushing still further of realism. Racine and Voltaire were classicists; Hugo and old Dumas were romanticists; M. Augier and M. Dumas, *fils*, are realists; M. Daudet and M. Zola are naturalists. And M. Zola has set forth the theory and practice of naturalism in many heavy tomes of polemic criticism and of solidly constructed fiction. Cannot Mr. Kenyon Cox call his naturalism—a very different thing from M. Zola's—by another name?

BRANDER MATTHEWS.

NEW YORK, 121 East 18th Street.

TO THE EDITOR OF THE NATION:

SIR: The very interesting discussion by Mr. Stillman in the *Nation* of December 31 of Realism versus Idealism scarcely disguises Mr. Stillman's partisanship of the idealistic school. The extraordinary phase of contemporary art known as realism or naturalism seems to Mr. Stillman sufficiently explained as a result of deficient imaginative power. I cannot venture to meet Mr. Stillman on his own ground of plastic art, or to broach a discussion as to the amount of imaginative faculty evident in the realistic painting and sculpture of our day, *e. g.*, in the French school of realistic painting; but the explanation which Mr. Stillman offers scarcely applies to the department of art in which the realistic theory has been most extensively popularized—I mean in fiction, especially novel-writing.

Mr. Stillman, indeed, seems almost to regard realism as an essential feature of modern fiction; but few critics would deny a distinction, not merely of degree but of fundamental conception, between the fiction of Thackeray or Hawthorne or George Eliot on the one hand, and that of Balzac, of Zola, of Alphonse Daudet, or of Tolstoi, on the other, far transcending the differences between any two members of either group. Balzac's work would probably be generally accepted as a typical example of realistic fiction, but it is scarcely conceivable that any one should deny to Balzac exuberant creative power, and few would deny a high degree of the same endowment to Balzac's more distinguished pupils, although the imagination displayed by these writers differs in kind, or, let us say, in direction, from that of another school. The realistic delineation of character and life cannot be regarded as merely mnemonic or objective any more than that of Shakspere or Thackeray or Hawthorne. Who would venture to assert that Balzac could possibly have known by actual experience a tithe of the characters and situations that he exhibits, or could have conceived them otherwise than by the imaginative intuition of genius? Nor can it be said of the masters of realistic fiction that they only see in their *dramatis personæ* what others might see in living personages, or that they merely "record external behavior and appearance." On the contrary, they conceive clearly the springs of being in their creations, and grasp well the unity of each moral nature; but they do not exclude, and in fact, give great prominence to, much that the idealistic school would regard as accidental, and appropriate only to the lower forms of comedy or to purely sensational fiction, such as the merely fortuitous occurrences of life, all manner of catastrophes and events not springing from the action of the characters or the moral principles involved in the story, the purely material surroundings of the personages, etc. What the idealistic school would regard as the mere frame or background of a romance, the realistic school raises to coördinate importance with the moral action. In this respect, Mr. Stillman's distinction between the idealistic and realistic tendencies cannot be controverted.

If, however, it be granted that realism in fiction is not due to a paucity of imaginative power, the introduction of the purely physical and fortuitous which characterizes it must be explained by some novel conviction or need felt by the writers of the realistic school—some fresh phase of human experience to which one group of minds may be more sensitive than another. It is my own belief that realism, in fiction at least, is due to the rapid disappearance of faith in a Divine government of the universe controlling human affairs as a beneficent Providence. Surely no experience could be more likely to leave its trace upon the art of any period than the transition, which a vast proportion of thoughtful persons of our own century have known, from trust in a moral order pervading human destiny to a recognition of the eternal antagonism of inhuman, irrational natural force. Now the novel is essentially a form of drama; and in all drama above low comedy the interest of the plot is based upon some conflict, whether of human emotion and will in antagonism with some supernatural power, as is usually the case in Greek drama, or of the will and passions of an individual or individuals pitted against another group of characters or against some moral principle or social prejudice, as in modern drama. When, however, all gods, Pagan or Christian, are dethroned, and we have recognized how infinitesimal is the domain of human science and moral law as compared with the outlying region of occult force, a far sublimer theme for drama offers itself in the desperate conflict of man with elemental nature, with the purely physical impulses of his own organism, with the fortuitous complications of human intercourse, with all that excludes and defies rational insight and rational volition. This antithesis of man's moral being to blind nature or chance seems to me the keynote of realistic fiction.

In idealistic literature the purely fortuitous scarcely appears; the occurrences of the drama are represented as results of some supernatural agency or moral law, and the narrative is pervaded by belief in the ascendency of mind, divine or human, over matter. Vice itself receives a certain moral character from the underlying conception of free-will. In realistic fiction life is shaped by the mysterious workings of heredity, the iron link of cause and effect replaces free-will, character is warped beyond recognition by the play of circumstance, and man appears not as the lord of creation, but as some pigmy in conflict with the Titans.

In fine, realism in fiction seems to me a very distinct product from realism in landscape-drawing, although there is sufficient superficial analogy between the two phenomena to explain the common application of the term.

Mr. Stillman concludes his letter by asking what relation the real has to music. Did not Wagner spend his life in attempting to demonstrate that music has an essential relation to the real?

T. R.

NEW YORK, January 4, 1886.

AN ELOCUTIONARY AFFECTATION.

TO THE EDITOR OF THE NATION:

SIR: Please allow me a little space to protest against a disagreeable affectation which teachers of elocution are trying to introduce into the pronunciation of English. They insist that we shall in speaking separate *at* from *all* in *at all*, and from *any rate* in *at any rate*—whereas, in the

natural utterance of any cultivated man in either England or America, *at all* is as much "one word" as *attempt* is, and *at any rate* as much "one word" as *attenuate* is.

Let any one read aloud a sentence of English—of this letter, for instance—and he will notice that we (unless we are thinking of what some one has told us is right) separate a word from the word which comes after it only when the sense or ease of utterance is the cause of such a separation. In any sentence whatever of considerable length, many more words are joined to their fellows than are separated from them.

Now there can be no closer connection in sense than between a preposition (*e. g.*, *at*) and its object (*e. g.*, *all*), nor any succession of syllables easier to utter than an unaccented one ending in a consonant (*e. g.*, *at*) and an accented one beginning with a vowel (*e. g.*, *all*). It is true, we speak of a man's "running his words together so you can't understand him," but this is when he runs them together in unnatural groups, or it may mean merely that he speaks too fast and indistinctly. R. L.

CAMBRIDGE, MASS., January 4, 1886.

"A.B." AT WASHINGTON AND LEE UNIVERSITY.

TO THE EDITOR OF THE NATION:

SIR: On p. 8 of this week's *Nation* your Boston correspondent gives a list of colleges where a knowledge of Greek is not required for the degree of Bachelor of Arts. To this list Washington and Lee University should be added. The only academic degrees offered by this institution are A.B., M.A., and Ph.D., there being several schemes of study for each of these degrees. In one of the schemes for A.B., only one of the two languages, Latin and Greek, is required, and only a partial course of that one.

Yours truly,

S. T. MORELAND.

W. AND L. UNIVERSITY, January 9, 1886.

Notes.

CASSELL & Co. will directly begin publication of "Cassell's National Library," a series of reprints, issued weekly under the editorship of Professor Henry Morley, which "will represent all periods and forms of thought." The first volume will be Macaulay's 'Warren Hastings.' White's 'Selborne,' Hallam's 'Middle Ages,' Franklin's Autobiography, Luther's 'Table-Talk,' Byron's 'Childe Harold,' are other works named in the prospectus. The volumes will be octavo, of about 192 pages, and will be sold for ten cents each, or $5.00 by the year—a cheapness hardly to be matched on such a scale.

Scribner & Co. announce for the present month Lieutenant Greely's narrative of the Franklin Bay expedition, in two volumes octavo, under the title, 'Three Years of Arctic Service,' and with more than a hundred engravings and maps.

For this month, too, is set down the appearance of D. H. Montgomery's 'Leading Facts of English History,' and Prof. P. V. N. Myers's 'Mediæval and Modern History'; and for June of Esyenbach's German Grammar, revised by William C. Collar, head master of the Roxbury Latin School (Ginn & Co.).

Houghton, Mifflin & Co. announce for immediate publication a volume entitled 'Progressive Orthodoxy,' made up of the editorial articles on this subject which have appeared in recent numbers of the *Andover Review*.

Mr. Howard Seely, a recent graduate of Yale, and author of 'A Lone-Star Bo-peep, and Other Texan Ranch Tales,' published by himself, has prepared a new edition, with additional tales, to which Dodd, Mead & Co. will give their imprint. The work will appear shortly.

William S. Gottsberger will publish this week Count Leo Tolstoi's historical novel, 'War and Peace,' translated from the French by Clara Bell, in two volumes.

The *Forest and Stream* Publishing Company will issue a third and enlarged edition of W. P. Stephens's 'Canoe and Boat Building.'

Henry Holt & Co. will be the American publishers of Sir Henry Maine's 'Popular Government,' and of 'The Father's Tragedy,' and other poetic dramas, by Michael Field; also, of Zeller's 'Outlines of the History of Greek Philosophy,' translated by Sarah Frances Alleyne and Evelyn Abbott.

W. A. Croffut is preparing an illustrated history of the Vanderbilt Family, to be ready in May.

The Messrs. Goldsmid, of Edinburgh, are to print in their "Collectanea Adamantea" an unabridged translation of 'Manon Lescaut.' That so expensively issued during the holidays by the Messrs. Routledge, a correspondent informs us, was probably made by D. C. Mozlan, and was first published by Joseph Thomas in 1841.

We learn that seven essays have been received in competition for the Naval Institute Prize for 1886, the theme being: "What changes in organization and drill are necessary to sail and fight our war-ships of the latest type?" The best essay receives $100, a gold medal, and life-membership in the Institute. The subject of the essay for 1887 is: "The Naval Brigade: its Organization, Equipment, and Tactics." The signatures must be mottoes, and the essays be handed in by January 1, 1887.

We have received the January issue (No. 1 of vol. 1) of *Lend a Hand*, a magazine published at No. 3 Hamilton Place, Boston, as a sort of clearing-house for societies and individuals "engaged in public improvement" "on different lines of philanthropy"—in other words, an organ of associated charities. As may be inferred from the title, the Rev. E. E. Hale is at the head of the literary part of the enterprise.

The first number of the *Philanthropist*, also, is before us, an eight-page paper published monthly in this city for the promotion of social purity. Mr. and Mrs. Aaron M. Powell are the editors.

Robert Clarke & Co. have brought out a second edition of Mr. Appleton Morgan's 'The Shakespearian Myth.' The author adds a new preface, correcting himself on two points in the former edition, and referring to "the very great elaboration the Baconian theory has [meantime] received . . . at the hands of Mrs. Henry Pott, Mr. Ignatius Donnelly, and others." "Elaboration" is a neutral word, but we fancy that Mr. Morgan implies by it something different from the *reductio ad absurdum* which the works named have actually wrought on the theory.

Ginn & Co. have added to their "Classics for Children" Ruskin's 'King of the Golden River,' with Doyle's illustrations indifferently printed; 'Æsop's Fables,' edited by J. H. Stickney, with cuts and a supplement containing some of Elizur Wright's translations from La Fontaine, and specimens of Kriloff's Russian fables; and Scott's 'Talisman,' edited by Dwight Holbrook, who annotates without abridging the text.

The new edition of Marryat's 'Masterman Ready,' issued by Frederick Warne & Co., makes a square volume of 334 pages in clear print. The "original illustrations" are plentiful, but of uneven merit, and at best not to be praised highly. The present generation will, we doubt not, take kindly to this book as did its predecessors; but writers for the young have meantime made a vast stride forward in the naturalness of their conversations as compared with Marryat's example in this work.

Apparently it is customary to make an annual printed volume of the vetoes of the Governor of Pennsylvania, and that containing Governor Pattison's objections to the legislation of 1885 fills 229 pages octavo. The vetoes number 90 in all, but some simply annul items of appropriation bills. Characteristic slipshod law-making is revealed in Veto 61, in which the Governor says: "This bill and its title do not correspond. The title misrecites the enactments of the bill. Moreover, the title itself is inaccurate, and refers to an act that has no existence." There is much food for reflection in these pages, the moral of which is not simply local.

Mr. Griswold's General Index to the *Nation* (vols. 31–40), already announced, occupies thirty-two pages. The somewhat more closely set Index to vols. 1–30 filled forty-two pages. Bound together, the two will be found very convenient for reference. The price of the new Index is $1.25.

Mr. J. H. Hickcox's excellent Monthly Catalogue of U. S. Government Publications will complete its first volume during the present month. With No. 9 a new and useful feature was introduced of briefly indicating the chief issues of the month. The same number contained a list of the Signal Service Professional Papers, while No. 10 gave a list of the Professional Papers of the Corps of Engineers. We notice that the *Publishers' Weekly* has abandoned its own list of Government publications in favor of Mr. Hickcox.

Mr. Ernest Ingersoll has prepared a little handbook to the National Museum at Washington (Brentano), very well calculated for popular instruction, and furnished with numerous engravings. It is general in its description of the several departments and collections, and there is no reference to room or case or object numbers. It would seem as if the Museum were used to some extent by dealers to advertise their wares, under the guise of a loan exhibit.

The chief item of interest in the Fourth Annual Report of the Managing Committee of the American School of Classical Studies at Athens concerns the publication of the great mass of inscriptions gathered by Dr. J. R. S. Sterrett last summer in Asia Minor. There are no funds in the Committee's control applicable to this purpose, and outside aid must be relied upon. There will be at least five scholars in the School during the present year.

A suggestive little paper in No. 23 of the *American Journal of Philology* is Mr. P. B. Marcou's "Two Points in French Style." In tracing the shortening of the French sentence from Montaigne downwards, he found that with this author a mean sentence (out of 100 consecutive sentences) contained an average of 6.02 verbs, with Fénelon 4.48, Voltaire 3.89, Sainte Beuve 3.95, and Daudet 3.38. (The ratio of words to verbs Mr. Marcou determines to be as 6 : 1 or 7 : 1) The other point dwelt on is the extent to which French writers, for the sake of euphony, emphasis, or piquancy, put the adjective before the noun instead of in its regular place after it. Rousseau uses this license freely; Chateaubriand less so, but with manifest discrimination.

"A Constant Reader" thinks it would be a favor to others holding similar views on the tariff with himself to know of the active free-trade weekly paper called the *Million*, published at a cheap rate at Des Moines, Iowa. We cheerfully name it and recommend it. Its contributors include the principal tariff reformers of the country. Nor should we omit mention of the *Freeman*, a kindred periodical published at Indianapolis—"an independent political journal, devoted to the advancement of honest politics, civil-service and tariff reform." Both these papers are conducted in the region most necessary to enlighten,

for it is now true, and will be for some time, that in the Government of this country the West is in the saddle.

From Mr. Christern we have prospectuses of several significant works: 'Anvers et l'Exposition Universelle de 1885,' by René Corneli, a fine folio souvenir of Antwerp's notable exhibition, with full-page and other illustrations, to be published in twenty parts; Jacob Falke's 'Hellas,' freely done into modern Greek by N. G. Politou, with all the illustrations; a critical edition of the 'Lusiad,' in commemoration of the tercentenary of Camoens's death ('Os Lusiadas,' Leipzig: Giesecke & Devrient), with many illustrations on copper and in color; and 'Handbuch des Getreidebaues,' by Fr. Koernicke and H. Werner, the first comprehensive work in German on grain-growing.

Some idea of the disestablishment literature called out by the English elections can be gained by the list of the titles of eighty-two pamphlets and sermons on the subject received by the *Guardian* up to November 25, 1885. This list, judging from the titles, represents apparently only the Church side of the question.

The latest additions to East African literature are G. Rohlf's 'On the Climatology and Hygiene of East Africa,' and the first volume of Cardinal Massaia's account of his more than thirty years of missionary work in that country. In this volume he treats at length of the condition of the Orthodox and Coptic Churches. It may be added that the Italian interest in East Africa, as shown by the various exploring expeditions recently sent out, is largely owing to the labors of Cardinal Massaia.

'Schmidt und Smith, Hottentottisches Blaubuch,' by C. M. Seyppel, is worthy of note simply as a sign of the times. A German and an Englishman, after various burlesque adventures, are taken prisoners by the Hottentots, and before being eaten are allowed to plead for their lives. Smith accordingly sets forth in glowing terms the advantages of being annexed to Great Britain, but meets with no favor, the mention of the Queen being received with shouts of derision at the idea of being ruled by a woman. Schmidt, on the other hand, with a few words ending with a promise of Bismarck's protection, gains the submission of the savages, and immediately proceeds to tie the German flag to the top of a neighboring palm, while Smith retires discomfited. A few years ago such a book would have been impossible.

There was in the life and character of Karl Richard Lepsius, whom learned Germany, many years before his death in July, 1884, distinguished by the designation *Altmeister der Ægyptologie*, much that could be worthily depicted only by the hand of a biographer skilled in describing sentiment, energy, and active achievement. At the same time, his biography had to be written by an adept in his science, a first-class Egyptologist. Fortunately for the many admirers of the lamented scholar, and particularly for those to whom the information concerning his investigations and discoveries, as a student and travelling explorer, had to be offered in a popular manner, the task has been undertaken and executed by Georg Ebers, a writer equally famous as a romantic delineator of psychological traits and situations and as an Egyptian archæologist. His biographical memorial—the work, in part, of a disciple's gratitude—forms a volume of 400 pages, entitled 'Richard Lepsius: ein Lebensbild' (Leipzig, 1885). It will be welcome to a large circle of readers.

The "Wiener Neudrucke," a collection of reprints in which it is intended to include inexpensive reproductions of the most important and rare works which have been published in Austria from the Middle Ages to the beginning of the present century, now comprises eight volumes. Among the latest additions to the series is Stranitzky's 'Lustige Reyss-Beschreibung in verschiedene Länder,' edited by R. M. Werner from a copy in the Royal Library at Berlin, having neither date nor place of imprint. The editor gives valuable bibliographical details regarding the various editions of this work, which appears to be a satire upon the romances of travel so much in vogue in the seventeenth and eighteenth centuries. Works relating to the development of the drama in the theatres of Vienna, and those written in the dialect of Vienna, or treating of the history of the city, also find places in the collection. Future issues will include Abraham-a-Sancta-Clara's 'Mercks Wien,' Brunner's 'Jacob und seine Soehne,' Collin's 'Lieder für die oesterreichische Landwehr,' etc.

—Whether as ex-ruler or as soldier, the name of Grant easily heads the list of the famous dead of 1885. Indeed, considering the sale of his posthumous memoirs, he is not far from leading the popular authors who have passed away. Yet in this particular he must reckon not only with Victor Hugo and Asbjörnsen, but with "Josh Billings," and even (such is the bedfellowship of literature) with T. S. Arthur. The military list thus initiated is brilliant, and recalls many of the greatest campaigns of the century: McClellan, McDowell, and J. W. Phelps in this country; Prince Frederick Charles, Manteuffel, and Vogel von Falckenstein in Germany; Serrano in Spain; the French Admiral Courbet; the ill-fated Chinese and Sudanese Gordon, and the all-conquering Mahdi. The featureless Alfonso of Spain is the only reigning sovereign of any prominence who died last year. All the American statesmen were second-rate—Colfax, Frelinghuysen, Hendricks, Gratz Brown, Robert Toombs; and of a far higher grade were Charles Rogier of Belgium, Terenzio Mamiani, Rudolph Gneist, and Holland's great though still youthful jurist, Modderman. Pascal Duprat, that good fighter of the Second Empire, is also remembered as a littérateur, though his light pales before Hugo's or Edmond About's. Of their class, in various degrees, were N. I. Kostomaroff, the Russian historian, J. P. Jacobsen, the promising Danish novelist, the Austrian poet and novelist, Alfred Meissner; Walter von Goethe, last of the name; Bishop Wordsworth, the nephew and biographer of the poet; Lord Houghton, F. J. Fargus ("Hugh Conway"), Helen Jackson ("H. H."), Richard Grant White, and Susan Warner, author of 'The Wide, Wide World.' Scholars like Georg Curtius and H. A. J. Munro would adorn any necrology; and William Veitch and Samuel Birch also deserve mention here. The librarian and biographer and benefactor of students, John Langdon Sibley, and that bookish bookseller and publisher, Charles Welford, may fitly be named in the same connection. Science loses the zoölogists Henri Milne Edwards, John Gwyn Jeffreys, and William B. Carpenter; a great archæologist in Worsaae; an interesting student of ethnology in Eugène Bodichon; the explorers, Gustav Nachtigal and Robert von Schlagintweit; the chemist, Benjamin Silliman. Three eminent civil engineers, Dupuy de Lôme, John B. Jervis, and Commander Gorringe; and a remarkable inventor, with the sad lot of his demon-haunted class, W. B. Woodbury, to whom we owe so many useful applications of photography, conclude the present division.

—Besides Modderman and Gneist, the law reckons comparatively few losses, and mention of Lord Cairns in England and John Norton Pomeroy in this country will suffice. Eminent as clergymen or theologians were Cardinal McCabe, Archbishop McCloskey, Bishop Fraser of Manchester, J. H. Scholten, and Daniel Schenkel. Three conspicuous figures—one indispensable—in our great religious agitation for the abolition of slavery, Maria W. Chapman, Elizur Wright, and Orson S. Murray, diminished the ranks of the veteran survivors in 1885; and Lord Shaftesbury's is the most significant name among the other philanthropists who have ceased from their labors. Paris honors DeLiesville, who gave back to the public his priceless antiquarian collection. A princely philanthropist was missed in W. H. Vanderbilt, whose maximum distinction is his inherited riches. The causing of wealth in others is the fame of James Marshall, the discoverer of gold in California. A. de Neuville and William Page among painters; Franz Abt, Ferdinand Hiller, Sir Julius Benedict, and Leopold Damrosch among musicians, are art's contributions to the list of the departed; and those who for fifty years have sung the familiar hymn "Federal Street" will perhaps wish to associate with the foregoing its unpretentious composer, the late Henry K. Oliver, of Massachusetts.

—The Perkins Institution for the Blind, at South Boston, Mass., has been making a very promising experiment in the introduction of the kindergarten system for the younger scholars, and the results have already been remarkable. Pupils who were sinking gradually into sluggishness and idiocy, averse even to locomotion, and unable so much as to tie the strings of their shoes, have been reclaimed, and have made remarkable progress. Boys and girls who seemed entirely helpless, and had no command whatever of their hands, have been aroused to energy and activity through its ministry. And last summer the enthusiastic Director, Mr. Anagnos, gave a pathetic and most interesting exhibition, in which the little pupils in physiology showed their understanding of their lessons by modelling the heart and other organs; baby botanists made plants; tiny geographers shaped maps; and some little boys who had gotten into zoölogy moulded turtles, polyps on the coral reefs, etc. There is no other field where the stimulus of Froebel's object lessons is so needed to keep the minds of the poor sightless little ones from the hopeless stagnation caused by the want of stimulants to thought and action such as their eyes furnish their more fortunate brothers and sisters. The Perkins Institution is not able to establish this preparatory department within its walls, but a new building has been erected, and it is hoped that funds can be obtained to put the new juvenile department speedily in operation.

—The movement for the abolition of compulsory prayers at Harvard has recommenced among the students in earnest, with an organization which means, we hope, permanence until the end is attained, and with an admirable statement of reasons. It is not surprising to find the *Unitarian Review* opposed to this "revival," which it pronounces "an insult to the memory of the religious founder of this institution"—in refreshing disregard of the holy horror with which John Harvard would have looked upon the Unitarian tenets of the editor and his affected solicitude "Christo et ecclesiæ." Nor can cant much further go than when it is declared incredible that signatures should have been largely obtained for this self-evident truth: "That voluntary attendance upon prayers would necessarily betoken genuine interest in the religious exercises"; and this truth of experience, "That the sense of compulsion accompanying the present attendance upon prayers is not conducive to the development of sincere religious feeling, but, on the contrary, produces indifference, if not hostility, to the observance." The fact is, that if we may force a man to prayers, we may force him to church, and we cannot now think of anything more useful for the editor of the *Review* than a

compulsory course of attendance on ultra-Calvinistic preaching. His plan for finally suppressing the agitation is as amusing as anything that goes before. He would have the President and all the members of the Faculty make it a duty to attend prayers regularly. It is, however, well known that a majority of the Faculty are in hearty sympathy with the anti-compulsory movement. Among these are professors whose orthodoxy, unlike the *Review* editor's, is above reproach, and who would, as a sign of their respect for religion and abhorrence of the present system, rather absent themselves from prayers persistently than attend in order to discourage the feeling of revolt.

—The *Rundschau* for December contains two interesting addresses by the famous historian Von Sybel, upon the education of women. The first was delivered in October, 1883, as the opening address in the Victoria Lyceum, an institution which can perhaps be best described for Americans by calling it the Berlin Annex. The address is chiefly a memorial tribute to Miss Archer, the founder of the Lyceum, who died at Montreux in 1882. But few biographical details are given. We learn that Miss Archer received but a slender education in the home of her parents, and that she grew up under circumstances which offered little gratification to her natural thirst for knowledge, and only a meagre scope for her energetic character. To achieve her own mental independence, she determined to go to Germany. There she first attended a school in Lüneburg, and then went to Berlin and commenced giving lessons in English. As a teacher she was immediately successful, but the greater her success and the more clearly she became conscious of her own intellectual needs, the more she pondered upon the badness of the situation as regarded the higher education of women. As her pupils opened their hearts to her, she found many of them to be in a condition of mental apathy. Others impressed her with the superficiality of their attainments, and even the most ambitious seemed to be unable to help themselves to further acquirements. The graduates of the *Töchterschule* had no means of further culture except in the way of private reading, and for this they lacked direction and had not learned how to direct themselves; and so it was no wonder that so many of them lapsed into an "empty and frivolous existence." Meditating constantly upon this condition of affairs, Miss Archer became possessed of a desire to remedy it if possible. What to do, however, was not easy to decide. She had neither the means nor the influence requisite for the founding of a university or even a gymnasium for women; so she decided to avail herself of the fashionable appetite for popular lectures. She projected a lecture institute, and succeeded in winning for her plan the interest of the Prussian Crown Princess, who lent to the enterprise her name and her sanction. In 1869 the Lyceum began its work with four courses of lectures and seventy students. But Miss Archer soon observed that the listeners were not, as a rule, ready for the academic pabulum which was offered them. The word "langeweilig" came often from their lips, and many were evidently using the courses of the Lyceum simply as a diversion. She saw that classes for disciplinary work must be established. As to the studies best adapted to this purpose, she did not hesitate: nothing could take the place of mathematics, Greek, and Latin—the Latin grammar being, in her judgment, peculiarly fitted to develop that *Ordnungssinn* so essential in women. Such classes were accordingly provided, and the Lyceum prospered. Pecuniary aid soon came from private sources, then from the city of Berlin, and lastly from the Prussian Government. In 1883 the Lyceum offered twenty-seven lecture courses, with about the same number of classes for drill work, and had 900 students. In 1885 this last number had increased to 1,200. So successful has the Berlin establishment become, that it has been imitated in various other German cities.

— Von Sybel's second address, delivered at the opening of the Lyceum last October, is devoted to a general consideration of the woman question from the German point of view and in its educational aspect. There is little in it that will sound new upon this side of the Atlantic, for notoriously we have not very much to learn from Germany with regard to the education of women. The speaker's attitude is conservative. He is in favor of allowing women to learn whatever they like, so it only be appropriate to them; but he is also in favor of denying them the best, the most natural, and the most efficacious means of satisfying their craving for knowledge, namely, free access to the universities. He touches upon the familiar question whether women should study the same things that men study, and finds himself compelled to raise a voice of warning. Experience shows, he says, that the range of higher study which is suitable for women is a limited one. A female lawyer, politician, philosopher, or even theologian is a monstrosity, although in medicine, history, art, literature, and—botany, woman is quite in her place. The inference from this would appear to be that in this second set of subjects, at least, women should have, if they want it, the best instruction attainable, and that is presumably to be found at the universities. This disagreeable conclusion is, however, ingeniously evaded by Von Sybel. He observes that a boy requires all the time from his tenth to his twenty-fifth year to fit himself for a learned career, and that such a long period of study is for women, who have so much else to do (housework presumably), simply out of the question. An argument of this sort shows how deeply rooted in the German mind is the idea that the so-called philosophical studies of the university have no theoretical *raison d'être* except as a preparation for teaching. It seems not to occur to Von Sybel that a young woman of brains might wish to hear university lectures, say upon art, or upon botany, without intending to make herself a rival of Lübke or of Sachs. The remainder of the address is devoted to advice. It closes with a long quotation from the last chapter of Proverbs.

—"For two years and a half," says Élisée Reclus in his Preface to his friend Kropotkin's 'Paroles d'un révolté' (Paris, 1885; New York: F. W. Christern), "Peter Kropotkin has been in prison, cut off from the society of his fellow-men. His punishment is hard, but the silence imposed upon him regarding the subjects most dear to his heart is quite differently painful; his confinement would be less oppressive if he were not gagged." To a man so overflowing with sentiments tender or fiery; with love and sympathy for toiling mankind, and hatred and dread of rulers, employers, and possessors; with harrowing pessimism as to the present of society in all its forms and aspects, and with the brightest Messianic hopes, based on altruism, socialism, and "the commune"; with glowing or scathing words and phrases, imbibed from prophets and apostles, Jacobins and Nihilists—from Isaiah down to Tchernyshevski—to such a man enforced silence must indeed be the last of martyrdoms. This martyrdom must yet last for years unless abridged by the clemency of the President. Meantime, "what commonplaces," Reclus exclaims, "are we going to be treated to, what lying utterances are to wound us, what selfish half-truths are to be drummed into our ears?" To counteract these emanations of *bourgeois* egoism the famous French geographer and anarchist has collected, annotated, and published in book form the articles contributed some years ago to the journal *Le Révolté* by his Russian coworker in the dissemination of geographical science and anarchic principles. The book is a perfect gospel of salvation, which is to come after the necessary demolition, by the tawny arms of laborers, of thrones, altars, and magisterial benches, of villas, banks, and private workshops. The revolution is coming—bloody and terrific—and with it an everlasting reign of altruism and Arcadian bliss. The Jews who saw the walls of Jericho totter, the Crusaders who stormed the ramparts of Jerusalem, were not half so convinced of the unmixed happiness they were bringing to the Holy Land as the bearers of the ark of anarchism and crusaders of "the commune" are of the felicity which is to dawn on all mankind as soon as the Bastile of individual property is breached. Till then, Prince Kropotkin tells us in his inexhaustible eloquence, everything is hell—politically, economically, physically, morally; afterwards, everything is paradise—sloth, envy, passion, mendacity, rapacity, and the like vanishing like nightmares. With such clear visions of what is coming, life in a dungeon must be sweet. Isaiah had similar visions when he prophesied of the wolf and the lamb dwelling together and the lion eating straw like the ox—but he seems to have prophesied of distant times.

—In speaking of the opening performance of the American Opera Company we called attention to the fact that the word American, in this connection, could only be taken in the sense of international, so far as the operas to be performed are concerned. The second opera produced by this company, on Friday evening, is in itself a curious illustration of the tendency to become international which music has always had. Gluck's "Orpheus and Eurydice" is practically an Italian opera by a German composer, which has been revised in a French spirit, and was sung at the Academy of Music in the English language by American singers. Gluck wrote this opera with an Italian libretto for Vienna, where it was produced in 1762 with great success. Twelve years later, when it was to be brought out at Paris, he added several excellent numbers, but arranged the part of *Orpheus*, which had been assigned originally to a male alto, for a high tenor. As this change did not improve the effect, Berlioz took occasion in 1859 to restore the original alto part, assigning it to Mme. Viardot Garcia; and in this form it produced, as Berlioz tells us, one of the greatest successes he had ever witnessed. Mr. Thomas followed the precedent of Berlioz, and not only for this, but for enabling American audiences for the first time really to appreciate this work through an adequate performance, he deserves the gratitude of all lovers of classical music. So far as his share of the interpretation was concerned the performance was absolute perfection. The orchestra played with a delicacy and a refinement of shading that cannot be too much commended, and in the choruses one could not admire sufficiently the sensuous beauty of tone that seems to be characteristic of American choral bodies, whatever may be said of the harshness of voice of individual American women.

—As for Gluck's opera—the revival of which comes opportunely within one year of the centenary of Gluck's death—it must be admitted that some parts of it are thin and antiquated, and can only be enjoyed if we put the historic spectacles over the mind's eye. For the sake of the second act, however, and some other numbers, this opera will always be revived at intervals. Considering how short is the life of operas

general, the fact that it is revived at all is a remarkable thing. But, as Schumann remarked of another opera of Gluck, "So long as the world exists, such music will always be revived, will never become antiquated"; and the enthusiastic Berlioz quotes Jules Janin's words, that "it is not ourselves that take up again the old master-works, but it is the master-works that take us up again." In the history of music "Orpheus" occupies a remarkable place, inasmuch as with it Gluck broke away from Italian traditions and began to embody some of those principles of the music of the future, or dramatic music, which have found their full realization in Wagner. Gluck's reforms consisted chiefly in his refusal to be a mere slave of vain *prime donne* and tenors by writing arias in which musical worth was subordinated to the necessity of giving the singer a chance to display vocal agility. Gluck accordingly pruned his melodies of all superfluous ornamentation, and tried to restore harmony between the contents of the text and the expression of the music. Further than this, however, his reforms did not go, and the detractors of Wagner who formerly insisted that he merely carried out Gluck's ideas and reforms, only betrayed their woful ignorance of the history of music, their lack of insight. Gluck retained all the old operatic disconnected forms of aria, duo, ballet, etc., while Wagner substituted in the place of these disjointed numbers a continuous orchestral undercurrent sustaining the vocal melody and declamation; and besides this he introduced, in his system of ever-recurring leading motives which characterize each person and dramatic idea of the plot, a principle of which Gluck never dreamed, and which for the first time made music really capable of telling a story in its own language.

NEWCOMB'S POLITICAL ECONOMY.

Principles of Political Economy. By Simon Newcomb, Ph.D., LL.D. Harper & Brothers.

THIS book was written with a view to making political economy less controversial and more practical. The author holds that the strictly *a priori* method and the historical method are both alike defective; that the true method lies in a union of the two. Like every other science, political economy is partly "pure" and partly applied. Like every other science, it must rely on practical research rather than on abstract reasoning; but the research, in order to be fruitful, must arrange and interpret its results in accordance with logical principles. Thus the abstract and the practical sides must help each other. The author's aim in the book before us was to give an exposition, in scientific form, of the principles of economic science as to which all who understand the subject are in substantial agreement. He would exclude from pure political economy all mere views, and, as far as possible, all doubtful or controverted doctrine, relegating such matters to the field of investigation.

His view as to the place and function of general principles in the science leads him to endeavor to state and develop them in the form best suited to the use of observers and investigators. Other economists try to show the working of economic laws under the simplest conditions. They make much of the individual, and avoid all unnecessary complications. They carry the student far from the madding crowd, to a region where wages are paid in kind and commodity is exchanged for commodity by barter. Professor Newcomb, on the other hand, treats matters from the standpoint of actual affairs. He leads his reader into the haunts of active business, and speaks to him the language of the shop and the counting-room. In his book, as in the great world of business, trade occupies a more prominent place than production, and the medium of exchange is at least as much thought of as the things exchanged. Men produce only to sell, and sell only for money. The action of economic forces is traced by their effect on the flow of money to and from individuals and classes. Changes in the flow are treated as the source of far-reaching economic effects. Where other books speak of value, this one speaks of prices. Where other books speak of saving capital and lending capital, this one speaks of saving and lending money. Most of the author's reasonings about wages, profits, supply and demand, cost of production, etc., are conducted in terms of the cash account, and embrace all the complications of the industrial system. His aim being to make his readers intelligent observers, he naturally brings them face to face with the actual things to be observed.

This method has some obvious advantages. It has the great advantage of seeming reality. Practical men might, perhaps, be ready to accept, when presented in that way, doctrines which they reject when presented in the old way. And since the practical man shows no sign of coming to political economy, it would surely be a great blessing if political economy could come to the practical man. Also, if it should be found possible to diminish controversy, and to bring professed economists more into the attitude of friendly coöperation, much good would certainly accrue to the influence of their science on the conduct of affairs. If Professor Newcomb's book should contribute even a little toward so desirable results, we should all be greatly his debtors. On the other hand, we must not allow the agreeable prospect to blind us to the great dangers of his method. Daily familiarity with money and the ways and phrases of practical life makes it seem easy and natural to use them in economic reasoning. But unfortunately, when so used, they are apt to play tricks. Money, especially, seems to have no end of deceits. It belongs to the surface of the subject, not to its depths. The man who uses it as a vehicle for his reasonings about fundamental principles must scan warily every step he takes, or it will lead him into confusion and fallacy, cheating him with reasons that prove nothing, and explanations that do not explain.

For examples of these dangers, we regret to say that one need not travel outside of Professor Newcomb's own book. He is a Malthusian. He also sees clearly that the wages of labor must be paid out of capital. Yet we have not found in his book any statement of the law of wages. He has much to say about *changes* of wages, but seems to regard the average rate as a thing not needing to be accounted for. He even at times uses expressions at variance with the law of wages, as when (p. 400) he avers that increase of population without increase of capital would cause higher prices; or when (p. 403) he speaks of a general fall of prices as the result of an increase of capital. Without a law of wages, a satisfactory law of profits is of course impossible. Professor Newcomb, however, undertakes to explain the source and rate of profits independently of wages. This he does by drawing attention to the labor-saving power of machinery, railways, etc. He defines capital as a labor-saving agent; the saving belongs to the capitalist and determines his profit (p. 89). Seeing clearly that circulating capital has no power to save labor, he endeavors to account for the profit it yields by observing that, if it yielded none, there would be no circulating capital; and that abstinence is itself "something which can command money in the public market." But he fails to consider that *all* capital is originally circulating capital, and can be turned into machinery only by being paid to laborers. Profits, then, must obviously start from wages as a base, even on his own theory. But the theory that attributes to capital, as capital, a labor-saving power, does not bear examination. Capital, as such, is merely savings—resources for the support of industry. The labor-saving devices we owe primarily to those who invented them. Of course capital is necessary in order to make use of inventions; but to call capital itself "a labor-saving contrivance" is the same as to call pig-iron a steam-engine. Further, the author himself, in his chapter on the "effect of labor-saving improvements," shows very clearly that the benefit of the saving brought about by machinery goes to the consumer and not to the capitalist.

Cost of production he defines as consisting of wages, interest, taxes, etc., all expressed in money. This definition has long since been shown to have the great defect of confounding the cost of producing a thing with the rewards of the producers. It leads to much confusion and difficulty. Professor Newcomb himself finds it necessary to make so much abatement and correction (p. 257 *et seq.*) that it may be doubted whether ordinary readers will see clearly what "net cost of production" really stands for, or what it would be good for if anybody could discover it, which is confessedly impossible. The net cost of production of a gold watch, for example, is not the sum total of the amounts actually paid for getting it made. It is rather the smallest sum that would suffice to keep the men who make it from going out of the business. So it has no control over the value, except perhaps to fix a point down to which the value cannot permanently descend.

Perhaps the most striking proof of the defects of Professor Newcomb's method is to be found in the conclusion to which it leads him regarding the connection between demand for commodities and demand for labor. Reasoning on the flow of money from man to man, he concludes that when a person has money to spend, it makes no difference to the laboring class whether he spends it in hiring laborers or in buying commodities. For if he buys goods he thereby supplies the producer of those goods with the means and a motive for making more goods. This is an old fallacy—one of those perennial fallacies that are many times killed, but never die. We should have no hope of making any impression on it by anything we could say in this notice. But we must remark that Professor Newcomb, in his criticism of Mill's position (p. 434), seems to us to argue somewhat beside the point. Mill distinguishes two cases, first, the case of a man who has produced an article for which there is no demand. In this case a part of the circulating capital has been made useless, has practically been lost. If, now, a purchaser should step down from the moon and relieve the man of his mistake by buying his product, Mill admits that the mere fact of the purchase would affect the demand for labor. The lost capital would be restored, and could be used again in paying wages. It must be noted, however, that the sale would only restore things to the position they were in before the mistake was made. The true view of the case then would seem to be, not that the sale would create a demand for labor, but that the mistake of the producer has destroyed a part of the demand. Further, unless we are assuming the man to be a fool, we must not assume that he would use his recovered capital in paying men for making a fresh stock of the same unsalable commodity. So that it is true only in a restricted sense that the sale in such a case would supply the means for making more goods; and it is not at all true that it would supply a motive.

The other case spoken of by Mill is the ordinary one of production in answer to demand—

the case in which no mistake has been made. Mill assumes that ordinarily production is carried on with an intelligent eye on the market, and holds that when men buy things that were produced only because men wanted them, the buyers are merely carrying out the final stage of production by division of labor. Of course exchange must keep pace with production, otherwise the operations of capital are interfered with. But the friction of exchange ought not to hide the true nature of the case. Men use division of labor because, in spite of all the delays, risks, and trouble connected with the exchanging of products, the world gains immensely by the use of it. The greater the delays and friction, the more capital is required for carrying on a given amount of production. Quick sales are therefore beneficial. They lessen the cost of producing things and promote high wages. This we believe to be the true relation between demand for commodities and demand for labor, in the ordinary case. Those who maintain the contrary view confound the ordinary case with the case of mistaken production, and virtually assume that all production is of the mistaken kind.

The point is far from being one of merely speculative importance. Most of the false theories and mischievous legislation under which the world has suffered, and still suffers, are directly traceable to the fallacy that demand for commodities is a demand for labor. In the book before us it pervades, and to a large extent vitiates, the author's discussion of the very practical subject of taxation. Taxes, he says, take away from us money we should otherwise spend for ourselves. They therefore lessen our demand for labor, and tend, if there were no compensation, to lower wages. But the Government must spend the revenue in some form, and in whatever form it spends it, a demand for labor is set up precisely equal to the loss of demand on our part. Thus he reaches the conclusion that neither taxes nor Government loans can affect the total demand for labor, or lower wages. So that we are to believe that taxes on the active capital of the country, even taxes so heavy as to absorb the greater part of it, would not injure the laboring classes, provided only the revenue be promptly spent. It would even seem to follow that if a special tax were imposed on the laborers themselves, they would not be really burdened by it, since the Government, by spending the increase of revenue, would set up a new demand for labor, and thus raise wages by the amount of the tax. However this may be, the author seems to conclude that it matters little who pays the taxes:

"The really important question growing out of taxation is, not how the tax is to be levied, but how it is to be expended. In whatever way it is levied, it will have come out of the pockets of the community, and different classes will probably have to pay nearly the same in any case" (p. 483).

Again:

"We need scarcely fear that any tax levied according to a general law will be permanently inequitable" (p. 493).

His view is, apparently, that the tax comes out of the monetary circulation, is restored again, and in the end diffuses itself over the community.

By the same reasoning he maintains that the state could not help the poor by levying taxes to be expended for their benefit, say, in building better houses:

"If the wealthy are taxed, the money they can spend in other directions will be diminished by exactly the amount of the tax. . . . The final result would be that the cost of building the tenement houses would come out of servants, builders of locomotives, and the occupants of the houses themselves" (p. 521).

Again, as to the socialistic scheme for giving employment to the unemployed poor, he says:

"In order to pay them wages the Government must levy a tax. This tax would be taken right out of the monetary circulation, and would cause a diminution in the ability of taxpayers to employ labor exactly equal to the increase in the power of the Government to do so. Thus, at best, the injury would equal the benefit" (p. 523).

We shall make no comment on these doctrines beyond remarking that they seem to us to supply a very good *reductio ad absurdum* for the theory that demand for commodities is a demand for labor. We are still of the opinion that if every spendthrift in the country were required by law to part with half of his income for the benefit of the poor of his neighborhood, both parties to the transaction would become aware of a very substantial difference in their circumstances.

In spite of the serious defects we have pointed out, Professor Newcomb's book contains much that is excellent and highly instructive. Many of his chapters are admirable for sound doctrine and clear, incisive reasoning. In some respects it will undoubtedly be found a valuable contribution to the science. The plan, for example, of treating circulating capital as a flow rather than a fund will be found a permanent improvement. The copious questions and exercises interspersed throughout the book supply valuable food for reflection, and will be especially serviceable to teachers. As a whole, then, the work is characterized by great excellences and great defects. It reads like the work of an acute and able thinker who is continually hampered, and at times led quite astray, by a wrong method of treating his subject.

RECENT NOVELS.

Oblivion. An Episode. By M. G. McClelland. [Leisure Hour Series.] Henry Holt & Co.

White Heather. By William Black. Harper & Bros.

Suzette. By Mary Spear Tiernan. Henry Holt & Co.

Mustard Leaves, or a Glimpse of London Society. By D. T. S. Dodd, Mead & Co.

Mrs. Herndon's Income. By Helen Campbell. Boston: Roberts Bros.

THE scene of 'Oblivion' is laid "in the Appalachian Mountains," well south, but too remote from the country Miss Murfree describes to be in any way an imitation. With less of color than in her pictures, the effect is that of a strong etching. The author has forestalled comparisons by a word of preface to the effect that the story was written in entire ignorance of 'Called Back.' The resemblance between the two books is confined to the single incident of the loss of memory, and almost of all mental power, by a young and beautiful woman. Hugh Conway's story is very simple, dealing with incidents only, and never attempting to trace development of character, or to study the effect of incidents upon it. 'Oblivion' presents both, and for that reason is on a far higher plane, even if less successful within its own limits. 'Called Back' only demands the belief that anything may happen in a novel, from the basest murder to the luckiest of chance meetings, and all goes smoothly. The author of 'Oblivion,' with large confidence that betokens a brief experience, has undertaken to combine in one plot at least three different studies: first, the growth of a second life after the loss of memory; second, the effect of love for a refined and beautiful woman upon a man noble by nature but untrained and uncouth; and third, the situation when this woman recovers her memory, and the complications of the two lives present themselves for disentanglement. This last is a knot which to the author' feeling at least can only be cut violently, for the lady is at once a beloved wife and the betrothed of her chivalrous deliverer and protector, while she is dead to all her world.

Any one of these three studies would fill a book, though for ourselves, never liking the school that would turn the romance into a clinic, we find the first quite enough developed here. The second is so freshly and delicately outlined as to give it the charm of an idyl. It is the best of the book, and so touches the sympathy of the reader that the conclusion comes as a positive pain. The want of practice in making up a plot tells more than anywhere else in the tendency to make the difficulties of the situation so extreme, so inevitable, that the only way out is a violent one. It goes so far sometimes in books otherwise well written as almost to leave the impression that precious lives have been sacrificed solely to end a story. It would be easy to point out grave faults in style besides these mistakes in construction, but there is in the book such a power of imagination so bent on high things, so touched to fine issues, that we are fain to dwell on the promise of a future which shall add to present ability a trained artistic skill.

The essential part of 'White Heather' is as pretty as anything Mr. Black has ever done. He leaves the west coast, of which we had had a little too much, and transports us to the loneliest of Scotch lakes in the early days of the season for salmon-fishing, finding an opportunity for new pictures, even after all he has given us, in the brilliant air and dazzling contrasts of winter sunlight and snow. The main theme is the superiority of country life, unambitious and untroubled, over the hurried, tempted life of the great city. Old as the theme is, Mr. Black has so embodied it in fresh young lives as to make it new again. All of the book that is Scotch—be it out on moor or loch, or in Glasgow—is in perfect keeping. There is over-much of the hero's verses, for he is that sort of poet whose song is wakened only by the charms of the woman he loves. The salmon-fishing, too, is a bit over-done for any one not a sportsman. Still, in the portrayal of brisk, stirring, out-of-door life, and with it the love of ingenuous youth for gentle maidenhood, Mr. Black has now no superior. Some of his later work has, no doubt, given the impression one feels in listening to a voice that is no longer young, singing a hackneyed strain. With Mr. Black the voice may be worn, but it has always been sweet and pure, and the strain always tender and noble.

Thus much for the genuinely Scotch part of the book. There is another curious side to it, which has afforded no little amusement while the story has been coming out as a serial. The good genius of the piece is an American, or we should say genii, for the man has a daughter who is rather more important than he, since if he has the money she has the facile invention which uses it. They are not exactly caricatures, for their qualities are such that no one need be ashamed of them. It is their speech which astonishes. Even omitting the worst of it which Mr. Black represents the young girl as adopting in a kind of defiance, East, West, or South never heard the like, nor has any English writer before attempted to impose upon American lips such a fantastic jumble. The *Texas Siftings* seems to have replaced the 'Biglow Papers' in certain circles as the standard of American speech. Nobody would take the trouble to resent such misrepresentations, but their presence in fiction explains the exclamation the well-bred American is sure to hear in England sooner or later, "*You* are not an American!"

'Suzette' is not exactly a picture of Richmond in the forties, being rather a chronicle of pleasant family life. The old city, with its generous

homes and its traditions, fills in the edges and the corners of the canvas much after the fashion in which the garden is introduced, or the hills, in the pictures which artists describe as figures with landscape. Miss Tiernan follows very closely the method of grouping by contrasts—the lonely little heroine, almost a waif, in the chill grandeur of the great house, and the beloved daughter and sister in the bustling life of a home which affection makes glad in spite of slender means; two men, the one growing into a lonely recluse, the other frank-hearted, giving and winning confidence. The types are none of them new, but they are saved from being conventional by the freshness of the author's fancy and the ingenuity and originality of the incidents. The surroundings, too, are novel, for all Southern cities are still very remote from us, and life in them as it was forty years ago is utterly different from the hurried rush of city life to-day. A small circle, living on generation after generation without change, develops a community of interest known nowhere else. The life was certainly narrow, yet its sympathies were thereby the deeper. It is easy to call it indifferent, idle, or by a harsher term, but in it all there was a placid leisure of a charm such as survives in the pages of 'Sir Charles Grandison.'

The author is least successful with her hero, Geoffrey Amberst, for she is not equal to the delicate shading which would make a character only repelling, not repulsive. The little trio of himself, his mother, and Suzette suggests 'Nathalie,' but barely suggests it, for their story is so involved with other lives as to give far greater variety of events and situations. The telling incident which, to use a paradox, we are not told, but only what led to it and what came out of it, is the escape of a slave to freedom by the aid of Suzette. Yet the book has not the least concern with "questions" of any kind. The incident appears, as did those on the much larger scale of 'Homoselle,' simply as a part of the life men and women lived then and there. The Southampton insurrection of fifty-five years ago has more than once supplied sensational material for fiction. The distinctive merit of the use of it by Miss Tiernan in 'Homoselle' was in the penetration which looked beyond the surface facts, and rightly gauged the qualities of the negroes themselves as they then were, which made failure inevitable. The two books, in spite of all their shortcomings, their occasional trite expressions and quotations, the evident lack of literary association, the want of finish, of balance, form a notable contribution to our knowledge of the South. There is the complete absence of *parti pris*, the utter unconsciousness, which make the value of the competent witness. The only impartial testimony is the testimony which is of equal weight on either side. 'Uncle Tom's Cabin' was the fervid plea of a righteous indignation. The replies, novels all forgotten now, were only some form of angry denial. These unpretending narratives of Miss Tiernan, which tell of slavery only because the lives of the masters could not be represented without it, justify all the accusations of the abolitionists, and at the same time clearly reveal the perils, the overwhelming difficulties, of the situation of the masters themselves.

The heroine of 'Mustard Leaves' is the familiar American girl of ravishing beauty. The son of the Duke of Babylon espies her as he is about to take the stage in a White Mountain village. He forces his way into her mother's home, and, spite of his offering the girl a gross insult within the first half hour, he speedily persuades them to go to Europe. After a brief sojourn in Paris, she becomes through his efforts the success of the London season. Prevented by poverty from marrying her himself, he contrives a match for her with a millionaire baronet, meaning then to win his own base, selfish ends. She is soon broken-hearted, and, with barely strength enough left to resist the evil tempter, flees to Paris. There turns up the friend of her childhood, who had early appeared in the distance as a divinity student and a waiter at a summer hotel. He starts to take her to her mother, who has returned home. The steamer founders in mid-ocean and she is drowned in his arms. It is the international story run wild. We have sketched it, not supposing a protest would be of much use, but to show the reader what absurdities may be gravely put together as probable. "D. T. S." does not even know New England, for at the very outset a man is presented as the "'Squire" of the village, who has spent his life in the grocery store. There is cleverness enough to put together a few pages which, at a cursory glance, might pass for a picture of London fashionable life. A little scrutiny detects the counterfeit. One ready to take gloomy views of society might find unfortunately in the newspapers some evidence for the assumption that almost all the men in Mayfair are *roués*, and all the women live in an atmosphere of petty backbiting and of dubious scandal, but when it comes to manners and customs, the writer is so utterly at sea that there is no need to be distressed by any estimate of morals from such a tyro. How could any one imagine that the most angry husband would believe his wife such a fool as to make a ruinous visit to a gentleman's apartments, leaving her carriage, liveries and all, standing before his door for an hour in broad daylight? The name 'Mustard Leaves' suggests a purpose of satire, an aim that is lamentably missed, for the very good reason that no form of literary work requires such intimate knowledge of the subject as satire. There is no need to delay for further proof of the ignorance of "D. T. S." both as to scenes and characters.

Again we have to regret the crowding of many subjects, each enough to fill a whole story, between the covers of one novel. It is of the more consequence because, up to a certain point, Mrs. Campbell does her work extremely well; how well would perhaps be best shown by comparison with such a book as 'Fashion and Famine.' That deservedly dropped out of sight a generation ago, but it was a very fair specimen of the florid, romantic treatment of social questions. In 'Mrs. Herndon's Income' Mrs. Campbell has stated and partially illustrated too many of them for us to attempt even a catalogue. In the broken reading necessarily given to a newspaper serial there is time for more reflection than the novel is likely to excite, and in that form the story may have had already greater usefulness than it can again. It starts anew the question whether as realism (in the common acceptation of exactness of detail) comes to be more and more demanded of a novel, its employment as an instrument of special pleading will not be greatly limited. We are not entering upon any discussion whether it is best so or not, but simply pointing to the facts. The book before us, any one can see, is a very partial, a very imperfect statement of the wrongs and the sins it deprecates. It is not true, because the truth is a great deal worse, and because the omissions and the suppressions make what is told often inconsistent and contradictory. Yet, had Mrs. Campbell filled out the whole story, the *Christian Union* would never have printed it. 'L'Assommoir' is the most tremendous temperance story that ever was written, as accurate as it is harrowing, but it is hard to say to whom it can have done any good. The men and women it describes are not intelligent enough to come within reach of it, to be helped by its reasoning, while on higher levels most persons would say, better run the risk of ignorance than be so terribly enlightened. It will be asked: Do you then mean that with Dickens as an example to look back to, the novel cannot be made a servant in the cause of philanthropy? This question, we have already said, we are not prepared to answer. Rather, we add another: If the present tendencies continue, will they not bring us to the end of the novel for such purposes in communities that still hold the theory that purity and nobleness are best guarded when the unclean and the ignoble are, not falsely concealed, but never dragged forth for their own sake?

PINDAR.

Pindar: the Olympian and Pythian Odes. With an Introductory Essay, Notes, and Indexes by Basil L. Gildersleeve, Professor of Greek in the Johns Hopkins University, Baltimore. Harper & Bros. 1885. 12mo, pp. cxv, 395.

ABOUT three years ago we had occasion to commend an edition of selected odes of Pindar by Prof. T. D. Seymour, of Yale College. We expressed the opinion that it was eminently adapted to the needs of undergraduates, and that for those who intended to continue the study of Pindar beyond the narrow limits to which the amount read in college is necessarily confined, it would be well to begin by reading Professor Seymour's edition as a sort of general introduction. We have as yet seen no reason to change our opinion. The present edition of the Olympian and Pythian odes, by Professor Gildersleeve, not only contains a much larger portion of the works of Pindar, but it is in all respects on a more extended scale. The introductory essay is much longer, and treats very fully a great many matters which Professor Seymour does not mention. The special introductions to the different odes are very elaborate, and contain a large amount of historical learning and refined analysis. The notes are numerous and minute, and, while perfectly intelligible to any pupil who is qualified to study Pindar at all, they will be the more fully appreciated the more advanced his scholarship is. Prof. Gildersleeve says, indeed, that "the whole book is intended for beginners in Pindar," but we suspect that the interval between beginners in Greek and the "beginners in Pindar," whom Professor Gildersleeve is accustomed to instruct, is much greater than between the beginner in Greek and the average undergraduate.

In some respects the book has been prepared under exceptionally favorable circumstances. A fellow and a scholar of the Johns Hopkins University have assisted the Professor in preparing indexes and reading proofs; "the metrical schemes are due to the generosity of Dr. J. H. Heinrich Schmidt," who kindly placed at the editor's disposal the MS. of his unpublished 'Pindar'; and graceful acknowledgment is also made of the assistance of such well-known scholars as Prof. C. D. Morris, Dr. Alfred Emerson, and of Doctor Drisler, who has the editorial supervision of "Harper's Classical Series," of which this edition of Pindar forms a part.

Professor Gildersleeve's introductory essay commences with a life of Pindar, in which he gives, with much interesting comment, the few facts that have been handed down to us. Most noticeable are the evident side-glances at our civil war, like this from page xi (the italics are ours):

"One question always arises when the Μαραθωνομάχης and Pindar are compared, and that is the attitude of the Theban poet during the Persian war. Was Pindar in thorough sympathy with the party of the Theban nobility to which he belonged by birth, by training, by temperament, or was he a friend of the national cause—*as it is safe to call a cause after it has been successful?*"

And again:

"It is no discredit to Pindar that *he went honestly with his State* in the struggle. It was no

treason to Medize before there was a Greece, and the Greece that came out of the Persian war was a very different thing from the cantons that ranged themselves on this side and on that of a quarrel which, we may be sure, bore another aspect to those who stood aloof from it than it wears in the eyes of moderns, who have all learned to be Hellenic patriots. *A little experience of a losing side might aid historical vision.* That Pindar should have had an intense admiration of the New Greece, should have felt the impulse of the grand period that followed Salamis and Plataia, should have appreciated the woe that would have come on Greece had the Persians been successful, and should have seen the finger of God in the new evolution of Hellas—all this is not incompatible with an attitude during the Persian war that those who see the end and do not understand the beginning may not consider respectable."

We have not space even to enumerate the various topics which Professor Gildersleeve treats in his introductory essay. We can notice only one or two points. Under the heading "Approach to Pindar," he sketches the manner in which he thinks the artistic study of an ode should be prosecuted. He apparently agrees with the recommendation of Rauchenstein to commence with the "easier odes," but asks (p. lxiii):

"Which are the easier odes? . . . The fact is, a man who has read himself into Pindar is a poor judge of the relative difficulty of the odes unless he has made actual trial in the class-room, and the experience of most lovers of Pindar has of necessity been limited, as Pindar has seldom been read in our colleges."

We suspect that were it not for his experience in the class-room, Professor Gildersleeve would be a poor judge of the relative difficulty of different portions of the works of almost any of the Greek classical writers. His study of Greek has been so wide and so deep, so minute, we might say so microscopic, that the language has become interwoven with his intellectual constitution; all intelligible passages are to him equally easy, and a passage which is obscure or unintelligible to him, we have little doubt would have been equally obscure or unintelligible to an educated Athenian of the 80th Olympiad. He points out, however, the order in which he thinks it best to study the odes, and then the manner in which they should be studied. "The first thing to be mastered, not theoretically, but practically, is the form"; and before any attempt is made to get at its meaning, it must be read over and over aloud until the student has become perfect in the rhythmical recitation of the ode. To enable the student to do this our editor has not only given with each ode Schmidt's schemes of the metres, but he has placed dots under those syllables of the Greek text upon which the stress falls. Having mastered the rhythmical recitation of the ode, much as if it were a piece of instrumental music to be played with the voice, the next thing is to master the meaning, and here, of course, the commentary will come in. "Finally," what to many will seem a little odd—"the introduction by way of review" is to be studied. We do not think it a matter of vital importance whether the student first masters the form or the meaning so far as either can be comprehended without the other, provided he really masters both in the end; and as to the special introduction to each ode, we are quite sure that, whether for better or worse, it will be the first thing that every student will read.

As noticed above, Professor Gildersleeve has been enabled to lay before his readers the very latest results of the profound investigations of Dr. J. H. H. Schmidt, according to whom Pindar uses three fundamental forms of metre, corresponding to the 2:4 or duple, the 3:8 or triple, and the 5:8 or quintuple time of writers on music. We have no space to enter into the details of protraction, correption, and other points. We shall confine our remarks to the last species, reminding the reader that the difference between music in 5:4 and in 5:8 time is merely one of notation, and that any given piece in the one kind of time can equally well be written in the other without changing its character in any respect whatever. For a large part of the first half of the present century it was supposed that many of the peasant dances in the Palatinate and Bohemia were genuine examples of music in 5:4 or quintuple time, and many of them were so printed. But subsequent investigations have shown that this was a mistake, and that the music is really a combination of duple and triple time. Indeed, while there is no doubt that a few pieces in quintuple time have been written by modern composers, yet it is extremely doubtful whether any such music ever *grew*. An error is never fully comprehended or susceptible of complete refutation till its origin is discovered. The origin of the error of supposing that these peasant dances were in quintuple (5:4) time is easily pointed out. Any strain of music which consists of alternate bars of duple (2:4) and triple (3:4) time, or *vice versa*, can, without any essential change of its character, be converted into quintuple (5:4) time by simply omitting the alternate cross-bars. The first specimens of these dances that were reduced to writing were of this kind. Why this was the case is also clear. Out of the multitude of these dances, all equally accessible, those which were apparently in quintuple (5:4) time were the only ones the rhythm of which was intelligible to those who endeavored to reduce them to writing. But investigations of living musicians have shown that the dances which can be reduced to quintuple (5:4) time form but a small fraction of the whole number. Louis Köhler, in his collection of national dances ('Volkstänze aller Nationen der Erde,' Collection Litolff, vol. 514), has published a considerable number of these peasant dances (*Bauerntänze*). They are all marked with the double-time signature 3:4 2:4, and, unless we have made some mistake in our examination of them, there is only one in the whole number which can be reduced to quintuple (5:4) time. In all cases each section or strain is repeated. In most cases the strain commences with an anacrusis and ends with an imperfect bar, which, together with the anacrusis, when the strain is repeated, or with the anacrusis of the succeeding strain when we pass to it after repeating the preceding strain, just forms a complete bar.

It may be a matter of interest to metrical students who are acquainted with the elements of music if we give the metrical schemes of one of these dances. It can be easily done in the same manner as Schmidt's Pindaric schemes. Commencing with the first complete bar, and considering the last bar as complete for the reason mentioned above, the scheme of the first strain of No. 21 of Köhler's collection is this: 2 3 2 3 2 3 2 3. Here each figure represents a bar and the number of quarter-notes or their equivalent contained in it. It will be observed that by combining two bars in one these eight bars of complex (2:4 3:4) time can be reduced to 4 of quintuple (5:4) time, so that the scheme would be: 5 5 5 5. But there is an insuperable objection to this. When so combined there would be nothing to indicate to the player whether the secondary accent should fall on the third or the fourth quarter-note, and unless the secondary accent of the quintuple bar were marked with the same clearness as the primary, the dancers would not know how to regulate the figures of the dance; that is if they counted their steps, as learners do, they would not know whether to count them 1, 2, 1, 2, 3, or 1, 2, 3, 1, 2. In other words, if the music were written in quintuple (5:4) time, both the player and the dancers would inevitably convert it into one of the forms of complex-time, either 2:4 3:4 or 3:4 2:4.

There is no definite limit to the number of ways in which duple and triple time may be combined, and perhaps the time will come when in all the Greek metres we shall be able to return to the prosodial principle, recognized for more than twenty centuries, that the only Greek syllables are shorts and longs, standing to each other in the simple ratio of 1 to 2. At any rate we feel that, although Professor Gildersleeve has given us the latest, he has not given us the last word on Greek metre and rhythm.

We will conclude with the expression of a hope, which is that the sale of this volume of the Olympian and Pythian odes may be sufficient to induce Professor Gildersleeve to prepare, and to warrant his publishers in issuing, a second volume on the same plan, containing the Nemean and Isthmean odes and all the fragments, not merely a selection. His introductory essay is in all respects adapted to a complete edition of Pindar's works. The references in those parts which treat of the dialect and syntax of Pindar are quite as numerous to the lacking portions as their comparative bulk demands. In many cases they are more numerous than the references to the odes contained in this volume; for example, under the suffix -θεν he gives one reference to a Pythian ode, while there are two to Nemean and two to Isthmean odes. Should our hope be realized, we should have an edition of Pindar which for completeness and usefulness would long remain unsurpassed; and it would serve as a specimen of American learning and scholarship of which we should all be proud.

The Campaigns of Stuart's Cavalry. By H. B. McClellan. Richmond: J. W. Randolph & English; Boston: Houghton, Mifflin & Co. 1885.

THIS volume fills, and fills well, a gap in the literature connected with the civil war. Though called on the title-page, 'The Life and Campaigns of Major-General J. E. B. Stuart,' it is really a history of the cavalry of the army of Northern Virginia while under his command, but a small space being devoted to the personal history of General Stuart apart from his military career in the Confederate army. In the many narratives, more or less valuable, which have been written of the campaigns in Virginia, the operations of the cavalry have been described in a fragmentary and often in a very meagre and inadequate way. For the first time we now have a history of these operations (so far as conducted by Stuart) which gives a connected view of them as a whole. This has been done, too, by one who, as Adjutant-General of the cavalry corps, not only knows what he is talking about, but who has evidently spared no pains and labor to get at all the facts about transactions in regard to which the official reports are imperfect, or misleading, or altogether wanting. The tone of Major McClellan's book deserves unqualified praise as the frank, manly, straightforward story of a soldier who is more anxious to be just than to glorify his own side, and who can see and admire the gallant deeds of his foemen as readily as those of his comrades.

But this is only one of the excellences of the book. While the style is perfectly simple, unpretending, we may say unadorned, it is admirable for its lucidness and ease. Cavalry operations are often complicated and confused, and the battles of large bodies of horsemen, scattered as they usually are over a great extent of country, are matters not easy of description. But Major McClellan is not excelled by any writer we know in the clearness with which he sets forth the movements of troops before battle, and the well-defined, perfectly comprehensible picture he presents of battles themselves. The story of Stuart's raids is admirably told, and the great cavalry

fight, for instance, between Stuart and Pleasanton, on June 9, 1863, which opened the Gettysburg campaign, is so well set forth that, with the aid of the map, it is perfectly easy to follow the varied and intricate movements of the day without confusion and without fatigue. Major McClellan possesses the happy faculty of not overburdening his narrative with too much detail, while he yet retains enough to secure vividness. He thus describes the opening of the struggle for Fleetwood Hill, the centre and key to Stuart's position on June 9, and which, from the supineness of General Robertson, had almost fallen into General Gregg's possession before Stuart knew that he was near:

"My first courier found General Stuart as incredulous concerning the presence of the enemy in his rear as I had been at the first report of the North Carolina scout. Major Hart states that Stuart turned to him and ordered him to 'ride back there and see what all that foolishness is about.' But simultaneous with my second message . . . came the sound of the cannonading, and there was no longer room for doubt. The nearest point from which a regiment could be sent was Jones's position, one and a half miles distant from Fleetwood. The Twelfth Virginia, Col. A. W. Harman, and the Thirty-fifth Battalion, Lieut.-Col. E. V. White, were immediately withdrawn from his line, and ordered to meet this new danger. But minutes expanded seemingly into hours to those anxious watchers on the hill, who feared lest, after all, help *could* not arrive in time. But it *did* come. The emergency was so pressing that Colonel Harman had no time to form his regiment into squadrons, or even in platoons. He reached the top of the hill as Lt. Carter was retiring his gun after having fired his very last cartridge. Not fifty yards below, Col. Percy Wyndham was advancing the First New Jersey Cavalry in magnificent order, in column of squadrons, with flags and guidons flying. A hard gallop had enabled only the leading files of the Twelfth Virginia to reach the top of the hill, the rest of the regiment stretching out behind in columns of fours. It was a trying position both to the pride and courage of this regiment to be put into action in such manner that a successful charge seemed hopeless; but with the true spirit of a forlorn hope, Colonel Harman and the few men about him dashed at the advancing Federals. Stuart reached the hill a few moments later. . . .

"And now the first contest was for the possession of the Fleetwood Hill; and so stubbornly was this fought on either side, and for so long a time, that all of Jones's regiments and all of Hampton's participated in the charges and countercharges which swept across its face. . . .

"Colonel Harman was severely wounded in a personal encounter with the officer leading the Federal cavalry. Lieutenant-Colonel White, having reformed the two squadrons of his battalion, swept around the west side of the hill and charged the three guns which had been advanced to its foot. The cavalry which supported these guns was driven away. Not so, however, with the gallant gunners of the Sixth New York Battery. They had already distinguished themselves at Chancellorsville on the 2d of May under General Pleasanton, and on this occasion they stood by their guns with the most determined courage. Lieutenant-Colonel White says in his report: 'There was no demand for a surrender, nor offer to do so, until nearly all the men, with many of their horses, were either killed or wounded.'"

Major McClellan is perhaps over-careful to defend the fame of his chief against the military criticisms which have been often made on some of his operations. Stuart was one of the great cavalry leaders of the war. On the Southern side, he divides with Forrest the palm for skill, daring, and genius, and his achievements entitle him to rank among the great commanders of horse. His judgment was cool and good, his military intuitions of a very high order, his daring proverbial, his skill in handling men very great, while his physical energy and endurance had few parallels. The author has well explained the difficulties which had to be overcome in the equipment and maintenance of the Confederate cavalry, growing out of the insufficient supply of horses and arms to be had. Yet Stuart maintained an easy superiority over the Federal cavalry opposed to him during the first two years of the war. An immense improvement, however, took place in the Federal cavalry in the spring of 1863, and from this time forward the struggle was far more desperate and uncertain. Stuart was confronted by foemen worthy of his steel, and the failing resources of the Confederacy made his task increasingly arduous.

But his ability was too great, and his achievements too solid, to make it necessary to defend him from every charge of error. The saying is trite but deserves to be remembered: "The man who has made no mistakes has never fought any battles." The achievement which first gave Stuart great reputation was his daring raid around McClellan's army on the Chickahominy, and he showed ever after a *penchant* for similar operations. This first raid not only was a brilliant feat, but it conduced in the highest degree to the success of Lee's plan of campaign against McClellan. Indeed, that campaign may be said to have been based upon the information that Stuart brought. But no such importance, either in design or result, attached to the Chambersburg raid; and while the skill and boldness with which it was conducted were creditable in the highest degree, the exhaustion due to it probably counterbalanced the advantages secured.

One of Stuart's great days was that on which he commanded Jackson's Corps at Chancellorsville, and, after a fierce and sanguinary struggle, wrested victory from Hooker. Arriving on the field at midnight, when the operations of the corps had been for some hours paralyzed by the fall of Jackson, he showed immense energy in acquainting himself with the condition of the field and the disposition of the troops, and deserves great credit for the vigor and skill of his attack next morning. He fought out the battle according to his own conceptions of the situation, instead of attempting to carry out Jackson's ideas. In this he was right; but it does not follow that, had Jackson been permitted to complete his own movement of the night before, even more striking results might not have been obtained.

In regard to Stuart's movements before Gettysburg, Major McClellan has said well what can be said in behalf of his chief, and he has not hesitated to criticise him—mildly, it is true—for sacrificing time of inestimable value for the sake of saving a train of captured wagons or paroling a few hundred prisoners. There can be no question but that General Lee's instructions allowed Stuart great latitude in consonance with the confidence which Lee reposed in the indefatigable commander of his horse, but it is just as certain that his prolonged absence was unexpected and severely felt by Lee, and that to this absence the battle of Gettysburg, at least as to manner and place, was due.

The brief sketch of Stuart's life before the war, the account of his participation in the capture of John Brown, and the glimpses given of his personal character and habits, add much to the charm of this interesting book; and we can only wish that the author had dwelt more on the personality of a soldier not more renowned for his brave deeds than for his singularly pure and lovable character. No deed of cruelty to citizen, no outrage upon woman, has ever been laid to his charge. Courteous as brave, running over with a joyous gayety which nothing could depress, he was hardly less earnest in his religious convictions than Stonewall Jackson himself.

The oversights are few. On page 88 Morse's Neck should be Moss Neck, and on page 386 Hanover Junction is once printed when Warrenton Junction is meant. Rosser and the horse artillery hardly receive the credit they deserve for their part in the fight at the Boonsboro' gap, September 14, 1862. On page 129 it is not accurate to speak of Starke's division as reinforcing Lawton, as both were engaged at the same time and on different parts of the line. The book has been well got up by the publishers, and the maps are unusually good.

Königliche Museen zu Berlin: Die Gipsabgüsse, etc. [*Royal Museums of Berlin:* The Plaster Casts of Ancient Sculpture explained in Historical Sequence. Materials for the History of Greek and Roman Plastic Art. By Carl Friedrichs. Revised by Paul Wolters.] Berlin: Spemann. 1885. Pp. x, 850.—Beschreibung der Vasensammlung im Antiquarium. [Description of the Collection of Vases in the Antiquarium.] By Adolph Furtwangler. 1 vol. in 2 parts, pp. xxx, 1105, 7 plates. Berlin: Spemann. 1885.

THE Museum of Berlin (to class as one the many royal or national collections of the Prussian capital) is rich in vases and painted terracottas; and this collection may even be considered as peculiarly good for purposes of study and comparison, although it cannot be put in the first rank for the number and importance of its separate pieces of peculiar value and rarity. Large and very judicious purchases have been made during the past few years: in 1880, for instance, the collection of six hundred votive tablets from Corinth was obtained in one transaction, and not long before had been procured the extraordinary painted frieze from Athens; while remarkable single pieces, notably some with decoration partly in gold, have been added within a very few months. They are not very well displayed for the purposes of the ordinary student, who must look at them through the glass of the cases. Nearly all departments of the Berlin Museum are crowded.

The great cast collection, especially, is so much too large for its halls and corridors that it is really impossible to get far enough away from its most important pieces to see them properly. But there it is, filling ten halls of different sizes, besides landings of stairs and small passages; not very rich in Mediæval and Renaissance specimens, and much too purely *German* in the former department, but in classic sculpture by far the largest gathering in Europe. In fact, as has already been set forth in these columns, what with the few original pieces of value in the old collections—the Pergamon originals—the Olympia casts, which have their headquarters in Berlin, and are housed by themselves not far off, and the general collection housed in the "New Museum" building, Berlin may be said to have all the important classical sculptures that exist above ground, for the delectation of its students. The cast collection alone, including the Olympia finds, and as given in the book before us, contains 2,271 numbers of classical sculpture only.

The two books under consideration are excellent companions to the study of these collections, and so discharge their first duty as *catalogues*, but not in this capacity would they claim much attention from stay-at-home students. They are also excellent companions in the study, and nobly make up for the shortcomings of the professed histories and handbooks. For what is the fault of the histories and handbooks?—that they explain and discuss and draw general conclusions without giving examples enough to help the reader make up his own mind. Take the history of Greek sculpture, of which we have several good examples of late, and see what pages of disquisition have only two or three examples cited as the ground for these conclusions and convictions. The reader longs for more: he wants to know how many such reliefs or statues there are above ground; he would like to help the author reach his decisions, and asks for material to work upon. This the "history" cannot give, but the mere catalogue, "in historischer Folge erklärt,"

does nicely. It gives its chronological list, with sizes and places where discovered, from five to fifty lines of minute description, with careful reference to any other piece which shows similar or contrasted qualities; and, finally, it mentions all, or as near as may be all, the books and periodicals in which the piece in question has been described, and especially those in which a picture of it has been given. After you have read about your statue in the history you are at work upon, in Overbeck, or Reber, or Lübke, or Murray, or Perry, or Mitchell, or Rouget, you turn to our Friedrichs-Wolters catalogue to find an exact, minute, feature-by-feature account of it, the injuries and the repairs it has suffered, the restorations you must eliminate before you judge it, and also to find where else it has been pictured or described.

Evidently, for this purpose, the sculpture catalogue is far more important than the other. The vases in the Berlin Museum—those individual specimens—are probably unknown to, and certainly not easily to be reached by, the reader in an American library; but the statues and reliefs which Berlin has in plaster are the immortal and well-known ones, whose bronze or marble originals are in Athens, or Naples, or London, but whose plaster duplicates are here and there, wherever one chooses to have them brought, at small expense, and photographs and photogravures of them are immensely more accessible still. The spear-bearer which this catalogue describes at length may be seen rendered, it explains, in this book and in that, here better and there not quite so well; and the books so cited are *not* so unobtainable but that every moderate-sized town might have them all.

Carl Friedrichs's own 'Bausteine zur Geschichte der Griechisch-römischen Plastik' was published in 1868: it has been a much-used and highly valued book ever since, and had grown to be completely out of print, almost unobtainable. Two years ago, our readers will remember, Mr. D. Cady Eaton published an English translation of it at New Haven. The present admirable reissue of the original is Friedrichs's book still; the principal changes being in the great increase of matter with which it has had to deal. As it stands, no better or more critical work on the subject exists. If this were a review-article, there would be plenty of questions to raise, opinions of the author to challenge, and so on; but actual and undoubted faults and errors in the text seem hard to pitch upon. We may be excused for hinting to an audience who like short German sentences with a visible verb better than the other kind, that the German style of this book is as simple as Overbeck's (for instance) is long-winded, involved, and slow of comprehension.

And so we come to the Index, and it must be said that the Friedrichs-Wolters is poorly furnished. There is an index, but it is very inadequate. One great, almost fatal, shortcoming is that it classifies sculptures only under the names of the supposed subjects: but what is called here a *Hermes* the English reader may have known as Apollo, or as Achilles, and the modern-equipped archæologist may consider an Ephebos simply; and, in short, one knows not where to look. The simple remedy would be to give also the place where the sculpture is, "Patissia Museum," or "Japan Palace, Dresden"; also the finding-place, where known, or in place of it the *provenance*, like "Farnese collection," or the like. The vase catalogue has excellent and complete indexes.

Fine Arts.

SALMAGUNDI EXHIBITION.

THE eighth exhibition of the Salmagundi Club, now open "under the auspices of the American Art Association," seems most appropriately named, there being three distinct exhibitions under the same roof, and visible for the price of one admission, thus forming practically one large collection of very varied contents. They are: the Salmagundi exhibition proper, the first annual exhibition of architectural drawings, and the collection of "out-door water colors" by Mr. F. K. M. Rehn.

The first thing one notices about the Salmagundi exhibition is the comparative absence from it of anything like real drawings. A collection of black-and-white studies—of such drawings as artists make in the preparation of their pictures—would be of great interest and value, and one is somewhat surprised by the absence of such studies. Perhaps the reason is to be found in a clause of the circulars of the club to the effect that "works intended for sale will be given the preference." The result of such an announcement is naturally to deter artists from sending any of their serious drawings made purely for artistic study, and to encourage the production, especially for this exhibition, of a sort of pictures painted in gouache or black and white oil, and "intended for sale." These pictures emulate to some extent the completeness of works in color, minus the color, and have an advantage over the latter in that they are much easier to do, and can consequently be sold at a cheaper rate. It seems to us that the only reason for existence of these processes is in their convenience for book illustration, and that, considered in any other light than as preparations for engraving, they are essentially vicious. In too many cases the facility of daubing has led the performer away from any serious study of form, while the comparative ineffectiveness of carefully studied values without the aid of color has been equally fatal to real study of light and shade. The result has been a reliance on mere effect—a spot of white against a spot of black—of the kind so familiar to us in the popular magazine illustrations. When done for the engravers such work has at least this advantage, that such quality as it has any engraver can render, whereas fine drawing or delicate tone is liable to be cut to pieces by all but the very best men; but done for itself, and without such ulterior aim, we cannot see that it possesses any serious value whatever. It is a direct training of falseness of vision in the artist, and is a debaucher of the public taste.

These general remarks will show why we do not devote much space to the consideration of individual drawings. We shall only notice a few of the more prominent exceptions. One of the most notable of these is a "Study" by F. D. Millet, which seems really to *be* a study. It is a pencil drawing of a female figure in antique costume, done with much delicacy of handling and considerable beauty of line. Many of the best drawings in the exhibition are veritable illustrations, and the frequency with which the Century Co., Harper Bros., and other publishing firms appear in the catalogue as owners strikes one at the first glance. There are two considerable sets of such designs, Mr. Kappes's illustrations of 'The Idyls of the King' and Mr. Shirlaw's illustrations of Goldsmith's 'Hermit,' besides a number of drawings which have appeared at different times in the magazines. We should like to praise Mr. Kappes's designs more heartily than we are able to do. They are evidently the outcome of much labor and sincerity of purpose, and those that deal least with the figure are sometimes quite effective; but his subject has demanded a science of the figure which he unfortunately does not possess, and with the best intentions he occasionally produces distressing results, as in "Vivien's Wiles," for example, where the bewitching lady is presented to us in a form anything but bewitching. Mr. Shirlaw's illustrations appear twice—in the originals and in Mr. Juengling's engravings—and, good engraver as Mr. Juengling is, he has hardly done justice to Mr. Shirlaw. Affected and theatrical the drawings are, but they are not without a certain rococo charm, most of which has evaporated under the engraver's ruder touch. Mr. Smedley has a number of illustrations which show his usual refinement and delicacy, and Mr. De Thulstrup has some dashing Indian subjects; there is much good, sober work in Mr. Burns's "Lost in the Fog," and Mr. Gaul's spirited "Urgent Despatch" is better work than we have seen from him lately. Lastly, there is some drawing of an unusually good sort in Mr. Charles Osborne's meagre nude study with a long and enigmatical title.

To the non-professional mind architectural drawings are apt to seem rather arid, and to convey little idea of the building, real or projected, that they illustrate, and this is certainly true of a large portion of the present collection, though not of all of it. Of the merits or demerits as architecture of the buildings here drawn we have nothing to say, but some of the drawings are very beautiful as drawings. The catalogue is very confusing, making no distinction between the architect of a building and the draughtsman, so that on one supposition—that warranted by the wording—Messrs. Swain Gifford and Hopkinson Smith appear as the architects of various famous buildings in Europe, while on another, drawings by Mr. Alfred Brennan, Mr. Harry Fenn, and others, are attributed to the architect who planned the buildings they have drawn. It is therefore impossible to tell, in the absence of other information, whether Mr. C. H. Walker is or is not a veritable architect, but what is certain is that he is a most accomplished painter in water colors. His drawings of several foreign churches are very lovely, with a combination of precision of information and picturesqueness of effect very rare to see, and are simple and direct in method and beautiful in color. Before we get away from the catalogue, let us mention that the first part of it is not altogether impeccable, a clever head of a "Matador" by W. A. Coffin appearing, no doubt to the disgust of the artist, as a "Mastodon" by W. *H.* Coffin! A charming bit of detail work, only partially carried out, is a fragment of Giotto's Tower, by H. B. Warren. Other things of the more purely architectural type possessing interest as drawings are a blotty, clever sketch of a part of Amiens Cathedral by Cass Gilbert, and some sketches of furniture, etc., by R. Brown. Mr. Gifford's contributions are, naturally, very different from any of these, being heavily painted with a good deal of gouache, and with more care for color and effect than for precision of detail. They are, in fact, *pictures*, and are only "architectural" by reason of the subjects. It seems to us that the buildings are, on the whole, better than the landscape.

Two of the American Art Association's rooms are filled with Mr. Rehn's "out-door water-colors," but of these we have little to say. The epithet probably corresponds more closely to the historical fact of their production than to any intrinsic quality of the works themselves. They are good, workmanlike productions of the conventional sort, and their quantity, as the result of one season's work, speaks volumes for the honorable industry of their author, especially when one considers that they were probably the employment of the moments when his work in oil was for any reason interrupted; but they hardly show any such originality or vitality as to call for extended notice.

Messrs. HENRY HOLT & CO.,

29 West 23d St., New York,

WILL PUBLISH

JANUARY 15:

SIR HENRY SUMNER MAINE'S

POPULAR GOVERNMENT. Four Essays: I. Prospects of Popular Government. II. Nature of Democracy. III. Age of Progress. IV. Constitution of the United States. 8vo, $3 00.

DR. EDWARD ZELLER'S

OUTLINES OF THE HISTORY of Greek Philosophy. Translated, with the author's sanction, by Sarah Frances Alleyne and Evelyn Abbott. 12mo, $1.75.

*MICHAEL FIELD'S "THE FA*ther's Tragedy," "William Rufus," and "Loyalty or Love." 1 vol., 12mo, $1.75.

"Will the pseudonym of 'Michael Field' become greater even than that of 'George Eliot'? It is hard to say. . . . We cannot read twenty lines anywhere without finding traces of a strong genius and a great dramatic imagination."—*London Spectator.*

AFTER HIS KIND. A Romantic Novel of English Rural Life, with an American Hero. By John Coventry. 16mo. Leisure Hour Series. $1.

French, German, Spanish, Italian.

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by Dr. Rich. S. Rosenthal's celebrated Meisterschaft System. Terms, $5.00 for books of each language, with privilege of answers to all questions, and correction of exercises. Sample copy, part I, 25 cents. Liberal terms to teachers.

MEISTERSCHAFT PUBLISHING CO.,
Herald Building, Boston, Mass.

The Harvard University Catalogue for 1885-6.

Is for sale by CHAS. W. SEVER, Cambridge, CUPPLES, UPHAM & Co., 283 Washington St., Boston: and F. W. CHRISTERN, 37 West 23d St., New York. Price, post-paid, 60 cents.

RECORD OF POLITICS and Politicians in the United States, 1865-1882: An analytical index to the *Nation* for that period (with occasional parallel references to McPherson's Political Handbooks and other sources). This index supplements the chiefly literary index to the *Nation* published in 1880. Valuable to all libraries, students, and editors. Price, in paper, $1 00. (Purchasers will please remit with order; accounts cannot be opened.) Address PUBLISHER of the *Nation*, Box 794, New York City.

*FOR ADVANCED FRENCH STU*dents.—An interesting French European Magazine: Tales, History, Poetry, Plays, Travels, Riddles, Exercises, etc. An invaluable aid for all desirous of retaining or extending their knowledge of French. 26 numbers a year, post paid, for $1.10. Specimen numbers mailed to any address. E. ROTH,
337 S Broad St., Philadelphia, Pa.

FIRST-CLASS BOARD in a refined German Family at Leipsic, Germany. Excellent opportunity for parents wishing to have their children educated in Europe. For particulars address BERNHARD GERHARD, 53 Arndtstrasse, Leipsic, Germany; or W. P. GERHARD, 6 Astor Place, N. Y. City.

Free Manufacturing Sites at Pittsburgh, with Natural Gas.

A getleman wishes to improve a large property. Sites unexcelled; Natural Gas; Navigable River; Railroads; cheap coal; all advantages. Address WHITNEY & STEPHENSON, Brokers, 612 Liberty Street, Pittsburgh; or A. LEGGATE, 31 Federal Street, Allegheny City, Pa.

*I WILL AGAIN RECEIVE AND DIS*tribute reading matter for the South and Southwest. Books, magazines, reviews, the *Nation*, all Government reports and public documents, college reports, etc. Express charges must be paid to this point.
J. B. HARRISON, Franklin Falls, New Hampshire.

*SCHOOL BOOKS IN FOREIGN LAN*guages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals.
CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

D. Appleton & Co.

PUBLISH THIS DAY:

I.

Marlborough.

By George Saintsbury. Being Volume Two of a New Biographic Series, entitled "ENGLISH WORTHIES," edited by Andrew Lang. Small 12mo, cloth. Price, 75 cents.

Volume One of "English Worthies" was 'Charles Darwin,' by Grant Allen. This series will consist of Biographies of Englishmen of influence and distinction, past and present, military, naval, literary, scientific, legal, ecclesiastical, social, etc. Each Biography will be intrusted to a writer specially acquainted with the historical period in which his hero lived, and in special sympathy, as it were, with his subject.

II.

Protection vs. Free Trade.

THE SCIENTIFIC VALIDITY AND ECONOMIC OPERATION OF DEFENSIVE DUTIES IN THE UNITED STATES. By Henry M. Hoyt. 12mo, cloth. Price, $2.00.

The author of this work is well known as formerly Governor of Pennsylvania. He appears in this volume as a defender of protection, discussing the subject in a judicial spirit, with great fulness, quoting copiously from eminent free-trade writers, in order that the reader may have both sides of the question before him. It is probably the fullest statement of the protection argument that has been made.

III.

Donovan: A Modern Englishman.

A NOVEL. By Edna Lyall. 12mo, cloth. Price, $1.50.

'Donovan' is a novel that has been attracting a great deal of attention in England, especially among more serious readers. It is a religious novel, the hero of which is a free-thinker, and the story consists of a struggle between doubt and faith.

"This is a very admirable work. It should do as much good as the best sermon ever written or delivered extempore. The story is told with a grand simplicity, an unconscious poetry of eloquence which stirs the very depths of the heart."—*London Standard.*

IV.

The Broken Shaft:

TALES IN MID-OCEAN. Told by F. Marion Crawford, R. Louis Stevenson, F. Anstey, W. H. Pollock, William Archer, and others. 12mo, paper. Price, 25 cents.

'The Broken Shaft' should attract many readers, first, by the great reputation of its contributors, and second, by the startling nature of its contents. Mr. F. Marion Crawford tells a ghost story; Mr. Louis Stevenson's contribution has a ghost and a murder; Mr. Anstey has a ghost and a case of manslaughter; W. H. Pollock, the editor of the *Saturday Review*, contributes a dramatic tragedy; and Mr. William Archer, a thrilling story of a secret society.

*** For sale by all booksellers; or will be sent by the publishers, by mail, post-paid, on receipt of price.*

1, 3, and 5 Bond Street, New York.

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, post-paid, on receipt of price.
HENRY HOLT & CO., New York.

An eminent medical authority says: "The most dangerous season to persons suffering from any form of Kidney Disease is the severe winter weather, such as the present, owing to the fact that these organs are overworked by reason of increased action in carrying off the liquids of the body, which, in milder temperature, are thrown off through the medium of perspiration."

Buffalo Lithia Water.

Never in the annals of the trade has a mineral water been placed upon the market the reputation and value of which have been so firmly established and so largely enhanced by eminent physicians and surgeons, and the results attained so remarkably and uniformly successful in the treatment of Kidney Disease, Diabetes, Bright's Disease of the Kidneys, Gout, Rheumatism, Dyspepsia, Indigestion, Lithiasis of the Blood, Albuminaria, and that widely prevalent and dreaded disease, Malaria, as the justly celebrated water from the Buffalo Lithia Springs of Mecklenburg County, Virginia. For the past ten years this wonderful remedial agent has steadily grown in popular favor by virtue of its high standing in the estimation of the medical faculty, and this fact is its most powerful recommendation. No meretricious efforts have been made, no subterfuges resorted to, no deception practised in bringing it to their attention That they are so widely recognizing its merits and so freely prescribing its use speaks volumes for the inherent merit of its wonderful properties and curative powers, and warrants the proprietors in more earnest efforts to bring it to the attention of sufferers from the many forms of uric-acid poisoning.

Dr. J. Marion Sims, of New York, a most eminent authority, said: "I have used in my practice the Buffalo Lithia Water for two years past, and have, in many cases, found it *highly efficacious.*"

Dr. William A. Hammond, of New York, Surgeon-General of United States (Retired), wrote: "I have for some time made use of the Buffalo Lithia Water in cases of Affections of the *Nervous System*, complicated with *Bright's Disease of the Kidneys*, or with *Gouty Diathesis. The results have been eminently successful.*"

Dr. Alfred L. Loomis, of the Medical Department, University of New York, says: "In all *Gouty* and *Rheumatic Affections I regard it as highly efficacious.*"

Testimonials of the same high grade might be indefinitely multiplied were it deemed necessary, but the very high standing of these gentlemen in their profession, commands the attention of all intelligent and thoughtful people who are seeking a remedy of genuine and acknowledged merit.

Pamphlets setting forth the peculiar values of this water, and containing testimonials from reliable sources, will be mailed free to any address.

A Journal of Honest Politics.
THE
Civil-Service Reformer.

Devoted to the exposure and reform of the political abuses for which the SPOILS SYSTEM is responsible.

The following gentlemen have agreed to contribute to its columns during the coming year: Hon. Carl Schurz, Mr. S. Teackle Wallis, Hon. George William Curtis, Mr. J. Hall Pleasants, Mr. Everett P. Wheeler, Mr. John K. Cowen, Mr. Richard H. Dana, Mr. Charles J. Bonaparte, Hon. Dorman B. Eaton, Mr. Joseph Packard, jr., Mr. Skipwith Wilmer, and many other well-known and experienced writers.

"The *Civil-Service Reformer* is one of the most vigorous, able, independent, and well written of the reform journals of the country. It has gained a reputation as a discreet and conservative, though progressive and uncompromising defender of sound political principles and pure political methods. The discussion of public questions is marked by a lofty purpose, great shrewdness, and practical sense, and a style at once attractive and vigorous."—*The Brookline (Mass.) Chronicle.*

"Some of the best writers in the country have contributed to its columns. It is well edited, capitally printed, and the work in which it is engaged, recommends it to every lover of good government. Its success is more than deserved."—*Baltimore American.*

"That so excellent and attractive a journal, and at a price so moderate, should be issued in Baltimore by the Maryland Association is a significant sign of the times."—*Harper's Weekly.*

"The name of this neatly printed and admirably written journal sufficiently defines its purpose. Questions are handled in a strong, lucid, and attractive manner, and the arguments brought forward are irresistible."—*Baltimore Daily News.*

"There is a hope for the State of Maryland when a periodical like the *Civil Service Reformer* is growing in public favor at such a rapid rate. Though only a year old, the interest in the subject is so widespread and profound that scarcely a periodical published in the State is so largely circulated or so generally discussed."—*The Rockville (Md.) Independent.*

Published on the first day of every month. Sixteen large quarto pages (similar to *Nation*). Printed on fine laid book paper and a model of typography and press work. One dollar a year; ten cents a copy. Send postage stamp for sample copy. Address

BUSINESS MANAGER, *Civil-Service Reformer,*

Congressional Government.

A STUDY IN AMERICAN POLITICS.

By WOODROW WILSON, Fellow in History, Johns Hopkins University, Baltimore. *Third Edition, 16mo, $1.25.*

"The most important study of our Government as it is now working, and indeed the only study of it worthy the name, is 'Congressional Government.' It ought to be in the hands of every man interested in politics, and of every student of our political institutions. It is not a long treatise, but it is the one that we should recommend to an inquiring Englishman, seeking to know exactly how our Government is now carried on."—*Hartford Courant.*

"We have no hesitation in saying that this is one of the most important books, dealing with political subjects, which have ever issued from the American press. . . . His book is evidently modelled on Mr. Bagehot's 'English Constitution,' and it will, though the praise is so high as to be almost extravagant, bear comparison with that inestimable work."—*New York Evening Post.*

"The most suggestive and striking discussion of our Government which has appeared in recent years. We have not space to set forth at great length the writer's virile and suggestive criticism of our governmental methods, but we commend the book to all who aim to understand or to improve our Federal administration."—*The Capital* (Washington).

"An admirable study and a very acute criticism of our methods of government. . . . The book is eminently a suggestive one; where it does not compel agreement, it compels thought. It is written in a keen, incisive manner, which makes it very agreeable reading."—*Boston Journal.*

"So far as we know, the volume before us is the only work which treats with anything like adequateness of the American Government as it is; and it is not excessive praise to say that a more important book on politics has rarely been issued from the American press."—*Philadelphia Record.*

"The best critical writing on the American Constitution which has appeared since 'The Federalist.'"—*Minneapolis Tribune.*

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 West 25th Street, New York.

For sale by druggists, or mail, $1.

Just Published:

OUTLINES OF Universal History.

By George Park Fisher, D.D., LL.D., of Yale College.

1 vol. 8vo. 690 pages.

This work, designed as a text-book and for private reading, is a clear and condensed narrative, brought down to the present year, comprising not only a record of political events, but also a sketch of the progress of literature, art, and science from the beginning of history to the present time.

It contains full lists of books for reading and reference, and is furnished with 32 historical maps, mostly colored, and many of them folded.

The lucid arrangement, together with the use of different sizes of type, has rendered it possible to bring together a great amount of matter within a brief compass, and in a readable form.

Extra cloth binding, with leather back. Price by mail, postage free, $3.00.

The Nation.

NEW YORK, THURSDAY, JANUARY 21, 1886.

The Week.

THE case of Mr. E. W. Armstrong, some time Collector of Internal Revenue at Utica, in this State, is a peculiarly pathetic one, and calls for an expression of respectful sympathy, not with him, but with his friend and patron, Mr. Roscoe Conkling of the New York Bar. Armstrong was one of Mr. Conkling's most faithful henchmen. Mr. Conkling got him his Collectorship in the immediate neighborhood of his "home," and Armstrong used to work for him at Albany in the time stolen from the Government. He was one of "the Spartan band" who, Mr. Conkling said, had to struggle against "abhorrent and forbidden forces" in trying to send him back to the Senate after his resignation in 1881. In fact, Armstrong was an intensely practical and faithful man. The other day, however, President Cleveland dismissed him, and appointed a Mr. Beach in his stead. The case appeared on its surface a peculiarly revolting illustration of the President's hypocrisy in the matter of civil-service reform, and Senator Morrill, of the Finance Committee, accordingly inquired the reasons for it, and the Secretary of the Treasury promptly furnished them. They came in the shape of a letter from Armstrong himself, which is said to have made the Senate roar with laughter. It informed the President, in bad grammar and bad spelling, that although ostensibly a Stalwart Republican, Armstrong had really during the last campaign covertly worked hard for Cleveland's election, and if the President would keep him in office, as a Republican, he would continue to serve the Democrats in every way in his power, and particularly in the old-fashioned way of removals and appointments. For a "Spartan" to figure in such a transaction is enough to make one despair of human nature, and to make Mr. Conkling's manly form shake with some kind of emotion when he hears of it.

The suggestion, which is said to have emanated from the President, that if the Senate wishes to discuss his removals upon information furnished by him, it should be done in open session, will strike nearly everybody outside the Senate as excellent. There is not a single reason for discussing nominations in secret session at all which will bear examination, except the risk of hurting the feelings of applicants for office by making public the objections made to their appointment. But if the discussion were public, we may rely upon it there would be fewer applicants for office whose feelings could be hurt in this way—that is, there would be fewer against whom serious charges could be made, and it would be an end to Senatorial bargaining, which is one of the great hindrances to reform. If the President has been making unjustifiable removals and bad appointments, it is not the Senate only which should know the particulars, but the whole public. If any highly-placed politician on either side has succeeded in inducing the President to make improper nominations, it ought to be made an open secret. There is no such cure for this sort of abuse as letting all the world know about it. Therefore we say that an arrangement between the Republican Senators and the President for the public examination of all his removals would be greatly welcomed by the country, and would do a world of good.

The Supreme Court of the United States on Monday rendered a decision of considerable importance in a test case as to the power of a State to impose a discriminating tax upon a "drummer" from another State, who seeks to sell goods manufactured in the latter State. A number of States have sought to protect home industry by levying taxes, often so heavy as to be practically prohibitory, upon "commercial travellers" representing similar industries in other States. The agent of a Chicago liquor house was arrested in Grand Rapids, Mich., two years ago, for soliciting and taking orders without the license required by Michigan law to be taken out by any such outside dealer, and the State Supreme Court sustained the lower tribunal in punishing him for violation of this statute. The Federal Supreme Court, however, pronounces the Michigan law void because it operates as a regulation of commerce among the several States, and is therefore repugnant to the Constitution of the United States, which gives the exclusive power of regulating such commerce to Congress.

If the protectionists were consistent, they would press for an amendment to the Constitution annulling the clause which intrusts to Congress the regulation of commerce among the States and thus permit free trade to prevail between the different commonwealths. If Michigan industries need to be protected from the competition of her next neighbor on the north and east, they ought to be protected from the competition of her next neighbors on the south or west, and the fact that the former happens to be Canada and the latter members of the American Union does not affect the principle. Indeed, the principle ought to be carried still further, as some people have tried to carry it. When the Rhode Island Legislature was petitioned a few years ago to prevent the running of cheap trains over the Boston and Providence Railroad, on the ground that there was already too much free trade between Boston and Providence, and that the latter city needed protection, the petitioners were only living up to the protectionist creed. So, too, the people of Worcester were merely carrying out the same principle to its logical conclusion when they besought the Massachusetts Legislature to stop cheap trains over the Boston and Albany Railroad, on the ground that such trains encouraged Worcester people to go to Boston and buy their goods there, instead of purchasing them at home. If protection is really so beneficent a system as its advocates claim, the more the country has of it the better, and the greater the pity that the framers of the Constitution, in their short-sighted folly, placed any obstacle in the way of its universal application.

The House has passed by a large majority the Hoar Presidential Succession Bill, precisely as it came from the Senate, and it has since received the President's signature and become a law. All the familiar objections made to it through the newspapers were raised in the House, but made no more impression there than they did in the Senate. The best constitutional lawyers in both bodies were satisfied with the measure as it was drawn, and their judgment is likely to be sufficiently sound to be followed with safety. The bill is probably not perfect, but its defects are of slight moment compared with the great gain of having the question of succession settled in a way that insures public order, whatever happens. This gain ought to be followed by the adoption of Senator Edmunds's plan for regulating the counting of the electoral vote. We should then be safely past two great perils which have hung over the country for many years.

Secretary Bayard will have the deep sympathy of men of all parties in the great affliction which has befallen him in the sudden death of his daughter. The last year has been to him necessarily full of care and anxiety. He has quitted a secure position in the Senate, which he filled most creditably and most usefully in the eyes of the country, in order to assist his own party in the arduous work of forming a new administration, after twenty-five years of exclusion from power. Such a task has necessarily been often very perplexing. No one can fill the State Department and escape all the pitfalls which the present organization of our diplomatic service spreads by the score before unwary feet. To Senator Bayard, the ordinary cares of the place to any man have been aggravated by almost morbid anxiety to do right. In such difficulties the best men find home counsels and sympathy probably the greatest source of strength. Owing to her mother's protracted ill-health, his daughter was to Mr. Bayard something more than even the best daughters usually are. Her death, therefore, is perhaps to him as great a calamity as could befall a public man. It will, as we have said, soften toward him the hearts of his sternest critics, and possibly even silence for the moment the blackguards of the press who have been lately trying to make a little money by vilifying him.

The report of Mr. Cullom's Committee on Railroads has been presented to the Senate, and recommends that Congress should undertake the regulation of the business of transportation, because of "admitted abuses of its management, and of acknowledged discrimination between persons and places in its practical operation—evils which it is possible to reach and remedy through the exercise of the powers granted by the Constitution." For this purpose it proposes a Commission with power to arbitrate between the shippers and the railroads, to collect information, and to make its findings of fact prima-facie evidence in all legal proceedings. Such a Commission would undoubtedly be very useful in allaying irritation on the part of the public,

and in diffusion of knowledge about the real conditions of transportation. But that it would give the country any great improvement on the facilities now provided by the competition of the roads themselves, we must not expect. Greater cheapness of transportation or a more rapid decline in rates than competition has produced within the last twenty years, it would be folly to look for from any Government interference. The discrimination between persons and places, too, which is the cause of the chief complaint that angry shippers make against railroads, consists really, for the most part, in selling cheaper at wholesale than at retail, which is what all dealers do. In carrying people or goods 100 miles at a less rate than 10 miles, railroads are really influenced by the familiar motive which induces the applewoman to sell three apples for five cents while charging two cents for one. All business is, indeed, carried on on this principle. James Fisk, jr.'s lamented father would not tell a lie, as we all now know, for a York shilling, but he would tell eight for a dollar.

The report quotes from testimony of Mr. Edward Atkinson, showing that railway property now constitutes one-fifth of the accumulated capital of the country, gives employment to 650,000 people, and moves 400,000,000 tons of freight annually, one-half of which is fuel and food, and so cheaply that the Massachusetts mechanic can now procure the transportation of a year's supply of food from a distance of 1,000 miles for the proceeds of one day's labor. This is a very wonderful story, and we must not in cudgelling our brains over the railroad problem forget that it is the much abused corporations which have performed this amazing feat and that it is not likely that the wisdom of Congress is great enough to introduce many improvements into railroad management, although that it can introduce some is unquestionable.

The devices of the protected classes to prevent trade with foreign countries are of almost infinite variety and cunning. Here is one that has just been introduced in Congress by Senator Platt, of Connecticut:

"A bill to prevent frauds on American manufacturers.

"*Be it enacted*, etc., that no article of foreign manufacture shall be admitted at any custom-house of the United States, when such article, or the box or package containing it, is so stamped, marked, branded, or labelled as to represent that such article was manufactured in the United States."

On the surface this bill looks like a measure to protect trade-marks, and prevent imposition on the public. The title of the bill contains a very neat stump speech: "to prevent frauds on American manufacturers." But, like most stump speeches inserted in titles and preambles, it is itself a fraud, and the only fraud connected in any way with the transaction sought to be prevented. Imitation of trade-marks and that sort of thing is already effectually prevented by the laws governing importations, and of course something else is had in view in the proposed new measure. We have not to look far to find out what this is. Of late years it has become a practice among jobbers in this country to advertise themselves and their trade by ordering goods made abroad to be stamped with the names of their firms, just as they get wrapping paper printed with their names and places of business. Nobody is harmed by this. "John Smith, Kansas City, Mo.," is stamped on the blade of a pocket-knife. This does not harm John Jones, of Meriden, Ct. John Jones, of Meriden, has his own name and trade-mark. He is entitled to them and he is protected in the use of them against all the world. But his rights are no greater than those of John Smith, of Kansas City. The latter has a perfect right to put his name on his own pocket-knives, and to do this either at the place of manufacture or at the place of sale. If the bill in question had proposed to put a higher rate of duty on goods so stamped, the little game would be exposed at once, because attention would then be directed to its merits, instead of being diverted by the catchword "to prevent frauds on American manufacturers." The framers of this pretty measure did not venture on such a step. They thought it would be a safer and surer plan to absolutely prohibit such importations than to put say 75 per cent. duty on goods stamped "John Smith, Kansas City," in place of 50 per cent. on the very same goods not stamped at all.

It is plain that John Smith has the right to stamp his pocket-knives when he gets them into his own store, and to stamp them in any way he pleases so that he does not infringe any other man's trade-mark. For all purposes of trade it would make no difference whether the stamping was done at Sheffield or at Kansas City. The effect would be the same. But of course it is much cheaper to have the stamping done where the goods are made, because the process of stamping can be done in the process of manufacture. It costs nothing to stamp goods in this way, whereas to stamp them at the place of sale requires a new manipulation. The passage of Senator Platt's bill is therefore equivalent to an additional duty on the goods. But an additional duty is exactly what the heavily protected manufacturers of cutlery do not dare to ask for. They know that they could not get it, and they do not want to draw attention to the exorbitant rates of duty they are already enjoying, amounting in some cases to 200 per cent. So they resort to this device to accomplish the same result. They want to deprive John Smith of his natural right to advertise. The reason why they are so anxious about it is that John Smith likes to sell goods with his own name on rather than with John Jones's name on.

One of the most mischievous notions set afloat by the silver men when their craze first started, now nearly ten years ago, was that banks chartered by the Government had some special duty towards the currency, besides keeping safe what was deposited with them by their customers. Some of the zealots, Mr. Brown of Georgia, for instance, think that a bank is bound to "favor silver," and help it to circulate even when its customers do not want it. The fact is, that it is no more the business of a banker to do this than of a newspaper editor or of a member of Congress. The one duty of a banker about money left with him on deposit is to give back to the depositor, when called on, the full value of what was deposited with him. A banker has nothing to do with settling what kind of money people ought to use. His business is simply to take care of the kind they do use, and to return to every man what he got from him and nothing less. If any one is to blame about the failure of silver to circulate, it is the people, and what these silver Congressmen ought to try is the old plan of making it penal to refuse or fail to employ silver in business. Why not pass an act obliging everybody to keep a certain minimum amount—according to his means—of silver dollars in the house, and to use silver dollars in all payments under say $10,000, instead of checks?

The evidence appears to be accumulating that the Blainites have agreed to encourage the Democrats not to touch the silver problem, and thus to provide for a period of financial uncertainty and resulting commercial depression during the remainder of President Cleveland's term. The Western Republican silver men are beginning to recede from their recent admissions that the coinage ought to be suspended; and the wise old heads who represent Blaine in this part of the world are wagging away in the same sense. That there is a certain shrewdness in this course on the part of the Blaine firm, there is no doubt. The Democrats have always shown a fatal facility in falling into snares of this sort. It would not be unlike them to let the United States credit fall ten points in the markets of the world, and bring back the business of the country to the condition of fluctuating and uncertain values from which we escaped in 1879, by way of preparation for the election of 1888.

News comes from Dakota that much agitation exists there in consequence of instructions received by loan agents from their principals in the East not to make any further loans on mortgage, or to renew any, unless it it is stipulated in the contract that payment shall be made in gold or the equivalent thereof. Those who lend the money lend gold, and, being apprehensive that "dollars" may signify something 20 per cent. less valuable than gold when the loans become due, unless an express stipulation is put in the contract, they have ordered their agents to require such stipulation. One of the few things left us by the Supreme Court in the way of sound money is the right to make contracts in any kind of money we please. The court says that it will enforce contracts payable in gold, silver, tobacco, paper, coon-skins, whetstones, or anything else the parties choose, provided the stipulations are made in express terms. As the court's strong point is contracts, there is good reason to believe that loans made in gold to-day, calling for payment in gold one year or five years hence, will be enforced by all courts, including those of Dakota. We should not wonder if there were some squirming against this kind of contracts in Dakota, and, of course, Senator Beck will discover in them new evidence of the existence of "organizations of wealth." But it amounts to nothing more than this, that it gives all the silver to those who say they like it. The Dakota people are reported to be very much in favor of the "dollar of the fathers." The new clause inserted in their mortgages merely enables them to retain for their own use as many as they succeed in earning.

It is no new thing for postmasters to attend conventions; indeed, before civil-service reform

was heard of, it used to be charged that Republican conventions were often little more than assemblies of postmasters and other Federal officials. A convention of a very different sort is called to meet in Chicago next month; it will be composed exclusively of postmasters, but their meeting has no political object. For years postmasters of the third and fourth class—the former comprising those appointees of the President (about 1,900 in number) whose salaries range between $1,000 and $2,000, and the latter the incumbents of the 49,000 offices whose pay falls below $1,000 a year—have complained bitterly and reasonably of sundry grievances. Third-class postmasters are compelled to give all their time to their offices, and yet are compelled to pay out of their salaries the bills for rent, fuel, clerk hire, and other running expenses, although all such expenses are paid by the Government in the cases of first and second-class postmasters, who receive much larger salaries. The fourth-class postmaster is required to provide boxes for the office himself, and then divide the income from box-rents with the Government. There are some minor grounds of complaint, but these cover the main points. Postmasters-General have repeatedly recommended action by Congress to relieve the postmasters, but no effective legislation has yet been secured. The postmasters have finally concluded to try the effect of an organized movement, and delegates from all parts of the country are to meet in Chicago on the 15th of February, to formulate their complaints and press them upon public attention.

The Board of Directors of the Produce Exchange of New Orleans calls for support for "schemes to attract trade to the city, and to suspend at least the diversion of what they have left." The city before the war used to export 70 per cent. of the cotton crop; it now exports only 26 per cent. It used to import 80 per cent. of the coffee; it now imports only 7 per cent. of it. In fact, the place is going down hill both relatively and absolutely, in spite of the enormous expenditure on the improvement of the port. Its fate illustrates strikingly the change which the improvements in transportation are making in the channels of trade. Before the days of railroads, great rivers produced great cities at their mouths, if there was a good harbor and a good climate. In the case of New Orleans, the river was so great that it produced a great city, in spite of the poorness of the harbor and the badness of the climate and soil. But now that the railroads have robbed the river of so much of its usefulness, the climate and soil and the badness of the harbor are killing the city by inches. Nothing but an extraordinary outburst of energy on the part of the population can save it; but nowadays, when travel is so easy, the energetic go, like the rest of the world, where the obstacles to success are the fewest.

Senator Sherman was as vague as politicians usually are in the advice he gave the Ohio Legislature last week about the labor question. "You ought to legislate," he said, "so as to secure to the laborer, as far as the law can go, the highest wages and the advantages of social life." Now, everybody has looked at the matter in this way for ages. What is making all the trouble about labor in politics is the difficulty of deciding how far the law can go. There are laborers who think that the law ought to insure them a good income all the year around and a piano for their daughters. And there are capitalists who think the law can do no more for the laborer than for the lawyer or farmer—that is, can only protect him in the pursuit of his industry and the enjoyment of his earnings and savings. Which is right, is what we need to know. We should think the laborer would by this time be thoroughly sick of the politician's see-saw about "the rights of capital on the one hand, and the rights of labor on the other," which party platforms are apt to contain.

We quoted from the *Independent* in December last a letter written to the editor of that journal by the Rev. Anson West, D. D., of Talladega, Alabama, containing this passage:

"I have, just out of the press, published by the Southern Methodist Publishing House, Nashville, Tenn., a book bearing the title 'The Old and the New Man; or Sin and Salvation.' What will you charge me for *two editorials a column long in your paper, giving a favorable notice* of my book? I think my book possesses merit, and would like to get for it a favorable and rousing notice from the press of the country"

The *Independent's* reply to this was that its price for such notices was a "million dollars a line." We advised the Rev. Dr. West not to be discouraged at this high tariff, but to go to some of our esteemed contemporaries who are in the habit of printing "reading matter" for money down, where he would undoubtedly get what he desired for a few hundred dollars. Instead of taking this advice, the Rev. Dr. West sends us a long letter on a printed slip containing a defence of his conduct. He complains that his letter to the *Independent* has been made the basis for insinuations "which seem to disparage his integrity and his common sense"; that he intended it "simply as a business letter," and that if all business consultations were treated as his letter was, he "feels sure that the interests of society would raise a protest." He declares that he had no thought of buying the *Independent*, or of "asking it to do anything out of the ordinary course of journalism," and did not suspect his letter of convicting him of "being either a knave or a fool." He concludes with the unprejudiced observation that his book has merit, and that in securing for it notice and circulation he "serves the cause of truth and religion." We are afraid that there is a good deal more of the "Old Man" in the Rev. Dr. West than he has been able to get into his book.

A new feature has been introduced into the sermon reporting of one of our morning contemporaries, by estimating how much the congregation of a certain church is "worth" in money. The "regular worshipping congregation" before the recent death of two noted members was worth, it is said, $300,000,000, but since these melancholy events the valuation of the body has dropped to $200,000,000, or thereabouts. We think, to make these estimates really instructive, the value of the church lot and the buildings ought to be added to the wealth of the congregation. The first example we can recall of this mode of "sizing up" the attendants at a church occurred some years ago in the account of a wedding, in a religious weekly of this city, in which, after giving the names of some of the persons standing around the bride and groom, the writer said: "That little group in front of the altar represented at least $20,000,000." Following out this idea, it might be a good plan, and would prevent mistakes, to have every man's worth, who had more than a million, stated on a plate or card on his pew door—a suggestion we have heard made with regard to the cards on the plates at dinner parties. A brief account on the card of the financial condition of each guest, if a rich man, would greatly add to the interest of New York entertainments, especially for foreigners who have not heard of our local notables, and often do not know in what distinguished company they find themselves.

"Does prohibition prohibit?" Let Maine answer. The total number of persons committed to jail in that State during 1885 was 3,395, of whom 188 were sentenced for selling liquors (an increase of 38 over 1884), and 1,761 for drunkenness (an increase of 441 over 1884).

Mr. Justin McCarthy, in an article on Home Rule in the *Contemporary Review*, ridicules the fears of Englishmen about home rule leading to separation, or attempts at separation, or in fact leading to anything but a peaceable connection with England, like that of the American States with the general Government. He forgets, however, that nine tenths of the advocates of home rule accompany its advocacy with expressions of the fiercest detestation of the British Empire. In fact, of all the fears entertained by Englishmen about the consequences of yielding to Parnell, this seems to us the most reasonable and justifiable. Most of the others have a somewhat chimerical and ridiculous air, and sound a little like the fears of some of the opponents of emancipation here, that the negroes would, if free, go and die of starvation in the woods sooner than work.

Our friend "G. B.," of Boston, who so often treats our readers to a dose of his political panacea—the concentration of political responsibility on individuals instead of assemblies—must be somewhat disheartened, if anything can dishearten so persistent a preacher, by what is passing in France, where the individual continues to wither in a rather startling manner. Ministries are there formed and overthrown at the rate now of one in six months, without anybody seeming to care. More significant than all is that M. Grévy has been reëlected President of the Republic, at the age of seventy-three, without any opposition, or indeed, any sign of public interest. The London *Economist*, commenting on this, draws the conclusion that we are probably witnessing the establishment in France of a new kind of government, which it calls "Cameral Government," that is, government by a Chamber en masse, instead of by individual ministers leading a Chamber or supported by it. Moreover, it intimates that this may possibly be a gain to the world in releasing communities from dependence on great men, who are not always forthcoming.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 13, to TUESDAY, January 19, 1886, inclusive.]

DOMESTIC.

IN the Senate on Wednesday Mr. Ingalls (Rep., Kan.) offered a resolution, "That in the opinion of the Senate the compulsory coinage of silver dollars directed by the law of February 28, 1878, should not be suspended until the aggregate reaches the sum of $500,000,000." It was laid over for the present.

More work was accomplished by the Senate on Wednesday in executive session than on any previous day of the present Congress. Over 150 postmasters were confirmed, and, in addition, a long list of navy promotions, including Captain Walker to be Chief of the Bureau of Navigation.

In the House of Representatives on Wednesday, Mr. Curtin (Dem., Pa.), addressing the Speaker, said: "It was your pleasure, sir, to do me the honor to place me first on the list of the Committee on Banking and Currency. I did intend to state to this House my reasons for declining that honor, but on the advice of many friends, and of the sentiment of the public journals of the country, I have concluded to offer no reasons of my own. For reasons of my own, which seem to be understood by my friends and colleagues on this floor, I do ask this House to excuse me from the important duty as Chairman of the Committee to which you have assigned me." Mr. Curtin was excused. This devolves the Chairmanship upon Mr. Miller, of Texas.

The House on Friday passed the Presidential Succession Bill as it came from the Senate, by a vote of 183 to 77. All the negative votes but two came from the Republican side. Thirty seven Republicans voted with the Democrats who supported the bill.

President Cleveland on Tuesday affirmed the Hoar Presidential Succession Bill, which is, therefore, a law.

The House River and Harbor Committee on Friday fixed the limit of the River and Harbor Bill at $11,000,000 The bill which President Arthur vetoed in 1882 appropriated $18,743,875.

On Monday in the House Mr. Wadsworth (Rep., Ky.) introduced for reference a resolution declaring that the President has done what he could to keep silver, gold, and paper on an equality. He desired that this should be referred to the Judiciary Committee. Mr. Weaver, representing the silver men, moved its reference to the Coinage Committee. The latter motion prevailed by a vote of 159 yeas to 57 nays. The silver men claim that on any question involving silver they have about 100 majority.

In the Senate on Monday Mr. Frye offered a resolution to the effect that in the opinion of the Senate the President's recommendation for a new fisheries commission should not be carried out. Mr. Edmunds declared that the agreement entered into by the Administration involved grave questions as to the powers of the President. While not strictly a treaty, its terms did practically and precisely what a treaty would do, and there might be a question as to the assumption by the President of rights and powers not given him by the Constitution. Messrs. Hoar and Dawes declared that no American fisherman would suffer injury by the termination of the treaty, and Mr. Frye sneered at the efforts of Minister West in behalf of American fishermen, and declared that his action and that of the Administration were the most marvellous pieces of business in the history of diplomacy.

Senator Voorhees (Dem., Ind.) has introduced bills for the admission of Montana and Washington Territories as States.

Secretary Manning on Saturday sent a communication to Senator Morrill, Chairman of the Committee on Finance, in which he acknowledged the receipt of his letter requesting the reasons for the suspension of a certain Collector of Internal Revenue, and the appointment of another person in his place, and then said: "I would reply that as yet I have received no directions from the President in relation to transmitting the papers and information called for."

"The following," said a Democrat in high authority, "may be regarded as the Administration's position in regard to the nominations before the Senate: The Tenure-of-Office Act is considered to have been practically nullified by the partial repealing act of 1869. Since that repealing act the President has no longer been required, even by form of law, to send to the Senate the reasons for suspensions. As to original appointments, the Administration is of opinion that the Senate, as a matter of right, is not entitled to receive any information from the President on demand as to his reasons for appointments. But it has been the custom for the Executive department to furnish such information as a courtesy, and that courtesy will be continued. The case, however, is different in the matter of suspensions. The Senate has no constitutional right to concern itself with the President's reasons for suspensions. But the President wishes to observe the courtesy due the Senate to the furthest extent possible consistent with the maintenance intact of the Presidential prerogative. If Senators, as a matter of courtesy, desire the reasons for certain suspensions, those reasons will be furnished. If, however, the Senate shall demand these reasons as a right, they will be withheld. Everything will depend upon the form of the request."

Secretary Lamar has decided that the Government should bring suit to test the validity of Bell's telephone patent.

It is known authoritatively that the Republican Senators in caucus did agree upon these two points: First, that there shall be no rejections except for causes which would insure the rejection of nominees of a Republican President under like circumstances; upon this subject the Stalwarts were signally defeated. Second, that the information called for in cases of suspension must be furnished; and that if it shall be withheld, the respective Cabinet officers will be served with a summons *duces tecum* by the Senate committees

A test suit was decided in the interest of commercial travellers by the United States Supreme Court on Monday. The court held, Judge Bradley delivering the opinion, that a discriminating tax imposed by a State, operating to the disadvantage of the products of other States when introduced into the first-mentioned State, is in effect a regulation in restraint of commerce among the States, and as such is a usurpation of the power conferred by the Constitution upon the Congress of the United States.

Senator Sherman was reëlected Senator of the United States from Ohio in the joint legislative session on Wednesday. He addressed the Legislature on Thursday, urging the members to revise the State election laws. "I invite your attention," said he, "to the example set by the great State of New York. In that State in 1868 great frauds were perpetrated by a man whose name will be repudiated by any party, Boss Tweed. Then it was that men of both political parties went to work and reformed their election laws. If it had not been done, civil war would have been inevitable. Men of both political parties resolved upon reformation, and it resulted in the best election law in the world. In the dispute last fall over the election they awaited the announcement of the official vote, and the matter was ended. One of the most distinguished men to bring about this reform was Samuel J. Tilden (applause), and I am glad to speak of him here. In this respect I heartily refer to the recommendations made by Governor Hoadly in his annual message, which express my sentiments better than I could do."

The Ohio House on Wednesday appointed a committee of five to investigate Donavin's charges of bribery in connection with the election of Mr. Payne as United States Senator.

The committees as announced in both branches of the New York Legislature on Wednesday are generally approved by those who hope to see good work done. The following are among the chairmen in the Senate: Sloan, Finance; Comstock, Judiciary; Low, Railroads; Hendricks, Cities. In the Assembly: Erwin, Ways and Means; Kruz, Appropriations; Baker, Judiciary; Hamilton, Cities.

In the Assembly on Thursday the bill incorporating the Grant Monument Association of New York City, and permitting it to hold, exempt from taxation, real estate to the value of $1,000,000 was passed. A resolution authorizing Weed, Parsons & Co. to do the State printing pending the legal controversy over awarding the contract to the *Argus* Company, was passed by 70 to 48.

W. Bruns, Tammany Assemblyman, introduced on Monday night several bills amending the charter of this city. They provide for a Park Commission of two members, to be appointed in the first instance by the President of the Board of Aldermen, and afterward by the Mayor; transfer the duties of the Public Administrator to the Corporation Counsel; consolidate all the bureaus of the Public Works Department into three, etc.

Chauncey M. Depew was elected President of the Union League Club in this city on Thursday night, and the rest of the regular ticket was chosen without opposition. The following resolution was adopted by a nearly unanimous vote: "Resolved, That in the opinion of the Union League Club the public welfare demands that the compulsory coinage of silver dollars should be suspended by act of Congress, and that the Senators and Representatives from this State be respectfully requested to advocate such a measure."

Preparations are being made for the starting of the large furnaces at Riddlesburg, Pa., lately owned by the Kemble Coal and Iron Company, which have been out of blast for more than a year on account of the failure of the company.

A strike of 7,000 miners and coke workers in western Pennsylvania is threatened. They demand 10 per cent. advance in wages.

Mr. Schoenhof, American Consul at Tunstall, England, in an interview, expressed his belief that the decrease in the British exports of pottery was due to depression in the pottery trade in America as much as to the high tariffs. He added that the pottery market in America was glutted by purchases from England in 1883 previous to the raising of the tariff.

Collector Herbert Beecher has seized $45,000 worth of prepared opium stored at Kassan Bay, Alaska, awaiting shipment to Portland, Oregon, and San Francisco.

Patrick Egan, President of the Irish National League, of America, will resign at its next meeting.

The Rev. Henry Norman Hudson, the Shaksperian scholar, died at his home in Cambridge, Mass., on Saturday, at the age of seventy-two. He was born in Vermont, and his education was obtained while struggling with poverty. In 1840 he was graduated from Middlebury College. He went South as a teacher, and delivered his first lectures on Shakspere at Huntsville, Ala. Four years later he went to Boston and lectured there and in other large cities. For three years he was editor of the *Churchman* in this city. His first edition of Shakspere appeared in 1851, and has been very popular. He did other critical work, especially on Wordsworth. For twenty years past he has lived at Cambridge, and has prepared many text-books.

The Rev. Benjamin Currey died on Saturday, near Peekskill, N. Y., at the age of eighty seven. He lived on the same farm in Westchester Coun-

ty all his life. Early in life he became a Methodist preacher. For thirty years before the war he was active in the so-called underground railway for helping fugitive slaves. He was a fearless abolitionist, and when that question was settled became a temperance advocate.

Miss Bayard, eldest daughter of the Secretary of State, died suddenly on Saturday afternoon.

FOREIGN.

The new members of Parliament were sworn in on Wednesday. The Speaker permitted Mr. Bradlaugh to take the oath.

Queen Victoria on Monday sent her private secretary with a letter to Mr. Gladstone on the Irish question. The royal speech was drafted at the meeting of the Cabinet on Monday. Lord Randolph Churchill overcame the demand of a section of the Cabinet that the whole Coercion Act be renewed. The Government will rely upon a division of the Liberals to secure support of its Irish proposals. It is also asserted that the Government will at the earliest moment introduce a bill in Parliament making boycotting a felony, enlarging magistrates' powers of summary jurisdiction, and otherwise strengthening the Criminal Law. Parliament will be asked either to regulate or suppress the National League.

Deputations from the various branches of the Loyal and Patriotic Union waited on Lord Salisbury, the Premier, on Tuesday, and urged that a stern enforcement of the law accompany any concession granted to the Nationalists by the Government. The Loyalists were arrogant and dictatorial in their address, which so offended Lord Salisbury that he dismissed them with a very short speech, instead of the long political address which was expected. The Loyalists were chagrined. It is reported that Mr. Gladstone will deny that he ever proposed an Irish Parliament. Ulster Loyalists are indignant because he has refused to receive a deputation of their number.

The London *Times* on Saturday morning recognized that the Irish question must receive the immediate attention of the new Parliament. In a spirited leading article it urged the necessity of the Conservative party at once facing the issue. It says the Conservatives cannot shirk or postpone decisive action. If they attempt to remain in office without making a vigorous effort to grapple with the Irish difficulty, it will react in their prompt and unequivocal condemnation. Universal scorn will be their portion if they give their opponents a chance to overthrow them without staking their existence on a bold defence of the Union. Such a course would be worse than a blunder—it would be crime. The Government should not hesitate to challenge the verdict of the House of Commons on the question of home rule. It cannot be doubted that they would obtain an immense majority in favor of maintaining the integrity of the empire.

The *Daily News* says that the Government contemplates a *coup d'état* in Ireland, and that General Lord Wolseley will be appointed to command the military forces there; but this has been denied.

The Earl of Carnarvon, Lord Lieutenant of Ireland, will soon resign. The Viceroyship will be left in commission, with Lord Ashbourne, Lord Chancellor of Ireland, presiding at the Castle.

The Dublin *United Ireland* attributes the intended resignation of the Earl of Carnarvon to his reluctance to abet wholesale evictions contemplated by the Government, which will render the Irish desperate. It implores the Cabinet to look before it leaps and not adopt coercive remedies, as the people will not submit tamely to being robbed of their homes.

Great distress prevails in many parts of Ireland, especially among the inhabitants of Achill and Eagle Island. Lord Carnarvon says that his sole reliance for affording relief to the starving people is the limited means at his disposal of sending the unfortunates to the workhouse. He, however, hopes that private contributions for the relief of the sufferers will enable the poor people to remain in their homes instead of being compelled to seek shelter in the already much overcrowded workhouses.

A condition of great alarm exists in Dublin commercial circles, owing to reasonable fears regarding an extensive boycotting system which, it is thought, will soon be inaugurated.

Monday's *Pall Mall Gazette* says there is no foundation whatever for the rumors now current that the Government will resign immediately on the reassembling of Parliament.

It is asserted on good authority that Mr. Gladstone and his colleagues have become reconciled; that Earls Spencer and Granville, the Earl of Derby, the Marquis of Hartington, and Sir William Vernon-Harcourt have all given their assent to a course of tactics suggested by Mr. Gladstone, and that the ex-Premier will take the first chance to overthrow the Conservative Government.

The Duke of Bedford writes to the *London Times* as follows: "There is a growing belief that Mr. Gladstone seeks to abandon the loyal Irish to the dominion of the disloyal. This obliges me to ask myself whether the party allegiance to which I have ever adhered is not strained to the breaking point. Many Liberals besides myself are eager for assurance to the contrary."

The Parnellites will join with English and Scotch Radicals in supporting an amendment to the address, protesting against evictions in Ireland and in the Highlands among the crofters.

Lord Salisbury has consented to recognize China as nominal suzerain over Burmah, on condition that the Pekin Government abandon its claim to tribute from Burmah, and open the Chinese frontier to British traders at 5 per cent. ad valorem duties, except on opium.

The British Minister at Lima has been instructed to recognize the existing Peruvian Government upheld by Caceres.

The Direct Cable Company's report shows that the receipts have decreased $150,000 during the past six months, and attributes the decrease to the reduction in the tariff and to competition.

Mr. Stead, editor of the *Pall Mall Gazette*, was released from prison on Monday.

Prince Bismarck has received despatches fully confirming the reported seizure of Samoa. The British Consul in Samoa telegraphs: "Commander Weber has driven the King from the seat of government. Weber hauled down the King's flag, a force from the *Albatross* assisting. The King was insulted. The British and American Consuls entered a solemn protest. Their presence alone prevented a massacre of the Germans. War is imminent. A report is current that Germany will annex Samoa."

Bismarck has officially assured Lord Salisbury that Germany will neither annex Samoa nor permanently interfere with the government of the islands.

A sensation has been created by the publication of the letter from Prince Bismarck to the Pope acknowledging the receipt of the decoration of the Order of Christ recently conferred on the German Chancellor by his Holiness. It says: "Your kind letter and decoration have greatly gratified the Emperor William and myself." It then goes on to state that the Pope's words that the Papacy means to practise the works of peace, first suggested to Prince Bismarck the idea of seeking the mediation of his Holiness in the Carolines question, and, in deference to his faith and confidence in the Pope's elevated views and impartiality, he selected the Pope as the arbiter of the dispute. Germany and Spain have no cause to complain of the terms of the protocol, and the effect of the mediation will be lasting. Prince Bismarck will not neglect chances to attest his lively gratitude, highest devotion, and deepest respect for his Holiness in the future.

Emperor William opened the Prussian Diet on Thursday. In his speech his Majesty said: "I am grateful for the love and fidelity of my people, and for the benevolent sympathy which has been extended to me from foreign countries. Our foreign relations are friendly, and support fully our belief that the peace of Europe is sure to continue."

Another German-American has been expelled from a Prussian town.

President Grévy has signed a decree granting amnesty to persons convicted of political offences since 1870, and reducing the sentences of many offenders against the common law.

President Grévy's message was sent to the French Chambers on Thursday. "A republic," he says, "is the form of government necessary for France, in view of the importance and divisions of its opponents." M. Le Royer has been reëlected President of the Senate by a majority of 24.

M. de Freycinet, the Prime Minister and Minister of Foreign Affairs, in the Chamber of Deputies on Saturday, said that the new Cabinet's colonial policy would be less adventurous than that of its recent predecessors. This statement was received with cheers.

M. de Lesseps has written to the Marseilles and other principal Chambers of Commerce, asking them to appoint delegates to accompany him to Panama, for which place he will start on January 28.

M. Taine has been forbidden by his doctors to continue mental labor.

Paul Jacques Aimé Baudry, the French artist, is dead at the age of fifty-seven. He was the son of an artisan. Success came to him rapidly. In 1850 he obtained the Grand Prix de Rome for his painting, "Zenobia Discovered on the Banks of the Araxes." In 1857, when he exhibited in the Salon "The Punishment of a Vestal," "Fortune and the Child," and "Leda," he had established his fame. Since then he has painted about 200 pictures.

Greece and Servia are negotiating for an alliance against Bulgaria.

Greece has declined to disarm. The Ministry threatened the King that they would resign unless he assented to an alliance with Servia and the maintenance of the army on a war footing.

A war fever is again raging in Servia. The Government at Belgrade has summoned the second ban, and has ordered another 20,000,000 of cartridges, eighteen batteries, and several machine guns. The Austrian Government is keeping a squadron in Greek waters. An improbable rumor was circulating in London on Tuesday that Russia is to occupy Bulgaria, Austria to march an army corps into Servia, and Great Britain to be asked to force Greece to lay down her arms. Bulgaria, however, has consented to disarm if Servia will. Turkey is also more tractable.

Amilcare Ponchielli, the composer, is dead, in his fifty-second year. Ponchielli is known in this country chiefly through his "Gioconda," one of the operas in which Nilsson appeared in the first season at the Metropolitan Opera-house. He was, next to Verdi and Boïto, the most gifted of contemporary Italian composers. He was born in 1831, near Cremona, and made his début as a dramatic composer in 1856 with "I Promessi Sposi." His first special success was won at Milan, in 1872, with his first opera. Thereupon he was engaged by the Scala management to write a ballet, "Le due Gemelle," which also had great success. In the same city his "Gioconda" had its first performance in 1876. His last opera, "Il Figluol Prodigo," was first sung in 1880, and was also very favorably received.

THE TELEPHONE CASE.

THE view we should take of Secretary Lamar's decision to have the validity of the Bell telephone patent tested in the courts depends very largely upon our standpoint. If, as the Secretary seems to assume, and as a lawyer might naturally assume, the mind of the judge in such a case is to be *tabula rasa* on which the contending parties may freely write their arguments and impress their evidence, it is quite possible that the judge might see only that conflict of evidence on which the Secretary's conclusion is based. The result of the Star-route trials is an example of how a long and tedious argument about very simple facts may confuse rather than inform the mind. If a man could secure a fortune by making it appear debatable whether the Washington Monument might not talk, he would undoubtedly succeed. Hardly would the hearing be commenced before scores of people would be found who, in the still of night or the hum of day, had heard aerial voices proceeding from the Monument, which could not be accounted for without supposing that object to possess the power of speech. A perfectly unbiassed judge, with no prejudices of his own on the subject, listening attentively for two months to the evidence and arguments on both sides, would undoubtedly find the views very conflicting; unless, indeed, he should reach the decision that the talking power of the Monument had been fully established. But if we suppose the judge to possess beforehand some common-sense ideas of physical principles, and some knowledge of the world, then Mr. Lamar's conclusion is simply amazing, and we apprehend has surprised no one more than the plaintiffs themselves.

What gives his decision interest is not merely the historical and personal question of priority of invention, but the fact that the conclusion insures the success of one of the worst stock-jobbing schemes now before the public. The stock in trade of the companies on whose motion the suit is brought consists of a paper capital of several millions of dollars, and a few patents, of insignificant value, which they probably never intend to use. Before the courts, a suit instituted by and in the name of the United States is invested with such dignity that all injunctions against infringements of Bell's patent may remain undecided or inoperative until the case is finally settled. The result is that the companies have a fair chance of getting the use of Bell's invention for a period of perhaps three years—as long, in fact, as they are able to stave off a final decision. This prospect will enable the projectors to dispose of their paper capital on terms extremely remunerative to themselves. The grounds on which they are allowed to enjoy this advantage on the motion and at the expense of the Government are therefore worthy of very careful consideration. What we have to say on the subject is founded mainly upon the bill of complaint filed by the prosecution, supplemented by the well-known facts of the case.

Stripping the bill of all its verbiage, repetition, and incongruities, we find its gravamen to be contained in the following propositions:

1. That the examiner who passed upon the patent did not know that the invention was to be claimed as a speaking telephone, but supposed it to be only a method of harmonic multiplex telegraphy.

2. That a caveat having been filed by Elisha Gray on the same day that Bell made his application, the latter was allowed to see the caveat, and, in consequence, changed his application so as to cover ground which belonged to Gray.

3. That the speaking telephone was really the invention of Philip Reis, and was therefore public property before Bell's patent was issued.

We omit the claim that Bell fraudulently neglected to instruct the examiner in electrical and telephonic science, as one tending only to make the plaintiff's case appear ridiculous. We also omit the question of Gray's rights in the case, because the suit is not brought for Gray's benefit, but only for that of the public.

The first claim of the prosecution might seem at the first glance to have some foundation, from the fact that the word "telephone" had not come into general use, and that Bell therefore described his invention as a system of telegraphy. But a reading of his description shows that the speaking telephone was described so plainly and fully as to admit of no possibility of doubt or mistake. Even had the examiner misapprehended the invention, that alone would not invalidate the patent. Where would litigation end if the validity of every patent depended upon the state of mind of the Patent Office officials when they passed upon the inventions?

The second point is that Bell made use of his fraudulently acquired knowledge of Gray's caveat to amend his own description. If any evidence to prove this was adduced by the prosecution, we have not seen or heard of it. All necessity for looking up any such evidence is, however, done away with by the fact that no essential change was made by Bell in his description, and no alteration in or addition to his claim. The addition consists only in a fuller explanation of the difference between what he called undulatory and pulsatory currents, and added absolutely nothing to the invention. It is one of the many singular inconsistencies in the plaintiff's case that in some passages this very distinction, which they claim to have been borrowed from Gray, is denounced as a worthless pretence.

We now come to what is really the main point of the prosecution, that there was nothing essentially new in Bell's invention, and that his claim of an improvement on Reis's instrument, by substituting an undulatory for a pulsatory current, was a fraudulent pretence. Here we reach the question whether common sense and understanding of the subject are to be presupposed in the judicial mind. If we presuppose them, then the claim that the Reis telephone could speak is hardly more tenable, and is not supported by any more evidence, than the speaking power of the Washington Monument would be if the question of its existence were before a court. The Reis telephone sent electric pulsations through a wire; but these pulsations were all of one kind, and could produce at the end of the wire only a musical note of high or low pitch, like the sound of a tuning-fork. Such an apparatus never could talk, unless by the merest accident. Bell's invention consisted in giving the electrical undulations the same form as the sound waves emitted in human speech. The difference between the two inventions was neither more nor less than the difference between speech and noise. The validity of Bell's patent as against previous claims of Reis has been so often sustained by the courts that it can no longer be considered an open question.

On what grounds was an application granted when the reasons for it were so entirely untenable? We look in vain for an answer to this question in Mr. Lamar's communication. He enters into no discussion of the arguments, the law, or the evidence so far as this particular case is concerned, and indeed expressly excuses himself from forming or expressing any opinion upon the merits of the case. He does not even say what fraudulent act or what kind of collusion seems to him to have been possible, nor explain how ignorance on the part of the Patent Office could have made fraud on the part of a patentee. Granting all the facts claimed by the prosecution, except the incident of Gray's caveat, of which we have shown the utter groundlessness, no case would be made out except that the Commissioner of Patents blundered into issuing a patent for a well-known invention; a wrong which can be speedily corrected by ordinary legal proceedings. The amusing attempt to show that this supposed blunder was due to fraud on Bell's part is of a kind which would be laughed out of any court in the world; the fraud, consisting not only in neglecting to give the examiner scientific information, but in describing to the Commissioner of Patents a crude and worthless device in order to evade his vigilance, and, when the patent was granted, claiming that the device was a telephone. Mr. Cleveland's Administration has made no greater mistake than that of giving Government support to this ridiculous pretence.

THE SENATE AND THE REMOVALS.

IF the report of the Washington correspondent of the *Herald* is to be believed, the Republican Senators agreed, in their consultation on Friday, to subpœna the Cabinet officers to bring with them any papers they may have which will aid in the inquiries about removals which they are setting on foot, but admitted that if the Cabinet officers said the President had the papers, the Senate would be powerless as against him. This is comprehensible. What is not comprehensible is the following further report of the correspondent:

"It was the general opinion in this consultation that, as the President had publicly and often professed a determination to retain in office during their regular terms all capable and proper men and to remove only improper men, these public engagements gave the Senate the right and duty to see to it that proper and capable men are not removed—that, in fact, the President has been and remains faithful to his engagements. If the President will say publicly that he has not found it expedient or possible to keep his promises in this regard, but has, in fact, removed Republicans because they were Republicans, and appointed in their places Democrats because they were Democrats, and for political reasons, in that case the Republican Senators will, they say, at once confirm every nomination he has made. But they say that their object is, and their determination is, to ascertain whether the President has lived up to his public promises in regard to the civil service, or whether—while still professing

loudly—he has in practice violated these promises and become no better than a publican and a sinner. Republican Senators assert that he has so broken his public promises; and they say that it is important to the cause of public morality to show this."

According to this story, the Senate is, in doing its work in the matter of confirmation, to take its cue from the President himself. If he says he is trying to put fit men in office, and no others, it is going to overhaul all his nominations with much severity; but if he says that he is appointing men to office because they are Democrats simply, and without caring whether they are fit or not, then it is going to confirm every nomination he sends in without question. In other words, the Senators are not going to force the President to raise the standard in making selections for office one inch higher than he pleases. On the contrary, they encourage him, according to this story, to keep it as low as possible by assuring him that the lower he makes it, the more completely he disregards the interests of the public service in making his nominations, the easier will he find it to get them confirmed.

We are reluctant to believe that the Republican Senators have taken any such ground. A more degrading proposal to prostitute their office was probably never made by any portion, however small, of a respectable public body, than the foregoing would be. The Senators are bound to have a theory of their own about the proper mode of filling public offices. They have a duty in the matter as well as the President. The more openly he declares that he is filling them on partisan grounds, the more careful should they be to see that, nominating on such grounds, he is not disregarding the public interests. They are not charged with the duty of seeing that the President is consistent, or that his practice accords with his professions unless the professions show that the efficiency of the public service is his first concern. The Constitution did not bestow the power of confirmation on the Senate to be used in exposing the President's weakness or folly, but for the purpose of protecting the public against its consequences.

The Senate, in exercising its share in the appointing power, is bound, we take it, by every consideration of duty and policy, to assume that the President means to live up to the professions of his letter to the Civil-Service Reform League, and to examine his nominations from that standpoint. To demand from him his reasons for making removals they have plainly no right. He may give them if he pleases, but if he refuses, the Senators cannot complain. But it is their bounden duty to see that his nominees are fit for the places to which they are nominated. About this they can learn all they please through their constitutional powers of investigation. They can send for the man who has been removed, and find out how he did his work, and all he knows about the causes of his removal. They can send for the man nominated and learn all he has to say in support of his claims to the place, and they have a perfect right to be guided in acting on the nominations by the information thus acquired.

Moreover, there can be only one reason for their reluctance or failure to adopt this course—and that is their fear that, in setting up a high standard of Presidential selection, they would be dealing a death-blow to the system of Senatorial bargaining and log-rolling which is a large part of all the corruption there is in the Federal service. To insist on the President's treating public office as a public trust, is to bind the Senate to support him in so doing, and this for only too many Senators would be robbing their office of more than half its sweetness. But this is what the public now expect of it. They want the Senate to see as far as in it lies that the President lives up to his brave words. They will not object to his being plagued or harried by the Senate for this purpose, but they will strongly object to his being plagued or harried for any other. The time has long gone by when people would witness with equanimity a struggle between the Senators and the President over a division of the spoils. The Republicans cannot get back into power on that tack. They can only get back, in these days, by promising purer administration, and in such a way that the country will believe them.

FEDERAL AID TO EDUCATION.

THE revelations of illiteracy in the South made by the last national census produced a profound impression upon the country. Government in the United States is wielded by millions of voters, and the success of such a system obviously depends upon the intelligence of these voters. Every ignorant ballot is a threat to the community, and government by suffrage, where a majority of those who enjoy the suffrage cannot read the ballots which they cast, violates the very theory upon which our whole system is based.

Yet it was shown in 1880 that in a number of Southern States nearly or quite half of the voters were illiterate. About three-fifths of South Carolina's population are negroes, and 78 per cent. of the male negroes were unable to write their own names, while 16 per cent. of the male whites were as badly off, making 52 per cent. of the whole number of both races. Mississippi, with nearly as large a proportion of negroes, was in almost as alarming a condition, 76 per cent. of her male negroes and nearly 12 per cent. of her male whites being unable to write, or about 47 per cent. of all her voters. Louisiana's population is almost equally divided between the two races; of her negro voters 80 per cent. and of her white voters 15 per cent., being 47 per cent of all of both colors, were illiterate. In Alabama the proportion reached 46 per cent., and in Georgia 45, while there was not a single State of the States in the "black belt" where the ratio of ignorant voters was not so large as to justify the most serious apprehensions. Of course such a state of things could not continue permanently without grave danger to the republic.

As they emerged from the destitution in which they were left by the war, and the only less disheartening period of corrupt carpet-bag rule, and consequent race hostility, the Southern States began to develop a public-school system. But the States were still poor, the mass of ignorance was vast, and progress was slow. It was plausibly urged that the exigency was so pressing that outside assistance must be furnished, and that the Federal Government ought to come to the rescue of the South. The assertion that such action would be unconstitutional was to be met by allowing all the States to share in the appropriations, while the expenditure of the largest share in the South was to be insured by making the amount allowed each State depend upon the number of illiterates. These arguments proved effectual to secure the passage by the Senate in the Forty-eighth Congress of what is known as the Blair bill, proposing to appropriate over $100,000,000 during a period of ten years for distribution among the States upon this basis. The bill went through the upper branch by a vote of 3 to 1, 20 Republicans and 13 Democrats supporting the measure and 9 Democrats and 2 Republicans opposing it; but it was never taken up in the House, and lapsed with the end of the session.

Senator Blair has reintroduced the bill, and another strong effort will be made to secure its enactment in the present Congress. The majority in its favor was so strong in the last Senate that there is little question of its passing the upper branch again, and its friends profess confidence that a majority can be secured for it in the House. Not only for its immediate consequences, but also, and much more, for its far-reaching bearing upon the relations of the Government to the States, the proposition is perhaps the most important which will come before the present Congress.

The plea in favor of the bill, as we have said, is plausible, but we believe that it is fallacious, because it takes a short-sighted view of the future. Illiteracy is a bad thing for a community, but it is not the worst thing. It is important for the South that its present ignorance should be dispelled as soon as possible, but that is not the most important thing for the South. The vital element of any success that is worth achieving in this world is self-reliance. The man who works his own way to an education may not acquire it as soon or get as good an education as one who receives it at the hands of charity, but it will be worth a great deal more to him, and he will be worth a great deal more to the community. The same principle holds as true for the State as for the individual. The American colonies developed into infinitely stronger commonwealths by reason of having to make their own way in the world than they ever could have become by the most fostering care of the mother country.

What was true a hundred years ago is true to-day. Illiteracy in the South is a terrible evil, and its removal will be a vast work. The burden must be a heavy one for the South to bear, and it would be temporarily a great relief to unload a share of it upon the broad shoulders of the general Government, but the education of its coming voters is the first duty of an American commonwealth. It is not the business of the general Government, and nothing could be more demoralizing to a State than the assumption of its own duty, in whole or in part, by the authorities at Washington. Undoubtedly more Southern voters will be able to read ten years hence if the Federal Government expends $100,000,000 upon Southern schools, but the South can much better afford to have fewer intelligent voters ten years hence than to have purchased their education at the expense of its own self-reliance and self-respect.

The truth is that the Southern States are

already proving their capacity to grapple with this problem alone. Take for example South Carolina, which was in the most desperate condition. In 1874, under carpet-bag rule, there were only 110,416 pupils in her public schools. In 1884 the number had increased to 185,619. In Mississippi the number of pupils rose from 166,204 in 1876 to 266,996 in 1883. In Florida ten years increased the annual roll of scholars from 20,911 to 58,311. There is not a State where the gain has not been most gratifying. In most commonwealths the percentage of children of the school age who attend school already approaches that in the North—being, for instance, 65 per cent. in South Carolina and 68 per cent. in Maine—and the defects of the educational system are that the teachers are not so good and the terms not so long. But these defects can be overcome by the growing prosperity of the South, which will enable the States to raise more money for the schools. It must be remembered that the South has but just begun to realize the possibilities of her future under freedom. Every year will find her able to do more for education than the year before. At first the whites had to bear the expense of teaching both races, but already in Georgia the blacks pay into the Treasury most of what is spent upon colored schools.

Northern philanthropy may well contribute to the work of education in the South—the more Peabody and Slater funds, the better. But let not the nation make the fatal mistake of teaching the South to depend upon the Federal Government for the maintenance of its schools, and thus to lose that quality of self-reliance which no amount of education to short order can make up for. The best friends of the South are those Southerners who recognize the folly of this short-sighted policy. The North feels generously toward the South; it is in danger of yieldng hastily to its first impulse in this matter. The most effective opposition can be made by Southern men who base their opposition upon the right ground. Ex-Governor Chamberlain, of South Carolina, who himself stoutly opposes the Blair bill, not only for its unconstitutionality but also for its wrong principle, quotes the words of one such Southerner, an ex-slaveholder and ex-Confederate soldier, who puts the strongest argument against the Blair bill in this most forcible style:

"You know my deep interest in the public-school system. Hence I am opposed to national aid. You cannot *plaster* the South with this system. It is a growth, and its certain and healthy growth can only be secured by *each community providing for its own schools.* The Blair bill is simply, in another form, the old hallucination, 'fifty acres and a mule,' which has caused more briers and sassafras bushes to grow in Southern fields than all else!"

PROHIBITION VS. HIGH LICENSE.

THE renewed attempt to secure a high-license law from the New York Legislature renders peculiarly timely any fresh study of the operation of that system, in contrast with the workings of prohibition, in other parts of the country. A letter which was published in the *Evening Post* of Friday, portrayed the situation under prohibition in Kansas, while the *Christian Union* of last week presented a mass of valuable testimony regarding the state of things in Iowa, which, like Kansas, has a prohibitory law, and in Illinois, where a high-license system has been tried for some years. These are three representative States of the West, and the East ought to learn something from their experience.

The *Christian Union* recently addressed to its subscribers in Iowa and Illinois a circular letter asking what had been the effect of prohibition in the former State, and of high license in the latter, on the number and character of the saloons and the amount of drinking, drunkenness, and disorder. The replies from Iowa may be divided into two classes—those from the villages and small towns, and those from the large towns and cities. Correspondents living in the former places as a rule report that the prohibitory law is working well, but not a few of them confess that there never were any saloons in their neighborhoods before there was a prohibitory law. Public sentiment formerly forbade the liquor traffic, and naturally continues to do so now. On the other hand, the reports from large towns and cities almost uniformly represent that more liquor is sold and more men get drunk under prohibition than under the former license system. A few of the answers from such places are worth quoting:

Des Moines (population in 1880, 22,408).—Under license law 66 saloons; under prohibition 250; more sly drinking.

Dubuque (population, 22,254).—Last year 124 saloons; to-day City Marshal's list gives 143; city licenses read, "For keeping a saloon"; fully as much drinking.

Davenport (population, 21,831).—Increase from 20 to 30 per cent in number of saloons; new saloons of a worse character; amount of drinking increased; the law worse than a failure.

Burlington (population, 19,450). — Number of saloons more than double; character worse; drunkenness and disorder increased.

Council Bluffs (population, 18,063).—No effect from the law; under the so-called "Pop" ordinances—by which saloons are allowed to sell liquors not prohibited by law and not disturbed in selling what they please—licenses have been granted indiscriminately at low figures.

Keokuk (population, 12,117).—Liquor to-day sold as freely and openly as ever heretofore. The Marshal's report shows quarterly a great amount of drunkenness and disorder.

In short, a year and a half of experiment with the prohibitory law in Iowa conclusively proves that it cannot be enforced in cities and large towns, which are the very places where restrictions upon the liquor traffic are most imperatively demanded.

Kansas has fewer cities and a smaller foreign element than Iowa, so that the conditions were even more favorable to the Prohibitionists; yet the correspondent of the *Evening Post* shows that in the larger towns of Kansas the law is almost as much a farce as in similar places in Iowa. The provision by which a druggist may sell liquor to anybody, upon the customer's own certificate that he needs it "for medical purposes," is most demoralizing to druggists and public alike. Although liquor is not sold in most of the villages, this fact is not due to the law, but to the public sentiment, which, without the aid of a prohibitory statute, had previously forbidden the traffic, while in the cities there appears to be quite as much drunkenness as ever.

Contrast the condition of these two prohibitory States with that of Illinois, which has for some time had a high-license law, with a minimum fee of $500 for general liquor-selling, and a local-option clause that allows towns to increase the amount to any figure or prohibit the sale altogether. One-sixth of the whole population of Illinois is contained within the city limits of Chicago, and the *Christian Union's* correspondents from that city, with the exception of one opinionated Prohibitionist who "can see nothing but evil in any license system," agree that the high fee has reduced the number of saloons by several hundreds, the decrease being especially marked among those of the worst class, and that there is less drunkenness than formerly. If the investigation had been made a little later, official figures of the most convincing character might have been cited to support the impression of intelligent observers as to the workings of the system. The city Tax Collector has just issued a statement showing the number of saloon licenses issued for the last half dozen years, from which it appears that in 1882, before the high-license law was passed, there were 3,919 saloons, while in 1885 there were only 3,075 for a population probably a fifth larger, and the smaller number pay into the treasury $1,721,474, against only $195,490 for the larger number. Most of the smaller cities make similarly favorable reports, this from Rock Island being a fair sample: "Under low license, 84 saloons; under high license, 53; low groggeries rooted out; 30 per cent. less drunkenness and disorder."

More than one-third of the population of New York State is found in the cities of New York and Brooklyn, and the smaller municipalities bring up the proportion of the inhabitants who live in cities to nearly half of the whole number. Every intelligent and candid person knows that prohibition cannot be enforced in a single one of these cities. There is no way of preventing all sale of liquor, but it is possible and feasible to put limits upon the traffic, and to make it bear some share of the burdens which it brings upon the State. The one practicable way of reaching this result is to impose a high license, which not only diminishes the number of saloons, but makes every licensee from self-interest alert to prevent the breaking of the law, and the consequent injury to his own interests, by unlicensed sellers.

AMERICOMANIA IN ENGLISH POLITICS.

OXFORD, December 28, 1885.

AN American observer who should now revisit England after an absence of from twenty to twenty-five years could not fail to be struck with a singular change in English sentiment toward the institutions of his country. From 1860 to 1865 all the well-to-do classes and (what is of far more consequence) all the thinkers and writers of England looked unfavorably on the political and social condition of America. The Union was often held up for the instruction, for the warning, for the reproof of Englishmen. It was rarely, except by one small body of politicians, mentioned with admiration or respect. Democracy, we were told, had broken down, and American experience bore witness to its failure. The Union during the war of secession was described by Carlyle in his peculiar language as the "dirtiest chimney which has ever got set on fire." The prevailing impression of reasonable Whigs was that the political arrangements of the United States were at best cheap and nasty, and at worst

nasty without being cheap. Even theorists so favorable to every form of freedom as was John Stuart Mill or Grote seemed more than half to doubt whether political liberty was not in America purchased at the price of intellectual servility or uniformity, and certainly dwelt at least as strongly on the supposed subjection of Americans to the tyranny of the majority as on their certain exemption from all the more palpable forms of despotism. The ideas of the day were summed up in the constantly expressed determination that the English Constitution should not be "Americanized," and the most telling of the taunts aimed at John Bright was that he wished to introduce into England the habits and institutions of the United States. No doubt Bright himself and the small and then unpopular party which he led eulogized transatlantic republicanism. Even his praise, however, was in one sense negative. What he admired was the absence of evils, or supposed evils, which he saw existing around him. I can still remember the fervent applause with which a meeting of sympathizers with the North hailed his description of a "country where they had no State Church, no hereditary peerage, no emperor, no king." But indomitable as was his bravery in forcing upon the minds of his countrymen the grandeur of the great republic, and keen as was his insight into the moral aspects of the life-and-death struggle between freedom and slavery, it may be doubted whether the specific institutions, the constitutional mechanism, so to speak, of the United States ever excited very keen interest in the mind of John Bright, or received from him very careful examination.

Be this as it may, Bright was in 1860 a prophet, preaching only to the people, who repelled rather than guided the sentiment of average well-to-do Englishmen. The contrast between the current opinions of 1885 and 1860 is as marked as it is striking. Radicalism, as represented by Mr. Chamberlain or Sir Charles Dilke, has ceased to occupy itself deeply with America. A nation whose habits and polity are based upon individual freedom, and whose Constitution guarantees respect for the sanctity of contracts, does not in any sense realize the ideals of statesmen who hope, rightly or not, to accomplish great things for the mass of the people by means of the intervention of the State. It is not for a moment, of course, to be denied that there are many things in American institutions—as, for example, the absence throughout the Union of any State Church, and the establishment of free schools—which command the sympathy of English Radicals. Yet a very slight knowledge of America shows that it is not the land in which Socialism can flourish, and it is not to be expected that men who uphold theories which are more or less Socialistic should look with the same partiality on the United States as was naturally displayed by reformers like Bright and Cobden, who, but for the non-recognition of free-trade doctrines, might consider the Union (when delivered from slavery) to have satisfied the aspirations of the Manchester school. If, however, the United States no longer command the exclusive affection of English Radicals, the institutions of the Union now excite something like hopeless admiration on the part of thoughtful Conservatives. Whoever doubts this should read with care Sir Henry Maine's 'Popular Government.' He should note, also, the letters on the English Constitution and home rule which appear in the *Times*. Any one who does this will perceive that the current of Conservative speculation has changed its direction, and he may rest well assured that politicians will sooner or later follow the guidance of thinkers. The plain truth is, that educated Englishmen are slowly learning that the American republic affords the best example of a conservative democracy; and now that England is becoming democratic, respectable Englishmen are beginning to consider whether the Constitution of the United States may not afford means by which, under new democratic forms, may be preserved the political conservatism dear and habitual to the governing classes of England.

A person skilful in drawing out antitheses might easily pen any number of sentences pointing out, in a more or less satirical form, the apparent contradiction between the Conservative sentiment of 1860 and the Conservative sentiment of 1885. But the general course of opinion is, under all apparent inconsistencies, never really self-contradictory. It is easy enough to harmonize the dislike of Americanism which prevailed twenty-five years ago with the Americomania of the present day. As long as it seemed possible to repel the inroads of democracy, English Conservatives naturally opposed all Americanization of the Constitution. Now that a democratic form of government is all but established in England, English Conservatives as naturally turn their eyes toward the United States, to see if they can borrow from the other side of the Atlantic devices for guiding democratic progress in an orderly and conservative direction. That this is the true explanation of the care and sympathy with which the American polity is at this moment investigated by English thinkers, is clear enough to any one who notes the points in your institutions which are singled out by English writers for admiration or respect. The President, they allege, occupies a position far more independent of temporary changes in public opinion than a Prime Minister; the Senate wields powers and exercises an influence never claimed or exerted by the House of Lords. Not the most trifling article in the Constitution of the United States can be changed without the most deliberate assent and the most lengthy consideration on the part of the American people; while it is at any rate conceivable that within a month or two, without any reference to the electors of Great Britain, the English Parliament might dissolve the union with Ireland or turn the United Kingdom into something like a Federal monarchy. The question, in fact, of the day is with many Englishmen rapidly becoming whether expiring Toryism may not, by alterations of the Constitution, be changed into Democratic Conservatism.

In another letter I may attempt to give some sort of answer to this inquiry. It is well, however, before considering how far any of the specific institutions of America can be transplanted to England, to weigh carefully a consideration which often apparently escapes the attention of those who propose reforms in our Constitution. The basis of the American polity is general acquiescence in the fundamental principle of democratic government, which, turn the matter as you will, is at bottom nothing more nor less than loyal submission to the will of the majority: the essence of a democracy is the rule of numbers. This rule may be, and, as every man of common sense must confess, often is, unenlightened, dull, and (occasionally) oppressive. But no one is really a democrat who does not hold that on the whole it is best in a given state or nation that the will of the majority should be supreme. Now any man who wishes to develop democratic conservatism must honestly acquiesce in democratic government, and it is open to question whether such acquiescence exists at present among educated Englishmen. Theorists who propose constitutional innovations appear often to aim, though unconsciously, at two different objects. At one moment they propose to check or counterbalance the power possessed under the present Constitution by the majority of the electors. This would certainly appear to be one, at least, of the ends proposed to themselves by the fanatics or enthusiasts for the representation of minorities. The end proposed may or may not be good, or may or may not be attainable. But it assuredly is an end which cannot be attained without violating the fundamental principle of democratic government. At another moment our innovators propose schemes—such, for example, as changes in the constitution of the House of Lords or as limitations on the absolute sovereignty of Parliament—of which the avowed aim is not to restrain the influence of the majority, but to insure that the will of the majority shall in reality be supreme. This end may or may not be good or attainable, but it is an end perfectly consistent with the fullest belief or acquiescence in the principles of popular government. Now one thing appears to be perfectly certain: the Constitution has become in form, at least, democratic. The majority of the electors are nominally, at any rate, sovereign. Of this power they will not suffer themselves to be deprived by the most artful combinations devised by the most ingenious of doctrinaires; or (if this be not admitted) it is at least certain that whoever attempts to diminish the power of the democracy must do so openly and by appealing to anti-democratic feelings, and a policy of which this is the object receives no countenance from the example, and can derive no benefit from the imitation, of America. It is, however, possible that the English electors may countenance changes of which the true and sole aim is to give full effect to the deliberate will of the people. In considering what changes are calculated to produce this result, instruction of all kinds may be derived from studying the Constitution of the United States. The theorist, however, or statesman who hopes to derive any practical benefit from the transference to England of the safeguards by which American statesmanship has surrounded the action of democratic government, must before all things honestly accept American belief in the rule of the majority. Anglomania has before this led Continental revolutionists to erect unstable and disastrous polities, which have displayed all the forms while omitting the essential spirit of the English Constitution. There is no small risk that Americomania may produce as untoward results in England. The authority of the President, the dignity of the Senate, the limited powers of the houses of Congress, the difficulties in the way of changing constitutional laws—these and other checks placed by the founders of the Union on the hasty action of the American people excite the admiration of conservative theorists. It is not so certain that they admire or share that respect for the popular voice which, for bad or for good, constitutes the essential spirit of American republicanism.

A. V. Dicey.

Correspondence.

REMOVAL OF INDIAN AGENTS.

To the Editor of The Nation:

Sir: I am a sincere admirer of the fearless and uncompromising justice with which President Cleveland has publicly righted certain open wrongs perpetrated upon the Indian. I welcomed the President's inaugural declaration in respect to the Indian, and still believe that it is the expression of his honest purpose and genuine conviction. It is therefore in no partisan or fault-finding spirit that I desire to call attention to what is, in my judgment, a most grave and far-reaching error in the Indian policy of the present Administration. I refer to the sweeping changes which have been and are being made in the Indian service—the great number

of them for purely political reasons. Apart from clerical and other changes in the Indian Office at Washington, about 60 per cent. of the entire number of Indian agents have been removed by the present Administration, and their places filled chiefly, if not wholly, by men of the opposite political party. If these changes meant no more than the minor changes in other branches of the civil service, however we might regret or attack the system which induced them, we could not, perhaps, properly make them a subject of especial complaint. But under our peculiar, and in one sense critical, relations with the Indian, these changes rest upon an entirely different footing. They are not merely an unfortunate incident of the "spoils system": they are a direct and cruel mistake in the management of Indian affairs—an obstacle placed by his guardian in the hard path of the Indian's advancement.

These removals stand alone among minor changes, because an efficient Indian agent cannot be replaced as easily as an efficient clerk or accountant. The post of agent is one of singular difficulty. To fill it successfully demands a rare combination of qualities. A good agent must have firmness, courage, patience, sympathy, justice, tact; a knowledge of farming, of accounts, of the especial needs and disposition of the particular Indians committed to him. On the agent may depend not merely the order and progress of his Indians, but often the very lives and property of the adjoining whites. The loss of a capable agent whose experience has peculiarly qualified him for his work, who has won the confidence of the Indians by his personal contact with them, is an unmixed calamity. To check the advance of a tribe in the critical stage of its progress, that some place-hunter may be provided for, is indefensible from every point of view.

Let me anticipate the possible objection that these removals of agents are made for sufficient cause by one word more. While I do not doubt that in some instances this may have been the case, the facts that have come directly to my notice have served to strengthen the reasonable probability that such a general change of agents was largely uncalled for. It is impossible for me here to give instances in detail, but I could cite cases, as that of Major Gasman at Crow Creek and Sioux Brulé agencies, Dakota, where a careful examination of the facts shows conclusively that the removal was for purely political reasons. In Major Gasman's case it is likely to be as unfortunate in its results as it was unnecessary. In another case the new superintendent of an Indian school (who has since filled the places under him with members of his immediate family) announces that he came through "the mutations of politics." Without assuming that President Cleveland is the direct cause of these changes, he is certainly responsible for them. He stands before the country pledged to reform the civil service, and to pursue a just and enlightened Indian policy; in his needless removals in the Indian service he has violated the spirit of his civil-service doctrines, and has sacrificed the good of the Indians to party spirit. This is not the treatment of the Indian that "the conscience of the American people demands." HENRY S. PANCOAST.

PHILADELPHIA.

LAND COMMISSIONER SPARKS.

TO THE EDITOR OF THE NATION:

SIR: Will you allow from the Northwest a word of praise for Land Commissioner Sparks? I do not undertake to defend or condemn his course, but I do wish to state that I am firmly convinced that any Land Commissioner who does his duty faithfully, or tries to do so, will raise the same howl that we hear against Commissioner Sparks. As I write, there are neighbors on every side of me owning Dakota lands obtained under the Preëmption Law, and that without having spent a month at any one time in Dakota. The usual method is to furnish funds to some "dead beat," who complies with the requirements of the law and then transfers the title to his patron.

There may be some innocent sufferers in Dakota at the present time, but it is hard to believe that bona-fide settlers are injured to any great extent by delay in issuing patents. The "dead beat" and his patron have doubtless raised the howl. Moreover, I have lived long enough among the honest, industrious farmers of the Northwest to know that, as a rule, they do not do the howling against a man who is trying to protect them. The people have ample reason to complain, not against Land Commissioner Sparks, but against the railway monopoly which both buys and carries our grain. This complaint becomes louder and louder every year. Let me commend this just cause to the papers and disinterested citizens of the Northwest who desire to protect the farmer. FARMER.

ROCHESTER, MINN., January 12, 1886.

AMERICAN "SOVEREIGNTY."

TO THE EDITOR OF THE NATION:

SIR: In a recent review of Dicey's 'Law of the English Constitution,' you allude to a speculative question, the location of sovereignty in the United States. Permit me to say with more emphasis, what you seem to hint, that, with us, there is no such thing as sovereignty. Waiving Austin's definition so far as he denies to it generally a legal limitation, and admitting that it may exist, as the term is used, even with such limitation, it is sufficient to say that a state or people are sovereign when they have no political superior, have full powers in respect to all subjects of governmental jurisdiction.

In our own country there is no such state, no such people. The United States as a body politic—that is, its aggregate people—have supreme jurisdiction as to certain subjects; as to others each State—that is, its several people—is above them. The States individually, that is, their several people, have supreme jurisdiction as to some subjects, while as to others the Federal state, that is, the aggregate people, is above them. These are legal facts of every-day cognizance. So, then, the Federal state and its people—that is, the aggregate people—and also each local State and its people, as to important subjects of governmental jurisdiction have their superior, and hence are not sovereign. If sovereignty ever existed, it has been divided, destroyed, no matter how; it no longer exists, it cannot exist with the irrevocable loss of its necessary powers.

But if this loss is not irrevocable, if either the aggregate people or the several peoples can change their relation, can assume or redistribute powers, then its sovereignty is not destroyed. A state which has endowed local subdivisions, as counties or cities, with political powers, does not thereby lose its sovereignty, for those powers may be resumed. But were it to part forever with jurisdiction over important classes of subjects, giving it to another body politic without power of recall, its sovereignty is as dead as though it were a conquered state. It may still be called supreme, but only *pro tanto*.

I am aware that a class of thinkers, assuming that sovereignty must exist somewhere in unity, locate it in the aggregate people of the several States, because, by their action, governmental powers may be redistributed or consolidated. I can see no difference between the aggregate people of the several States and the aggregate people of the United States; there is no aggregate people except as represented by the Federal authorities, and as so represented they have no such power—they can only initiate changes. The independent action of the people of each State can in no just sense be called the action of the aggregate people—it is not aggregate action of an aggregate body, but several actions of the several bodies.

An act of sovereignty must be sufficient of itself. If the aggregate people, as forming a body politic, a Federal state, could as such people so act as to change the distribution of powers, it might do to call them sovereign so far as sovereignty can exist among men; but it is absurd to say that the independent action of the people of each local State, or of an agreed portion of them, is the action of such aggregate people, although invited by them.

Every people—that is, every organized political society—must be represented by a governmental agency or there is no such people, no such society; and, whatever the mode of deciding a political question, it acts alone through such agency. But the theory supposes that the aggregate people of the several States act, not alone through the Federal agency, the only agency responsible to the Federal people, whether we call them people of the several States or of the United States, but also through the independent agency of the people of each State—that is, through agencies which do not represent them and over which they have no control.

I prefer to say that there can be no sovereignty in the Federal, the aggregate, people, and much less can it be predicated of the several peoples of each State, unless they have power at will to dissolve their Federal relations, which I deny. In my view, sovereignty, as defined by Mr. Austin and his followers, cannot exist among men; and, as defined above, it cannot exist in a Federal state like ours. P. B.

STATE UNIVERSITY, COLUMBIA, MO.

ONE EFFECT OF OUR PENSION SWINDLE.

TO THE EDITOR OF THE NATION:

SIR: A few weeks ago I received by mail the enclosed printed circular and four copies of the enclosed card, addressed to me, as an attorney-at-law. The pen mark was drawn through the word "quietly" on each card, when received, just as you see it. The underscoring in red ink is mine.

That such matter should be sent openly to lawyers throughout the country is a painful indication of the effect upon public morals of reckless pension laws. And that it should be supposed that it could go unrebuked, causes one to blush for his calling, or rather for some who follow it.

The gentlemen who vouch for John Ambler Smith's honesty and trustworthiness ought to know to what use their testimonials are put.

Very truly yours,

N. L. ROBINSON.

CANTON, N. Y., January 16, 1886.

[The card and circular referred to by our correspondent are those of the "Hon." John Ambler Smith (as he is designated in the testimonials appended to his circular), a Washington attorney and prosecutor of all sorts of claims. The amended sentence on the card originally read, "Desertion mark quietly removed." Among his latest sponsors are Senators Blackburn, Hoar, Angus Cameron, Logan, and Allison; and of earlier date Congressmen Kelley, Hawley, Robeson, Proctor Knott, Beck etc.—ED. NATION.]

AN INTERNATIONAL PARCELS POST.

To the Editor of The Nation:

Sir: It is announced that the German Director of Posts has invited our Government to send an officer of the Post-office Department to Germany, to study the advantages that would accrue to us by joining the International Parcels Post.

Those who have lived abroad appreciate the great convenience and advantage of the easy transmission of objects from one country to another. We have never been willing to recognize this, but have built a sort of wall between ourselves and Europe by refusing every facility of the sort. To get a small parcel from Europe one must pay, first, an absurdly heavy freight charge to the steamer company, then a remarkable bill to the agents on this side, items of storage and cartage that in proportion to the size and weight of the little parcel are utterly absurd. A $3.00 charge for "brokerage" follows, and then the duty. This last one expects to pay in any case, but would wish to avoid the others and the interminable delays.

Those who desire this reform should make their wishes heard, or, as abuses are always profitable to somebody, it will have but poor chances of being effected. L.

THE KEILEY BLUNDER.

To the Editor of The Nation:

Sir: The editorial article on "The Keiley Correspondence" in the *Nation* for December 17 is excellent so far as it goes, but it seems to me to leave untouched one very relevant point, which I note, however, without having seen the correspondence itself. I refer to the most important (and not less important because unalleged) reason why Austria could not receive Mr. Keiley. This reason was simply his previous rejection by Italy. The relations between these two Powers, whose frontiers are for so long a distance contiguous, are of a very strained character, notwithstanding the much-talked-of adhesion of Italy to the alliance of the two Emperors, and necessitate a constant exercise of the utmost diplomatic delicacy and tact. Nobody knows this better than the two Governments concerned; but, indeed, the fact is patent to every reader of current history, and ought to be well understood even in the State Department at Washington—our ever-blundering foreign office, into which, in general, only the crudest notions of foreign affairs appear to penetrate. On both sides of the Italo-Austrian border Irredentism still exists, and is continually breaking out in more or less violent eruptions despite the strong repressive measures of the authorities in Rome and Vienna. In the Italian cities the police do not yet succeed in preventing the scratching on the dead walls at night of anti-Austrian *sgraffiti* with the customary explanatory inscriptions, *Viva Oberdank* and *Abasso il colonello austriaco;* and only ten days ago, here in peaceful and moderate Florence, on the anniversary of Oberdank's execution (December 20), an effort to flood the streets and squares with a rabid Austrophobic manifesto was partially successful. As to the other side of the frontier, during some weeks spent the past summer in the Trentino, I heard of not a few arrests of enthusiastic *Italianissimi*, whose desire to sever their present allegiance to Austria had got the better of their prudence; while, at frequent intervals, the newspapers recount some new incident in the unceasing struggle between the Italian Common Council of Trieste and its Austrian superiors, or some new exhibition of Italian sentiment in the other Adriatic possessions of the empire.

Under these difficult circumstances the court of Vienna—unless it wishes to force a conflict with Italy—could assuredly not afford to receive as United States minister a man whose public utterances concerning Victor Emanuel and Italian unity had been so recently published in the journals of the Peninsula; for though the general good sense of the Italian press leads it to support the national Government in its efforts to restrain the inopportune and embarrassing Irredentist displays, yet it is not difficult to foresee that the reception of Mr. Keiley would have been treated by the soberest publicists as an utterly needless insult to their country. The consequences might, of course, have possibly been very serious to both the neighboring States. Count Kálnoky was certainly right in allowing this consideration to decide his action, although the dignity of the empire would not permit him to allege his real motive to a foreign Government. The Austrian Ministry would perhaps have done better to refrain from giving any reason whatever for the rejection of Mr. Keiley, resting its proceeding solely on the right inherent in every government to receive or to refuse to receive any particular diplomatic agent. On the other hand, no European foreign office would have been so obtuse as to ask for a reason, or so indelicate as to insist on the reception of a minister so evidently not a *persona grata*. In fact, no European Administration would have committed the original blunder of sending a man with such a history to Rome, and none but an American Administration would have made a bad matter infinitely worse by transferring the rejected Virginian to Vienna.

E.

Florence, December 30, 1885.

NATURALISM.

To the Editor of The Nation:

Sir: I see that Mr. Brander Matthews objects to my use of the word "naturalism." I care little about the word if the *thing* be understood, but I may say that I used the word because Mr. Stillman had done so. When he speaks of art having "become to some extent naturalistic if not yet realistic," it is evident that by naturalistic he does not mean "ultra-realistic," but rather something between idealistic and realistic, and I tried to show what, in my view, this something is. As far as I know, Ruskin and other English writers use the word in the same sense, and I think we may consider the *English* sense of the word "naturalism" as fixed. If, however, Mr. Matthews or any one else will suggest a better word, I shall be glad to accept it. For my part I should be content to use the simple one, "art."

Kenyon Cox.

New York, January 12, 1886.

THE NATIONAL MUSEUM.

To the Editor of The Nation:

Sir: In noticing Mr. Ernest Ingersoll's handbook to the National Museum you remark that there is no reference to room, case, or object numbers. As this same comment is often made by visitors, it may be well to say that the rapid accession of material makes it necessary to so frequently alter the arrangement of the various departments as to preclude—at least for the present—the possibility of locating any given object.

A specimen here to-day may be there to-morrow, and it would require a daily edition of a guide-book to keep pace with the changes. During the past year the material on exhibition has increased so much that it has been necessary to wholly or partially change the arrangement of every hall of the Museum.

Very respectfully, L.

Washington, D. C., January 17, 1886.

"AT ALL" AND "AT-ALL."

To the Editor of The Nation:

Sir: Will you allow me to call the attention of your correspondent "R. L." to a difference in meaning between "at all," pronounced as two words, and "at-all," pronounced as one?

To the question, "Did you shoot at all the targets?" the answer, "I did not shoot at all," implies that the respondent did shoot at some. The answer, "I did not shoot at-all," means that he took no part in the shooting. At least, that distinction would invariably be made in this part of the country.—I am, sir, etc., W. H. B.

Baltimore, January 15, 1886.

[We should suppose that the altered inflection would suffice to prevent ambiguity.—Ed. Nation.]

Notes.

The spring announcements of Ticknor & Co., Boston, are very numerous. The following are, we believe, new to these columns: 'The Life and Genius of Goethe,' lectures at the Concord School of Philosophy for 1885, edited by F. B. Sanborn and W. T. Harris; 'Poets and Problems' (Tennyson, Ruskin, and Browning), by Geo. Willis Cooke; 'A Stroll with Keats,' by Frances Clifford Brown, illustrated; 'Indian Summer,' 'Italian Poets,' and 'A Sea Change; or, Love's Stowaway,' a comic opera, by W. D. Howells; 'Songs and Ballads of the Old Plantations,' by "Uncle Remus"; 'Every-Day Religion' and 'Light on the Hidden Way,' by the Rev. Jas. Freeman Clarke; a uniform set, in four volumes, of the works of Mary Clemmer, together with a memorial of her ('An American Woman's Life and Work') by Edmund Hudson; 'The Sphinx's Children and Other People's,' by Rose Terry Cooke; 'The Prelate,' a story of the American colony and native society in Rome, by Isaac Henderson; 'Christian Symbols and Stories of the Saints,' by Clara Erskine Clement and Katherine E. Conway; 'The Olden-Time Series,' gleanings from old Boston and Salem newspapers, by Henry M. Brooks; 'Edge-Tools of Speech,' by Maturin M. Ballou; 'John Bodewin's Testimony,' by Mary Hallock Foote; 'A Romantic Young Lady,' by Robert Grant; 'Two College Girls,' by Helen Dawes Brown; and a new and enlarged Concordance to the Bible, by the Rev. J. B. R. Walker.

Prof. Rudolph Gneist's 'History of the English Constitution,' translated by Philip A. Ashworth, will be shortly published in this country by G. P. Putnam's Sons in two volumes.

The *North American* Publishing Co. have in preparation 'Reminiscences of Abraham Lincoln, by Distinguished Men of his Time,' collected and edited by Allen Thorndike Rice, editor of the *North American Review*. The book will be a portrait gallery, since the several contributors are figured as well as the subject of their reminiscences. It will appear in April.

A "Rainbow Series" of new novels by American and foreign authors is announced by Cassell & Co. The title refers to the tinted covers, and not to the color sensation suggested by the two novels first on the list—'A Crimson Stain,' by Annie Bradshaw, and 'Morgan's Horror,' by Geo. Manville Fenn.

Thomas Whittaker has nearly ready 'Authorship of the Four Gospels,' as viewed by Judge William Marvin from a lawyer's standpoint.

G. P. Putnam's Sons give their imprint for the American market to Leslie Stephen's 'Life of Henry Fawcett,' which we have recently reviewed at length. It is noticeable that an affection of the eyes, before the terrible accident which

destroyed them, makes the early portrait of Fawcett in this volume seem almost blinder than the very latest.

Henfrey's valuable 'Guide to the Study of English Coins from the Conquest to the Present Time,' which has been for some years out of print, has been republished in Bohn's Reference Library (Scribner & Welford). The original arrangement has not been altered, but the form of the volume is handier, the descriptions of the pieces have been revised, and an historical introduction prefixed by the editor, Mr. C. F. Keary, and the work will no doubt continue to be a standard authority for collectors.

Unwin's Christmas Annual (New York: Appletons), which prolongs the holidays on this side, is exceptionally attractive both from its list of contributors and the skill with which its editor, Mr. Henry Norman, has bound the stories together by lively and well-subordinated conversational passages. The scene is the deck of the *Batavia*, where the accident which gives a happy name to the collection—'The Broken Shaft'—has unlocked the lips of the story-tellers at the command of the "Eminent Tragedian," who, with his "Beatrice," will be readily recognized, to while away the time. Ghosts, which by some whimsicality of the imagination have a prescriptive right to be with us at the blessed season, notwithstanding Marcellus's belief, appear in several disguises, from the crude materialism of Mr. Crawford's blood-curdling and bone-breaking nightmare to the elf-like presence of the "Marjorie" whom Mr. Anstey has made the centre of a charming child's story. Mr. Stevenson, Mr. Pollock, and especially Mr. Archer contribute work which approaches French perfection in this literary form; Mr. Hopkins treats us to the old-fashioned British humor which seems so bumpkinish in comparison with the finer touch of these latter days; and lastly Mr. Norman winds up with a tale not inferior to those of the older hands, though we cannot help thinking that the very startling incident out of which it springs obscures the sweetness and perfect tone of the love-passages which are the better part of it.

The 'Standard Indexed Atlas' of the United States published in this city by A. A. Grant for business uses has an obvious advantage in its size, which is folio, over its predecessors. By simple typographical devices and by coloring, one distinguishes readily the counties of any given State; the towns as post-offices or not, and as money-order post-offices or not; the railroads, and the express line which has the privilege of each. The indexes are purposely made fuller than the maps, and contain much compact information as to population, banking facilities, place on the map, and accessibility by rail. Canada is not, as in some other business atlases, included in this one.

The twenty-ninth volume of *Harper's Weekly* reflects, as usual, the events which have most deeply interested our public, from the Sudan expedition to the Riel rebellion, from the first "Walküre" to the first "Mikado" performance, from the trial trip of the *Dolphin* to the races of the *Puritan* and *Genesta*, from the revision of the Old Testament to the revision of our National Administration. The array of portraits certainly does not diminish in numbers or importance, the rotation of office-holders (English and American) furnishing a great many, and the world's distinguished dead not a few besides. "Process" work is still but little relied upon except for facsimiles of pen-drawings, and to nothing like the extent to which foreign illustrated journals make use of it. One or two supplements in this volume have a single tint, but general color-printing is yet to be ventured upon by the publishers.

In *Harper's Bazar*, which has ended its eighteenth volume, the full-page or double-page cuts have less to do with current affairs, though the Mississippi floods and the New Orleans Exhibition are glanced at, and such a social event as the yacht race could not be overlooked, nor could the death of Grant. The portraits are generally of women, though Ranke and Shaftesbury are admitted. The pictorial facetiæ of the last page of the *Bazar* still show the extraordinary fondness of our women for humorous views of our colored fellow-citizens.

The latest Bulletin of the Library Company of Philadelphia has a very valuable appendix, "Regimental Histories," by George Maurice Abbot, being Part I. of Contributions toward a Bibliography of the Civil War in the United States. Pennsylvania, Massachusetts, and New York rank first in number of works (measured by pages occupied in the appendix), but Massachusetts by far leads all the rest in point of completeness. The 58th Massachusetts Infantry is the highest number here recorded, and there is something relating to Nos. 1, 2, 4–6, 9–13, 15–17, 19–21, 24, 25, 27, 29, 32–39, 41, 43–45, 49, 51, 52, 55, 58—say two-thirds of the whole. The list includes Federal and Confederate States. Most of the latter are very deficient in histories or memoirs, but Virginia makes a good showing.

We have received from the Secretary of the Grolier Club of this city its ornamental 'Transactions' for the first year and a half of its existence (January, 1884–July, 1885). It contains a brief sketch of Grolier, an account of the origin of the Club and its doings, lists of the objects shown at its exhibitions of etchings, of illuminated manuscripts, and of illustrations for books, and abstracts of the technical papers relating to the bookmaking arts read by various members. The publications of this Club have been notable for their beauty, and have been eagerly taken up. It is stated that books once belonging to Grolier's collection are to be found in the Astor Library and the library of Columbia College, as well as in private libraries in New York.

The Bewick Club, of Newcastle-on-Tyne, founded in 1876 as a sort of life school by the artists of that locality, has enlarged its scope with its new premises, which it entered into on November 4, 1885. We learn from a pamphlet containing the address delivered on that occasion by Dr. Robert Spence Watson, that the Club now aims to embrace in its organization all who take an interest in art, and to promote social intercourse and intellectual recreation "by artistic and musical conversazioni, by sketching excursions, and by classes for the study of the higher branches of art." These classes are open to both sexes.

The State of Virginia is having copies made of some hitherto unknown documents in the British Museum to which Dr. Edward Eggleston directed its attention. Such are the brief original draft of the 'History of the Dividing Line,' by William Byrd—the colonial classic—and fourteen documents of the highest importance relating to Bacon's Rebellion. The State is also, at Doctor Eggleston's suggestion, having copies made of some important papers, as yet very little known, in the Public Record Office. It is safe to say that the real history of Virginia in the seventeenth century has never been written. Many of the most valuable papers relating to colonial history are in private collections in England. They do not, we believe, come within the range of Mr. B. F. Stevens's explorations.

In 1854 Dr. J. G. Kohl, the well-known German geographer, was employed by the United States Government to prepare, for the purposes of the Coast Survey, a history of the discovery and exploration of the Pacific coast. He later undertook a similar task for the Gulf of Mexico and the Atlantic coast. These two memoirs, owing to official negligence or misunderstanding, have ever since remained in manuscript in the Coast Survey Office. Doctor Kohl always alleged that the Government did not keep faith with him in regard to their publication. The authorities have now bestirred themselves to the extent of having the historical portions of the memoirs published as an appendix to the Coast Survey report for 1884. In the light of more recent knowledge they are necessarily deficient. The later and better results of Doctor Kohl's researches as regards the Atlantic coast are set forth in his 'History of the Discovery of Maine,' published by the Maine Historical Society as the first volume of the second series of its Collections. A collection of hand copies of early maps relating to America, prepared by Doctor Kohl, is preserved in the State Department at Washington. A descriptive catalogue of these maps by Mr. Justin Winsor is in course of publication in the Harvard University Bulletin.

The Bressa Prize (12,000 francs) of the Turin Academy of Sciences has been conferred upon Professor Pasquale Villari, President of the Faculty of Philosophy and Philology in the Istituto di Studi Superiori of Florence, for his exhaustive biography of Machiavelli. The prize is given once in four years for great distinction either in science or letters. It was bestowed a few years back upon Darwin.

With No. 1 of its 37th volume that excellent weekly the *Revue Politique et Littéraire* of Paris takes on, in larger letters, the more convenient name, *Revue Bleue*, in harmony with the familiar color of its covers.

By a singular irony the followers of M. Le Play, whose panacea for the evils of modern society was the rehabilitation of the family, have had a family quarrel. The association which published the *Réforme Sociale* has dissolved, and one wing has gone off and founded the *Science Sociale*, "d'après la méthode de F. Le Play," as they state, wishing to retain for themselves the old trade-mark. Apparently, however, the weight of the movement as of the organization remains with those who were opposed to the dissolution; and it is announced that the Société d'Économie Sociale, with its Unions de la Paix Sociale, does not recognize the new organ, but will continue the *Réforme Sociale* under the simple title of *Bulletin* of the Society aforesaid. So far as our light goes, we are prepared to recommend the *Bulletin* as the true and lawful heir of its predecessor. It is a very earnest and valuable publication, and must have a widespread influence for good. The office of the Bulletin is at 174 Boulevard Saint-Germain.

Another useful French institution is the Paris Société Historique et Cercle Saint-Simon, which is housed at No. 2 rue St.-Simon. Its *Bulletin* is now in its third year. The second number contains, if we mistake not, an innovation in the shape of illustrations (very clever ones), accompanying a lecture on the Japanese Theatre by MM. Émile Guimet and Félix Régamey. Curious is the germ of the Western footlights—a candle at the end of a rod, managed by a person behind the wings, who thus illuminates the actor's face. The Club has been making an interesting experiment of listening to popular melodies drawn from all parts of France, expressly harmonized, and sung by various gentlemen and one lady, Mlle. Mercédès. This proved very successful, and was followed by a Mother Goose banquet (*Ma Mère l'Oye*).

Gerhard von Amyntor has a jeremiad in the *Magazin für die Literatur des In- und Auslandes* on the decline of popular interest in Germany in the products of native literary talent. Books, whether literary or scientific, which reach a circulation of 100,000 can, he says, be counted on the fingers without including them all. Only Bodenstedt's 'Mirza Schaffy' and Scheffel's 'Trompeter' have surpassed that number, while

other specially popular works, such as the romances of Ebers, Freytag's 'Ahnen,' the epic poems of Wolff, and Stinde's 'Familie Buchholz,' have, in spite of ingenious advertising, not reached a third of that number. At the same time, the markets are flooded with translations of foreign books, especially of the French school of naturalism. The writing of fiction is all done by women for women. The writer seriously suggests that native talent should be encouraged by boycotting foreign literature, even as the French boycott German music in their refusal to hear "Lohengrin." Perhaps a simpler method would be for German authors to study French simplicity of style, literary perspective, and the art of eliminating irrelevant facts and episodic padding.

By an error for which we cannot now account, we included Prof. Rudolph Gneist among the dead of 1885.

In the necrology of the present year we regret to record the name of Sheldon Amos, formerly Professor of Jurisprudence at University College, London, and author of 'A Systematic View of the Science of Jurisprudence,' 1872; 'The Science of Law,' 1874; and numerous other works, legal and political. In 1881 he went to Egypt in the legal service of the British Government, and became a regular correspondent of the *Nation* at Alexandria until the summer of 1884, in which year, having been appointed a judge of the new native Court of Appeal at Cairo, he took up his residence in that city.

—The resignation of Gen. John Eaton from the National Bureau of Education at Washington to assume the presidency of Marietta College, Ohio, excites widespread regret among teachers and not a little anxiety as to the future of the Bureau. While there has been no lack of criticism upon the work of the Bureau, no one has questioned the integrity, devotion, and general efficiency of the retiring Commissioner. He has gathered and distributed the statistics of education of all grades and kinds throughout the country in convenient form for handy reference, and incited and issued many monographs and special reports, often by eminent teachers outside his own corps of co-workers, afforded help to thousands of inquirers, indexed nearly 30,000 titles of books and pamphlets and important essays on educational topics, gathered a large library and educational museum, and has brought the influence of the department to bear in stimulating educational interest in many ways and sections of the country—all in a manner which has tended, as its best result, to develop in many minds besides his own a still higher ideal than has yet been realized of what the Bureau could and now ought to do. The difficulties to be contended with have been increasingly numerous and great. The building in which the Bureau is lodged is mean, overcrowded, and quite outgrown; the appropriations and the salaries inadequate, from that of the Commissioner down to the porter; and the long delay of all reports in the Government Printing Office (sometimes more than a year, we believe, even the fourteenth report for 1883-4 not being issued yet, though its successor is nearly ready) effectually takes the bloom of freshness from all its documents, and causes discontent, often directed against the Bureau itself, which is in no wise responsible for the long delays. All this is utterly unworthy the present high and advancing condition of education in our country, and the courage with which General Eaton has stuck to his post and always done his best in the face of such and other difficulties, cannot be too highly commended.

—Although the voice of provincial ignorance and philistinism is still heard in the land, glorifying our institutions as too perfect to learn from "abroad," all intelligent men, and especially all the bright young men, now entering the profession of teaching, realize well that nothing will now tend more to lift the whole tone of educational work to a higher level than a comprehensive survey of what has been done and is now doing in this field. We believe that the first and chief requisite of the next head of the Bureau—so long, at least, as it remains mainly a bureau of information as it is at present—should be a good knowledge of foreign tongues and of foreign educational institutions of high and low degree; and that this qualification should be second only to wide knowledge and keen sympathy with all that is good in our own land, and administrative and business tact. This will carry with it a pervading sense that the interests of the higher and lower education should be bound together in an organic unity as they are not in any portion of our land at present—a fact which constitutes one of the most deep-seated defects of our whole national system. The qualification in question will imply also, it may be hoped, that the incumbent is not a doctrinaire of any of the many types among us; nor a political worker, for in few positions are the qualities which enable men to make a strong push for a place less often associated with those which would insure real success in office. Judging from the petitions, letters, etc., now in circulation in the interests of various candidates, the Government is not likely to be embarrassed from lack of applicants from whom to select. Its decision will be a crucial test of its wisdom and discrimination. The importance of the office is out of all proportion to its rank and pay. We are full of the conviction that there are few directions in which the Department of the Interior could achieve a deeper and more lasting good than by giving special attention to the pending appointment, if not indeed to the whole function of the Bureau of Education. That this will be done we have reason to hope.

—Two recent publications of the Italian Ministry of Public Instruction are of interest to librarians. One is the first of a series bearing the general title of 'Indici e Cataloghi,' the special title of this volume being 'Pubblicazioni Periodiche, 1884.' It indicates, in a single alphabet, all the periodicals and proceedings and transactions of learned bodies regularly received by the 26 principal public libraries of Italy in 1884, with very full information in regard to each publication, such as the names of its editors, the number of volumes previously issued, the completeness or incompleteness of the set belonging to the library, etc. This alphabetical list (pp. 1-192) is followed by various indexes (pp. 194-301), including a subject-index, an index of academies and societies, and a topographical index, and these by several statistical tables (pp. 305-313). The total number of serial works cited is 1,890. Of these 39 are American, of which only one, the *American Journal of Mathematics* (Baltimore), reaches as many as 5 libraries. The preface to this well-arranged and well-printed volume makes appreciative mention of Poole's 'Index,' accompanied by the announcement that the National Library of Florence will soon begin the issue of a half-yearly analytical index of all current Italian periodicals.

—The other official work referred to is a 'Regolamento per le Biblioteche Pubbliche Governative,' being a code of regulations for all the Italian libraries under the control of the central Government, approved by royal decree October 28, 1885, and henceforth in force. The first title enumerates the Government libraries, which embrace 16 independent book collections (*biblioteche autonome*), and all libraries attached to museums, galleries, universities, special or technical and secondary schools. Comparatively few libraries of importance in Italy, other than private ones, are thus excluded from the list, the exceptions being some of the public collections belonging to municipalities or provinces. One section makes all special collections appertaining to the cabinets, laboratories and museums of a university parts of the general university library. Titles ii to vi relate respectively to "Internal Arrangement"—provisions for registers of accessions, shelf-lists, catalogues, reports and the like, making imperative the compilation of subject catalogues, and special indexes of incunabula and book rarities, music, maps and charts, engravings, autographs, miniatures, palimpsests, artistic bindings, etc., and the compilation of statistics in regard to the library's use; "Government and Acquisitions"—establishing a council of direction, with the chief librarian at its head, for each library; "Employees"—their classification and functions; "Appointments, Promotions, and Salaries"—all places to be filled, as heretofore, by competitive examination, the candidates having previously passed through special courses of study; "Public Use of the Libraries"—defining the privileges and obligations of readers. The volume closes (pp. 59-112) with models of the necessary blanks, and an ample index. It is interesting to note that among the blank forms is one enabling a reader in any library to obtain books from any other, so that a scholar sojourning or residing for instance at Florence may have access to any desired book contained in the public libraries of Palermo, Venice, or Milan. Though issued by the ministry, both these publications are in great part the work of that thoroughly able *bibliothecist*, if one may coin the word, Dr. Desiderio Chilovi, the lately appointed prefect of the Florentine National Library, as the old Magliabechiana-Palatina is now officially styled. Doctor Chilovi is rapidly introducing into Italy the novel bibliothecal methods which have already proved of such great public utility in the larger American book collections.

—Since Limborch in 1692 printed the book of sentences of the Inquisition of Toulouse from 1307 to 1323, no work has appeared which throws so much light on the character and operations of the Holy Office of the Middle Ages as the 'Practica Inquisitionis Heretice Pravitatis' of Bernard Gui (Guidonis), which has just seen the light under the auspices of Prof. Douais, of Toulouse (Paris: A. Picard, 1886). The writer or compiler of the 'Practica' was one of the most learned and indefatigable Dominicans of the age, a voluminous author on historical and controversial subjects, and himself the inquisitor whose register of sentences was published by Limborch. His work, intended for the guidance of less experienced colleagues, contains within its 350 quarto pages everything which an inquisitor of the time would seem to need—formulas, instructions, papal decrees, and masses of material, heaped together, it must be confessed, without much regard to scientific arrangement, but invaluable as illustrating the every-day labors of the dreaded tribunal. Such a work was worthy of the most conscientious editing. It is not likely to be again reprinted, and scholars had a right to ask that any one who undertook it should put it forth in the most perfect form and with all the aids which would render it complete and intelligible. Unfortunately, M. Douais has not thus understood his duty. He has contented himself with collating the two MSS. of Toulouse, without examining those in Paris and London, and ignorant that others exist in Italy. Consequently there are omissions much to be regretted. The task of editorship has been reduced to a minimum. A simple examination of the sources from whence Bernard Gui drew his materials would

have added greatly to the value of the work, and illustrations of the usages and processes described in its pages would have rendered intelligible much which can be comprehended only by the special student. Still, we doubt whether, with the best intentions, M. Douais could have added real value to the work. In his preface (p. viii) he cites a note in the MS. as showing that the 'Practica' was used as a guide and a manual by the Toulousain inquisitors, and at the bottom of the page prints the note, which says nothing of the kind. Such incredible carelessness reconciles us to the absence of further annotations, but does not diminish our regret that the task had not fallen into more competent hands.

—Mr. Walter Federau Nokes grapples for the third time with the difficulties of Corneillian verse in his translation of "Polyeuctus, the Christian Martyr" (London: Hachette; Boston: Schoenhof). As in his previous translations in blank verse of Corneille's "Cid" and "Horace," he invites direct comparison with the original by printing the French text on the opposite page. Few translations not intended for "ponies" could stand this test. Mr. Nokes has at least not shirked any of the hard places, as the *traduttori traditori* often do. Really his task was one which it required courage even to undertake after the pitiful efforts of Ozell and others in the last century "to do into English" some of the classic French plays. What can be more remote from an English or even a French-speaking person of to-day than the conventional turns of the Alexandrines which charmed the ears of the subjects of Louis XIV. and of Louis XV.? The *feux* and *flammes* and *vœux* and *chers objets* are as remote from us as the *rabats* and lace *canons* worn by the *grands seigneurs* who delighted to hear these expressions. This and other considerations, self-evident to any one familiar with French versification, make it hard to find fault with the rendering presented by Mr. Nokes. His blank verse is not easy reading. Average French scholars will be able to read the original with as much facility as his translation, full of all the conventional tricks of a certain kind of English blank verse. Archaic words and forced epithets are common, and he too often has recourse to such forms as *was't*, *'twas*, *'twere*. But the version is an honest attempt to be literal, to omit nothing. As such it will remain a curiosity not without merit.

SCHLIEMANN'S TIRYNS.—I.

Tiryns. The Prehistoric Palace of the Kings of Tiryns: The Results of the Latest Excavations. By Dr. Henry Schliemann, Hon. D.C.L., Oxon., etc. The Preface by Prof. F. Adler, and contributions by Dr. Wm. Dörpfeld. With 188 woodcuts, 24 plates in chromo-lithography, 1 map, and 4 plans. Charles Scribner's Sons. 1885. Pp. lxiv, 385.

Every traveller who enters the land of Argos at Nauplia first turns his steps to a low, oblong hill in the southeast corner of the plain, on which stands the wall of Tiryns, the most venerable of Cyclopean fortresses. Here, on the very threshold of the land, he finds walls on which Greeks of the age of Pericles once gazed in astonishment, marvelling at their massive architecture and their hoary antiquity; and he feels the presence of the heroic age of Greece. Even Homer, who would hardly have noticed a common fortification, celebrates Tiryns as "a city of walls." Pausanias, who visited Argolis about 170 A. D., says that the walls of Tiryns are as wonderful as the pyramids of Egypt, adding, in a tone of absurd exaggeration, that a yoke of mules could not move even the smallest of the unwrought stones of which they are built. The foundation of Tiryns, like that of its neighbor Mycenæ, is buried in fable. Tradition makes Tiryns the older of the two, the original Cyclopean fortress. About 1400 B. C. (according to the mythical chronology), two great-grandsons of the Egyptian Danaus, the twins Acrisius and Prœtus, appear as rival claimants of the land of Argos. According to the most common account, Prœtus is expelled by his brother, goes to Lycia, marries the King's daughter there, the famous Anteia or Sthenebœa, and returns with an armed force of Lycians, who establish him at Tiryns, while Acrisius rules at Argos. Prœtus also brought from Lycia, according to Strabo, seven wonderful builders, the Cyclopes, who built the walls of Tiryns for him, and afterward those of Mycenæ for Perseus, the grandson of Acrisius. To this prosaic level had the divine Cyclopes descended from the Titanic height on which they stand in Hesiod, as children of Heaven and Earth! Tiryns was part of the inheritance of Amphitryon, the earthly father of Heracles; but before this hero's birth Amphitryon and Alcmene had withdrawn into exile at Thebes. Heracles himself came to Tiryns, by command of the Delphic oracle, to abide there twelve years in the service of his kinsman Eurystheus, who then reigned at Mycenæ, and to perform the famous labors for which he was to be made an immortal. One account, however, makes Heracles a native of Tiryns.

The glory of Tiryns, like that of Mycenæ, lies, therefore, in the distant mythical past. We know it chiefly as the home of divine heroes, and rarely indeed do we hear of a mere man walking its streets. Both of these famous cities emerge into the light of history only to disappear from our sight. With the Dorian invasion of Peloponnesus all pretensions of either to independent sovereignty must have ended. The Dorian kings of the Temenid dynasty made Argos their seat of government, and after their accession we find hardly any mention of either Tiryns or Mycenæ until the Persian wars and the subsequent destruction of both cities by Argos. The question whether the real conquest of these ancient cities by Argos took place after the Persian wars or many centuries earlier (see 'Tiryns,' pp. 35–46), becomes unimportant when we think how little of the former glory of either could have remained, under any circumstances, to be extinguished at this later period. We can easily believe that they existed until 468 B. C. as small towns, subject to Argos, but occasionally provoking her by their independent pride; and we are compelled to believe that they sent troops to Platæa in 479 B. C., when we read their names still legibly inscribed on the bronze serpent-coil in the Hippodrome of Constantinople, which was once erected at Delphi to commemorate the great victory. At all events, both cities disappear from history after 468 B. C., and we have the testimony of Pausanias that six centuries later Tiryns was, like Babylon, "nothing but a wall."

After the brilliant success which crowned Dr. Schliemann's labors at Mycenæ, it was not to be expected that he would leave the hill of Tiryns long unexplored. The deep trench which he dug in 1876 into the heart of the upper citadel entered an open court in which there were fortunately no walls preserved; otherwise, serious damage might have been done. In 1884 and 1885 Dr. Schliemann undertook the exploration of the upper citadel of Tiryns, with the constant help of Dr. William Dörpfeld, whose aid in the latest excavations at Troy is so conspicuous in 'Troja.' The results are given in the volume before us. Dr. Schliemann has written chapters i.—iv. (pp. 1—176), giving an account of the excavations of 1884, the topography and history of Tiryns, and an elaborate description (with 111 illustrations) of the objects of terracotta, stone, etc., found in the ruins. Dr. Dörpfeld has written chapter v., describing the walls and buildings so far as they were explored in 1884; and nearly the whole of chapter vi., which describes the excavations of 1885, and supplements and corrects the accounts of chapter v. in many important particulars. A preface (pp. v.—liii.) has been contributed by Professor F. Adler, of Berlin, containing interesting discussions of many architectural questions suggested by the buildings of Mycenæ, Tiryns, and Hissarlik.

The excavations of 1884 were confined chiefly to the space within the walls of the upper citadel, and disclosed little regarding the great Cyclopean fortress itself. But the next year's work dealt chiefly with the outer walls, and made some unexpected additions to our knowledge of these famous structures. By a thorough removal of débris from the outside the wall of the upper citadel was laid bare to its foundations. A comparison of the large plan made in 1885 (No. 125, opposite p. 309) with the outline of the wall given in Steffen's *Karten von Mykenai* (1884) shows many angles and irregularities which had not been suspected before. The first excavations showed that the supposed main entrance at the southeast corner, through which almost every traveller now enters the citadel by a broad, easy road over the buried wall, was really no entrance at all, there being no break whatever in the line of the outside wall at this corner. There was only one carriageway leading to the upper citadel. This ascended gradually from the north along the outside of the eastern wall, then passed through the wall to the inside just south of the great tower, and ascended again between the outer wall and a strong inner wall to the great open court in the southeast corner of the citadel. The chief entrance for people on foot led from the strange semicircular projection of the western wall, through which a little gate opened upon a long flight of steps, of which 65 still remain, leading to the north end of the upper citadel. At the southwest corner of the wall stands a tower, about 63 feet long and 27 feet wide, resting on a natural projection of the rock. This contains two rooms without doors, separated by a solid wall, which Dörpfeld supposes to have been cisterns. A similar cistern is found at the southeast corner.

Every visitor at Tiryns enters with astonishment and some anxiety the strange gallery which leads directly into the eastern wall from the south. This covered passage has a sharp-pointed roof, made by the convergence of the upper courses of horizontal stones, which gives the appearance of an arch. Six passages, lower than the main gallery, but with similar pointed roofs, now lead from this directly through the eastern wall to the outside of the fortress. This strange gallery and its side passages have been variously explained as storehouses, stables, armories, chambers of the mad daughters of Prœtus, and lastly, by Steffen, as a sort of casemate with covered passages, through which defenders could step out on an outer platform to repel assailants. This last theory is accepted by Dörpfeld as satisfactory in chapter v. In fact, this gallery and two similar covered passages in the southern wall, parallel but at different heights, were the chief support of the theory that in such forts "a vertical lower wall is first built on the rock, and over it there is a vertical upper wall, starting about 6.50 m. behind the former" (p. 182); on the broad level surface of the projecting lower wall the doors of these vaulted passages in the upper wall were supposed to open directly. This manner of construction, which would seem more appropriate to a modern winter health-resort than to the home of Heracles, is shown to be chimerical by the exploration of the hitherto obstructed passages in the southern wall. Here an upper gallery was

found to be connected by steps with a parallel lower passage, closely resembling that in the eastern wall, having five pointed doors, which it was supposed would open on an uncovered platform above the lower wall. But on clearing these doors of rubbish, they were found to open into "five separate rooms, all of which were once vaulted with colossal stones in ogival form" (p. 319). Inspired by this unexpected discovery, the explorers immediately examined the passages leading from the eastern gallery; and on removing the rubbish it was proved beyond a doubt that these originally led into six closed chambers like the others, and that the whole casemate theory of Steffen was untenable. In figure 132 (p. 334) an inner view of the eastern gallery is given, showing plainly a piece of the wall which separated the first from the second chamber. In figure 129 (p. 324) we see the ground plan of a piece of the outer wall of Byrsa, the citadel of Carthage, in which there is a gallery with side passages leading to closed chambers in arrangement and size very similar to those of Tiryns. Appian is quoted for the statement that in the hollow covered rooms inside of the walls of Carthage there were stables for 300 elephants and more than 4,000 horses, besides quarters for 20,000 infantry and 4,000 cavalry (p. 324). Dörpfeld decides that the chambers at Tiryns were storerooms. If they were lighted and ventilated, they may have been stables, or even soldiers' quarters in time of war, like those at Carthage. As most of the western wall of the upper citadel has been swept away by a landslide, we can never know whether it contained similar galleries and chambers; but we may now fairly presume that this method of building was widely used in Cyclopean walls.

The work of 1885 at Tiryns has disclosed one fact which strikes at the foundation of our previous knowledge of Cyclopean walls. It has always been believed, and perhaps it will always be believed by some, that the outer walls of Tiryns and Mycenæ were built without mortar or cement of any kind, the huge blocks of stone being kept in place by their own weight. This is twice stated by Dörpfeld in chapter v. (pp. 178, 254) as an undoubted fact. But after laying bare the walls to their foundations in 1885 he makes this astounding statement (p. 318):

"The last excavations have proved that nearly *all the walls*, the outer citadel walls as well as the inner walls of the palace, *were built with clay mortar*. If the portions of the castle wall which were hitherto visible do not show any mortar, but only small stones in the joints between the large blocks, it is the natural consequence of the rain which during thousands of years has struck the wall and washed out the mortar. . . . Almost throughout, wherever we have laid bare pieces of wall which for many centuries had been covered with débris, the mortar within the joints still showed itself well preserved."

The most interesting and the most important result of Dr. Schliemann's excavations at Tiryns is the discovery of the almost complete foundation walls of a large palace of great antiquity, which astonishes us by its many points of agreement with Homeric palaces. Dörpfeld says (p. 178): "In the upper citadel, almost the entire palace, with its gateways, courts, great rooms and chambers, can be distinctly recognized. Most of the walls are still standing, ½ to 1 m. in height; numerous bases of pillars are still in their place, and in the doorways still lie the huge stone door-sills." We will give a brief account of the most important parts of this building, postponing for the present the discussion of its age. We have already mentioned the great roadway on the eastern side, which leads to the open court in the southeast corner of the citadel. In its ascent southward, about sixty feet from its passage through the great outer wall, it passes through a gateway, of which the threshold and two immense door-posts of stone still remain. This gate corresponds, in measurement and position, in many points to the Lions' Gate of Mycenæ, the clear width of the passage (2.86 metres) being precisely the same in both. The double doors, which were of wood, were fastened on the inside by a round bar, for which apertures are found in the upright posts, that on the eastern side allowing the bar to be pushed into the great outer wall. About 110 feet from this gate the road enters the southeast court, the eastern side of which consisted of a portico with columns, directly above the covered gallery already described. Opposite this portico, on the west side of the court, was the chief propylæum or gateway of the palace. This structure, in which we see the Homeric *prothyron*, and also the elements of the Propylæa of the Acropolis of Athens, enclosed a space about 38 feet square, divided in the middle by a wall, in which was the gateway itself with its folding doors. It had two porticoes or vestibules, each supported by two columns between two antæ. The stone bases of all the four columns and of three of the antæ remain in position; but the columns and the antæ themselves, being of wood, were probably burnt when the palace was destroyed, and there is nothing to show the form of either. One portico opened on the court just mentioned, the other on the larger court into which the gateway led, which was evidently the general courtyard of the palace. Little or nothing remains of the ancient buildings on the south and west of this court, and nearly all of the west side has been swept away by the land slide which destroyed most of the outer wall at this point. In the northeast corner is the western portico of the great propylæum just described, and about the middle of the north side is the southern portico of a smaller propylæum, similar in structure to the other, and enclosing a space about 27 feet square, leading to the principal inner court or *aule*. In the palaces described in the 'Odyssey' there is no mention of any outer court with its larger gateway, such as we find at Tiryns, and it would seem that the visitor comes directly to the gateway of the inner court, corresponding to this second *prothyron* of Tiryns. Passing through the outer portico and the gate in the middle wall, we stand in the inner portico within the central court, upon which opened the great hall of the palace. Here stood Athena in the 'Odyssey' (i, 103), "in the *prothyra* of Ulysses, on the threshold of the *aule*," and saw the suitors playing at draughts on the other side of the court, before the palace doors. On the east, south, and west sides, this court was surrounded by porticoes (*aithousai*) with columns. Half of the south side was occupied by the portico of the gateway, with its two columns and their antæ standing in line with the two columns of the portico which filled the other half of this side. The gate was therefore strictly "the gate of the *aithousa*," as well as "the gate of the *aule*," and it is called by both names in the 'Odyssey.' The oft-repeated verse of the 'Odyssey' describing carriages driving "out of the *prothyron* and the resounding *aithousa*" has now a new significance, when we see that the portico of the gateway was a part of the portico of the court. On the right of the gateway, as we enter the court, still stand the massive foundations of a square altar (measuring 10½ by 8½ feet).

The greater part of the north side of the court is occupied by the doorway of the *megaron*, or great hall of the palace, whose stately vestibule, about 31½ feet broad and 16 feet deep (inside), is constructed like the porticoes of the two gateways, with two columns between two antæ, and is raised by two steps above the level of the court. An excellent view of the southwest corner of this vestibule, as it now appears, showing the foundations of the anta (with five dowel-holes to hold the woodwork), the round base of the western column, and the two steps, is given on page 211. This portico, which was called the "*aithousa* of the palace," or simply "*aithousa*," was the colonnade of an anteroom of about the same size and shape, called the *prodomos*. Between the two rooms were three pairs of folding doors, hung on four door-posts, which were deep enough to allow the doors to open flat against them without swinging into the anteroom, and yet so narrow as hardly to obstruct the passage. From the antercom a door 6½ feet broad opens into the *megaron* itself, and a small side-door leads to the rooms on the west. This anteroom, with its portico, was the common sleeping place for guests in the Homeric palace. Here Helen orders beds to be prepared for Telemachus and Nestor's son, when they visited the palace of Menelaus at Sparta. As the two rooms were so closely connected when the six doors were open, and perhaps were not always separated at all, it is not surprising that, when Helen orders the beds to be made "under the *aithousa*," the young princes are said to sleep "in the *prodomos* of the palace" ('Odyssey,' iv, 297, 302). Moreover, as this *aithousa* was distinguished chiefly by its stateliness from the portico of the gateway on the opposite side of the court, it is natural that it should sometimes itself be called a *prothyron* (as in 'Odyssey,' xviii, 101).

BUNYAN.

John Bunyan. His Life, Times, and Work. By John Brown, Minister of the Church at Bunyan Meeting, Bedford. With illustrations by Edward Whymper. Houghton, Mifflin & Co. 1885.

An incumbency of more than twenty years in Bunyan's pulpit (if the term be not too high for the simple platform of early nonconformist faith) has given the author of this volume a special interest in his subject and ease of access to its materials; and in his treatment he exhibits the research, the closeness of examination, and wariness of inference which denote a trained as well as a scholarly mind. The work, not unlike Masson's 'Milton' in plan, though much less heavily weighted, is the history of a life, of a church, and of a persecution, and in each of its phases strongly illustrates the social condition of the people in the English provincial towns, of which Bedford was an example, during the seventeenth century. In view of the many lives of Bunyan, it seems strange that there should be anything left to glean, more particularly as he interspersed a considerable portion of autobiography in his own published writings; but nearly all of these, as has commonly been the case with the English worthies, have been composed at second-hand from a few old and unsifted authorities. Even Froude, whose narrative is the most capable, will have to learn how unsafe it is to write out of other men's books; for, by the side of this sure-footed investigation, his own easy-going biography seems ludicrously wrong both in its allegations and its tone. An author, however, who has compared the making of histories to the building of card-castles, will not be surprised at the demolition of one of his own structures. It would be tedious to follow the correction of facts from point to point in Minister Brown's narrative, when one can sum it up by allowing at once that this is the first comprehensive and accurate life of Bunyan; but it is of interest to note the very careful proof with which the author sustains Macaulay's assumption that Bunyan served with the Roundheads, instead of the Cavaliers as Froude will have it, and the success with which he disentangles the claims of the county and

town prisons to the honors of the incarceration, and the quiet truthfulness with which he restores the sober coloring and lively detail to the scenes of the arrest, trial, and confinement of Bunyan, which Froude endeavored to diminish and make pale by a skilful use of political perspective and theological distance.

Mr. Brown has been the first to go to the manuscript storehouses, many of which have only lately been made accessible; and from sources opened by the Royal Commission on Historical Manuscripts, and from the records of the Lambeth Library, the Bedford archdeaconry, and the archives of the corporation, together with the hitherto unpublished entries of his own church, he has reconstructed the religious state of the poor people of the Lincoln diocese in Bunyan's time, and brought very near to us the look of the lowly life which was the original soil of English dissent and the field of the tinker-preacher's labors. In reading these terse extracts from the old documents—"short and simple annals of the poor," truly—of prayers in the barn and fines in the courthouse, of levies on workmen's tools and old women's chattels, of these families of "the meanest sort," as the Bishop's schedule calls them, whose petty share of poverty was confiscated for the security of a Stuart throne and an Anglican prayer-book—in reading of these things, a chapter of the history of the English people comes out which has been too closely written over with the wit and frolic of Charles's court; and the query as to what became of the Commonwealth when Cromwell died does not seem so wholly unanswerable as the silence of standard history on the point would indicate.

The central figure of this work, however, is John Bunyan, and to him, who seems to have troubled himself little with state affairs, our space must be devoted. The word genius is often used to conceal a puzzle which the critic, through defects of analytic power or sympathetic insight, is unable to solve; but perhaps this short and easy method was never more feebly resorted to than when a writer, with a strong prejudice in favor of sweetness and light, described Bunyan as a "Philistine of genius." In this designation there is much darkness and some acerbity. The wonderful thing about this man was not so much his gifts as the strange combination of them. There must be, of course, something extraordinary in any common man who becomes a leader in the higher life of the race. The history of the Church, however, is starred with the names of the ignorant and the humble who, since the fishermen were called from their nets by Galilee, have been chosen to be shepherds of the flock and evangelists of the faith. Bunyan was visited with the experience of Protestant Christendom, of which the successive terms are an outraged conscience, an offended God, and a miraculous pardon, and when he came to his peace he spread the glad news, acceptably to the pious and convincingly to the impenitent; but tens of thousands in Christian lands have passed through that same strait gate, and hundreds of them have discovered that they possessed the gift of tongues. Had Bunyan done no more his sermons would have turned to yellow dust long ago, and his memory would be treasured only by a sect, for, eloquent as he was, he was not one of the missionaries who are world-famous. He wrote a book; and it turned out that this book of an uneducated man was a great literary classic. Had he written an epic it would have seemed less marvellous, because there is a popular superstition that nature makes poets, but in prose does not enter into competition with the common school. Bunyan wrote verses, it is true, and the man who set the delectable mountains on the rim of earth had the magical sight; but just as surely his doggerel shows that he had not the singing voice. He was a master of prose, and wrote a book that neighbors the Bible in our religious homes. Whence he derived his skill, how he built his book, are questions which this biography does not explicitly answer, but some help toward an understanding of his exceptional success is given, and the truth that is brought out is, *mutatis mutandis*, of a wide application in literary methods.

Two things are, of course, indispensable to a boy of genius—imagination and the gift of expression. Now Bunyan was fond of representing himself as very wicked in youth; and so he was, from his own point of view. The record of his deeds, however, would not make an exciting Penny Dreadful. The worst he can say for himself is, that he lied and swore, without malice or injury to others, but because he had a talent for tales and oaths. It is not trifling to remark that his powers of invention and forcible Saxon speech appear to have found their first channel in this sort of mental activity. The possible openings for the development of genius in the tinker's cottage at Bedford were few. It is plain that the mind of the young man was one of intense life, and, in the lack of guidance and knowledge, wandered at random or turned to feed upon itself. The only intellectual or moral ideas that came to him were conveyed from the Bible, mostly through the medium of the parish church in the years of the Puritan ascendency. The commonplace that the Bible affords a good education, especially on the imaginative and moral sides, is true, and the theology that attaches to it has developed strong intellects; it was, in the end, the total book-culture of Bunyan—all that he knew of that vast and various world. But in the primary classes it is not a simple text-book of life, especially for a boy of genius who is all sense, all spirit. Bunyan in after years did not regret his first lessons; he preached that children should be taught the terrors of the law. Certainly his own mind laid hold of the easily apprehended images of threatened vengeance, and was filled with vague alarm and driven to a torturing scrutiny of his own spirit. The experience of conversion repeats in the individual the religious history of the race in the same order in which it is developed in the evolution of Biblical thought itself, and Bunyan's case was not substantially different from that of others, Puritan or Catholic, to whom there is no Calvary without a Sinai. The peculiarity lay in the soil into which this fiery seed was sown. His imagination ceased its childish fabling and became visionary; he saw, as the eye sometimes will, his mind-pictures, and this the more readily because his uneducated mind was accustomed to move through concrete ideas, and hence would be characterized by a high visualizing power. That this was a marked trait of his mental habit is shown by the fact, to which Froude calls attention, that all his stories about himself are localized in a distinctly remembered place.

At this stage his mind approached the danger-line of religious madness: his descriptions of his moods, of his despairs, and his struggles with fancies whose importance to his intellectual life arose from the fewness of his ideas and the limited field of their play, show that he had no power over his thoughts, that he had not learned to use his will in thinking. This objectivity of his religious experience and his powerlessness before it, which have been recorded of other intense lives likewise, gave him a strong sense of the reality of spiritual things; and when he at last had laid his doubts and come into the calm, he kept this conviction to such a degree that earthly matters, even when religion was largely interested in politics, seemed of no consequence: this world was the dream, and the next world the truth. To our days the account of this conversion seems to indicate a lack of sanity, a spirit touched with the fever that ends in fanaticism; but we may be sure that to his hearers there was nothing incredible in it, nothing that could not be paralleled out of what they had known in themselves or heard from their neighbors. So, early in life, the plot of his career was brought to its crisis, and the remainder of his years followed from it as naturally as the last acts of "Lear" from the first. In this faith in the reality of eternal things his mind reached its growth, and afterward knew no change.

But with this sure hold on the spirit and its high concerns there went a perfect realism. Bunyan was the opposite of a mystic. His common sense in his sermons of advice is extraordinarily close-packed and hard, and exhibits acute observation of the ways of human nature in practical life. He wrote once what was almost a novel, a history of one Mr. Badman, which is probably truer to contemporary life than the adventures of Jonathan Wild in the next century. If he did not weaken his eyesight over books, he sharpened it on men and women. All his volumes abound with anecdotes and incidents which he had evidently seen in the town streets or by the roadside, and with phrases and proverbial sayings close to the soil. Not the least agreeable of the signs of this realism, this sight for the bare fact in sense alone, are those descriptions of the country, of the birds, and flowers, and fields, and the simple cheerfulness of them to the country-born boy, which strew his pages from cover to cover. So, when he came to write his great book, he united in a perfectly natural way, and without forethought, the reality of a journey on earth with that of the search for heaven. The success with which, in a literary work, truth is fused with fact, is a measure of genius. It is, perhaps, more striking in this case because the work is an allegory, which is usually so drearily pale a kind of composition. The characters and action of the 'Pilgrim's Progress,' on the contrary, are a transcript of life, so vivid that it cannot wear out. It is not more realistic, however, than other portions of Bunyan's voluminous writings, in which one may get an idea of English provincial character of high historical value and human interest. How close, how truthful to his surroundings he was as a literary workman, is brought home with great force, though perhaps unconsciously, by the view which this biography gives of Bedford things and people.

After all, one is almost inclined to say that no man ever owed more to his limitations. Within his bounds, Bunyan used all his spiritual and earthly experience, and, aided by a native gift of imagination and of fluency in the people's speech, blended them, and poured the full fountain of his life through his books. Had his youth included other powerful elements of emotion and knowledge besides his conversion, had theology, or learning, or wider duties removed him somewhat more from the life of his neighbors and friends and the folk of the diocese, of which he was jestingly called the bishop, he might have found so complete self-expression a more difficult task. As it was, he told all he had to tell—told the highest truth in the commonest words and made it current. It is curious to observe that he exhibits no consciousness that he is writing a great work; he speaks of a rush of thought and fancy, and an attractiveness in the subject, but he does not seem to think that he is doing more than adding another to the two-score publications he has already sent out. It is noticeable, too, that he did not meditate upon it for years beforehand, nor spend more than a few months in its composition. Some passages were added at a later time, but as a whole it was a spontaneous and rapid composition. The reason is that he was ripe for it. Without knowing it, he had been working up to this crowning book, both

thought, treatment, and style, through many years of sincere and straightforward, face-to-face conversation with men and women whom he was endeavoring to guide in the way which he had travelled. It appears now that the 'Pilgrim's Progress' was in fact begun during the third short imprisonment of Bunyan, passed in the town jail, the place which tradition has always pointed out as the allegoric "Den," and was finished shortly after his release. It has been called the last book that was written without the fear of the reviewer; it is of more consequence that it is one of the few works that have been composed without ambition.

Bunyan's memory is singularly agreeable. Personally he was free from the defects of assumption, dogmatism, and spiritual pride which entered largely into the religious character of his epoch, and his sensitive conscience seems to have kept him humble after he had won a name. The two great elements of his work—the homely quality and the Christian quality—were deep-seated in his nature, and give him charm. In an age of sectaries he was not a narrow bigot, and did not stickle for meaningless things; and in a time of political strife growing out of religious differences, and though himself a sufferer by twelve years' imprisonment in early manhood, he did not confuse heaven with any fantastic monarchy or commonwealth of Christ in London, nor show any rancor or revengeful spirit as a subject. It is worth remembering that out of Puritanism, which is regarded as a narrow creed and life, came the only book since the Reformation which has been acceptable to the whole of Christendom, and is still regarded as the substantial truth of the Christian life in all the churches that preach it under any creed of orthodoxy. The life of the man who could evolve such a story must have been very simply typical of the Christian life itself. "A Philistine of genius"—is there no light nor sweetness in this?

RECENT FRENCH BOOKS.

THREE interesting studies upon the Russian writers, Gogol, Turgeneff, and Leo Tolstoi, have been recently published by M. Ernest Dupuy, under the title, 'Les grands Maîtres de la littérature russe au dix-neuvième siècle' (Paris: Lecène et Oudin; Boston: Schoenhof). The volume has for a subtitle, 'Les Prosateurs,' which implies a promise for the future of further essays in the same direction. The moment is propitious for such a publication. The remarkable series of articles upon contemporary Russian writers published in the *Revue des Deux Mondes* by the Vicomte Eugène-Melchior de Vogüé, during the last few years, has been almost a revelation to the world of the literary wealth of Russia. Turgeneff, indeed, had been long known, if not very widely read outside of a small circle of appreciative admirers, and there were still vague echoes of the admiration with which Mérimée had written of Pushkin and of Gogol many years ago. But the articles of M. de Vogüé aroused a new interest, not only in the earlier writers, who were almost forgotten, but even in Turgeneff himself, whose death was the occasion of the publication of the first of the series, and in Tolstoi, who was almost unknown, even by name, outside of Russia. A little more than a year ago a translation into French of 'War and Peace,' one of the two great works of Tolstoi, was republished in Paris from the St. Petersburg edition of ten years before. This publication was preceded, only a few days earlier, by M. de Vogüé's article in the *Revue des Deux Mondes* upon Count Leo Tolstoi. The story of the enthusiasm with which the new writer was received does not need to be told here. It is certain that M. de Vogüé's admirable article upon Tolstoi had much to do with the attention given to 'La Guerre et la Paix' upon its first appearance, for no other translation of a Russian story, though several had appeared in Paris since the days of Mérimée, had ever made any impression upon the world. Since then, however, every new translation has been widely read, and criticised in a sympathetic and generally appreciative spirit by the literary authorities in Parisian journalism, and (a still more remarkable evidence of the depth of the impression produced) many of the most promising of the younger writers especially show unmistakable signs of the influence exercised over them by the charm of the newly discovered Russian literature.

The studies of M. Ernest Dupuy upon the three great masters of the literature of modern Russia are both interesting and valuable even beside those of M. de Vogüé. In some respects M. Dupuy seems to have a finer sense of the more imaginative portions of their works, to be better able to disengage himself from the bonds of those literary opinions which have been strengthening for centuries in western Europe, and to look upon the new literature with more unprejudiced eyes than any of his predecessors. This is especially noticeable in the chapters upon Gogol, and in those portions of his work relating to what has been called the mysticism of Tolstoi. The evanescent charm of Gogol's poetic rendering of the legends of his Cossack ancestors especially is conveyed by M. Dupuy's necessarily slight sketches with a delicate insight that no other writer has shown. What he has to say about the moral and religious teachings of Tolstoi is more nearly just than anything that has appeared from the most eminent of the critics who have treated the subject. 'Ma Religion' is spoken of with the respect that it deserves, and it is summarized almost without prejudice. Probably no one to whom its central doctrine of non-resistance was entirely unfamiliar could have written more moderately. The work is sufficiently comprehensive to give to its readers a very fair appreciation of the imaginative literature of modern Russia, and at the same time short and clear enough not to repel them by a too exhaustive study of the authors chosen. M. Dupuy is as yet but little known, but this work is certainly a very promising beginning in literary criticism for a writer who, as M. Louis Léger, the Slavic scholar, says in the *Revue Critique*, has taken the pains to learn Russian in order to read in the original the authors who have delighted him.

The enthusiasm with which 'La Guerre et la Paix' was everywhere received was renewed toward the end of last summer by the publication in Paris of the long-expected translation of the second of Tolstoi's great works, 'Anna Karénine' (Paris: Hachette; New York: Christern). This had been originally published in a Russian periodical, apparently abandoned by the author in the midst of the story, and, after an interval of months, resumed and finally completed only in 1877. 'Anna Karénine' is at once the crown and the conclusion of the literary life of its author. Since its publication Tolstoi has abandoned his art for religion, as earlier in life he abandoned the world of St. Petersburg and Moscow and all the literary and social habits of his previous existence to retire to his estate in the country, where he has now lived for more than twenty years, writing, educating his children, ameliorating the condition of the peasants around him in every way, and passing through all the mental and moral vicissitudes which he has pictured so vividly in Prince Andrew Bolkonsky, in Peter Besoukhoff, and especially in Constantine Leviue. 'Anna Karénine' represents the feelings and opinions of Tolstoi during this later period of his life, as 'War and Peace' represents those of his military service during the Crimean war and of the years immediately following it, and as his first story, 'The Cossacks,' which was translated into English a few years ago by Mr. Eugene Schuyler, represents those of the earliest years of his manhood in the Caucasus. While all these books are written in a singularly impersonal manner, the impression made by the writer's individuality gradually deepens, leaving the reader in the end under the charm of a nobility and grandeur in the author and in his work such as no other fiction produces. M. de Vogüé says that after reading Tolstoi other novels seem feeble, false, and wearisome. This will not appear extravagant to those who have read 'La Guerre et la Paix' and 'Anna Karénine.' In the mind of the author, neither of them is a novel in the ordinary sense of the word. 'La Guerre et la Paix' is an exposition of a passage in the philosophical history of humanity; 'Anna Karénine' is an essay in the highest intellectual morality.

About the time that 'La Guerre et la Paix' appeared in Paris, a translation of one of the works of another Russian, Feodor Mikhailovitch Dostoyevsky, was published there. 'Humiliés et Offensés' made but little impression, however, until after M. de Vogüé's article upon its author appeared in the *Revue des Deux Mondes*, early in 1885. Just before this time a second work by Dostoyevsky, 'Crime and Chastisement,' was translated by M. Victor Derély and appeared under the title 'Le Crime et le Châtiment.' It cannot be said that the new writer has delighted his readers as Tolstoi did; but he has been read with surprise and emotion, and the sensation he has produced has been powerful if not always pleasant. Both these books are startling from their unlikeness to all other modern literature. We must go very far back, to some of the early French poets, Villon, for example, for a note at all like what we find here, and even then it is not persistent, dominating all the rest as in Dostoyevsky. To tell the story of either is an injustice, and conveys no idea of the spirit of the books. The interest is always great, sometimes painful, but it never depends upon the events which are occurring in themselves. It comes always from the manner in which, slowly, imperceptibly, the whole mind and soul of the principal personage unfold, develop, assimilate from every external circumstance something which becomes a part of themselves. 'Crime et Châtiment,' which has been called the most profound study in criminal psychology that has been written since "Macbeth," is a relation of the long struggle in a human soul between reason and conscience, between the mental powers and the moral instincts. A sentence very near the end of the book marks the culmination of this struggle: "La vie s'était substituée chez lui au raisonnement," but the idea is there from the beginning, especially in the characters of the women, in that of Sonia above all the rest. The kindred idea of the absolute moral superiority of the humble or the suffering over the strong in body or mind, of the moral danger of intellectual cultivation, is one of the characteristic ideas of Russian writers. Another similar idea, to which Dostoyevsky frequently returns, is what M. de Vogüé has called "the fundamental conception of Christianity among the Russian people," the efficacy of suffering in itself, above all of suffering in common with others.

French readers and still less English ones could hardly be expected to enjoy, unprepared, such books as 'Humiliés et Offensés' and 'Crime et Châtiment,' but no one could read them under any circumstances without the feeling that here was a strange and powerful manifestation of the genius of a race almost unknown to western civilization. The experience of the readers of Scott's and Coleridge's and Mme. de Staël's time, when German literature was first revealed to them, must have resembled in some respects that

of the present day with Russian writers. Now, however, the charm of strangeness and remoteness is intensified; the race is a different one from our own, more primitive, with ways of living and thinking and feeling often very far from anything in our experience, sometimes opposed to our most cherished opinions and beliefs. Often the things that to them are a mere matter of course shock us, or, it may be, charm us by their strangeness; as frequently what with them is revolutionary and subversive of the very foundations of government and religion, is with us the simplest matter of every-day life. The vagueness of our knowledge of all that belongs to Russia gives a corresponding poetic coloring to what we read, and adds to its charm. As we become more familiar with these strange writers, what impresses us most strongly in all of them, unlike as they are to each other, is a certain simplicity and grandeur of soul, a tenderness of nature, an inclination towards unbounded self-sacrifice, which is all as new to us as it is attractive. In none of them are these peculiarly Russian characteristics more striking than in the author of 'Crime et Châtiment'

Feodor Mikhailovitch Dostoyevsky is a strange and tragic figure. This powerful and entirely exceptional writer threw his whole being into his books in a manner that partly explains his wonderful influence over the imagination of his readers. It is not his experience which he presents, nor his opinions and beliefs; it is his whole soul, his sympathies, his visions, and his agonies—all the chaos of a tender, pitiful heart, filled with compassion for the *humiliés* and the *offensés* of the world of suffering in which his life was spent. Tortured from youth by a distressing nervous malady, by years of the bitterest poverty and struggle, of prison and exile and silence, his life was as strange as his books, and reads like a legend of the temptations and trials of some Oriental saint, and its close needs only a few added touches to complete the story with a veritable apotheosis. Among the most interesting pages of M. de Vogüé's article upon Dostoyevsky are those relating to his influence over the people, "le commun des hommes," "toutes les classes qui ne sont plus le peuple, et ne sont pas encore la bourgeoisie." In 1880, at the inauguration of Pushkin's monument, at which all the representatives of Russian literature were assembled, the popularity of Dostoyevsky overshadowed that of all his rivals. The people sobbed while he spoke; they took forcible possession of the platform in order to approach him, to touch him; young men fainted with emotion when they succeeded in coming near him. "Turgeneff has never had anything but a literary and artistic prestige," says M. de Vogüé; "Tolstoi only a philosophical influence—he addresses only the intellect. Dostoyevsky took possession of the heart, and his share in the direction of the contemporary movement has been incomparably the greatest."

Prince Kropotkin has just been discharged from prison after nearly three years of confinement, having been condemned for five years after the disturbances at Lyons. His friend, M. Élisée Reclus, had, as we noticed last week, collected the articles written by him for *Le Révolté* of Geneva from 1879 to 1882, under the title, 'Pierre Kropotkine: Paroles d'un Révolté' (Paris: New York: Christern). Those who have read 'Underground Russia' will remember Stepniak's warm tribute to this agitator, whom he calls "the most sincere and frank of men." The difference between the ultimate ideal of Tolstoi, as shown in 'Ma Religion,' and that of Kropotkin does not appear to be materially great. Both dream of an ideal future when all rule and authority shall have disappeared, and yet what a difference between the two men. Tolstoi is an apostle of love, whose doctrine of non-resistance relies only upon persuasion and the personal example of self-abnegation; Kropotkin is a man of violence, ready and eager to destroy and burn and kill whatever stands in the way of his ultimate aim. He admits "no departure from the ultra-anarchical programme." Those who wish to see this programme stated in full on many points will find it in the 'Paroles d'un Révolté' in all its brutality. The unity of this strange book lies, its editor, M. Reclus, tells us, in the "vehemence of the thought." Kropotkin may be an orator, he is no logician. He relies on the intensity of his own emotions to carry away his readers. He scarcely ever stops to prove his assertions. "There can be no doubt," "it must be admitted," "can it be denied?" are the forms of speech that recur frequently. This, together with a certain declamatory tone, makes of the book rather a curiosity than a serious exposition of the great social problems with which it deals.

The new volume of Prince J. Lubomirski, 'Une Religion nouvelle: Le Christianisme légal' (Paris: Calmann Lévy; New York: Christern), deals with subjects which it would be out of place to discuss here. The nature of the work may be surmised from the titles of the two books of which it is a continuation: 'Autour de Jérusalem: Le Christianisme et la Société,' and 'Jérusalem: Un incrédule en terre sainte.' The main idea of 'Une Religion nouvelle' seems to be that many things heretofore considered as essentially a part of religion have nothing to do with it, "et que le christianisme a toujours été une erreur philosophique."

G. CURTIUS'S LAST WORK.

Zur Kritik der neuesten Sprachforschung. Von Georg Curtius. Leipzig: S. Hirzel. 1885.

THE death of Curtius gives a pathetic interest to this his last piece of scientific work. In a little volume of 160 pages he takes up and discusses the points at issue between the old and the new school in comparative philology. He attempts to show that the radicalism of the neogrammarians, with their contemptuous treatment of the older doctrines, is hasty and scientifically ill-grounded. Not that he utterly repudiates the work of the *nuova fede;* he finds in it, on the contrary, much that is good, and he takes an obvious delight in pointing out how much of this good is really to be found in his own writings. But after all, he finds the new school beset with difficulties. To use a figure for which he is not responsible, they have vociferously jumped out of here and there an old frying-pan, and now find themselves for the most part in an entirely new fire, the scorching qualities of which, as might be imagined, Professor Curtius does not allow to go undescribed. He makes a specialty also of illustrating the often fundamental lack of harmony among the votaries of the new faith itself.

There are in the main, according to Curtius, four points in which the break of the new school with the past is most conspicuous. The first concerns what are called the laws of phonetic change. The dogma of the younger school is, that these laws are absolutely without exception. Such a principle is obviously of far-reaching importance in etymologizing. It means, when rigorously applied, that if, in two cognate languages, we alight upon two words that present to us a suspicion of historical connection, the idea of such connection must be summarily, or at least provisionally, rejected, if one of the words is found to deviate in the least from the laws of phonetic correspondence that have been found to obtain as between the two languages; provided, of course, that we cannot "explain" the deviation as due to the operation of some special cause. To illustrate: Has the English word *eye*, descended from the Anglo-Saxon *ēage* and cognate to the German *Auge*, any connection with the Latin *oculus?* Here the austere phonologist is compelled to answer, No; a word akin to the Latin *oculus* would not appear in Anglo-Saxon as *ēage*. But, on the other hand, such connection would seem to be on general grounds eminently probable. A large number of words descriptive of bodily organs are undoubtedly the same in the two languages; for example: *armus: arm, auris: ear, cor: heart, dens: tooth, gena: chin, genu: knee, nasus: nose, pes: foot*, etc. In view of this fact it appears pedantic and finical to insist that *oculus* and *ēage* can have nothing to do with each other, especially since the phonetic difficulty is, on the face of it, so small. In regard to these words, then, the old school admitted the connection, and simply postulated an "exception" to the usual laws of phonetic correspondence. The new school must either repudiate the connection, or say that it "remains to be proved." The dictionaries teem with cases of this kind, which Curtius explained as instances of "sporadic change." (It ought to be said in passing that the particular case we have chosen does not, for reasons that need not be discussed here, figure in Curtius's illustrations of sporadic change). But the new school insist that there is not and cannot be any such thing as sporadic change.

In the work before us Curtius returns to and defends his own construction of the matter, but, as it seems to us, in spite of our great admiration for the man and his work, not with entire success. For the dogma of the neogrammarians means after all only this: that for every process of phonetic change, as for every other fact in nature or in history, there is a sufficient cause. It may be that the cause is obscure. It may have lain in some fact that has utterly dropped out of our historical purview, and may be, therefore, with our best efforts irrecoverable. But a cause there was, and we shall, on the whole, do better, as a matter of scientific method, to insist severely upon some explanation of every apparent irregularity than calmly to admit into our scientific fold a herd of facts which we are compelled to label as absolutely anomalous. In other words, the axiom of the new school is in theory correct, and in practice may be made to subserve a useful purpose in promoting scientific rigor. But having said this, we wish also to say that the votaries of the new school are not as a rule any more scientifically rigorous than was Professor Curtius. It is only that their rigor, as well as their vigor, is of a little different kind.

The second point at issue concerns the value of analogy as an explanation of the apparent anomalies of phonetic change. Of this principle the elder philologists made but sparing use; the younger employ it with much readiness. To explain a difficult word-form as due to the analogy (*i. e.*, to the attracting influence) of some other word or group of words, used to be thought permissible only as a last resort; but with the new school, or at least with some of them, this has come to be a favorite method of explanation. In the mind of one enthusiast analogy has undergone a formal apotheosis, and he describes it or her as a "benign daughter of heaven" (*eine segensreiche Himmelstochter*). To Professor Curtius and, we confess, to ourselves also, this new goddess seems, like so many other feminine divinities, somewhat capricious in her operations. Under her auspices most things in philology become easy and all things possible. Is not *oculus* akin to *ēage* after all, and has not the one word or the other been perturbed from its proper phonetic orbit by the influence of some other word of similar sound? We do not remember to have seen

precisely this idea suggested, but not a little that seems to us equally shaky can be found in the literature of recent philology. Curtius's good-natured polemic against the excesses of the analogy-hunters is quite in place.

The third matter discussed is the question whether the Indo-European parent speech possessed the short vowels *e* and *o*. The old view was that it did not, and the converse of this view is one of the most widely accepted distinctive doctrines of the new school. Curtius sums up the arguments pro and con, and concludes that the now dominant theory is no better as a working hypothesis than the former one; it may have proved helpful, he admits, in Europe, but it is a stumbling-block in Asia. Into the merits of this question, which is at least considerably more important than it might seem to the unphilological reader, we cannot enter. The arguments of Curtius are certainly not without force; but that they will change, or that, upon the whole, they deserve to change, the present attitude of scholarship, few specialists will be found to admit. The final chapter of our book deals with the reluctance of the younger philologists to enter upon what are called, somewhat ponderously, glottogonic speculations. Twenty years ago many, perhaps most, comparative philologists thought they were in a fair way to find out how our Indo-European speech was originally put together—to discover the precise meaning, that is to say, not only of its roots, but also of its person and case endings, and its whole formative apparatus. Now complete agnosticism reigns with regard to these matters, as with regard to ultimate questions in so many other departments of thought. How long this *Nichtwisserei* will last in philology, whether it will endure through the century or even through another decade, it would be idle to attempt to foretell. Curtius thought that the present generation was over-cautious in this matter, and that at least a small part of the earlier "glottogony" will still pass muster. However one may think of this, it certainly is true that these questions of origin, if we could hope to find satisfactory answers to them, would be precisely the most interesting questions of comparative philology.

In our meagre review of Curtius's last work, it has been our chief aim merely to give an account of the veteran philologist's final attitude upon the pivotal questions of his science. For anything more than that, especially for any real discussion of his views upon their merits, or of the rejoinders which have already been made and will doubtless be made hereafter, this was not the place. It only remains to add a word concerning the admirable style and method of the book. Here, all unabated, is the old artistic clearness of exposition, and here is the very temper in which a great scholar might well wish to pass from his labors. This last little book, like the former greater ones, evinces not only thoroughness and intellectual keenness—qualities that are common enough, as all the world knows, among German scholars; it shows us also a placid and genial mind, a controlling sense of scientific decorum, a serene superiority to acrimonious contention, and a singleness of devotion to the cause of science. These qualities are not universal among German philologists, although in the possession of such traits there is one imperial German model. With the name of Jacob Grimm posterity need not shrink from coupling that of Georg Curtius.

The Principles of Expression in Pianoforte Playing. By Adolph F. Christiani. Harper & Bros.

THE circumstances under which this book appears are so sad as to invest it with a sentimental personal interest that would mollify adverse criticism, were it called for, which is by no means the case. On the contrary, the book is one which every pianist in the country, elementary or advanced, should carefully read and take to heart. Twenty years ago the author, who was one of the most esteemed piano teachers of this vicinity, began to meditate on certain problems connected with the proper execution of his art, and concerning which there was a remarkable absence of information in musical text-books. Five years ago he began to devote all his leisure time to putting his thoughts into shape on paper; and after much trouble in securing a subscription list large enough to tempt a publisher, the work was at last on the point of appearing when the author suddenly died.

The subject is one which is neglected even by many public performers and intelligent amateurs who ought to know the value and charm of expression in music. Many, from mere carelessness, pay hardly any heed to the numerous signs of shading, in time and loudness, sudden or gradual, momentary or prolonged, with which musical scores, especially those of the modern schools, abound. This class of musicians, even though they should be familiar with most of the principles explained in Christiani's book, would usefully learn from it the futility of mere execution, without intellectual and emotional expression. Facile execution, in fact, has become such an every-day affair that critics at the present day take it for granted in a concert-giver, and devote their attention almost entirely to considering how far he has mastered the principles of expression, as explained in Mr. Christiani's work.

Among the lessons which the author impresses on the pupil's memory are the necessity of accenting discords, and the reasons why; the abomination of playing accompaniments and accompanying parts so loud that the leading melody is drowned; the importance of emphasizing hidden melodic strains—analogous to the new light thrown on a poetic line by the accents of an intelligent actor; the necessity of distinctly bringing out the basses, etc. One of the best chapters is that which explains the peculiarities of accents in national dances—Austrian, Polish, Spanish, Hungarian, and Scotch. Certain proposed emendations in the notation of pianoforte music are very sensible. Some of the greatest composers have often adopted a needlessly complicated and obscure mode of writing down their thoughts, as is shown by numerous quotations in musical type, placed side by side with a simplified version. A clear understanding of this matter will convince amateurs that in buying their music they can save themselves many misconceptions and much useless study by choosing not the cheapest editions, but those which bear the names of the best editors, as, for instance, Bülow's edition of Beethoven's sonatas, and Klindworth's edition of Chopin. On page 80, however, Mr. Christiani goes too far in his proposed simplification of the notation of Schumann's "Faschingsschwank." It is a subtle point that cannot be explained in a few words, but to our feeling the passage loses its rhythmic peculiarity by the alteration suggested.

About one-half of Mr. Christiani's book is taken up with well-chosen illustrations in musical type. The text is divided into very short paragraphs—almost to a comical excess in some instances. There is a German tendency toward too much classification and subdivision, but the language is always clear, and has that directness which only a teacher can give who has for years endeavored to make himself intelligible to pupils who are often obtuse. This necessity probably induced him to give the following graphic and amusing illustration of a fundamental law in music, that an ascending melody or passage demands a crescendo, and a descending melody or passage a diminuendo:

"I remember a little scene at a European fish-market. One of the fishwives said something which displeased another one. A quarrel ensued. Immediately a crescendo of both their voices commenced, not only by an increase of lung-power, but by a simultaneous rising in pitch of the voice, until, at the climax, the loudest as well as the highest screaming was attained. At that moment a well-dressed customer approached, and, as business was paramount to passion, the women instantly calmed down. The voices fell in a surprisingly short diminuendo both in pitch and power, and the height of crescendo was succeeded by a sudden lull."

The Fall of Constantinople: Being the story of the Fourth Crusade. By Edwin Pears, LL.B., Barrister-at-law, late President of the European bar at Constantinople, and Knight of the Greek Order of the Saviour. Harper & Bros. 8vo, pp. 422.

MR PEARS, a long resident of Constantinople, has written an excellent history of one of the most important events in its annals—the capture of the city by the crusaders in 1204, which he considers "the necessary prelude to the Ottoman conquest in 1453." "Constantinople had been for centuries," he says, "the strongest bulwark of defence against Asia." Its capture at this time "was the cause which brought about the fall of the Roman Empire in the East, and rendered its ultimate capture by the Turks both certain and easy." While, however, he points out the fatal weakening of the Empire which resulted from this conquest, he shows at great length the pre-existing causes of weakness which made it fall an easy prey to this attack—causes so serious as to make one question whether the blow received at this time was in reality so vital. As a matter of fact, the resistance in 1453 seems to have been fully as vigorous as that in 1204. These causes, by the way, are described in five chapters, which treat respectively of the Seljukin Turks, the neighbors on the north, dynastic troubles, the previous crusades, and Western enemies, in relation to the weakening of the Empire. These chapters present the results of careful study, and are severally excellent discussions of their subject. But they suffer for want of a general view. If another chapter had been inserted at the beginning, giving a brief general sketch of the history of the Empire during the twelfth century, it would have made these chapters much clearer, and it need not have added much to the bulk of the book, because it would have prevented the necessity of some repetitions, and would have allowed greater compression. Mr. Pears is himself so much at home in the confused annals of this century that it does not occur to him that some of his readers may not be as familiar with the houses of Commenos and Angelos as with the Bourbons and Hapsburgs.

After describing these causes of weakness, in five long chapters, occupying nearly half of the volume, he disposes of the crusade in eleven shorter chapters, and it is one of the most lamentable and discreditable events in history. The great body of the crusaders are shown to have been sincerely anxious to carry out their vows, and indignant at the miscarriage of their enterprise; but they were caught in a trap, and found themselves, through the perfidy and selfish ambition of their leaders, forced to help in the abhorred work of capturing two Christian cities, one after the other. And the events of the final capture and sack of Constantinople afford another humiliating illustration of the ease with which men, when they have once compromised with their sense of right, fall into deeper and deeper shame and sin. "Never in Europe was a work of pillage more systematically and shamelessly carried out. Never by the

army of a Christian State was there a more barbarous sack of a city than that perpetrated by these soldiers of Christ, sworn to chastity, pledged before God not to shed Christian blood, and bearing upon them the emblem of the Prince of Peace." "Their abstinence and their chastity once abandoned, they plunged at once into orgies of every kind" (p. 354).

The responsibility for the change of plan which converted a hopeful crusade into a mere enterprise of greed and ambition, is by our author divided between three or four; but it appears to rest chiefly upon the Venetian Republic, with their doge, Henry Dandolo. The Republic had made a contract to transport the crusaders to Egypt for a certain sum; but a large number of the crusaders had chosen to embark at a different port, so that not enough were gathered at Venice to fill the ships provided, nor had they the money to fulfil their part of the contract. Under these circumstances the capture of Zara in behalf of Venice might perhaps have been pardoned as being a service equivalent to the debt which they owed. The Venetians may have been justified in insisting upon the exact fulfilment of the contract, but for their bad faith in entering into a secret treaty with the Sultan of Egypt, by which they agreed not to transport the crusaders there. This is at least the view adopted by the writer (p. 269), in agreement with Hopf; but it should be noted that it is not accepted by all historians. At any rate, the conduct of the Venetians is in harmony with the theory, as they seem to have in every way evaded the fulfilment of the contract, even after the crusaders, by the capture of Zara, had met their obligations. However this may have been, the leaders of the crusade were themselves hardly less guilty, and Mr. Pears makes it probable that the elected leader, Boniface of Montferrat, had, even before the treachery of the Venetians, entered into a secret agreement with the Emperor Philip to turn the crusade against Constantinople in behalf of the young Prince Alexis, Philip's brother-in-law. Dandolo, too, appears to have had a deep-seated animosity against Constantinople. There seems to have been no other leader prominent enough and energetic enough to withstand the intrigues of these three. Of all the personages active in the affair, Pope Innocent III. is the only one who comes out of it with credit. He protested against the iniquitous scheme at every stage, excommunicated the transgressors, and, when the work was consummated, addressed them a letter of indignant reproach. Nevertheless, he was powerless, and, when it was accomplished, could not help hoping that it would result in healing the schism in Christendom.

Among incidental points of interest we find an account of the system of land-holding in Asia Minor (p. 31); an account of the "Warings" or Varangians, whom the author identifies with the Varini of Tacitus (p. 153); and a description, of considerable value in the history of international law, of the "capitulations" or agreements with foreigners, regulating the conditions under which they have resided in Constantinople, and their rights there. This system appears to have begun with the Warings early in the tenth century, and to have continued to the present day. On page 384 Philip is erroneously called King of Swabia, probably by a slip. Elsewhere he is called Swabian King and Duke of Swabia, both of which titles may be considered correct, as he was Duke of Swabia, and thus a Swabian king of Germany.

A Series of Character Sketches from Dickens, from Original Drawings by Frederick Barnard, reproduced in Photogravure. Cassell & Co. 1885.

THIS is the third series of these interesting studies. The present reproductions by the Goupil process of Mr. Barnard's drawings are certainly better as works of art than the prints of the first series; but whether as character-studies these are as good as the former ones is a different question. The matter of expression in face and gesture is not subject to hard-and-fast rules of excellence, and easily misled are they who mistake their associations and their early conception of a character for demonstrable fact, and look for it in the graphic artist's design. But without falling into Michelet's error of correcting history by the portraits in the Louvre, let us say that Captain Cuttle looks to us shrewd and hard rather than the gentle innocent we find in Dickens; that Micawber is as nearly as possible nobody at all, and Uriah Heep very conventional, to say the least. On the other hand, "Dick Swiveller and the Marchioness" is an admirable design, with the two characters (and those, to us, the most charming in all Dickens's volumes) perfectly seized and capitally rendered. "Bob Cratchet and Tiny Tim" is also an excellent design.

BOOKS OF THE WEEK.

NEW BOOKS.

Madame de Maintenon:
AN ETUDE.
By J. COTTER MORISON.
Square 16mo, parchment, 50 cents.

*** A vivid sketch of the life and times of Madame de Maintenon.

Sketches of the History of Christian Art.
By the late LORD LINDSAY (Earl of Crawford and Balcarres.)
New Edition. Two Vols., crown 8vo, cloth, $9.00.

In these volumes the late Earl of Crawford and Balcarres traced the history of art, of sculpture, architecture, and painting in Christian countries and under Christian influences. Their origins and development are set forth, and the works of the principal masters in each branch are described and criticised.

In reviewing the book in the *Quarterly Review*, MR. RUSKIN wrote:

"As a contribution to the History of Art, his work is unquestionably the most valuable which has yet appeared in England. His research has been unwearied; he has availed himself of the best results of German investigation—his own acuteness of discernment in cases of approximating or derivative style is considerable—and he has set before the English reader an outline of the relations of the primitive Schools of Sacred Art which we think so thoroughly verified in all its more important ramifications, that, with whatever richness of detail the labor of succeeding writers may illustrate them, the leading lines of Lord Lindsay's chart will always be henceforth followed."

WANDERINGS IN CHINA. By C. F. GORDON CUMMING, Author of 'At Home in Fiji,' 'A Lady's Cruise in a French Man-of-War,' &c. With a portrait of the Author and numerous Illustrations. 2 vols. 8vo, cloth. $10.00.

THE PLEASURES, DANGERS, and USES OF DESULTORY READING. By the EARL OF IDDESLEIGH (Sir Stafford Northcote), Lord Rector of the University of Edinburgh. Elzevir, 8vo, paper, 50 cents.

New and Cheaper Edition in One Volume.

Microcosmus:
An Essay concerning Man and his Relation to the World. By Hermann Lotze. Translated from the German by Elizabeth Hamilton and E. E. Constance Jones. 1 vol., thick 8vo, cloth, $6.

NORTH BORNEO: Explorations and Adventures on the Equator. By the late Frank Hatton, Fellow of the Chemical Society and Associate of the Institute of Chemistry of London, Scientific Explorer in the Service of the British North Borneo Company and Government of Sabah, etc. With a Biographical Sketch by Joseph Hatton. Illustrations and a Map. 1 vol., demy 8vo, cloth extra, $4.50.

"Those who want a book that is romantic in the real sense of the romance of truth—the romance of life as it is—may with profit procure this latest volume of biography and travel."—*Court Circular.*

Bohn's Libraries.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

LESSING'S WORKS. Translated from the German. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

*KANT'S PROLEGOMENA AND METAPHYSI-*cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H Wall. With a short Life and a Portrait. 3 vols. $4.20.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. New Catalogue of Musical Books ready.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Oceana; or, England and Her Colonies.
By JAMES ANTHONY FROUDE, M.A. 1 vol., crown 8vo, illustrated, $2.50.

A volume which is the outcome of Mr. Froude's recent journey around the world. The author's route led him from England to the Cape Colony, thence to Australia, New Zealand, the Sandwich Islands, California, New York, and home. It is not only the region, but the people also who are described. The question of Imperial Federation is discussed, but the chief portion of the volume is occupied with Mr. Froude's interesting narrative of his travels.

The Early Hanoverians.
By EDWARD E. MORRIS, Professor of English in the University of Melbourne. [Epochs of Modern History Series.] One volume, 12mo, with Nine Maps and Three Tables. Price, $1.00.

To all interested in Modern History this volume will be welcome as the best brief account of Europe at an important epoch, and to readers of [illegible] it will have an additional value, as filling [illegible] between the 'AGE OF ANNE,' by the same [illegible], and 'FREDERICK THE GREAT,' by F. W. [illegible].

Public Library 98466

The Spartan and Theban Supremacies.
By CHARLES SANKEY, [illegible], late scholar Queen's College, Oxford. [Epochs of Ancient History Series.] 1 vol., 16mo., with Three Maps and Two Plans. Price, $1.00.

The period of history covered by this little book is full both of interest and importance. It was the transition period from the glories of the Athenian empire to the degradation of the Macedonian conquest, and it was then that Athens numbered Socrates and Xenophon among her citizens. As descriptive of the time of these writers, or as a text-book to accompany their study, the book is invaluable.

ANOTHER EDITION READY.

Strange Case of Dr. Jekyll and Mr. Hyde.
By ROBERT LOUIS STEVENSON,
Author of 'The New Arabian Nights,' etc. Cloth, $1.00; paper, 25 cents.

"*It is such a story as Poe might have written. . . . With the exception of the English of Mr. Norris, it is the best since the pen dropped from the tired hand of Thackeray.*"—*The Mail and Express.*

ENGLISH REVIEWS OF

How to be Happy though Married.
Being a Handbook to Marriage. By a graduate in the University of Matrimony. 1 vol., 12mo, $1.25.

"We strongly recommend this book as one of the best of wedding presents. It is a complete handbook to an earthly Paradise, and its author may be regarded as the Murray of Matrimony and the Baedeker of Bliss."—*Pall Mall Gazette.*

"An entertaining volume. . . . The new guide to matrimonial felicity."—*Standard Leader.*

"A clever, readable, and entertaining book. . . . This delicious book.—*Literary Churchman.*

"One of the cleverest, best written books on the subject we have read at any time. To girls contemplating marriage, the volume should be presented as a wedding gift. . . . Grave and gay, but never for a moment dull or tiresome. Each page sparkles with anecdote or suggestive illustration."—*Ladies' Treasury.*

"A rich store of entertaining anecdote, and full of thoughts beautiful, pious, and wise."—*Bookseller.*

*** *These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

Charles Scribner's Sons,
743-745 Broadway, New York.

BOOKS OF THE WEEK 85

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 9,100 copies. The Subscription List is always open to inspection.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of the *Nation* has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates, the bindings generally counting for nothing. Volume I. has readily brought $10 and upward when complete, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in the *Nation*.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XL. comprising the first half-year of 1885.]

French, German, Spanish, Italian.

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by Dr. Rich. S. Rosenthal's celebrated Meisterschaft System. Terms, $5.00 for books of each language, with privilege of answers to all questions, and correction of exercises. Sample copy, part I, 25 cents. Liberal terms to teachers.

MEISTERSCHAFT PUBLISHING CO.,
Herald Building, Boston, Mass.

*IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address Publisher of the *Nation*.*

RECORD OF POLITICS and Politicians in the United States, 1865-1882: An analytical index to the *Nation* for that period (with occasional parallel references to McPherson's Political Handbooks and other sources). This index supplements the chiefly literary index to the *Nation* published in 1880. Valuable to all libraries, students, and editors. Price, in paper, $1 00. (Purchasers will please remit with order; accounts cannot be opened.) Address PUBLISHER of the *Nation*, Box 794, New York City.

A General Index to the Nation.

Vol. I.—From July, 1865, to September, 1880. $2.50.

Vol. II.—From October, 1880, to October, 1885. $1.25.

No trade or other discounts. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794 New York or Q. P. INDEX Bangor, Maine.

*SPECIAL TREATMENT OF ALCO*holism at the private residence of a retired physician in the Adirondack region.

Address A,
Box 1135,
New York City.

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, postpaid, on receipt of price.

HENRY HOLT & CO., New York.

The Story of Margaret Kent.

By HENRY HAYES. 1 vol. 12mo.....$1 50

A well-known novelist and poet says: "The plot and situations are original and natural. It is out of the common run, and sparkles with life—real life—and deep feeling."

"More than any recent American novel a venture into the higher realm of fiction. The character of Margaret Kent is a masterpiece of its kind. It is a fresh creation. The type is Southern, and yet American, and its inner fibre is womanly to the core. . . . Whoever the unknown magician may be, she has leaped at a bound into the front rank of those who are making our best American fiction. Here is the realism which Mr. Howells is master of, but here is also the constructing imagination which weaves into realism all the finer issues of life. The pathos of 'Margaret Kent' at a certain point is exquisitely painful, and still as entrancing as if one were drinking the elixir of life."—*Boston Herald.*

American Whist.

By G. W. P. 1 vol. 16mo. Sixth Edition. Revised and Enlarged.....$1 00

A new and fully revised and much enlarged edition of this foremost classic, best teacher, and wisest companion as to the most enjoyable game of cards.

Cleopatra.

By HENRY GRÉVILLE. Original Copyright Edition. With Portrait of the Author. 16mo.....$1 25

"Will hold the reader in closest attention. The brilliancy of the picturing, the graphic description of scene and circumstance, the vividness and vitality of the portraiture and the charm of style present Mme. Gréville at her best. The dénouement is very unexpected, and managed with artistic power."—*Boston Traveller.*

NEW EDITIONS JUST READY:

Japanese Homes,

And Their Surroundings. By EDWARD S. MORSE, Ph.D. Director of the Peabody Academy of Science, late Professor in Tokio University, Japan, Member National Academy of Science, Fellow American Academy of Arts and Sciences, etc. With 300 illustrations. 8vo, richly bound.....$5 00

"It is one of the most important of works ever written about one of the most fascinating of countries."—*Boston Herald.*

"The time is ripest now for the very charming acquaintance we get from Mr. Morse's book with these homes. The book will be read by all Americans with great profit."—*New York Commercial Advertiser.*

Choson:

The Land of the Morning Calm. A Sketch of Korea. By PERCIVAL LOWELL. Richly illustrated after photographs taken in Korea. 8vo.....$5 00

"An interesting and poetic account of a strange, sad country."—*Boston Advertiser.*

"We could not spare one of these 400 pages."—*New York Sun.*

"A work of unique merit."—*New York Telegram.*

PLAN.

IT IS HOPED TO CREATE FOR AMERICA AN ORGAN FOR THE PUBLICATION OF HIGH LITERARY WORK, OF ORIGINAL THOUGHT IN ALL DEPARTMENTS OF PHILOSOPHY AND SCIENCE, AND OF CONSTRUCTIVE CRITICISM, TOGETHER WITH A GOOD MEASURE OF SUCH ENTERTAINMENT AS IS SOUGHT BY INTELLIGENT READERS.

Specialists will write on

Public Questions, Philosophy, Science, Art, History, Education, and Politics, while for the Departments of Fiction, Biography, Travel, and belles-lettres in general, provision has been made for the best writers at home and abroad, also for important articles pertaining to Religion and Morality and The World's Progress and Events.

Gen'l O. O. Howard.
Archibald Alexander.
Henry W. Farnam.
Arthur Hadley.
Chas. H. Parkhurst.
Stanley Hall.
J. B. Harrison.
T. A. Janvier.
Alex. Johnston.
T. R. Lounsbury.
Allan Marquand.
James O. Murray.
Charles Eliot Norton.
Francis L. Patton.
Wm. C. Prime.
Wm. B. Scott.
Andrew F. West.
F. N. Zabriskie.

The first two numbers contain important articles by CHARLES DUDLEY WARNER, PRESIDENT McCOSH, DR. C. H. PARKHURST, PROF. CHARLES YOUNG, DR. G. DANA BOARDMAN, JNO. BACH McMASTER, JAMES RUSSELL LOWELL, FRANCIS L. PATTON, J. B. HARRISON, and OTHER EMINENT WRITERS.

The "New Princeton" is a medium through which the Ablest Writers will be brought in contact with the Best Readers on all topics of scholarly and general interest; educated men in all departments of life will find here dispassionate discussions of political, social, philosophical, literary, religious, and art questions; together with Editorial Summaries of the latest results of investigation and work here and abroad, in these various fields. Nor will elements of popular interest be overlooked; the topics discussed will be, for the most part, of vital interest, and will be presented with the charm of the best literary form.

Extracts from a Few of the Many Critical Notices of the January Number:

HARTFORD COURANT: "The NEW PRINCETON REVIEW steps into the arena with the New Year—*strong, well equipped, and with a decided purpose.* The time has come when a Review of a high class, with pronounced views, with a national policy, and a decided voice in affairs was needed. *It has a field of its own.* The New Review is *assured of the best support*—it draws upon the *best thought and scholarship* of the country. It will take sides in politics, religion, and on social questions, and have the courage of its opinions."

NEW YORK TRIBUNE: "The NEW PRINCETON *steps into a tempting vacancy.* Appearing once in two months, it will avoid in a measure the tardiness which has driven the old quarterlies out of fashion, while it will have ample chance for that deliberate editing which is essential to the establishment of a serious Review. The *first number offers a well-chosen table of contents.*"

BOSTON HERALD: "The NEW PRINCETON *begins with an amount of solid, thorough, and thoughtful work,* which *will both surprise* and *interest thinking* and *well-educated men* all over the United States. The articles are genuine; they are intended to be read and studied, and *will sustain the test of careful study,* which they invite"

BUFFALO COURIER: "In public estimation the NEW PRINCETON *will be placed at once in the front rank of literary publications in this country and in Europe.*"

NEW YORK CHRISTIAN UNION: "The new REVIEW is a periodical *broad in its aims, comprehensive in its scope, and representing the best American thought in philosophy, politics, science, and letters.* In all respects it confirms the high expectations inspired by its announcements."

ROCHESTER DEMOCRAT: "If the first number of the NEW PRINCETON is any criterion of what the REVIEW is to be, we have no hesitation in saying that *it will be without an equal in this country, and that it will rank with the best of the British reviews.*"

N. Y. JOURNAL OF COMMERCE: "The NEW PRINCETON REVIEW is, as it ought to be, *sui generis,* unlike any other publication of the day, and sure to force its way into the hands of *all lovers of good reading.* The NEW PRINCETON at once asserts for itself a position which will make it *necessary for people to take it* and read it. It does not crowd into the place of any existing magazine, but fills a demand which all who want good periodical reading matter have long felt. *It will be welcome to every intelligent family.*"

N. Y. INDEPENDENT: "The January number is *readable, spicy, and taking* in every one of its articles."

PHILA. PRESBYTERIAN: "The discussions and criticisms are *able, fresh, and readable* Knowledge is so served in these broad pages as to be inviting."

LONDON DAILY NEWS: "An enterprise of *some pith and moment.*"

CHICAGO INTERIOR: "If the NEW PRINCETON holds on to the course indicated by the initial number it will be *the Review* that *the people long have sought.*"

BOSTON DAILY JOURNAL: "The NEW PRINCETON enters the field of periodical literature more like the great English reviews in appearance than any of the magazines now published in this country."

The *Review* will be published six times a year, beginning with *January,* 1886, under the editorial management of Wm. M. Sloane, Professor of History in Princeton College. When no time is specified subscriptions will commence with the current number.

Terms: $3 a year in advance, postage free. Remittances may be made in P. O. or express money orders, or in drafts, checks, or registered letters. *Money* in letters is at senders' risk. Full descriptive circulars sent on application.

A. C. ARMSTRONG & SON, 714 Broadway, N. Y.

HODDER & STOUGHTON, 27 Paternoster Row, London.

The Nation.

NEW YORK, THURSDAY, JANUARY 28, 1886.

The Week.

GENERAL LOGAN is a Senator with whose political views we often have to disagree, but there is a certain manliness about his methods which commands the public respect. This quality was displayed during the fortnight after the Presidential election of 1884, when he accepted defeat in dignified silence, while Mr. Blaine was secretly trying to find some way of getting around the popular verdict, and openly abusing the majority of the national jury for deciding against him the case which he had submitted to them. The same quality was again exhibited on Thursday, when the Illinois Senator made a vigorous attempt to persuade his colleagues to consider all executive business hereafter with open doors. General Logan declared that the people of the United States had as much right to know what was said and done in regard to nominations as in regard to legislation, that they were equally interested in both, and that it would be to the advantage of the Senate, the President, the public, and the men whose nominations were under consideration, to have the doors kept open, and all the proceedings of the Senate conducted in the presence of the people. This is the exact truth, and General Logan deserves the heartiest praise for violating all the precedents of the body to which he belongs, and declaring for the rights of the public. The Senate rejected his proposition by an overwhelming majority, but it will have to accept his platform one of these days. The unrepublican, un-American secret session, which is a survival of the worst traditions of the "effete despotisms of Europe," must be abolished.

Senator Van Wyck, of Nebraska, has been sedulously and for a long time earning for himself the title of the buffoon of the Senate. If anybody had thought of disputing that distinction with him, the futility of such rivalship became apparent on his introducing a bill to prohibit the making of contracts payable in gold. Even in the height of crass foolishness which overtook Congress in the dark days of the war, when gold was an object of mingled detestation and alarm, and when the law-making power was invoked to "strike it down," nobody thought of prohibiting gold contracts. The short-lived anti-gold bill of Thaddeus Stevens merely prohibited gold contracts in cases where the gold was not actually delivered, *i. e.*, ordinary gold-room contracts, where only "differences" were paid by buyers and sellers. Anybody who wanted to buy or sell gold by the process of actual delivery remained at full liberty to do so. The well-remembered effect of the Stevens anti-gold law was to put up the price of gold from about 220 to 280 within a few days, at the end of which time the law was repealed, much to the humiliation of its advocates. It is not to be supposed that Mr. Van Wyck is serious about this matter. If he is, then he is serious for the first time within public recollection.

We have much pleasure in calling the attention of our unfortunate contemporary, the *Sun*, to the unanimous report of the Civil-Service Committee of the House against all the bills repealing or modifying the Civil-Service Law. If it inquires the cause of this untoward event, we can inform it that the explanation has been furnished of late in its own columns. It is due in part to the hypocrisy of the Jeffersonians in the House, who hate the law, but see that it would damage them to attack it; so they basely pretend to like it and let it alone. It is due in part, also, as Judge Seney says, who brought in one of the repealing bills, to the fact that Republicans like it because it ties the hands of the Democrats, and "a good many Democrats favor it because it takes a good deal of trouble off their hands and they are not troubled by applicants for office." This is correct, but what a picture it presents of the political morals of the Jeffersonians—some so deceitful, according to one correspondent of the *Sun*, that they pretend to like the law when they hate it; and some so selfish and lazy, according to another, that they favor it because it saves them trouble.

Two notable cases of "abandonment" have taken place within a short time which have not attracted so much attention as they deserved. The first occurred on the 9th inst., at Providence, R. I., when ex-Senator Hill, of Colorado, formally repudiated international bimetallism, declaring that it is "repugnant to the experience and practice of the world for thousands of years. Never," he added, "until Cernuschi made his appearance as a financial discoverer, was the doctrine heard of that it was necessary to the use of the metals as the world's money that they should both be used as money in every country." Mr. Hill then made an argument to show that the United States is able "to turn the scale in favor of silver" by its own unaided strength. Being himself perhaps the largest producer of silver in the country, he would lend a great deal of strength to the effort required to turn the scale. Incidentally he trod heavily on the toes of the capitalist classes, whom he called "financial Pharaohs." We are not surprised to find that Mr. Hill has a low opinion of all such. Indeed, we were prepared to expect it by his recent denunciations of Senator Teller, whose election to the place formerly occupied by Hill was ascribed by him to the influence of overweening "organizations of wealth"; leading us to infer that a poor man like Hill has no chance in Colorado. One statement of fact in Mr. Hill's Providence speech we must really take exceptions to. He says that "an importation of silver from Europe is impossible because that continent has no stock except its coinages, in which silver is rated about 3 per cent. higher than it is in our dollars and more than 20 per cent. higher than it will command to-day in our markets." It was officially communicated to the last Paris monetary conference that the German Government had about $75,000,000 worth of silver *bullion* to dispose of, and one of the stipulations talked of was that Germany should agree not to sell this silver for some years to come, provided the other governments would agree to open their mints to free coinage. We have not heard of the selling of this silver by Germany since the adjournment of the conference, and even if it has been sold it has probably not been swallowed by anybody, but must exist somewhere in the form of bullion, and therefore cannot be 20 per cent. or any per cent. higher in price "than it will command to-day in our markets."

The other case of abandonment occurred nearer home. The guilty party, we regret to say, is our esteemed Butler contemporary, the *Sun*, which has not only abandoned international bimetallism, but all kinds of bimetallism, and declared itself for the single silver standard in these words:

> "Thus monometallism seems to be the only safe and wise course. By our present legislation this country is moving surely though slowly away from gold, which is now our standard, toward silver. There seems to be no possibility of arresting this movement. Congress cannot be brought to repeal the present law providing for a steady coinage of silver; and, although the operation of this law is slow and gradual, it is sure, and, after a few years more under it, silver will be our only standard money, and the gold will be gone. Will this result be good? Will it be beneficial? *We think so*, and we see no good reason for travelling any longer toward the benefit by the slow and circuitous route that we have hitherto pursued."

The depositors in our savings banks who have been laying up gold or gold value these many years against a rainy day, may be angered against the *Sun* for supporting a policy which avowedly aims to reduce the value of their savings 20 per cent., but they should bear in mind that its course is the result of "honest conviction," and that it is designed to reduce the amount of evil in the world, by gradually extirpating its proverbial root, money. As for the capitalists, they are all (except ex-Senator Hill and the editor of the Chicago *Tribune*) so hardened to the existence of evil that they will stick to gold through thick and thin. We recommend them, now that there is plainly an abandonment of bimetallism on the part of the silverites, to abandon it also, and adopt for their own the query of Mr. Stanley Matthews, "What have we to do with abroad?" It is time to stop fooling with Paris conferences and get in line of battle for the gold standard and nothing else.

There are encouraging signs that sound ideas as to the government of cities are slowly winning acceptance in this country. A striking evidence of this tendency, which has not received the attention that it merits, is to be found in Governor Foraker's recent inaugural address. Ohio is the last State in the Union from which one would expect to hear sound doctrine on such a theme, and Mr. Foraker, judging him from his bloody-shirt tirades on the stump, is the last man one would expect to hear preaching such doctrine. It is, therefore, the more noteworthy that he should have given the Legislature one of the best recent contributions to the discussion of the municipal problem. The Governor points out very forcibly the chief defect of the traditional

system of city government, in the fact that responsibility is so divided among a multitude of officials that nobody can be held to account, the result being that "practically the entire city government falls into the hands of men selected without that care and consideration that should be exercised." He recognizes that there is only one remedy—"a fixing of responsibility so there may be accountability"; and only one way of applying it—"there should therefore be the fewest possible number of elective officials." If the duties of an office are not important enough to impress the people who elect the incumbent with the necessity of care in his selection, he holds that the office should either be abolished or be filled by appointment. He therefore recommends that the whole subject of municipal government in Ohio be carefully investigated, and meanwhile advises the law-makers not only to stop multiplying elective boards or minor officials of any sort, but to abolish all unnecessary boards now in existence, and make such changes in the laws as will impose upon mayors the duty of appointing such boards as may be necessary. To the objection that this would be conferring too much power and authority on one man, his answer is the sufficient one that "the importance of the trust is calculated to induce the people to select only worthy and competent men, and the fact that there cannot be any evasion in such case of accountability will be the strongest incentive to a faithful discharge of duty."

For some years past Massachusetts has regulated the liquor traffic by a local-option system, which allows any city or town to decide by popular vote whether the sale shall be licensed, and, if so, leaves the local authorities to determine how many licenses shall be granted. There are 348 cities and towns in the State. Half-a-dozen towns did not vote on the question last year; 230 refused to grant licenses; and 112, including nearly all the cities, voted in favor of license. The aggregate vote in favor of license was 92,419, and against the system 81,161. There was thus a majority in the State of 11,258 for license, although about two-thirds of the municipalities declared against the principle. Nearly 10,000 of this majority was contributed by Boston. It would thus require but a small change in public sentiment to produce a majority in favor of absolute prohibition throughout the State upon a general vote on this question. The Prohibitionists would consider it a great victory for their cause if they could secure a popular majority in their favor in this way, but such a majority would not at all affect the vital question, which is how most effectually to restrict the sale of liquor in places where public sentiment will not sustain prohibition. If the question had been submitted to the voters of Massachusetts last year whether any licenses should be granted anywhere within its limits, and 6,000 men in the smaller towns had voted no instead of yes, there would have been a majority in the State against any licenses, but with Boston voting 19,621 to 10,445, or almost two to one, for license, and therefore against prohibition, the result would simply have been that liquor would have continued to be sold in Boston, because the local sentiment of that city sustains the sale, while the public treasury would have lost the $502,340 which was paid into it by the sellers under the license system.

The decision of Judge Brewer in the United States Circuit Court at Topeka, which declares that the State of Kansas must make good to the owners of a brewery in Lawrence the value of property which was virtually confiscated by the enactment of the prohibitory law, is obviously just. Before 1880 the brewing of beer was as free from restriction in Kansas as the milling of flour, and when the Legislature enacted a statute forbidding the further brewing of beer, it made every brewery worthless. To pass such a law without compensating the owners of breweries for the losses thus imposed upon them is simply to legalize robbery by society in its organized capacity. The Federal courts are bound to protect the injured citizen in his rights if he can secure no redress from the State, and there is no doubt that the Supreme Court will sustain Judge Brewer if the case is carried to Washington. Section 1 of the Fourteenth Amendment provides that "no State shall deprive any person of life, liberty, or property without due process of law," and the highest tribunal has already gone on record, in the case of Bartemeyer vs. Iowa, some years ago, as holding that, while a State may regulate, and even prohibit, the traffic in intoxicating liquors, it may not deprive the owner of property in which he had invested under a permissive system, without making him due amends. The decision is of more practical importance in Iowa than in Kansas. The latter State has never gone extensively into the manufacture of liquors of any kind, but the census of 1880 showed that Iowa had 114 establishments for the production of malt liquors and three distilleries, which reported an aggregate capital of about $2,100,000. But it must be remembered that this represents only the value returned for purposes of assessment and taxation, and that the actual investment was much greater than this estimate. The larger share of this was undoubtedly invested in buildings and machinery, which prohibition rendered worthless, and the State is thus bound by Judge Brewer's decision to pay over some millions to the people who were interested in such establishments when the law was passed—or, rather, the State would be bound to such a course if the law were enforced, for we believe it is a fact that some of the largest breweries in Iowa are still in operation.

The wisdom of deliberation about the admission of Territories into the Union is not enforced alone by the nation's sad experience with Nevada. Most people have forgotten all about it by this time, but it is a fact that nearly twelve years ago, in May, 1874, the House of Representatives, then Republican by more than two to one, voted by an overwhelming majority to admit New Mexico into the Union, and that only the conservatism of the Senate saved the country from having the little band of "greasers" in that Territory wielding as much power in the upper branch of Congress to-day as the five millions of people in New York. The utter untrustworthiness of politicians' estimates of population was strikingly shown in the case of New Mexico. One advocate of admission in 1874 declared that the Territory had then at least 130,000 people, while the census of 1880 showed only 119,565. The history of the country proves that the nation has never regretted delay in erecting a Territory into a State, while in the case of Nevada it suffers serious harm from undue haste, and in the case of New Mexico must rejoice at its narrow escape from a blunder that would have been no less serious. The moral is plain in the cases of Montana, Washington, and Dakota, which are now under discussion. The two former should wait at least until the question of their boundaries is decided by dividing northern Idaho between them, while nothing should be done about Dakota until it is made clear by a decisive test whether a majority of the people in the Territory favor the pending scheme for its division, which there is strong reason to doubt.

Florida has been making steady and rapid progress ever since it emerged from the conflicts and confusion of the reconstruction period nine years ago. Northern people have been settling there in large numbers, and the development of the State has gone forward with a speed that quite amazed the survivors of the slow-going era before the war. There is, however, reason to believe that Florida has suffered a serious check during the past month. The "cold spell" has undoubtedly frightened a great many intending settlers out of the idea of going where the mercury has shown itself capable of sinking almost as low as it falls in New York city, and it will be many years before the memory of the damage inflicted upon the orange crop in the opening days of 1886 will cease to deter the Northern prospector who is of a cautious turn of mind. News of the unexpected harshness of nature has unfortunately been accompanied by reports of frauds on the part of man which will perhaps prove even more serious in their effect. During the past few weeks a number of speculators have done a great business in selling Florida lands to people who knew nothing at all about what they were buying. It turns out, as might have been expected, that some advertisements have flagrantly misrepresented the facts, and that thousands of people have been paying good money for bad land. Some of the swindles appear to be as outrageous as have ever been known in the long history of such frauds in this country, and the exposures will inevitably prejudice people against the State so strongly that it will be hard work for the owners of good land in Florida to sell it for a long time to come. It is, by the way, a remarkable illustration of popular credulity that men and women who would never think of accepting another person's representations about a piece of goods which they contemplated buying in their own city, but would insist upon examining into the matter themselves, will swallow any story, however absurd on its face, about real estate in a remote part of the country.

The discovery of a case of "Irish landlordism" in Illinois, Kansas, and Nebraska, all

carried on by one man, a certain Scully, of "Celtic birth," which is reported in the morning papers, is very startling, and shows what an insidious thing this "Irish landlordism" is. It appears that Scully lives in London, and yet he "builds up his system" in any State of the Union he pleases. "His rule," it appears, "has reduced two hundred and fifty (250) tenants," in one county in Illinois, and their families, "to a state of serfdom." His process is to make them sign agreements to pay rent and taxes, and sell their grain always in the fall, no matter what the state of the market may be, and he notifies the grain-dealers not to buy of the tenants till his rent is paid. How the dealers are kept from buying, or how they are all notified, the report does not say, but presumably with bloodhounds. Nor does the report set out why Scully's serfs do not run away, but presumably he chains them to the soil, mediæval fashion. If he would only live here, he might be shot, but the cunning Celtic rascal keeps himself in London, and collects his rents in the regular Irish fashion, through an agent who probably transmits the money to him in *gold*. The affair is very startling, and calls for some action on the part of somebody.

Gladstone's splendid opening of the session of Parliament on Thursday, winning over the Irish, overpowering the mutinous Liberals, and bringing Parnell to his feet to talk like a statesman, is undoubtedly one of the most important events of the day. It was the best possible answer to the words of sullen and somewhat brutal defiance which Salisbury, after much backing and filling, at the last moment, had the audacity to put into the mouth of the Queen. His proverbial good fortune was never more apparent than in the way he has again foiled his enemies. The Tories had prepared a careful ambuscade for him by which he was to bring in a resolution providing for the legislative independence of Ireland, on which the Ministry was to fall and then go to the country in defence of "the unity of the empire." Lord Salisbury, however, overreached himself in his preparations, because he put into the Queen's speech a threat against the Irish for doing a perfectly constitutional thing—namely, seeking the repeal of an act of Parliament—for the Union rests simply on an act like another, which Parliament may any day repeal. This gave Gladstone and the Irish an excellent excuse for debating the Irish question without pushing their arguments home, or producing any programme, and furnished both with an occasion for the display of their very best oratory, and left the Ministry in a position of great embarrassment.

Lord Salisbury's Ministry has come to an end, sooner, probably, than its enemies expected. For a few weeks after the election its prospects were considered very gloomy, but its position was considered to have sensibly improved after it had leaked out that Mr. Gladstone was ready to concede to the Irish some form of home rule. The burst of indignation which this excited in "society," and in the clubs, and among the Whigs, led the Tory chiefs very naturally to regard it as a blunder which was to give the battle to their hands, and they made elaborate preparations to take advantage of it. They raised the cry of danger to the empire, got the Queen to open Parliament in person with much pomp as a sort of solemn protest against it, and made her speak of the Act of Union as a "fundamental law," and of the Irish agitation for its repeal as if it were treasonable, and then prepared to meet Gladstone and the Irish on this ground, and, if defeated, to dissolve Parliament on the Union issue.

The expectation of the Ministry undoubtedly was that on this occasion the amendment would relate to the Irish question, and would raise the home-rule issue at once, and that on this the Ministry could well afford to be defeated, and dissolve Parliament. But the Opposition were too shrewd for them. They discussed the Irish question, giving Parnell and Sexton a chance to make very quieting and moderate speeches, but they attacked the address in the interest of the new county voters. Mr. Collings, who more particularly represents the labor interest in the House, moved an amendment deploring the omission from the Queen's speech of all proposals for legislation in aid of the acquisition of small holdings by laborers in the country districts. This, whatever may be the economic or other objections to it, is something on which it would be useless to dissolve. In an election on this issue the Conservatives would probably lose every county. Accordingly, when defeated on it, there was nothing for them but to go out of office, and this they are to do to-day.

The great success of Mr. Sexton's speech in the House of Commons on Friday night does not foreshadow an immediate success for the Home-Rulers. But it shows what is really an immense advance, viz., that the Irish question has at last taken firm hold of English public opinion. Formerly, paying serious attention to what Irishmen said about it was the last thing Englishmen and Scotchmen in the House thought of. In fact, an Irish debate, initiated by Irish members, used generally to drive the Englishmen away. Parnell began to be listened to more or less attentively after the Land League was formed in 1881, but Sexton, the only one of the Home-Rulers who makes any show as an orator, generally addressed empty benches. With eighty-five votes behind him, and talking with a certain authority on the great topic of the day, he will probably gain in power, and in some degree revive the old traditions of Irish Parliamentary eloquence, which in the hands of the Parnellites have well-nigh died out. There is in the last *Contemporary Review* a clever dialogue between Parnell and the Shade of Grattan, in which the former, however, ably defends the failure of himself and his followers to maintain the old glories of Irish oratory, by pointing to the greater success of their own methods in impressing themselves on the English mind.

The Greeks armed in 1877, and prepared to assist the Montenegrins in attacking the Turks, but (they said in deference to the urgent remonstrances of England and the other Powers) refrained from taking any part in the conflict. They then found that at the Berlin Conference, as usual, their peaceable demeanor, instead of securing consideration for them, made them objects of contempt to the "blood and iron" men, and they got with great difficulty only a small extension of their frontier in Epirus. Even this, however, the Turks refused to surrender, when the Conference was over, and only after much parleying, and after considerable pressure from Mr. Gladstone, who had come into power, the Greeks got a part, little over half, of what the Conference awarded them. This was a very mortifying result, and it was made more so by the fact that Greece was the only one of the small States surrounding Turkey in Europe which had not fired a shot or lost a man in the great Russo-Turkish struggle. She has now armed again, but, as before, the Bulgarians and Servians had fought and made peace before the Greeks could bring themselves to strike a blow, and they are once more threatened with a settlement of the Balkan question which will leave them out in the cold. They are very proud, however, and dread keenly the European laughter which their second fiasco would excite—the more keenly because they have managed until now to keep up a very respectable military reputation based on their War of Independence. A second taking of the field without fighting would, however, not leave a shred of this reputation, and would destroy all chance of a proper share of the spoils in the final distribution of the Turkish Empire which every one feels is approaching. So they go forth either to fight or to find somebody who will prevent their fighting by overwhelming force, which will answer their purpose perhaps nearly as well. If the British fleet will not let them attack the Turks, it will serve nearly the same purpose as attacking the Turks, and be much less expensive.

The precarious position of the Salisbury Ministry in England has naturally encouraged the Greeks to disregard the British prohibition against attacking Turkey—the more as England is the only Power likely to impede their naval operations. They have only three ironclads and about a dozen other vessels of iron or wood, a squadron of gunboats, and about sixty torpedo-boats. The Turks, on the other hand, have 3 first-class, 4 second-class, and 8 third-class ironclads, but hardly anything else. There has been talk of equipping a number of torpedo-boats, but it has not come to anything, we believe, for want of funds. Of this fleet the Greeks are not in the least afraid, relying, as in 1821, on their immensely superior seamanship. In fact, as regards officers and crews, no comparison is possible, and it is very doubtful whether the Turkish ships would venture outside the Dardanelles, and expose themselves to the dauntless courage and ingenuity of the Greek cruisers, which has, there is every reason to believe, in no way declined since the days of Kanaris. There is, too, to-day a firm belief, in Greece, that it is only necessary to fight gallantly to enlist the sympathies of Europe in any contest with the Turks. The experience of Montenegro and Servia and Bulgaria seems to demonstrate this.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 20, to TUESDAY, January 26, 1886, inclusive.]

DOMESTIC.

IN the United States Senate on Wednesday, Mr. Morrill (Rep., Vt.) made an elaborate reply to Mr. Beck's recent silver speech.

In a debate on the Electoral Count Bill in the Senate on Thursday, Mr. Sherman offered an amendment striking out the clauses which allow either house to exclude a State, and providing that, in case of disagreement between the two houses, the question in dispute shall be submitted to a joint convention of both houses, which joint convention "shall immediately, without debate, upon the roll-call of the respective houses, vote upon the question or questions upon which there has been such a disagreement, and the decision of the majority of the members of the joint convention present shall be deemed final and conclusive, and the vote shall be counted accordingly by the President of the Senate." This did not please Mr. Edmunds.

The Senate devoted Tuesday to eulogies upon Vice-President Hendricks. Mr. Voorhees and Mr. Evarts were among the speakers.

Mr. Edmunds, from the Judiciary Committee, on Monday reported to the Senate a resolution, "That the Attorney-General be, and he hereby is, directed to furnish the Senate with all the papers in the possession of the Department of Justice touching the suspension of George M. Duskin, late United States District Attorney for the Southern District of Alabama, and the appointment of John D. Burnett as his successor." This was adopted, the Democrats not voting.

The House of Representatives, on Wednesday, passed the bill which had passed the Senate to authorize the purchase by the Government of the old Produce Exchange building in this city, at a cost of $250,000 for the land and structure and $200,000 for alterations and repairs.

In the House Committee on Foreign Affairs on Thursday, Mr. Belmont submitted a plan of consolidating the minor diplomatic missions so as to increase the appropriations for and the efficiency of the first-class missions without increasing the aggregate cost, and at his suggestion it was determined to ask the opinion of the State Department as to the desirability of these consolidations, and as to the importance of duties at these minor posts.

The House Committee on Banking and Currency on Thursday voted to report favorably the Wilkins bill which permits national banks to issue circulation to the par of bonds deposited as security for circulation.

The Fortifications Board, of which Secretary Endicott is President, reports to Congress that $126,000,000 are necessary to put the coast in a proper state of defence, and recommends that $25,000,000 be immediately appropriated.

Charles J. Canda was nominated on Wednesday by the President for the post of Assistant Treasurer in this city. Mr. Canda was born in Paris, France, and is about fifty-two years of age. His first prominence in business matters was attained while he was connected with William B. Ogden, with whom he remained until about twelve years ago. During his connection with Mr. Ogden he acted as his general manager. In 1875 he was appointed Treasurer of the Democratic National Committee. During the past four or five years Mr. Canda has been managing embarrassed railway organizations, acting especially in this capacity for Amsterdam bankers and investors. He is also largely interested in locomotive and car works upon the Ohio River, and is prominently indentified with the management of the Lake Superior iron industry. He is a business and political friend of S. J. Tilden.

Attorney-General Garland has declined to take any part in the telephone case, and has placed its entire management in the hands of the Solicitor-General.

Senator Vest, in a letter to ex-Governor Crittenden, of Missouri, explaining his failure to secure for the latter a foreign mission, says: "When Cockrell named you the President said he could not entertain the idea; that in the East you were believed to have bargained with the Fords for the killing of Jesse James, and, whether true or not, he could not shoulder public opinion on the subject."

Senator Payne has sent a letter to the Chairman of the recently appointed Investigating Committee of the lower house of the Ohio Legislature (referring to the charge that he obtained his seat by bribery), in which he says: "I propose to give it appropriate attention. For myself I invite the most thorough and rigid scrutiny. My private correspondence and books of account will be cheerfully submitted to your inspection if you desire it. I only insist, in case any testimony is given which in the slightest degree inculpates me, I may be afforded an opportunity of appearing before the Committee."

Mr. Dorman B. Eaton has resigned from the Civil-Service Commission, from the date of March 9. He says in his letter to the President: "The political question which seems to have been raised over my nomination, and which did not allow an earlier offer of my resignation, makes it proper for me to say that when you nominated me you well knew the fact that I was still an adherent of the Republican party, as I had been from its origin, in every sense that I was a Republican when appointed a Commissioner either by President Grant or by President Arthur."

Mr. Cannon, Comptroller of the Currency, has resigned in order to enter into business.

In the New York State Senate on Wednesday the bill incorporating the Grant Memorial Association was passed unanimously.

Robert Ray Hamilton introduced a resolution in the New York Assembly on Monday evening, which was adopted, requesting "the Senators and Representatives of this State to use their utmost endeavors to secure the repeal of the law commonly known as the Bland Act, and that they be, and they hereby are, requested to urge such legislation as will maintain the currency of the country upon its present basis, and preserve the obligations of the United States from depreciation and the confidence of its creditors from disappointment." The resolution was reconsidered on Tuesday in order to allow opportunity for a full and free discussion.

The American Opera Company, Limited, has just been formed, as a permanent organization for carrying on the American opera enterprise which has been begun at the Academy of Music. The capital is to be $250,000, divided into fifty shares. C. E. Locke is to be the salaried manager of the company, whose incorporators include many well-known residents of New York and other cities.

Mr. William D. Sloane and his wife, who is a daughter of the late William H. Vanderbilt, have offered to build and equip a maternity hospital on a part of the land given by Mr. Vanderbilt as the site of a new building for the College of Physicians and Surgeons. The building will be begun at once.

By the will of Isaac D. Farnsworth, of Boston, Wellesley College receives $100,000 for a fine-arts college building.

Serious riots occurred on Wednesday and Thursday between striking coke workers in western Pennsylvania and the police. 5,000 men have joined the strike.

One of the severest storms that have ever visited the Pacific Coast began on January 17, and reached its height soon after noon on January 20. It extended from the northern boundary of Washington Territory to the southern boundary of California, and from the Rocky Mountains to the Pacific Ocean. On Wednesday the storm was a hurricane in San Francisco, unroofing houses and blowing down buildings, and even lifting cars from the tracks.

James T. Farley, who was United States Senator from California from 1879 to 1885, died on Friday after a long illness, at the age of fifty-seven. He was a Democrat.

Representative Joseph Rankin, of the Fifth Wisconsin District, died on Sunday in Washington, aged fifty-six. He was a member of the last Congress, and came from his home in a special car to the present session, though dying, in order to take his seat.

FOREIGN.

The opening of Parliament, on Thursday, by the Queen in person was a brilliant spectacle. In the House of Lords was a distinguished assemblage. The Queen appeared very well. Princess Beatrice and the Prince of Wales stood on one side of the throne. After reviewing foreign affairs the Queen's speech said: "I have seen with deep sorrow the renewal, since I last addressed you, of the attempt to excite the people of Ireland to hostility against the legislative union between that country and Great Britain. I am resolutely opposed to any disturbance of that fundamental law, and in resisting it I am convinced that I shall be heartily supported by my Parliament and my people. Although there has been during the last year no marked increase of serious crime, there is in many places a concerted resistance to the enforcement of legal obligations, and I regret that the practice of organized intimidation continues to exist. I have caused every exertion to be used for the detection and punishment of these crimes, and no effort will be spared on the part of my Government to protect my Irish subjects in the exercise of their legal rights and in the enjoyment of individual liberty. If, as my information leads me to apprehend, the existing provisions of the law should prove to be inadequate to cope with these growing evils, I shall look with confidence to your willingness to invest my Government with all the necessary powers. Bills will be submitted for transferring to representative councils in the counties of Great Britain local business which is now transacted by the Courts of Quarter Sessions and other authorities. A measure for the reform of county government in Ireland is also in preparation. These measures will involve the consideration of the present incidence of local burdens. A bill for facilitating the sale of glebe lands in a manner adapted to the wants of the rural population will also be submitted to you—as will also bills for removing the difficulties which prevent the easy and cheap transfer of land; for mitigating the distressed condition of the poorer classes in the western highlands and the islands of Scotland; for the more effectual prevention of accidents in mines; for extending the powers of the Railway Commission in respect to the regulation of rates, and for the codification of the criminal law."

After the reading of the Queen's speech, Lord Salisbury, referring to Ireland, said the Government had refrained from renewing the Crimes Act because there had been a prospect of returning order in that country. The experiment, however, had failed, although every chance had been given to make it succeed. Nothing, he said, could exceed the patience of the Earl of Carnarvon in carrying out his mission of peace. The disease, said Lord Salisbury, existed in Westminster and not in Ireland, and the Government must try to stamp it out there. The words of Mr. Gladstone, he declared, were answerable for many Irish evils. The House of Lords on Thursday agreed to the address in reply to the Queen's speech.

In the House of Commons Mr. Gladstone spoke for one hour and twenty minutes. He congratulated Lord Salisbury on the conduct of the Government in the Rumelian affair. In regard to Ireland Mr. Gladstone said he wished the Queen's speech had been more explicit. He was convinced that only a gentle and conciliatory handling of the Irish question would

be effectual. He had always striven to eliminate the elements of wrath and passion in discussing Ireland. The exercise of candor and justice could alone afford the smallest hope of solving the difficulty. "Whatever," he continued, "it may be necessary to do for Ireland should be done promptly. In the name of heaven, let us maintain the Union. We have been maintaining it for eighty-five—yes, six hundred years. Let us not deviate from the path of good temper and self-command, but, forgetful of every prejudice, let us strive to do justice to the great, the gigantic interests committed to our charge." Mr. Gladstone said that in seeking a reëlection he was mainly guided by a wish to procee l with proposals in regard to both the legislative and the social position of Ireland. Only the Government, however, was able to act in such a matter. He, believing it would be mischievous to do so, did not intend to introduce proposals of his own, but he would reserve his opinion. Mr. Parnell said he had always believed that if the principle were admitted that Ireland was entitled to some form of self-government, the settlement of the details would not be found a formidable task, and that there would be no great difficulty in securing the empire against separation. The whole question was one of reasonable or exorbitant rents. He denied that the National League encouraged boycotting. The Nationalist members, he said, on seeing the manifest desire of England to weigh the Irish question calmly, had resolved that no extravagance of word or action on their part should mar the first fair chance Ireland ever had. Lord Randolph Churchill, in proposing that the debate be adjourned, said he wished it to be clearly understood that it would be impossible for the present Government ever to sanction an Irish Parliament.

Mr. O'Brien's amendment in the House of Commons to the address in reply to the Queen's speech says: "This House, with the view of insuring respect for law and order, should consider as soon as possible measures by which the Irish courts will be enabled to stay evictions and arrange a settlement between tenants and landlords." In the debate on the address on Friday night, Mr. Sexton, member from Sligo, spoke for an hour in his most eloquent manner. In the course of his speech, he said: "A rising in arms by the rebel population of Rumelia is conclusive proof to the royal mind of the justice of their cause, but the election by five-sixths of the population of Ireland, instead of being dealt with like a rising in arms as an expression of the desire of the people, is to be treated, in the language of the sovereign, as simply a regrettable and deplorable attempt to excite hostility against legislative union. What is the moral the Government wants to drive home to the people of Ireland? It is false and delusive to say that the integrity of the empire, the supremacy of the Crown, and the supremacy of the Imperial Parliament are called into question by the demands of the Irish people." A very significant incident followed: "Perhaps the chief reason," continued Mr. Sexton slowly, "why the honorable member for Cork refrained from moving an amendment to the address upon the present occasion was that the right honorable member for Midlothian had repeatedly affirmed, with the consent of the country, and, as he believed, of all reasonable Englishmen, that he was favorable to the settlement of the claim of the Irish nation to a national Legislature, provided the integrity of the empire and the rights of the Crown were guaranteed." Then, in view of the whole House, Mr. Gladstone deliberately nodded three times. Everybody saw it, and wild and prolonged cheers broke from the Irish party.

New procedure rules of a very sweeping nature were laid on the table by the Government in the House of Commons on Friday night. They make a quorum of 100 instead of 40; establish a large committee system to save the time of the House; make the hours of sessions from 2 to 7 and 9 to 12 P. M., all business to stop at half-past 12, and Parliament to adjourn in July and reassemble in October.

The Conservative Government on Monday changed front and resolved to let the Irish coercion question come up before the new procedure rules, which it consented to modify so as to provide that the House of Commons should meet at 4 and adjourn at 1, abolishing the proposed dinner interval.

In the House of Lords on Monday afternoon the Earl of Kilmorey, Conservative, moved the abolition of the office of Viceroy of Ireland, but afterward withdrew the motion.

In the House of Commons on Tuesday afternoon Sir Michael Hicks-Beach, the Conservative leader, gave notice that the Government would introduce on Thursday a bill to suppress the Irish National League and other dangerous societies, to prevent intimidation, to protect life and property, and to maintain public order in Ireland. This announcement was greeted with loud cheers. Sir Michael said he would ask the House to give the bill precedence. He added that this measure would be followed by a bill dealing with the Irish land question on the lines of policy indicated by the land-purchase act of last session. Mr. Collings then moved an amendment to the address, expressing regret that the Queen's speech contemplated no measures for the relief of suffering in Ireland in consequence of the depression in trade and agriculture; particularly through facilities to farm laborers for obtaining allotments of small holdings on equitable terms (derisively characterized as a "three acres and a cow" measure). Mr. Gladstone strongly supported, and the Marquis of Hartington opposed, the amendment, which was adopted by a vote of 329 to 250, the ayes including 73 Parnellites as well as Messrs. Gladstone, Chamberlain, Dilke, Trevelyan, Labouchere, and Bradlaugh. Among the noes were Lord Hartington, and Messrs. Goschen, Courtney, and Lubbock. Parliament was adjourned till Thursday, when the Ministry will announce their resignation.

The guards of the principal public buildings were doubled on Saturday, and there were indications of unusual police vigilance in every quarter. It is asserted that this activity on the part of the police is occasioned by the fact that the authorities have become cognizant of threats of violence uttered in consequence of the unsatisfactory character of that portion of the Queen's speech referring to the Irish question. The Prince of Wales, while visiting at Chester, was carefully guarded.

The tunnel under the Mersey, connecting Liverpool and Birkenhead, was formally opened on Wednesday by the Prince of Wales and his two sons, Princes Albert and George.

Madame Louise Mourey, who, with Mr. Stead, editor of the *Pall Mall Gazette*, and others, was convicted in November last in connection with the Armstrong abduction case, and sentenced to six months' imprisonment, died on Friday in Milbank Prison of Bright's disease.

Joseph Mayer, F. S. A., a famous English archæologist, numismatist, author, and philanthropist, died on Thursday, lacking but one month of being eighty-three years old. He was a jeweller by trade.

The Eastern war excitement was revived on Sunday. It was announced that the Grecian Army would soon be ordered to cross the frontier into Turkey. A Greek fleet sailed on Sunday from Athens under sealed orders. England officially informed Greece that she was prepared to send a fleet to prevent the latter from attacking Turkey by sea. The Greek Premier replied that his country would not disarm; that the representations of England infringe on international and diplomatic observance, and that Greece reserves perfect freedom of action. The answer further says that Greece has not declared war, nor has she given cause for England to interfere regarding her attitude. Bulgaria having violated the treaty of Berlin under the ægis of England, Greece is justified in using every means in her power, and even to resort to arms, if necessary, to obtain the concessions the treaty of Berlin gave her. Greece will maintain her claim to Thessaly and Epirus, no matter what the cost may be, and is prepared to take the field at the earliest moment and fight to the bitter end in support of her rights. She is confident of success. The first movement of Turkish troops against Greece will be the signal for a revolt in Albania and Macedonia, and Europe will not look placidly on.

The Greek fleet on Tuesday departed from the Piræus, the Port of Athens, to avoid being blockaded by the British fleet. New regiments are rapidly forming. The Porte has asked the Powers to assist in a prompt settlement of the question. Mr. Gladstone, in reply to an appeal for his support as against the resolution of the Salisbury Ministry, telegraphed to the people of Athens on Tuesday: "Considering the authority attaching to the action of the Powers, both on general grounds and by reason of their intervention in the formation of the Greek kingdom, I earnestly hope Greece will pause before placing herself on this occasion in conflict with their deliberate and united recommendation."

The Italian Minister of Finance has announced that there is a deficit in the current budget of $10,000,000, which is attributed principally to cholera and the Massowah expedition. The duties on sugar, coffee, and spirits are to be increased.

The Cologne *Gazette* says the Prussian Government has determined to Germanize the Polish provinces, and with this view will purchase estates in those provinces, and parcel the land out to German peasants.

The German-Americans on the island of Foehr, whose expulsion from Germany was recently ordered, have petitioned the Government to allow them to remain until April 1.

A member of the Hungarian Parliament accuses Baron Armin Podmanczky, a friend of Herr Tisza, of squandering one-third of the Hungarian revenues.

Hippolyte Charamaule, a famous French lawyer and publicist, is dead at the age of ninety. He was prominent in the February Revolution which proclaimed the Republic, and, after the *Coup d'état* of Napoleon III., against which he protested, he retired to private life.

Jean Jacques de Tschudi, the Swiss naturalist and traveller, is dead at the age of sixty-eight. His explorations were principally made in Peru and Brazil.

The Congo Railway syndicate has appointed Mr. Henry M. Stanley manager of the work of laying the line of railway in the Congo country.

Michael Czaykowski, better known as Sadyk Pasha, a general once in the service of Turkey, has committed suicide. His career has been remarkable. He was born in Poland in 1808, and in his youth attained some fame as a poet and novelist. In 1831 he won renown and the title of General by fighting against Russia. Some years later he went to Constantinople to reside. His surrender to the Russian authorities was formally demanded, and to avoid being given up he in 1851 adopted the Moslem religion and assumed the name of Mahommed Sadyk. During the war between Turkey and Russia in 1853-55 he had the rank of Pasha and commanded a corps of the Turkish army. Subsequently he was Military Governor of Bucharest. In 1872 he quitted the Turkish service, and, obtaining permission from the Russian Government to return to his native country, he took up his residence in Kiev.

It is rumored that Zorilla, having failed in his efforts to incite an insurrection in Spain, has returned to London, the French Government having refused him a refuge in French territory.

SENATOR MORRILL'S SPEECH.

SENATOR MORRILL'S speech on the silver question, in reply to Senator Beck, is a very able presentation of the subject which just now engages the largest share of public attention. It is especially strong in support of the moral considerations which should impel all governments to do what was expected of them at the time when they entered into their financial engagements, instead of studying sharp devices to save sixpences at the expense of shillings in any future emergency calling for the employment of the public credit. Senator Beck's treatment of this branch of the controversy exposed him to a broadside which he has now got. In close connection with this, Mr. Morrill called his attention to the classes of persons who for the most part constitute the hostile army of bondholders, showing that they are not as a rule wealthy persons at all, but the note-holders of national banks, depositors in savings banks, infant heirs of deceased persons whose property is held in trust, wards in chancery, etc., while the millionaires commonly invest their money in things which yield higher rates of interest than 3 or 4 per cent. "This," says Mr. Morrill, "is the true character of those who now hold our bonds, and yet they are covered with defamatory epithets, as though they were culprits worthy of sentence to a dungeon or to a chain-gang." It is worth while for politicians to bear in mind that the number of depositors in savings banks in the State of New York is equal to the number of voters, being about eleven hundred thousand. Let any man ambitious for public honors take his stand in any of our large savings banks about the time when the interest on deposits falls due, and he will get a lively idea of the fate that would befall him if he should be suspected of an intention to cut away some part of the security for the deposits, or to reduce the value of the same 20 per cent.

The demagogue stamp upon Senator Beck's speech was exposed by Mr. Morrill in another way. Mr. Beck had soundly berated the bondholders for pushing up the premium on the bonds to so high a figure—as though *they* had any interest in having them sell at 124 rather than at par. "He unquestionably knows," says Mr. Morrill, "that it will make no scrap of difference to bankers and bondholders now whether our bonds bear a premium or not. All they expect to realize or can realize from their bonds is the fixed rate of interest and their par value when due, and it makes not a farthing's difference to the Government whether bonds bear a premium or not, unless the Government proposes to use its funds for speculative purposes, and make purchases of them in advance of their maturity."

The immoral practice of "striking down silver" also engaged Mr. Morrill's attention to good purpose. We can do nothing better than quote his paragraph on that subject:

> "The fall in the value of silver in the United States has been denounced by some of our advanced silver financiers as though it was a trick of the Wall Street bondholders, and not, like the recent fall in the value of copper, owing entirely to a largely increased supply and a diminished demand. The banks are also denounced as conspirators engaged in this unholy depreciation of one of the precious metals, because their customers whom they serve have not found a use for it; but the imputation is hardly less preposterous than it would be to charge the banks with the depreciation in the value of copper, because they do not buy and hoard uncalled-for millions of bronze or copper cents. Democratic Treasury officials are held to be no more honest than their predecessors, and it is not for me to claim that they are; but all have been at work from the early morn until the evening twilight in pushing silver at every cross-roads of the country, although esteemed in some quarters as nothing less than traitors because they have not had greater success, as accredited missionaries, in persuading mankind that the silver dollar is worthy of a more obedient faith and greater adoration among the unconverted."

We cannot so highly commend Mr. Morrill's excursion into the tariff dispute, where, however, he was only following Senator Beck. The latter had stated incidentally that American agricultural industries received no consideration in the distribution of favors by the tariff. What he ought to have said was that they *could not* receive such favors, since they are articles of export and not of import. Duties, we must remind both Senators, are levied only on imports. Mr. Morrill, however, takes Mr. Beck literally, and favors him with this astonishing information:

> "Tobacco in the leaf is subjected to a high duty; and corn, wheat, pork, bacon, lard, beef, cheese, butter, sugar, leather, oils of all kinds, hemp, flax, and even peanuts are not omitted. If there is a single agricultural product that has been neglected let it be named, and I shall have great pleasure in following the lead of the Senator from Kentucky in giving it a 'protecting arm.' Upon one question, at least, we will go arm in arm. Surely the Senator forgot, when he made his statement, where he was, and supposed he was on the stump in the blue-grass region instead of the United States Senate. Certainly agricultural products have not been neglected."

There is one considerable article not embraced in Mr. Morrill's list of protected agricultural products, which Mr. Beck might adduce by way of putting the Vermont Senator to confusion, and that is cotton. Why were we vouchsafed duties on wheat and corn, and not a scrap of duty on cotton? We import as much of the latter as of the two former. Again, how did it happen that in the microscopic survey of human industry embodied in the Morrill tariff we have a duty of 10 per cent. ad valorem on ants' eggs and no duty at all on hens' eggs? Hens' eggs are imported largely, although cotton is not. Would a revision of the tariff in order to put a duty on hens' eggs and to repeal the duty on ants' eggs be such a revision as the Republican national platform authorizes?

Senator Morrill's speech has a significance which he vainly endeavors to cast away, but it will not be cast away. It is a defence on the Republican side of the chamber of a Democratic Administration against Democratic attack. It is the only defence that the Administration has yet had against the attacks of Beck, Eustis, Vance, Pugh, Reagan, and other Democratic leaders. Mr. Morrill's disclaimer of any intention to interfere in a family quarrel will not count for much against the plain facts. The masses pay no attention to such technicalities; they only look at the picture as a whole. It seems now as though the chief support of the President and the Secretary of the Treasury upon the chief issue in national politics would come from the Republican party. It would be premature to speculate upon the larger consequences of this alliance, but that there will be consequences, running the length and breadth of the republic, no one can doubt.

WHY NEW MEXICO DOES NOT FLOURISH.

WITH the construction of the Atchison, Topeka and Santa Fé Railroad through New Mexico, a new era seemed to dawn upon that distant and nearly forgotten land. It was discovered that it possessed great wealth and enjoyed singular advantages, and for a short time people began to flock to it; capital was enticed thither for investment, and a great number of enterprises sprang up in almost every direction. The "boom," however, fell almost as rapidly as it arose. This was largely owing to a lack of resources in our Southwestern region. But if, remembering its beautiful and salubrious climate, we ask ourselves why it is plainly shunned by industrious people of modest pretensions; why it remains to-day a "good country" only for large capital in the hands of a few, for land syndicates and so-called monopolists in stock-raising, the answer must be because a system of land tenure, antedating the American annexation, acts as a deadweight upon it, making its real estate unavailable, nay inaccessible to the small buyer, to the poor renter. The old land grants cover a vast portion of New Mexico, and are, through their immobility, an almost insurmountable obstacle to the growth of the Territory.

These grants, sometimes of enormous extent, were originally vested in a few; but in process of time the descendants of one grantee have come to number twenty or thirty heads of families, living scattered, and, as not infrequently happens, with one or more of them lost to sight, without record. The small purchaser can nearly always acquire the individual interests of a single heir, or of a few even, but then he only owns an "undivided part," and obtains no control of it except in partnership with people whom he oftentimes never becomes acquainted with, and who in any case are foreign to him, in language, in ideas, in mode of life and manner of working. This investment remains dead capital until he can secure the remainder, and what hope has he of obtaining it? Wealth it may eventually become, but can he afford to have it dormant? Assuredly not. There is little inducement for the immigrant with modest means to settle in a country when such impediments are thrown in his way. Only the capitalist can buy out all those interested in the larger grants, and what he thus purchases is seldom, if ever, wanted for parcellation. It is sought for some enterprise on a grand scale that excludes the small settler.

Not only are a considerable number of grants held by many, but such is their legal status that they cannot be bought at present. No grant is regarded as perfect until it has been confirmed by the Congress of the United States. It is, therefore, first submitted to the Surveyor-General of Santa Fé, who examines the claim and then reports upon its merits, for or against, and Congress decides whether to approve or reject it. If approved, a patent deed is issued directly from the Government; if rejected, the claim is regarded as void. These are very lengthy proceedings; they take years, and cost correspondingly. No small settler can afford to sacrifice the time and the money needed for this, and this again throws the real estate of New Mexico into the hands of a few

to the exclusion of the many. It obstructs settlement and renders improvement almost impossible.

Unless a grant has been already confirmed, it is unsafe to buy it or to purchase any portion of it. There is a great variety of these titles, some made by the Spanish Government, some by Mexico. The Spanish grants were usually issued by the former Governors, Mexican grants by Governors or political chiefs. It is held by some that certain officers had no right to convey lands, by others that they had. Many contend that the title was never in fee simple, that nothing was conveyed but the right to use for certain purposes. Again, it is alleged that many grants are void, that the limits have been fraudulently extended, that the same tract has been granted several times over to entirely different parties, that grants overlap each other. Whoever touches an unconfirmed title, buys not only heavy expense and loss of time, but also a fair prospect of litigation with possible squatters and neighbors. To cap the climax, special grants were issued by Spain to the various tribes of sedentary Indians ("Pueblos") occupying fertile tracts throughout New Mexico. These tracts are regarded by the majority of people as desirable, but as equally unpurchasable, being made to a community as a whole and without any right to dispose of them. Others contend that they are transferable under certain conditions and under certain circumstances. At all events, they are at present untouchable.

The maze of difficulties in which the Territories once belonging to Mexico labor, so far as real estate is concerned, in consequence of an obsolete landed system, deserves prompt and earnest attention. Otherwise these Territories can never prosper, because they can never be freely settled. Mining there has its limits, and it is narrowly circumscribed. Agriculture and stock-raising are capable of much greater extension, but then the landholder must feel sure of what he owns, and the immigrant with small means must be able to acquire a home. As it is, only the wealthy buyer, who seldom cares for living out West, unless he is consumptive and goes there in the hope of deferring his death, can secure real estate and keep it. There are, of course, desirable parts of New Mexico which are not covered by grants of any kind, but the most accessible sections are, and these are specially attractive to him who wishes to make his home in the Southwest. It devolves upon Congress to find a remedy for the present hopeless confusion in regard to land titles. There seems to be no obstacle in the way of a prompt disposal of them one way or another. The Territories are suffering from the present state of things; public opinion there points to the old land grants as the cause of ailment, and since Congress has taken upon itself to decide whether they shall be respected or not, it is to Congress the appeal for relief is made with urgency.

THE GAS QUESTION IN ENGLAND.

THE relation of our modern municipality to the gas supply is one of the most interesting questions of local government and local finance now before the public. It is what may be called a burning question in this country in every large city and in many small ones, and although it is perhaps nearer a solution in Europe than with us, it is not by any means finally settled even there. English experience on the subject is the longest and most varied, and cannot but be of great value to us. The English Parliament and English localities have tried nearly all possible experiments in this field, and the conclusion to which they are very rapidly drifting is that the only solution of the problem lies in the ownership and management of gas works by the municipalities. As this is a result quite different from what we might expect from the history of such undertakings in this country, it is well worth our while to examine the course of events which has led to it.

They first tried the experiment of chartering competing gas companies, allowing each to make its own terms with consumers. The earliest acts authorized different companies to supply the same districts throughout the metropolis, and for a time opposition existed between the Chartered, and Imperial, and the City of London Companies, in a portion of their districts. The attention of Parliament was, however, very early called to the evils arising from this competition. Sir William Congreve, who was inspector of gas works, in a report to the House on the matter about 1820, expressed the strongest disapprobation of it, and recommended that no act should be passed without limiting the district of each company. Consequently, in all acts passed for a series of years, each company was limited to a specified district, under a heavy penalty for every light supplied beyond it.

Other companies were, however, formed with statutory powers for supplying the metropolis, and in 1842 the principle of exclusive districts which had been adopted in 1821 was finally abandoned. An act was passed authorizing a comparatively new company to supply districts already lighted by other companies, and, closely following upon this, several other acts were passed upon the same principle. This strengthened the competition which had existed for years in certain parts of the metropolis and initiated an era of the wildest competition. The leading companies laid their mains in all the leading thoroughfares where there was a large consumption, and some of the streets were supplied from six different works through as many mains. The strife for business on the part of the companies became most unscrupulous and ruinous both to the companies and the public. The companies could pay no dividends, the discriminations were enormous and dangerous to soundly conducted business, while the repeated tearing up of streets interfered to a serious extent with the regular traffic. This sort of thing could not of course continue forever. As a matter of fact, it did not continue quite ten years. In 1853 the companies agreed to quit competing, divided up the territory among them, and established uniform prices for gas throughout their respective territories. The price of gas was raised considerably in order to cover the losses incident to competition, and consumers in London are still paying dividends on capital invested in the useless mains of that period. This combination and the consequent increase of price created such a great excitement that a Parliamentary investigation was ordered. As a result of this inquiry, which was unusually careful and detailed, an act was passed confirming the districting arrangements, securing the companies in their respective districts, and prohibiting all other companies from supplying gas within this territory without special sanction of Parliament—thus recognizing finally and forever that competition was out of place as a regulator of gas prices.

Simultaneously with this process of dividing up the territory, a process of absorption was begun, by which one company after another was swallowed up by the larger ones. In 1853 there were thirteen companies supplying London. This number had dwindled to three in 1883. There are now only two companies, with a strong probability of early consolidation into one.

Even before the gas companies were finally recognized to be practical monopolies, an attempt had been made to regulate the maximum price of gas and its quality, by fixing the former and providing tests for the latter. Various laws were passed looking toward securing an impartial and sufficient service for all consumers. Efforts were also made to limit the exploitation of the public by fixing maximum dividends, and providing for a lowering of the price of gas after the dividends had reached the maximum. In spite of all these experiments, the dissatisfaction of the public continued to increase until the adoption of what is known as the sliding scale, which has done much to remove certain causes of complaint. According to this plan an initial price of gas was fixed, and also a standard dividend. For every reduction of a certain amount in the price, an augmentation in the dividend is allowed, and on an increase in the price the dividend must be correspondingly diminished. Thus the Gas Light and Coke Company of London has for its ordinary stock a standard rate of dividend of 10 per cent., while its standard price for gas is 3s. 9d. per 1,000 cubic feet. On reducing the price 4d. it was allowed 1 per cent. additional dividend. In 1884 it had reduced the price to 3s. and increased the dividend to 12 per cent.

Outside of London the course of development has been somewhat different. Competition broke down there as in the city, but they were not content with trying to regulate the companies. The municipalities began to establish their own works. No objection was raised to this in those places where no private companies had been established, but when the municipalities, despairing of regulating the companies successfully and unable to purchase their works because of the outrageous price asked for them, began to erect competing works, the private companies succeeded in getting an act of Parliament, in 1872, prohibiting municipalities from erecting works where private companies were already established. This handed over the communities, bound hand and foot, to the tender mercies of the gas companies, since they could only get hold of their works on "terms agreed," which meant on the terms demanded by the companies. These terms have been in most cases extravagantly high. The companies have put in all manner of claims—for maximum dividends on capital from the beginning of their organi-

zation, for the hopes of future profits based on the experience of the most successful companies in England, etc. In spite of all this the evils of private management are considered so unbearable that city after city is purchasing the existing works, and it is stated on good authority that one of the first steps of the reorganized City of London will probably be the acquisition of the gas works of the present companies.

According to the report of gas undertakings in the United Kingdom, made to Parliament in 1884, there were at that time on the islands more than 160 towns and cities which owned and managed their own works, and the number is increasing every day. Now, what has been the result of public management?

According to Mr. Arthur Silverthorne, a prominent English expert who has given much attention to this subject, "the event has proved that nothing could be more felicitous than the way in which the municipal authorities have managed even the largest gas undertakings confided to their care, and I fearlessly assert that these unpaid bodies have achieved far superior results to those obtained under the directorate of private companies." In spite of the high price paid for the gas works of private companies, varying from 150 to 400 per cent., and averaging about 250 per cent. of face value of stock and from four to ten times the value of the plant, they have nearly uniformly succeeded (1) in paying interest on debt contracted to purchase the works, (2) in lowering the price of gas to consumers, and (3) in handing over a handsome surplus to the City Treasury. There are several reasons why this should be perfectly possible, and the statistics leave no doubt of its being actual.

The city of Birmingham, under the lead of the irrepressible Mr. Chamberlain, purchased its works in 1875, which were earning at the time of purchase only £82,290 per year. By lowering the price, thus largely increasing the consumption, and introducing improved machinery and processes, the city increased the earnings by 1879, within four years, to £165,000, *i. e.*, it earned 35 per cent. dividend instead of 17 per cent. The striking results of such public management were made the basis of increased demand on the part of other private companies whose works were desired by the municipality.

The city of Nottingham acquired the gas works in 1875, when the price was at 3s. 4d., and reduced the price within ten years to 2s. 2d., with the following result in amount consumed and profit realized:

Year.	Price per 1,000 c. f.	Amt. consumed in millions.	Profit.
1877	2s. 10d.	662	£5,783
1878	2s. 8d.	723	12,525
1880	2s. 6d.	891	23,000
1882	2s. 4d.	1,040	27,615
1884	2s. 2d.	1,163	33,169

The city of Leeds has a still more striking record. The authorities have managed the undertaking so well that they were asked recently to reduce the price to 1 shilling per 1,000 cubic feet.

Germany seems to be seeking the solution of the same problem in the same direction. In 1860 there were in Germany 266 gas works, of which 66 belonged to the municipalities and 200 to private companies. In 1883 there were 600 establishments, of which 290 were public and 310 were private, the ratio changing in twenty-five years from 25 per cent. to nearly 50 per cent. in favor of public undertakings. Even now, of the 164 leading cities 88 own and manage their own works, and if we take Germany as a whole, the public works are far more important than the private works. The capitalized value of city undertakings is nearly double that of private works, being $143,000,000 to $78,000,000. The inhabitants of cities supplied with public works amount to 7,000,000 as opposed to 4,500,000 in those supplied by private companies. The public works consume more than 65 per cent. of the coal used in the manufacture of gas.

It would be eminently worth while for some of our experts to make a thorough examination of this whole subject, both in this country and Europe. It would be very desirable to know exactly how these public works are managed, and the secret of their undoubted and increasing success. They seem destined, in Europe at least, to supplant entirely the private undertaking.

THE OLD IRISH REMEDY.

THE report that after much debate and cogitation the only measure the Tory Cabinet can agree on for the solution of the Irish difficulty is a new coercion bill, derives much probability from the history of all previous legislation in London on the same subject. In fact, the readiness of the English mind, after tormenting itself for a while over remedial measures for Ireland, to put them aside and fall back on simple force has been almost comically persistent.

On this point the recently published volume of Mr. Barry O'Brien's 'Fifty Years of Concessions to Ireland' (London: Sampson Low & Co.) is most instructive. The war between the tenants and the landlords, which slumbered for a few years after the Union, broke out with renewed atrocity in 1807. Murder, arson, mayhem, and resistance to the police, all caused by the land question, raged all over the country during the following forty years. During this period a swarm of observers, English and foreign, visited Ireland and wrote on this question. A Government Commission, too, of which the Earl of Devon was chairman, investigated and reported on it. All told the same tale. All said that the root of the Irish trouble was the dependence of the Irish tenant on the landlord's discretion, and the barbarous indifference of the landlord to his condition, and his readiness to confiscate the tenant's improvements. Nevertheless, during the whole of that period—from 1807 (and in 1807 the evil was already a century old) to 1847, not one legislative attempt was made to remedy it, but plenty of time was found to pass coercion bills. In 1800-1 there was an Insurrection Act, and a Suspension of the Habeas Corpus. In 1803–4 these measures were continued. In 1807–8–9 there were an Insurrection Act and Martial Law. In 1814–15–16–17 there was an Insurrection Act and Martial Law. In 1822–3–4 there was an Insurrection Act. In 1825–6–7–8–9 there was an Act for the suppression of the Catholic Association, which was carrying on the agitation for the emancipation of the Catholics. In 1831–2 there was an Act prohibiting the possession of arms, called out by the desperate resistance of the peasantry to the collection of tithes for the Protestant clergy. In 1833–4 there was a Coercion Act, which was continued into 1835.

Between 1829 and 1835 the English mind was at last sufficiently moved by Irish turbulence to emancipate the Catholics, and stop the levying of Protestant tithes, but neither violence nor agitation could induce it to touch the land question, until in 1849 the Encumbered Estates Bill was passed, providing an easy process for the sale of the estates of bankrupt landlords, and enabling them to give "a parliamentary title" to the purchasers. But for the tenants nothing was done.

In the meantime, however, there had been plenty of coercion. In 1843-4-5 the possession of arms was prohibited. In 1847 there was a Crime and Outrage Act. In 1848-9 there was a Habeas Corpus Suspension Act, a Crime and Outrage Act, and a Removal of Aliens Act. From 1850 to 1855 there was a Crime and Outrage Continuance Act. In 1856-7 there was a Peace Preservation Act. From 1858 to 1863 there was a Peace Preservation Continuance Act. In 1865 there was also a Peace Preservation Continuance Act. From 1866 to 1869 there was a Habeas Corpus Suspension Act. In 1870–1 there was a Peace Preservation Act. From 1873 to 1880 there were a Peace Preservation Act and a Protection of Life and Property Act. In 1881–2 there was Forster's Coercion Act, and in 1883–5 there has been the Crimes Act.

During this period there was a Land Act, passed in 1860, which, as it simply allowed the tenant to be paid for his improvements if he made them with the landlord's consent, proved a total failure. In 1866 the Whigs made an attempt to give the tenant property in improvements which the landlord had not forbidden. In 1867 the Tories proposed to go further than this, and create a Commissioner of Improvements who should decide what improvements the tenant might make without the landlord's consent. But neither proposal came to anything, and the war went on. In 1869 Gladstone at last disestablished the Church, and in 1870 passed the first real remedial land act—"the best measure, perhaps the only good measure," Froude said, "which has been passed for Ireland in 200 years." But, like all other Irish remedial measures, it did not go far enough, for it left it in the power of the tenants to contract themselves out of the purview of the Act—that is, to agree in writing not to avail themselves of its provisions, and therefore, as the *British Quarterly Review* said in 1880, "Some landlords set themselves deliberately to defeat its provisions; . . . others required their tenants to sign leases deliberately drawn to defeat its provisions." So it also proved nugatory. Consequently the Land Act of 1881 was the first really effective attempt to settle the land question, but it, also, came too late.

We thus see that while English opinion in eighty years was able to consider and pass twenty-four coercion acts, it was only able to settle on four remedial acts—the Catholic Emancipation Act, the Tithes Commutation Act, the Church Disestablishment Act, and the Land Act of 1881; and the first three of these really simply provided for the cessation of gross oppression. In truth the whole story

of the government of Ireland by the Imperial Parliament since 1800, as told by Mr. O'Brien —with great calm, let us add, and profuse citation of authorities—is so absurd that it may fairly be called "light reading," and, in spite of the bulk of the volume, may be taken up by the fireside, in the evening, for pure entertainment. If the Tories should now, after profound reflection on the home-rule problem, bring in simply a good rattling coercion bill, it would cap the climax, or in other words give the finishing touch to a sorry farce.

THE FRENCH JEFFERSONIANS.

THE French fill their civil service by non-competitive examination, but the places are practically held during good behavior, so that the spoils system, as we know it, has never grown up, vacancies being rare. Since the establishment of the Republic and the seizure of all power by the Chambers, however, office-seeking, in the absence of the competitive system, has become a veritable nuisance. During the existence of the "scrutin d'arrondissement," as it was called, when each electoral district had one member, the voters got into the way of looking on him, as many voters look on members of Congress here, as merely an agent for getting places or favors for them from the Government, and in France the number of places and favors the Government has to bestow is enormous.

Under the operation of this system, it was becoming rapidly impossible for any Ministry to keep in power except by an elaborate and extensive system of bribery. The individual member, in order to retain his seat, had to get tobacco licenses, furloughs, transfers, places, and decorations for his constituents, and the Cabinet had to give them, or rather promise them, in order to secure his vote. It was under the pressure of this terrible burden that Jules Ferry tried to justify the Tonquin and similar colonizing schemes, by pointing out the opening it would offer for the young Frenchmen who now pester the Government for small offices. One of the strongest arguments in favor of the "scrutin de liste," or departmental ballot, by which all the deputies of the Department are elected on a general ticket, was that, no one member representing any particular district, no particular set of voters would have a special claim on him, and the whole body would thus be delivered from the office-seekers. But the traditions of French politics have proved too strong even for the scrutin de liste. Frenchmen cannot unlearn in a year or two the lesson which two centuries of highly centralized government have taught them—that everybody connected with the ruling power has unlimited influence. M. Clovis Hugues, the well-known Radical Deputy, sends to the *Lanterne*, as an explanation to his constituents, the following extraordinary account—after making allowance for all exaggerations—of the present state of affairs. He says:

"Every day, each deputy receives on the average twenty letters asking for personal services in no way connected with the pending questions of politics. In all these letters there is an abounding confidence in the fortunate member. He has only to make the smallest sign with the ends of his fingers to realize the dreams of his correspondent. With a word subscribed to the application, he can distribute tobacco licenses, obtain pardons, dispense charity, bring home emigrants, reverse or modify judicial decisions, get furloughs for soldiers and decorations for buttonholes, procure the dismissal of functionaries, find wet nurses and lost umbrellas, get ministerial decisions changed, appease creditors, negotiate marriages, settle divorces, mollify mothers-in-law, hush up scandals, pull candidates through examinations, appoint prefects, sub-prefects, vice-consuls, Republican bishops, and clerks in Government offices, in banking houses, in the offices of great corporations, and even in those of private individuals—and all this in a single day."

He goes on to say that every deputy has always about fifty applications for office on foot either in the post or the telegraph office. He sends to the Minister of War every month about thirty applications for furloughs, changes of regiment, or discharge. To the Minister of Finance he sends every quarter about sixty applications for tobacco licenses. Every January and July he recommends about fifteen unknown persons for the Legion of Honor. M. Hugues's own correspondence amounts, he says, to 500 letters per month on the average, and he answers every letter, promising to support the request, whatever it may be, but of course he does not do it. How can he? "How could he," M. Hugues asks, "and give any attention to the affairs of the country. In the morning, when he might be studying the questions of the day, he would be growing mouldy in the ante-chambers of the appointing officers. In the Chamber during the session he would be writing letters, or paying with a vote against his conscience for the services the Minister was to render him."

For the habit of asking general favors of the Government there is, of course, no cure but the improvement in the political education of the French people, which time and the practice of parliamentary government will bring about. But the office-begging nuisance can never be abated by anything but the competitive system, which the French will eventually have to adopt. No pass examination will suffice, because this still leaves the appointing officer an enormous discretion. The competitive system, on the other hand, delivers him from importunity, by giving a small number of the ablest competitors an exclusive claim to the place, and thus furnishes both Minister and Deputy with the only sure defence against this great curse and weakness of modern democratic government—the desire of the incompetent, the lazy, the vicious, and the unsuccessful, to quarter themselves on the public treasury.

CAN THE ENGLISH CONSTITUTION BE AMERICANIZED?

OXFORD, January 1, 1886.

To Conservative thinkers who have accepted the advent of the democracy in England, the institutions of the United States present (as I pointed out in my last letter) three points of attraction—the independence of the President, the authority of the Senate, the immutability of the Constitution. Whether these characteristics of American republicanism can by any imitation or adaptation of transatlantic morals be impressed upon the democratic Constitution of Great Britain, is already an inquiry of more than academic interest. It may any day become a question of pressing moment. My aim in this letter is to examine how far, in the three matters which I have mentioned, the Constitution of the United States in reality excels the English State-system (to use an expression of Mr. Frederic Harrison's), and how far the provisions of your Constitution present a model for imitation by English statesmen.

There is assuredly something striking in the contrast between the position of a President such as President Cleveland and the situation of a Premier such as Mr. Gladstone. It will, I suppose, be admitted on all hands that Mr. Cleveland does not possess anything like the amount of power wielded by Mr. Gladstone when in office, or for that matter when out of it. No declaration of policy by the President would, I presume, have anything like the effect on the public life of America which has been produced by the mere rumor of Mr. Gladstone's adherence to home rule; or which would result from an announcement that Lord Salisbury had determined at all costs to resist every demand for anything like the legislative independence of Ireland. But if the extent and area of the President's authority are much narrower than the sphere of a Premier's influence, such powers as an American President possesses can be exercised with an independence unknown to the most powerful of English Ministers. Whether administrative reforms shall be really carried out, whether public offices shall or shall not be treated as spoils belonging to the victors in a party contest, appears, to an Englishman at least, to depend at the present moment wholly on the will of President Cleveland. Grant that his policy may seriously affect, one way or another, his chance of reëlection, still, during his four years' term, his conduct is controlled pretty nearly by his own judgment and conscience. No vote of Congress can remove him from power. The dissatisfaction of his own supporters may doubtless be unpleasant, but it can hardly restrain his action. A Prime Minister, on the other hand, is, even at the height of his power, liable to be overthrown by any change of feeling among his supporters. No statesman ever looked more powerful than Lord Palmerston after the elections of 1857, yet two years did not pass before a Palmerstonian House of Commons dismissed him from office, and dismissed him for insisting, with perfect justice, that attempts to assassinate a foreign potentate must be treated in England as crimes. Contrast Palmerston's inability to carry through, in the face of temporary unpopularity, an enactment passed a year or two later without opposition or comment, with the ease with which Lincoln surrendered Slidell and Mason to England, and you have the measure of the difference between a President's independence of momentary popular sentiment and the absolute dependence of even a powerful minister on the public favor.

A Prime Minister is, in short, a party leader. A President is a ruler appointed by the nation. The one has too much influence and possesses too little independence. The other holds very limited powers, but, for the exercise of his authority, he is responsible only to his conscience and his country. To thinkers who believe that the weak point of democratic government is instability of purpose, there is something very fascinating in the notion of substituting a President for a Premier. The change promises two advantages. The country will, it is hoped, be freed from dependence on the sudden resolutions or still more sudden irresolutions of great party leaders. The real head of the executive will at the same time be delivered from the necessity of studying each momentary change of public feeling. Still, a moment's consideration shows that whatever American institutions may be transplanted to England, the Presidency is not one of them. His independence would of itself be absolutely fatal to the working of the Government. Opposition between the House of Commons and the Executive would produce temporary paralysis of the

State, and the English Empire would hardly survive even a slight fit of political paralysis. The President, again, is, as has been pointed out by Bagehot and Maine, a sort of historical survival. He is a reproduction of an English King such as was an English King in the time of George III. The Presidency is inconsistent with the monarchy, and, at the present moment, the last institution which the majority of Englishmen are prepared to abolish is the Crown. If the Executive is to be placed to any extent above the reach of party, the result can in England be attained, if at all, only by some increase in the royal power. Whether this method of freeing the nation from the evils, such as they are, of party government be practicable, is, to say the least, most uncertain. But it would do less violence to English habits than to attempt to imitate Presidential government. Moreover, the Presidency does not appear, to any student of American history, to be the strong point of your Constitutionalism. The office has, in more ways than one, frustrated the expectations of its creators. It is curious that at the very moment when English thinkers are dwelling on the evils of the connection between the Executive and party, American theorists note with dissatisfaction the disconnection between the President and the Legislature.

To an English observer, if the Presidency seems the least satisfactory, the Senate certainly appears the most original and the most successful among the creations of American statesmanship. The Senate and the House of Lords are the only existing bodies which perform with any effect the functions attributed by theorists to a second chamber; and no competent judge can doubt that the Senate is in efficiency and authority far superior to the existing House of Peers. The American second chamber lacks, it is true, the dignity of age and the augustness conferred by historical prestige; but though it has not existed for a century, the Senate is based on a far firmer foundation than the House of Lords, and it is not rash to anticipate that the constitution of the American second chamber may remain unchanged long after our upper house has been either abolished or so modified as to lose its identity. The reason of this difference is palpable to every one. The Senate is in reality, if not the most powerful, certainly one of the most powerful, of the members of the American Constitution. It contains within its body the ablest statesmen of the country; it combines executive with legislative functions, and exercises a constant and (unless I am mistaken) an increasing influence on the course of public affairs. It is in reality superior to the House of Representatives both in dignity and in authority. All this is of course well known to your readers. I dwell upon it in order to bring out the contrast between the American and the English second chamber. The House of Lords contains within it many eminent men, but of these eminent persons some, like many of the law lords, or like officers ennobled for success in war, are not expected to play a leading part in politics. The statesmen, such as Lord Salisbury, Lord Derby, or the Duke of Argyll, who add distinction to the peerage, are involuntary exiles from the House of Commons, which is their natural sphere of action. It is absolutely certain that any one of these three peers would, if the course were open to him, stand for a seat in the House of Commons and be at once elected. The House of Peers is the tomb of statesmen, and Mr. Gladstone's elevation to an earldom would be welcomed by his opponents as equivalent to political death. The members of the House who themselves gain from being part of it are a dead loss to the House itself. No statesman, speaking generally, wishes to be a peer whom any admirer of the peerage would wish to have a seat in the House of Lords.

This house, again, is, from one cause or another, becoming more and more detached from connection with the really important questions of the day. Of administrative authority it has none. Its legislative weight is far less than any one would expect it to be who ran through the list of eminent lawyers who now as at all times add lustre to the peerage. Our upper house suffers from two all but irremediable defects. It is based on the hereditary principle, and the idea that the discharge of serious public functions should depend upon birth is out of harmony with the spirit of the time. It has, during the last hundred years, become what it certainly at one time was not—the representative not of the nation nor even of a class, but of a party. Since 1784 the majority of the House of Lords has invariably belonged to the Tory or Conservative party of the day. The House of Commons represents the electors; the Crown in a sense represents the unity of the State; the upper house, as things now stand, represents neither the nation nor the empire, but the will of the Tory leaders. No doubt this condition of affairs does not in England produce all the evil that might be anticipated from it. Party rarely leads statesmen to forget all the claims of common sense and of patriotism; but the Conservatism of the House fatally weakens its influence. The Peers are uncertain whether they represent the nation or not, and hence dare not resist any measure which even appears to command popular support. A strange result follows. The House can and does delay reform, but it never resists for a moment anything which appears like revolution. The body which is intended to preserve the Constitution, stimulates that kind of systematic agitation which is most dangerous to the political stability of our institutions. It has been compared often enough to a drag, but it is a drag which is kept on while the coach is going up hill, and is of necessity taken off when the horses threaten to rush down hill.

To Englishmen who note the prestige and the defects of the House of Lords, the idea naturally occurs that the dignity of its associations may be retained and its political defects removed by turning it into a body like the Senate. The difficulties in the way of such a transformation are, however, immense. The members of the House of Lords are between five and six times as numerous as those of the Senate. The House has no connection with the Executive Government. It might, perhaps, by the adoption of Lord Palmerston's proposal, have been insensibly changed into a body of officials holding peerages for life; but such an assembly, whatever its merits, bears no resemblance to the Senate. The essential obstacle, however, to any Americanization, so to speak, of the peerage, lies in the very nature of things. The strength of the Senate consists in its representing the rights of the States. In the United Kingdom there are no States or anything corresponding to States for the upper house to represent. If, indeed, the British Empire should at any time develop into an imperial confederacy, the House of Lords might conceivably be the name of a body analogous to the American Senate. If the United Kingdom were to be split up into a Federation consisting of three or four States, the House of Lords might again possibly become to some degree the representative of the members of the Federation. But such revolutions as these would, it is more likely, involve the fall of the peerage. In any case, the question now to be considered is, not how far the upper house might form the Senate of a Federal State, but how far—the United Kingdom, being what it is—the House might be reformed so as in some degree to reproduce the features of the American Senate. It were rash to say of such a reform that it is an impossibility; it is safe to assert that nothing at the present moment seems less probable than that it should be even attempted.

Is it, lastly, possible to give to the fundamental laws of the British Constitution the kind of immutability possessed by the articles of the American Constitution? Attention to the current of opinion shows that some thinkers are prepared to answer this question in the affirmative. In favor of such a reply, take the obvious consideration that the mutability or flexibility of our Constitution is an attribute hardly to be found in the State system of any great country except England. It is natural enough to infer that if the Americans, the Swiss, and the French have all founded constitutions of a more or less rigid character, there is no insuperable reason why Englishmen should not confer upon their time-honored Constitution the quality of immutability; nor can any one who notes either the tendencies of democratic government or the special difficulties which England is required to meet at the present day, deny that much would be gained if the fundamental laws of the State could be placed for a time—in theory, at least—beyond the reach of discussion.

It would take far more than the space at my disposal, toward the end of an already long letter, to discuss the possibility of the proposed revolution. Three observations, however, are worth making, and should be borne in mind throughout the whole of a discussion which has only just begun to interest the public, and may well be destined to last for years. The proposed alteration is, in the first place, essentially a revolution: if adopted, it will change from top to bottom the whole character of the British Constitution. It cuts far deeper, so to speak, into the body of the Constitution than would the transition from a monarchy to a republic. The rigidity of the Constitution means the destruction of that kind of pliancy which has hitherto been the strength of the English State. It is impossible, in the second place, to give to any laws the fixity possessed by the articles of the American Constitution, without also conferring on the courts the powers possessed by the judiciary of the United States. To do this is to give to the judges an authority never yet possessed by any English tribunal. It is, lastly, a mistake to consider that anything like universal experience tells in favor of rigid or inflexible constitutions. The experience of the United States points in one direction, the experience of Continental Europe points in another. The Constitution of the American republic has been changeable, and has therefore not been changed. French constitutions have in general been immutable, and therefore have lasted on an average about six and a half years. The stability, moreover, which thinkers desire to confer upon the Constitution of England is given to the fundamental laws of the Swiss Federation by methods differing considerably from those adopted by the founders of the Union for giving permanence to its Constitution; and it is at least open to argument that in this matter English innovators or reformers may learn more from the Swiss Confederation than from the American republic.

A. V. Dicey.

A MEDIÆVAL CUSTOM-HOUSE.

Italy, January 5, 1886.

An incident from the Middle Ages may not be uninteresting to the readers of the *Nation*.

On buying tickets from Geneva to Genoa, I was advised to register luggage to the end, and was told that it would be in waiting on our arrival at the Italian frontier. At the northern end of the Mount Cenis Tunnel our basket-trunk and valise, which were all that we took for a

short stay in Italy, should have been opened, but I was told that they had been sent forward for examination at Turin. We got to Turin in the evening in a snow storm, and saw several travellers undergoing examination. As there were not enough passengers to go round, they fared badly —three or four officials working one poor traveller. An East Indian gentleman had his wardrobe much tossed about, and gave the officials some amusement by his vehement protestations in bad English: "No smuggly! No smuggly! Italians! Ugh!" The porter who took me in charge, after some searching, informed me that my luggage had gone forward to Genoa. The next day, which was Christmas, we reached Genoa, and, after much bother about it at the station, I was told that the luggage had not yet come, and that it had no doubt been sent to the "Coast-house." If I would only come back the next day or the day after! Everybody was polite; there was no irritation; there was no hurry; nobody was surprised; it was taken quite as a matter of course that baggage should be detained, and that travellers should wait for it. Would it certainly come? "O! it's got to," answered a hotel porter who stood by and kindly interested himself in my affair.

That night I rested at Nervi, where no snow storm ever comes, and spent the morning wandering in the very perpendicular garden of our villa, the walks of which are mostly stairways in the cliffs running down hundreds of feet to the edge of the sea, with halting places in thatched summer-houses at almost every angle of the paths or stairs. In the garden grow aloes, palms, and palmettoes, as well as pines; orange and lemon trees are here loaded with ripening fruit, and in one of the summer-houses near the water I sat and listened to the ludicrous stories of a party of friends whose baggage had also been involved in the costly meshes of Italian red tape. Reluctantly leaving our sunny garden at eleven o'clock, I started into Genoa; and after some unavailing search for the American Consul, who had "changed house," as I was told, I gave over the notion of asking advice, and made my way from the Via Roma to the water through those narrow gorges between high buildings that seem so little like streets. Arrived at the Porte della Mercanzia, I was directed to the Dogana. On making inquiry of some uniformed porters, I was put into the charge of a man whom they called (as it sounded to my ears) "Mary Ann"; probably they would spell it Merian. He was an old man, and had perhaps been long in the Custom-house. No doubt he had once been able to walk like a man; he might even once have been a boy, and played at the sprightly Genoese game of bowls that one sees so often; but year by year all notion of vigor in motion had disappeared from his mind, and Mary Ann had now what might be called the custom-house gait developed in ideal perfection. With a delicious languor, he led me a leisurely ramble through a wilderness of heaped-up merchandise, along one warehouse and across into another, much as Virgil's ghost, having all eternity before him, may have conducted a brother-poet through the land of shades. At length my guide paused at the foot of a stairway, up which he had evidently no notion of climbing: it was not the way of a customs porter. He told me to mount to the top and then go to the other end of the building, where I should find a door. As I went up the stairs, whose steps were deeply worn, I saw my guide placidly wending his way back through the labyrinth toward the place whence he came, intent only on consuming as peacefully as possible the hours until closing time, and I wondered whether even some *centesimi* could have quickened his pace.

I reached at last the mysterious door, which was locked, and I knocked in vain. There were several men in this upper story engaged in slowly taking merchandise out of boxes and spreading it over the floor as though they might have some intention of counting the parcels to-morrow. Addressing myself to one of these, he sent me to another, who explained to me in tolerable French that railway baggage was never sent to this place, but to the other custom-house at the Porto Salomi, half a mile away. When I reached this other custom-house I saw a pile of luggage, newly received, by the side of which lay my large valise, tied up with custom-house cord and sealed with a lead seal. The trunk, which should have accompanied it, was nowhere in sight. There was a watchman in charge of this heap of goods, sleeping peacefully on one of the boxes. I was obliged to disturb him in trying to find my trunk.

Distrusting my knowledge of spoken Italian, I inquired for some one who could speak French, and was sent up stairs. Here a lad of fifteen years offered to take charge of my case, but I insisted on finding some one capable of speaking French, and the lad brought me another *expéditeur*, as he called himself in French, a custom-house attaché and a commissionaire in one. This man was the only person I saw about the place capable of despatch. He took my luggage ticket and immediately conjectured that my wicker trunk was in a large willow receptacle lying locked near the valise. To verify his hypothesis he tried hard to peep through the cracks of this great basket, for it seemed that there was no man high or low who had authority to unlock it at the present stage of the game. The formalities must be observed, and the *spedizioniere* told me there were "beaucoup de formalités." Acting on the presumption that the rest of my luggage was in the great wicker case, he hurried off with me to the railway station, calling my attention as an American to the statue of Christopher Columbus, whose vigorous soul must also have known the vexations of a Genoese custom-house. Arrived at the station, we waited half an hour for those who were ahead of us at the window on similar business, but the *spedizioniere* at length recognized a friend within and so got himself admitted behind the window, and, after paying four francs and a fraction for a beginning, got my little yellow paper changed for a blue paper and a white one and a red one. The red one he kept himself, the other two he gave to me.

We now went back to the custom-house, where he informed me we must wait "a moment": other freight had the start. Moments grew to minutes, and nearly an hour passed before my valise was brought in by the porters, who all walked like Mary Ann, as though their legs were moved, without volition, by slow-going clock-work not to be accelerated in the least degree without a probable dislocation of the machine. I saw my *spedizioniere* pay small fees now and then in the vain hope of getting things along; I even saw the young rascal who had brought this particular man to me exact money from him, apparently as pay for the introduction to a client. But at length the long agony seemed nearly over. It had taken about an hour to handle half-a-dozen packages, and the big wicker was brought in last and duly weighed, and then, after a pause, unlocked. My trunk was not there! The *spedizioniere* made a wry face, asked me to remain where I was, and darted away again to the railway station half a mile off. I sat down on a bench with the porters, and watched the lagging movements of the officials. After awhile there entered a chief of some sort, who had probably been three hours at dinner, and who now flew around with a kind of purposeless energy. Seeing me there waiting, he began to scold in resonant Italian. The Italian is a beautiful language for scolding, the open vowels ring so long and exasperatingly. The case was explained to this man and he subsided. Thinking I might expedite a little on my own account, I arose and told him my predicament, and the importance of my getting through in time for a late afternoon train. I begged that my papers might be made out and my valise examined before the arrival of the trunk. He shook his head. The *expéditeur* had the red paper. I showed him the blue paper and the white paper, but nothing could be done without the all-important red paper. So I sat me down upon my bench again.

The hour of closing was drawing near. One of the porters asked me the time of day—there was no clock; another got out a leathern bag from which he began to take iron keys, in pleasing anticipation of the hour when no imaginary duties should detain him from the *caffè*. I knew that closing was the one thing about which these men were punctual, but I inwardly resolved that I would not leave without my luggage. At length the *spedizioniere* plunged "into our midst," and dashed impetuously up the long stairs, crying to me like a madman, "Enfin! enfin!" and the porters gently nodded to me in placid congratulation. Five minutes later my trunk was wheeled in. With what knotty formalities the poor *spedizioniere* was wrestling above stairs I know not, but it was a quarter of an hour before he appeared again, when he came flying down stairs with two large papers in each hand. These he thrust under the nose of a man who sat at a rough desk by a side door. The man wrote something on them, and the *spedizioniere* rushed wildly up the long stairway again. This time he was gone twenty long minutes, during which the porter put keys in the doors and tried the locks, and the entire force sat down to wait for the fulfilment of the solemn rites necessary to release my two pieces of luggage from durance. At length the *spedizioniere* came down nodding to me in triumph. The chief came too. The clerks and porters gathered about in a pleased group. The valise was put in a large hay-scale and weighed and then set aside. The trunk was also weighed and set aside. Then the *spedizioniere* borrowed a jack-knife from a porter, and cut the rope that enclosed my valise, and handed it with the lead seal to another man. I unlocked both pieces, and the actual examination did not take two minutes. It had taken the whole afternoon, however, to get to it, and half-a-dozen men had waited an hour, impotently entangled in their own formalities. One of the employees now dipped a brush in some indescribable paste or glue, and smeared a paper ticket with it, and slowly stuck it on my valise. This ticket was numbered, another number was stuck to my trunk, and then both pieces were mounted on a hand-truck. A porter wheeled this slowly down the length of the custom-house to the front. The *spedizioniere* followed him. I followed the expeditor. At the door a man took off the numbered papers and threw them away. The last ceremony was now concluded, and my luggage was free; the relieved officials were already locking the great doors.

It remained to settle the bill. There was no duty on anything in my trunk or valise, only petty fees. There was a custom-house fee charged at the frontier, for not doing anything, I suppose. There was a charge also at the frontier for porterage, another for tying up my valise, another for the rope itself, and one for the lead seal on the rope. Then there were charges for the bills which specified the charges. There were eighty *centesimi* for *commissione*, whatever that may mean. There was two cents for a stamp, and then a parallel set of charges for what had been done at the coast-house. Last of all, there were four francs to pay for *spedizione*. If this word be taken to mean speed, the charge

was too high; if it stands for the work done by the *spedizioniere*, it was dog-cheap.

It only remains to add that Genoa is the chief port of Italy. E. E.

Correspondence.

GEORGE BORROW'S WORKS.

To the Editor of The Nation:

Sir: Perhaps you will kindly permit me to interview your public so far as to ask them, or some one curious in these matters, whether any of the works of the late George Borrow not included in the subjoined list are known. Allibone's meagre mention of Borrow gives an 'Autobiography' under date of 1851, which, however, can only be the 'Lavengro' of that year and not a separate book. The 'Celebrated Trials from 1400 to 1825' were in part compiled by Borrow, and published at London in 6 vols., 8vo, in the latter year, I believe. Lowndes does not speak in high terms of them, doubtless because he knew not the charitable influence of Taggart's snuff-box. At the end of the second volume of 'Romany Rye' (2d ed., London, 1858), there are announced a number of titles of inedited works by Borrow, some of which have appeared under the ægis of "Glorious John," and others have not as yet been printed. These are: 'Celtic Bards,' 2 vols.; 'Songs of Europe,' 2 vols.; 'Kœmpe Viser' (Danish Ballads), 2 vols.; 'Penquite and Pentyre,' 2 vols.; 'Russian Popular Tales,' 1 vol.; 'Northern Skalds,' 2 vols. (unfinished); 'Death of Balder'; 'Bayr Jairgey and Glion Doo.' The published volumes that I possess are the following:

1. Romantic Ballads. Norwich, 1826. 8vo.
2. Targum. (Poet. transl. from thirty languages.) St. Petersburg, 1835. 8vo.
3. The Talisman (from Pushkin). St. Petersburg, 1835. 8vo.
4. El Nuevo Testamento (Scio's version). Madrid, 1837. 8vo.
5. Gypsy Version of St. Luke. Madrid, 1837. 12mo.
6. Basque Version of St. Luke. Madrid, 1838. 12mo.
7. Gypsies of Spain. London, 1841. 2 vols., 8vo.
8. Bible in Spain. London, 1842. 3 vols., 8vo.
9. Lavengro. London, 1851. 3 vols., 8vo.
10. Romany Rye. London, 1857. 2 vols., 8vo.
11. The Sleeping Bard. London, 1860. 8vo.
12. Wild Wiles. London, 1862. 3 vols., 8vo.
13. Romano Lavo-Lil (Gypsy Dict.). London, 1874. 8vo.
14. The Turkish Jester. Ipswich, 1884. 8vo. (Posthumous.)

I should be glad of any note or information that would complete this collection as far as possible. W. I. Knapp.

Yale College, January 19, 1886.

THE BOYCOTTING OF POSTMASTERS.

To the Editor of The Nation:

Sir: Your editorial on the boycotting of fourth-class postmasters seems to recognize no possible motive but the desire to gratify "a petty political spite."

I know a little village with only one public store or office, and that the only suitable place for the post-office. I am told that all the Republicans and a majority of the Democrats opposed a change. But a Democrat wanted the office, and had to have it. He is shiftless, addicted to the use of liquor, and generally considered dishonest.

I know another village—one that has grown up around a college. The college is unanimously Republican, the precinct heavily so, and the college makes the work of the post-office. There is a man in the village who was a rebel during the war, was captured, took the oath not to bear arms against the Government, and then reënlisted in the Confederate service. His business at present is illicit whiskey vending. He neither fears God nor regards man. He is openly accused, by those who know his past, of arson and robbery, and is suspected of other crimes; and I doubt if his best friend would not consider it flattery to call him dishonest. A change is daily expected which will practically make that man postmaster. Every Republican and almost every Democrat will oppose it. But what is to be done when every Democrat becomes a would-be P. M., and the Democratic M. C. determines to make a "clean sweep," and the present incumbent is an "offensive partisan"? Clearly, civil-service reform demands a change.

These are extreme cases, but your article admits that boycotting has been generally introduced where the will of the majority of the people has been disregarded. But when a Democratic Congressman determines to reward his faithful rural friend by securing for him the cross-roads post-office, and the powers that be are deaf to the voice of the people, and grossly incompetent and unworthy men are placed in offices in which every citizen is interested, what remedy have the people but to reduce the postmaster's income with a view to compelling him to give up the office? I do not know any post-offices where boycotting prevails to any considerable extent. I doubt not there are a few men unreasonable enough to try the method in almost any rural community—indeed, I have long since known families, who took some offence at a village postmaster, to mail all their letters on the trains. But where any considerable number of the citizens unite in so doing, it is safe to admit the possibility of some other cause than ultra-party spirit. And when a majority of good citizens combine in "such performances," it is safe to conclude that, whether their manner of redress be justifiable or not, there is at least just cause for complaint. The Republican majority generally represents at least half the good sense of a community, and the presumption is in their favor.

Respectfully, W. E. Barton.

Robbins, Tenn., January 19, 1886.

A DRIVE FOR TROTTERS.

To the Editor of The Nation:

Sir: Having been a constant reader of the *Nation* since its inception, attracted mainly by the breadth of its views, it was a surprise to see so much narrowness expressed in an article of the above caption.

This part of our continent (the blue-grass region of Kentucky) is visited by many foreigners, attracted doubtless by its park-like beauty; but what engrosses their attention when here is the trotting horse. His high finish, his great speed, his light and airy rig, are all marvels to them. It is the one thing that is strikingly American, and on that account particularly entertaining. One of my guests, an Englishman of position, after a spin behind a fast roadster, said to me: "If the Prince of Wales had a span of such horses, he would drive nothing else, and then America could not breed trotting horses enough to supply the English demand." As it is, not enough can now be bred to supply the home demand, and men of means have for years been purchasing colts and keeping them until they were old enough to use—laying them in as they do their wines—because the matured could not be obtained at reasonable prices.

No amount of cold water thrown on this recreation can abate the fever. Let us, then, make the best of it, and so arrange for its enjoyment that harm cannot come from it. If "roads frequented by trotters are sure to be lined with groggeries," let your Park drive be exempt from this evil, and by those who must "needs fill themselves with rum, gin, brandy, or whiskey," some other drive would be sought. The Park drive would neither foster nor hasten the "kidney trouble" among highly-fed business men, for the frequent drinks on that road could not be obtained. But why driving a horse in New York faster than a jog should create such an abnormal thirst, needs some explanation. It certainly does not have that effect elsewhere, not even in a country where whiskey is supposed to flow as water.

But your very provincial idea of "a race course with all that its name implies," is as striking to one living outside of your bailiwick as your bibulous argument. At our fair in this place, the trotting races have been attended for years by from five to six thousand spectators, more than one-half of whom are females, and the divines of every denomination are present. Not a drink of liquor has ever been sold on the grounds, not a drunken person has ever been seen there, and not a cent has ever been wagered on a race. Neither "grass, nor trees, nor shrubery" in this park have been injured, and "women and children and quiet men" are not driven away, but in increased numbers seek this place when the trotting race is expected. No quarrel, no profane language, and no bluster has ever been heard there, and this crowd is composed of "lawless Kentuckians." Surely sedate, Christian New Yorkers might contain themselves even if Maud S. and Jay-Eye-See were flying past them.

Your "moral view of the trotting horse" is even more startling than that of the race course; it surpasses the Methodist mountaineer's belief, that the devil is in a fiddle, or that a pack of cards is a coal of fire from hell. Would it not be advisable to have guardians appointed for those "poor young men who have a taste for trotters"? for if deprived of a place to trot their horses they will, without doubt, find some other adequate means of making their "banks or tills suffer sooner or later." Such idiots are made conspicuous because they are seen behind fast horses. Your city is full of just such men who go to the bad without ever having driven a trotter. An ambition to improve one's dwelling, as well as to improve one's horse, makes the tills of many weak men unduly suffer, but handsome dwellings should not on this account be tabooed.

To deprive your hard-worked merchant, whose tax for the benefit of the Park is often princely, of his innocent and healthful recreation, when he has grown too old to straddle a bang-tailed Anglicized American plug, and bob up and down with your host of badly-seated and ill-at-ease horseback riders, because some loud fellows prefer white coats and gin-cocktails when they drive, is hardly reasonable.

No part of your Park would be so entertaining to your visitors, be they native or foreign, as your trotting drive. To see the action and poise of the finest and most tractable horses ever produced in any land, driven by men some of whom are known to fame, and who have a reputation outside of their city not appreciated by their fellow-townsmen, would be worth a visit to New York if nothing else could be seen.

That driving fast horses is immoral cannot be maintained, and that the amusement is low can only be supported because it is American. That nothing is more exhilarating and refreshing to closely-confined mental workers than the rapid motion of the horse, either ridden or driven, is well known. To enjoy horseback exercise one must be a rider, an art only acquired by constant practice in youth, and few of our youths have an

opportunity to so indulge themselves. To drive, and that well, requires much less education, and can be acquired by the old as well as the young. Your horseback riders on their sorry steeds are forlorn objects, that cut a ridiculous figure in the eyes of your English neighbors and your Southern brethren. Your road drivers are behind horses superbly adapted to the business, and at a glance you see that the driver is at his ease—a perfect master of the situation. In the most of our recreations we are weak imitators; in this one we are original. In itself is there neither harm nor guile, and all that is needed to secure its proper rank is a fashionable and genteel place for its enjoyment. No better place could be found to elevate this national taste than your Central Park; and to abandon to rowdies that which is good in itself, and in which we excel, because it is not of foreign importation and lacks the stamp of royalty, is not only puerile but almost contemptible. M.

KENTUCKY, January 18, 1886.

[It is easy to take a hopeful view of what the effect of a trotting course on the Park would be, when looking at the matter from the blue-grass region of Kentucky. But people who live nearer to the Park, and are more interested in it, look into the details a little more closely, and are less sanguine. We are quite willing that the enjoyment of trotting should be "arranged for," and that the Prince of Wales should be tempted into the purchase of a pair of trotting horses, and that "the hard-worked merchant" should not be deprived of his trot. We simply say that there is no room in the Park for the trotting course, and that, if introduced there, it would ruin it as a popular pleasure ground. This may seem startling to any one to whom "five or six thousand spectators," "one-half females," with a sprinkling of "divines of every denomination," is an immense multitude. But we are accustomed here to seeing 75,000 people in the Park in a single day, often without a single divine among them; and the Park is only 700 acres in extent, without the possibility of any addition to it, while a race course in Kentucky, for all practical purposes, embraces the entire State.—ED. NATION.]

THE DEATH-RATE FROM CONSUMPTION.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation*, No. 1072, Doctor Shattuck objects to the Michigan statistics because not all deaths are reported. No one claims that they are; but, on the other hand, no one claims that there is any greater proportion of deaths reported of persons at one age than another; so that the evidence on relative numbers at different periods of age is good, theoretically, and practically we know it is good because it agrees with the evidence from other sources. In my first letter, I did not "base an argument on such small figures," but referred to them as an illustration of perhaps the first demonstration of a fact which I assumed was well known to statisticians. Since he seems to question what I assumed was well known, the following illustration, from figures on pages 56 and 75 of the Fortieth Report on Vital Statistics of Massachusetts, 1881, should convince him and others who have not given the subject attention.

Doctor Shattuck seems to favor Massachusetts statistics. Employing statistics of nearly one hundred thousand (97,047) deaths from consumption in Massachusetts, during the nineteen years 1863-1881, and an average of the population in Massachusetts in 1865, '70, '75, and '80, I find by computations the proportions at decennial periods of age as follows:

DEATHS FROM CONSUMPTION ANNUALLY IN 1,000 INHABITANTS IN SAME PERIOD OF AGE.

Aged under ten years	1.12	per 1,000	living.
Aged ten, and under twenty years	1.91	"	"
Aged twenty, and under thirty y'rs.	4.94	"	"
Aged thirty, and under forty years	4.28	"	"
Aged forty, and under fifty years	3.70	"	"
Aged fifty, and under sixty years	3.80	"	"
Aged sixty, and under seventy years	5.27	"	"
Aged seventy, and under eighty y'rs.	6.86	"	"
Aged eighty, and over	4.97	"	"
The average at all ages	3.31	"	"
The average at ages under 50 years.	3.04	"	"
The average at ages over 50 years	4.77	"	"

It will be seen that the average of decedents from consumption at ages over fifty years is about fifty-seven per cent. greater than the average at ages under fifty years.

I suggested that the larger death-rate from consumption (as it is known to statisticians) at ages over fifty years may account for the *apparent* greater death-rate from that disease among the foreign-born, who average much older than our native-born because the native-born includes so large a proportion of the children of the foreign-born.

I again respectfully submit that to decide the question we need statistics showing the death-rate of each class at each period of age, because of the great variation of the death-rate from consumption at the different periods of age.

Very respectfully, HENRY B. BAKER.

LANSING, MICH., January 22, 1886.

OUR FOREIGN MINISTERS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your article, "Our Foreign Relations," in No. 1072 of the *Nation*: Many years ago, travelling from Rome to Naples, I was shut up in the front compartment of the diligence with one of our foreign ministers accredited to a Continental Power. I had a card of introduction to him, and found him polite, agreeable, and very communicative. Among other things, he said, giving doubtless the results of his own experience, that the United States had no need of ministers in Europe, excepting, perhaps, England and France; that there was nothing for them to do; that if any serious difficulty should occur requiring the presence of a representative from this country, the business could be settled, as you intimate, by a "special envoy."

GEO. G. FIELD.

RECTORY, COATESVILLE, PA., January 19, 1886.

Notes.

G. P. PUTNAM'S SONS' spring announcements include: 'Humorous Masterpieces from American Literature,' edited by Edward T. Mason, in three volumes; 'The Life and Letters of Joel Barlow,' author of "The Columbiad," United States Minister to France, etc., by Charles Burr Todd; 'France under Richelieu and Mazarin,' by J. B. Perkins; 'The Adirondacks as a Health Resort,' by William Stickler, M.D.; 'Evolution of To-day,' a summary by Prof. H. W. Conn, of Wesleyan University; 'Mechanics and Faith,' by Charles Talbot Porter; 'Poetry as a Representative Art,' by Prof. George L. Raymond, of Princeton; 'Reflections and Maxims,' by Batchelder Greene; 'Le Romanticisme Français,' edited for students of French by Profs. T. F. Crane and S. J. Brun, of Cornell; "The Boys' and Girls' Library of American Biographies"—Fulton, Lincoln, Washington, etc.; and 'The Mill Mystery,' by Anna Katharine Green.

The same firm will begin publication in March of a monthly journal to be called the *International Record of Charities and Correction*, a quarto of sixteen pages, edited by Mr. Fred. H. Wines, than whom no one more fit could be found to conduct such a periodical.

S. E. Cassino, Boston, has in press 'Mineral Physiology and Physiography, or Geological and Mineralogical Studies,' with a general introduction, by Dr. Thomas Sterry Hunt. This work will be incidentally a tribute "to the work of Amos Eaton, who, more than fifty years since, laid on a sound basis the foundations of American geology."

'Without Blemish—To-day's Problem,' by Mrs. J. H. Walworth, is in the press of Cassell & Co. This new tale, by the author of 'The Bar Sinister,' deals with the problem of the negro's future.

From Houghton, Mifflin & Co. we have new editions—the twenty-second of vol. i, the fifth of vol. ii—of the Rev. James Freeman Clarke's 'Ten Great Religions.' The two volumes are uniform in style, and in handsome dress for the library.

The sixth volume of Mr. Henry Cabot Lodge's edition of Hamilton's Works possesses many features of marked interest—the closing documents in the Whiskey Rebellion; a large number of military papers, culminating in interest as war threatens with France, and Washington is drawn from his retirement; the controversies with Jefferson and with Adams; and the Reynolds pamphlet. This last has a great moral value—all the more because of its unsavoriness. During the late Presidential campaign it was often cited, but probably had little weight in so heated a time. Now that we are eighteen months distant from Mr. Cleveland's nomination, and that so good a Blaine man as Mr. Lodge thinks it right (and we agree with him) to include among Hamilton's permanent works the history of this scandal—this high example of a public man's sacrifice of his character for chastity and conjugal fidelity in order to protect his reputation for official integrity—perhaps some will read and ponder who in 1884 were incapable of it.

Harper & Bros. lend their aid in fostering the newly awakened interest in Count Leo Tolstoi, and send out Part I. of his 'War and Peace' in their Franklin Square Library. The English translator is Clara Bell, who follows a French version by a Russian lady, and is in turn revised by some one unnamed in this country. Some day we shall perhaps do better than this.

Mr. Charles C. Moreau has privately printed a hundred copies of a 'Catalogue of Books Illustrated with Engravings by Dr. Alexander Anderson,' with a biographical sketch of that earliest of American wood-engravers. Anderson was born in New York in 1775, and, under the influence of Bewick, taught himself how to engrave on wood. This 'Catalogue' will be illustrated with Anderson's book-plate, engraved by himself, and by head and tail-pieces cut by Anderson after he was ninety years of age. A few copies of this interesting bibliography will appear in the February sale catalogue of Nash & Pierce, Nassau St., New York.

Students of Montaigne, and of Shakspere as well, will be glad to have John Florio's translation of the 'Essayes' made accessible to them in the reprint edited by Henry Morley (Routledge). The original editions are practically unattainable, and though bulky are harder reading than the very fine though clear print of this reproduction, for which the editor has written a good introduction and a short glossary.

Mr. Clarence E. Blake, Principal of the Springfield (Mass.) Collegiate Institute, has published (D. Appleton & Co.) a small lexicon to the first three books of Homer's 'Iliad,' together with portions of books iv, v, vi, xviii, xxii (entire), and xxiv. In his preface Mr. Blake says: "It has been the author's aim to give the student a *full knowledge of each word found in the work.* . . ." The italics are his own, and there is

some more to the same purpose. It is perhaps needless to say that any such pretension in a little book of 215 pp. is absurd. It is also out of place, because it unnecessarily challenges the critic to try the book by a test which it could not and need not bear. Tried by a more appropriate standard the book seems to be sufficiently full, complete, and accurate to enable the student to read satisfactorily so much of the 'Iliad' as is usually required for admission to college. It will save a vast amount of labor, both of head and hands, to the student who uses it at so early a period in his Greek studies, instead of the mighty quarto of Liddell and Scott. That is enough to entitle the book to the approbation of teachers and pupils.

We have received three additional volumes of the "College Series of Greek Authors," edited under the supervision of John Williams White and Thomas D. Seymour (Boston: Ginn & Co.). The first is a "text edition" of the "Bacchantes" of Euripides, edited by I. T. Beckwith, Professor in Trinity College, "on the basis of Wecklien's edition." As it contains nothing but the Greek text, the only remark it seems to call for is that the mechanical execution is very neat and attractive. The second is an 'Introduction to the Language and Verse of Homer,' by Professor Seymour, of Yale, one of the general editors of the series. The book is intended to bring together and arrange in their proper connection the dialectic forms, metrical peculiarities, and noteworthy characteristics of Homeric style and syntax, which are usually scattered in a fragmentary manner through the commentary. An actual perusal of a large portion of the work warrants us in saying that it fully redeems all the promises of the preface.

The third volume is Plato's 'Apology of Socrates' and 'Crito,' edited on the basis of Cron's edition by Louis Dyer, assistant professor in Harvard University. We have rarely come across an edition of a Greek classic more satisfactory than this. Any one who reads the introduction, containing a summary of the history of Greek Philosophy anterior to the time of Plato, and who dips here and there into the commentary, will not wonder that German scholars have indicated their appreciation of Cron's work by calling for eight editions. Professor Dyer has, however, not confined himself to a mere translation of Cron's work, but has made such alterations and additions as seemed advisable to adapt it to the wants of an "English-thinking and English-speaking public." We are quite confident that no edition of the 'Apology' and 'Crito' can be found equal to this for use as a college text-book. Another advantage of this edition is that the commentary is printed on the same page with the text. This practice is almost universal in Germany, is very generally adopted by English editors, and conduces greatly to the convenience of the reader.

The fourth number of the *American Journal of Archæology* offers a fine array of news and discussion. We can instance particularly M. Salomon Reinach's description of a singularly pleasing statue of Artemis in the Museum of Constantinople, which this expert regards as a probable late copy of an original to be assigned to the time of Praxiteles—"some masterpiece of the fourth century which has long ago been converted into lime." Professor A. C. Merriam gratifies a widespread curiosity by publishing the text of the law code of the Cretan Gortyna discovered in the flume of an old mill, as our readers are aware. This he both translates and annotates. The tables relating to slaves and to the rights of married women are of especial interest. Professor Merriam assigns these laws to the Solonian period. Compare this with our Fugitive Slave Law of 1850: "Whoever intends to bring suit in relation to a freeman or a slave, shall not take action by seizure before trial; but, if he do seize him, let the Judge fine him ten staters for the freeman, five for the slave, because he seizes him, and let him adjudge that he shall release him within three days. . . . But if one party contend that he is a free man, the other that he is a slave, those that testify that he is free shall be preferred." Besides the plate of the Artemis, which M. Reinach says does more than justice to the victim of barbarous Turkish scrubbing, there are two other heliotypes, representing fragments of the sculpture of Notre Dame. The monoliths of San Juan Teotihuacan, Mexico, are illustrated in the text of the paper, by Mr. Wm. H. Holmes, which discusses them.

Our excellent contemporary, *Scandinavia*, published monthly in Chicago, has passed through a financial crisis which menaced its continuance except in more restricted proportions. We are glad to learn that it will not be suspended or reduced, and that an incorporated company has taken hold of it.

The Baltimore *Civil-Service Reformer* begins its second volume with renewed vigor. Its positiveness and aggressiveness are refreshing, and quite distinguish it from other papers of the same class. Like these, however, it deserves a more than local circulation.

The *Monthly Index* is the latest outcome of the Q. P. Index scheme. No. 1, for January, lies before us, a broadside—one-half, we are told, of what the February number will be. The subscription price is twenty-five cents a year. A column is devoted to correspondence—a sort of notes-and-queries department. The editor's address is 230 New Jersey Avenue, S. E., Washington, D. C. The publication office, as usual, is Bangor, Maine, and checks should be made payable to Q. P. Index. This monthly issue (which does not supersede the annual volume) is for sale in Boston by Cupples, Upham & Co., and in New York by J. W. Christopher, 47 Dey Street.

The International News Company sends us the first number of the *English Historical Review*, of which we can now only praise the absolute beauty of its typography. Pending our review of its contents, we commend it heartily to all students of history in this country.

The twenty-third Bulletin of the United States National Museum is devoted to a sketch of the life and a full bibliography (filling 273 pages, 8vo, in double columns) of the writings of one of the most venerable and persistently industrious of living naturalists, Dr. Isaac Lea, of Philadelphia, now in his ninety-fourth year. Mr. Newton P. Scudder has edited what is virtually an autobiography of Mr. Lea, full of interesting details relating to himself and to the eminent scientists whose acquaintance he made during two visits abroad. Dr. Lea is of Quaker ancestry, but forfeited his birthright by enlisting for the war of 1812, though not called into service. He is probably the only surviving subscriber to Silliman's *Journal* from the first number of that publication, as he may well be the oldest person in this country ever actively engaged in the publication of books (firm of M. Carey & Sons, Dr. Lea having married a daughter of Mathew Carey). Dr. Lea has preserved all his scientific correspondence since 1818; and the portion of it here printed, embracing letters to and from the late Jeffries Wyman in regard to Agassiz's reluctance to admit the occurrence of animal remains among the coal strata, is suggestive of the value of the vast mass that remains. A fine etching of Dr. Lea serves as a frontispiece to the biographical sketch.

With the February number the *Book-Buyer* will be enlarged and illustrated. In addition to the series of author-portraits there will be other illustrations, taken most frequently from new books in the manner of the special Christmas number. Mr. Laurence Hutton will begin a brief series of articles on "American Bookplates," a subject of much interest to collectors and hitherto almost wholly neglected. Mr. Hutton's articles will be illustrated. A portrait of Mrs. Frances Hodgson Burnett will be the extra illustration of the February number.

The January *Portfolio* (Macmillan) opens with the beginning of a new book by the editor on "Imagination in Landscape Painting." Those who have followed the discussion in these columns over realism and idealism will find something to the purpose in Mr. Hamerton's chapters, which, by the way, are illustrated in the text, and by a full-page mezzotint after David Cox. Two other etchings are noteworthy: "Elizabeth of France," after Rubens; and "Cattle in Regent's Park," after James Ward, concerning whom Mr. C. O. Murray has large words of praise as an animal designer.

L'Art draws for its material in Nos. 516, 517 (Macmillan) on two forthcoming works—on Phidias, by Prof. Max Collignon, and on Donatello, by Eugène Müntz. The chapter borrowed from the former relates to the frieze of the Parthenon, and the illustrations are very fine specimens of "process." Two etchings, after portraits by Antonio Moro of an unknown Jean Gallus and his wife, are the gems of these numbers. But there is also one after Rembrandt's "Jacob Blessing the Children of Joseph," and scattered through the text of an article on Rembrandt by Emile Michel are numerous facsimiles of the artist's own etchings, including some of the most famous.

Mr. Samuel Waddington, the editor of two valuable collections of English sonnets, is now engaged on a third—a gathering of translations into English of sonnets of foreign authors. Mr. Waddington, whose address is No. 47 Connaught Street, Hyde Park, W., London, will be glad to receive suggestions or translated sonnets from any one interested in the subject.

Bertram Dobell, of No. 66 Queen's Crescent, London, is preparing for immediate publication by himself a 'Catalogue of a Collection of Books and Pamphlets Printed for Private Circulation.' This will be the first English book on this interesting subject since the second edition of Martin's 'Catalogue of Books Privately Printed' appeared in 1854.

The Publication Agency of the Johns Hopkins University are about to issue, under the editorial supervision of Prof. Isaac H. Hall, a reproduction in phototype of seventeen pages selected from a Syriac MS. containing the Epistles known as "Antilegomena." These embrace the commonly rejected Epistles 2 Peter, 2 and 3 John, and Jude, of which but one other MS. has ever been published before. Each page will have a separate leaf. The price by mail is three dollars. The same Agency has also nearly ready a photographic map in seven plates, of the normal solar spectrum, made by Prof. H. A. Rowland. It extends to wave-length 5790., and is superior in definition and freedom from distortion to any engraved map ever published. The set unmounted costs ten dollars.

—The discussion of educational reform has been more obviously concerned with the object of attack, the classics, than with the challenger, science; but it becomes plainer that this masked champion of the new age is really dual, and it begins to be uncertain whether applied science, as distinguished from theoretical, is not the more dangerous, and whether the field of conquest will not prove to be in the general public schools rather than the colleges of the old time. In the February *Harper's* Mr. Charles H. Ham recites the progress made by manual training in this country during the decade which has elapsed

since its introduction, and the showing is a very gratifying one. The Massachusetts Institute of Technology has been a very valuable feeder to the new movement, and the lately established school at Chicago bids fair to be to the West in this department what Michigan has been in the academic; the schools at Baltimore, Toledo, and Philadelphia are highly prosperous, and it appears that the system obtains in twenty-seven States. The article, however, is more to be commended to educators and others because of its broadly argued philosophy, which puts the discussion on the grounds of the highest debate. The author disavows the suggestion, lately emanating from Cornell, that these schools should be devoted to training in the arts of their localities, which would involve, he thinks, a perpetuation of caste by education. He does not plead for them on the basis of utilitarianism as being merely practical, but holds that they are better education of the mind and morals, and better adapted to our civil needs, than the schools of the past; he does not even allow that they are a phase of merely industrial conditions. It is the old conflict of training against culture, of action against thought, of society against the individual, though these antitheses are, of course, only suggestive. It does seem, however, that the habit of continually blending the thought with the act is of the highest intellectual value, that accustoming the youth to labor tends to give them more correct and sensible notions of the business of life, and to kill out the notion—that miserable outgrowth of our high-schools—that hand labor is degrading, and thirdly, that the hygienic effects (for these hours of manual training are only supplementary to the ordinary English branches) are excellent in the extreme.

—The *Atlantic* is noteworthy for the most admirable article in the political field, both as a piece of reasoning and as a literary production, that has been in its pages for a very long time. It is a discussion by Mr. A. L. Lowell of the probable effects upon our Government of making our present Cabinet responsible to Congress, in the same way as a Parliamentary ministry. The author discusses the subject in all its branches, as it would affect the two houses, the President, and the courts, and incidentally unfolds the scheme and underlying philosophy of our Constitution with a lucidity, speed, and grasp that are of the greatest rarity in this department. He concludes that the change would wreck our governmental structure and seriously narrow its political theory. It will be of interest to note that at the close of his article he opposes Mr. Wilson, the author of the recent notable book on Congressional Government, holding that the balance of powers, as originally framed, has not been practically deranged by the political development of the century, although there have been gains and losses of power by the various component parts; the gradual recovery of power by the States since the Reconstruction period, the recuperation of the Presidency since Johnson's administration, and the enlarged field and essentially unchanged prestige of the Supreme Court, being especially insisted on.

—The effort of Professor Freeman, a few years since, to formulate a science of comparative politics, worthy to rank with political economy on the one hand and comparative philology or religion on the other, has not proved very successful; chiefly, we suppose, because the number of politicians, whether practical or amateur, among the reading class is so much smaller than that of theologians and philologists. The recent discussion of its rules by the House of Representatives was generally treated by the press as an abstruse question, of no interest except in its bearing upon specific legislative propositions such as tariff reform. The lately published handbook of the Librarian of Congress does, indeed, give a synopsis of the rules of the French House, but the procedure of other parliamentary bodies, especially those of Germany, which, from the federal nature of its government, present peculiar analogies with our own, are not even mentioned. "Der Mechanismus des Reichtags," as it is called by a writer in the January *Vom Fels zum Meer*, affords, however, material for an interesting study, since at almost every point the procedure contrasts with that to which we are accustomed. As everywhere, except in Great Britain, the German Parliament decides upon the qualifications of its members. At the beginning of the session the reports of all the voting precincts, forwarded by the various State governments, are examined by committees, the members who have a prima-facie valid title to their seats being divided for this purpose into seven sections, chosen by lot, the same number of cases being assigned to each, and the destination of each case being likewise determined by lot. The fact of the Parliament's being an afterthought, or, as is often asserted, a fifth wheel on the Government chariot, instead of being the ruling estate, or, at any rate, one of three mutually independent bodies, is shown at the outset in its inability to unseat an illegally elected member. All it can do is to adopt the committee's report to that effect, which carries with it a request to the Ministry to take the further steps necessary. But as the Ministry is independent of the Parliament, it takes its time, and often its investigation is not finished till Parliament's term of service has expired. Add to this that contestants get neither expenses nor salary, and it will be seen that the inducements to contest on the part of anti-administration candidates are not great.

—The credentials of at least 200 members having been reported to be correct, Parliament proceeds to the election of its speaker—the acting speaker having been its oldest (in service, we presume) member. Two vice-presidents, always members of the majority, are then chosen, and eight secretaries, among whom, by custom, all considerable "groups" are represented. Four of the secretaries, who are chosen from among the youngest and most active members, serve at a time, one of their duties being to prevent members, in revising the stenographic reports of their "remarks," from making any changes except verbal corrections. It appears, however, that complaints of the inaccuracy of the "record" are not infrequent, even in Germany. The secretaries also count the votes and act as tellers, as well as serve as reading clerks. The permanent committees, six in number, are chosen by vote by the seven divisions above described, each division having an equal representation. The committees deal, respectively, with rules, petitions, commerce and industry, finance and taxation, justice, and appropriations. The speaker has the right to take part in the proceedings of any committee, and any member of Parliament who chooses may be present. But the public, including reporters, are rigorously excluded, so that the papers have to depend upon the favor of members for their information. This secresy makes corrupt combinations possible and, it is charged, not infrequent. In nothing, however, is the practice of the German Parliament so widely different from ours as in the rules intended to prevent waste of time and printer's ink. Such a bunkum institution as our "bill day" is avoided by forbidding even the introduction of any original proposition unless the would-be introducer can secure for it at least thirteen sponsors besides himself. The practical result of this rule is that no bills are introduced merely to please a constituent or to call forth a commendatory leader in a local paper—none, in short, which have not at their back the majority of some one of the many parties or groups into which the Parliament is divided. The present Parliament, by the way, is the first in which the Socialists could obtain a hearing, except in debate on a bill fathered by some other party—their number, hitherto, having been below fourteen.

—Professor Preyer, of Jena, well known through his researches into hypnotism, the development of the infant mind, etc., does not believe in telepathy, and attempts in a twenty-two-page article to give the readers of the January *Rundschau* the reasons for his scepticism. His criticisms are confined to the Proceedings of the Society for Psychical Research in London, which in September, 1882, numbered 100, and a year ago 520 members, including 140 women. With truly German contempt for the feminine intellect, Dr. Preyer remarks that "the large number of female members and participators shows at the very outset that a strictly scientific spirit cannot be regarded as underlying the Society's proceedings." But since the Society has assumed such large dimensions as to have its special headquarters and a library, and since it includes among its active or honorary members such names as Balfour Stewart, Lord Rayleigh, Professor Bowditch, Mr. Crookes, and Mr. A. R. Wallace, Preyer thinks it worth while to examine their proceedings critically, so as to caution his countrymen against these useless proceedings, and prevent, if possible, the formation of a similar society in Germany. Preyer's analyses of a number of the 600 reported cases of telepathy are exceedingly ingenious and subtle, and, though he concedes that the *possibility* of thought transference cannot be disproved, he makes out a good case that the experimenters have constantly ignored sources of error which vitiate their conclusions. Especially ingenious is his explanation of the countless ways in which the two persons to be examined can communicate with each other, if in the same or adjoining rooms—as by means of different noises made in breathing through mouth or nose, movements with the foot, gnashing of the teeth, etc.; remembering at the same time that individuals, owing to great nervous susceptibility or to training, are endowed with as abnormal acuteness of the senses as are hypnotized persons. In Liverpool, for example, two girls were examined who claimed that one could tell what the other ate, if the latter was allowed to put her hand on the former's shoulder. Aside from the fact that there might have been a prearranged alphabet of signs through pressure on the shoulder, there was the probability that one of the girls had a very acute sense of smell. The result showed that in thirty-two trials only six answers came out correct, and in five of these cases the substance used had a strong odor. In other instances, where one of the persons under examination puts the question himself to the other, Preyer points out that the whole secret may be betrayed by special accents placed on certain words, in the same way that dogs can be taught to pick out certain cards, to add and subtract, by emphasizing certain words. The cases of alleged action of one mind on another, at greater distances, Preyer regards as either due to coincidence, to fraud, to hallucinations, to incorrect reporting, or to lack of accurate observation, which, always difficult, is more especially so in the region of psychic phenomena. In conclusion, he points out that savages ascribe nothing to chance, while with progressive civilization we see more and more how many things that appear to be related as cause and effect are mere coincidences.

—In the same number of the *Rundschau* Eduard von Hartmann has a long and interesting article

on "Musical Æsthetics," which is probably a chapter in his forthcoming general work on æsthetics. He briefly examines the theories of Kant, Schelling, Hegel, Vischer, Schopenhauer, Hanslick, Lazarus, Engel, Hausegger, and makes many subtle and suggestive criticisms. Hartmann, if we mistake not, had intended to become a musician before the happy thought struck him that he might chisel a new idol, and place it in the pantheon of metaphysical fetishes, labelled the "Unconscious." His early musical training, therefore, ought to qualify him to speak more intelligently than most of his predecessors on this subject. The great trouble with musical æsthetics has hitherto been that almost all the authors who have written about it have been either ignorant of music or of psychology. Kant and Schopenhauer, with their deep insight into mental problems, had a ludicrously inadequate conception of music from a practical point of view, and Vischer was in the same predicament. Hanslick, on the other hand, as well as Engel, Ehrlich, and even Wagner, had but an elementary knowledge of psychology, so that they were little better off than the other group. Hartmann is both a musician and a psychologist, but whether this advantage has enabled him to find the key to the mysteries of mind and music cannot be inferred from the *Rundschau* article. There are, unfortunately, indications that, as usual, he has prostrated himself before his fetish, and is going to parade that once more as the final cause and essence of all things. The best thing in his article is the incisive and lucid manner in which he exposes the inconsistencies and contradictions in the systems of Schopenhauer, Engel, and especially of Hanslick, whose treatise on the 'Beautiful in Music,' being the only generally intelligible one ever written, has reached a sixth edition, despite his absurd attempt to deny music its emotional import, and his formal theory which degrades music to something little better than an acoustic kaleidoscope.

—M. Alex. Bertrand has protested, in a memoir read before the Academy of Inscriptions, against applying the division of prehistoric archæology into Stone Age, Bronze Age, and Iron Age to other countries than Scandinavia. There the division holds. There was first an epoch when the metals were unknown and the dead were buried in megalithic monuments; then one in which gold and bronze were known and the dead were burned; in a third, iron and silver are added to the metals known. But this chronology, first employed by Thomsen, Keeper of the Copenhagen Museum of Antiquities, between 1830 and 1835, is only partly true of the rest of Europe. An early age in which metals were unknown may generally be found, but if a country was settled late, by nations who already were acquainted with metals, those countries would have little or no trace of a Stone Age, and this appears to be the case with Greece and Germany. And in the two last ages there is no reason why bronze should everywhere precede iron. Bronze, an alloy of copper and tin, would only be made where tin was easily obtainable. At any rate, the Bronze Age is confined to Scandinavia and Ireland. But Gaul makes up for its poverty in this respect by having three stone ages—the Quaternary, when man coexisted with animals now extinct; the Cave period, to which the engraved reindeer bones belong; and the Neolithic or polished-stone age. As to the Iron Age, all one can say is that it is late everywhere, but it is thousands of years earlier in some countries, Egypt, for instance, than in others. It appears to have slowly marched from the East, reaching the Danube and Italy long before Gaul, and Gaul six or seven centuries before it is found in Denmark and Ireland. Westward the path of iron takes its way.

HADLEY'S RAILROAD TRANSPORTATION.

Railroad Transportation, its History and Laws. By Arthur T. Hadley. G. P. Putnam's Sons.

PROFESSOR HADLEY'S treatise is no less timely than it is valuable. Prepared as a course of college lectures, the published work, as is not unusual in such cases, bears plain traces of the fact; much of it, while sufficiently good for class-room delivery, hardly bears the test of reading. It would have been well if these portions, when not wholly stricken out, had been considerably reduced in the process of printing. Nevertheless, taken as a whole, the work is the result of an investigation no less wide than exhaustive, and one possible only to a thoroughly equipped man, familiar with many modern languages.

The treatise comes just when Congress is called upon to deal with a new question of first-class importance. Up to the present time the national Government has made no effort to solve the so-called railroad problem. So far as this question is concerned, the statute book is as yet a clean sheet of paper; and if national legislation regulating railroad traffic between the States is now to be entered upon at all, it is important it should be entered upon intelligently. The indications thus far have not been encouraging. For years certain members of Congress have been groping around the subject in a blind sort of a way. Among these Mr. Reagan, of Texas, has been most prominent. Indeed, the "Reagan bill," so called, has regularly made its appearance before each recent Congress, has almost as regularly been reported to the House against the judgment of the major part of the Committee which had the matter under consideration, and has then passed by acclamation. Every effort to stop it has proved futile. In the Senate it has as regularly met its death, generally disappearing among the mass of unfinished business. It has deserved its fate. A cruder, more bungling piece of legislation could hardly be devised. Some twenty years behind the times, it is based upon no thorough study, and rumor says was originally drafted by an obscure Pennsylvania lawyer, who hoped to deal through the national Government with questions arising between the Pennsylvania and some other railroad of that State. Nevertheless, the Reagan bill will undoubtedly be pressed before this Congress by its author no less vehemently than it was pressed before the last. It may again pass the House of Representatives, though there is slight chance that it will ever become a law. This is fortunate, for in entering upon legislation the first step goes for much. Where that is wrong, all that follows is apt to be wrong.

The Reagan bill will probably fail to become a law owing to the fact that the two branches of Congress are at cross purposes on the subject to which it relates. Senator Cullom, of Illinois, took the railroad question up during the last Congress as his peculiar province in the Senate, as it was that of Mr. Reagan in the House. In the measure which he prepared he came near the correct principle, for he proposed the establishment of a commission. His bill was substituted for that of Mr. Reagan by the Senate, and there the matter ended. Meanwhile a Senatorial Committee was appointed to investigate the whole subject, and during the past summer that Committee has been over almost the entire country, hearing evidence and receiving impressions from all sorts of people. The material thus accumulated fills two bulky volumes which few will have the courage to open. It is this which makes Prof. Hadley's book so peculiarly timely. In it he compresses the recent experience of all Europe bearing upon this same question, and puts it compactly at the disposal of the Congress. He neatly supplements the work of the Cullom Committee, and there is no other book which covers the same ground in the same way. Some years since, indeed, a treatise was published by Mr. C. F. Adams, jr., then about to leave the Massachusetts Railroad Commission, which covered a portion of the ground; but new investigations have since taken place, establishing results then only partially developed. Some of the conclusions at which Mr. Adams arrived have by experience been found erroneous, and Mr. Hadley has also penetrated into fields which either then did not exist, or which Mr. Adams did not enter upon. This work, therefore, supersedes the earlier treatise. It is not only wider and more thorough, but it is later. It covers recent developments in Great Britain, as well as in Belgium, Prussia, Austria, France, and, above all, Italy. The last word each of those countries has to say upon the transportation problem is, therefore, presented at just the right moment, in compact, easily comprehended shape.

Yet after all perhaps the most curious feature of the work is the small value which all this vast mass of matter that Prof. Hadley has condensed, has for America. In other words, the railroad experience of one country seems to be of limited value to other countries. Too much depends upon the traditions and political habit of the people of each country, upon the manner in which they approach problems, and the business organizations through which they work. This is brought out very clearly by Prof. Hadley in some criticisms he passes upon a conclusion of Mr. Adams's, to the effect that results worked out to a satisfactory practical result by an appeal to public opinion in Massachusetts had likewise been worked out to a similar result by appeal to public opinion in Great Britain. Speaking from recent official investigations, Prof. Hadley shows that this is not the case. The direct opposite is the case. Influences which in this country, working through newspapers, public discussion, and in the halls of legislation, will produce a certain effect, cannot be relied on to produce at all equal effects in Great Britain. The great railroad corporations there have not the same regard to public opinion; they have not the same fear of legislative action. Everything in England moves in slower and more conservative channels, and in a less aggressive way. As Prof. Hadley's investigation widens he finds this true also of other countries, only in yet greater degree. Public opinion has less power in France than in England; and less again in Germany than in France.

On the other hand, the influences which have produced results in Europe can hardly be depended on to produce them in America. The power of the Government does not make itself felt in the same way; the people look less to the Government for direction and support; military conditions do not need to be regarded; police regulations are less customary. It becomes, therefore, apparent to the careful reader of Prof. Hadley's pages that, to be worked out successfully, the American railroad problem must be approached in a wholly new spirit and from a new direction. It must be handled with the most careful regard to the political, social, and business conditions existing on this continent; and with very little regard for those existing elsewhere. In fact, European experience is largely misleading for America.

The present tendency of American railroad legislation is distinctly toward what is known as the Massachusetts system. This system was the result of what Mr. C. F. Adams, jr., who had a good deal to do with it in its early days, has termed "a happy legislative guess." In 1869 public opinion in Massachusetts called for some regula-

tion of railroads. A commission naturally suggested itself, but the Legislature was not willing to intrust the Commissioners with large or general powers. Accordingly, a bill was passed creating a commission, but giving it power to do little more than investigate, report, and recommend. Only under certain conditions was the Attorney-General to lend assistance to the Commissioners when it appeared that a statute of the State was distinctly violated. We believe we are correct in saying that in not more than two or three instances in the course of fifteen years has this reserve power been called into play. At first the Commissioners had small faith that they could accomplish anything. Indeed, the question was, How could they avoid falling into contempt? Nevertheless, they went to work receiving complaints and investigating. Their investigations were of two classes—first, those arising out of specific causes of complaint; and second, those of a general character instituted by themselves. Gradually a system built itself up. It was what might fairly be called an essentially "American system." The only force the Commissioners had to rely upon was an intelligent, educated public opinion. Not having the sheriff's officer at their beck, they were obliged to meet the corporations or their representatives when any subject of complaint presented itself, and to discuss the issue to a result. If the Commissioners were wrong in the conclusions they reached, the fact would surely be made to appear, and they would be unable to press their demands. On the other hand, if they were right, it became a question of the degree of weight which the corporations would attach to their findings. The appeal, therefore, was neither to the constable nor to the court of law. It was to reason and an intelligent public opinion, with the Legislature always in the background. The result perhaps astonished no one so much as the Commissioners themselves. Half the time, at least, they found themselves compelled to take the side of the corporations. The causes of complaint were frivolous, or groundless, or unreasonable. They would not bear statement. The taking the side of the corporations in so large a proportion of cases inspired the latter with confidence. They felt that the Commissioners were fair. Accordingly, the corporations were not wholly indisposed to yield when the decision was against them; and where a decision was thus rendered, and was supported with a sufficiently vigorous presentation before the Legislature, the corporations almost always did yield. Indeed, it is said that the cases on record are few in which they failed in the end to do so.

Such a system is a new departure. It is also essentially, and in the best sense of the word, "American." It was constantly referred to in the hearings before the Cullom Senatorial Committee, and in their report it is spoken of as "the most conspicuous instance of the purely advisory Commission; . . . and by reason of its successful working under a novel plan and of the ability of its membership, it has always made its influence widely felt. . . . Its success is now undisputed." The Committee accordingly recommends that Congress should provide for a national Commission based on the same fundamental idea. Meanwhile, in Massachusetts itself, the Commission seems to be somewhat drifting away from its original moorings. As it has acquired the confidence of the community, powers have gradually been conferred upon it. The constable is more and more placed at its disposal. This seems unfortunate. The more a constable is placed behind a Commissioner, the less the Commissioner will rely upon investigation and the correctness of his findings, and the more he will rely upon force. It is difficult also to persuade the people even of this country to have faith in reason, discussion, and the ultimate supremacy of what is fair and right. They are continually clamoring for laws which will bring about at once the results they desire. This is especially the case in the West. Wherever a Western railroad commission has been organized upon the Massachusetts principle, it has almost universally been argued either that the Commissioners were bribed by the railroad companies; or else, having no power, that they could accomplish nothing. In point of fact the men who have been appointed Commissioners have, as a rule, been incompetent to perform their duties. They could not meet the representatives of the corporations in discussion. Had they been qualified to do so, the results would probably have been more satisfactory.

In addition to the vast amount of light shed upon the results of European experience, this American phase of the question is elaborately discussed by Prof. Hadley. The course of the Massachusetts Commission is traced from its commencement. It is to be hoped, therefore, that this treatise may find its way into the hands of as many members of Congress as possible. The fact should be recognized that a great system for the regulation of the most important material interests of the day is to be built up. In that work it will be well to make haste slowly. A commission should be provided, not too large, the first duty of which would be to investigate, and formulate the results of its investigations in recommendations of law. The Commissioners should look into every cause of complaint to which their attention is called. From these cases, as they are presented and heard, principles would gradually be evolved. When principles are so evolved, and not until then, can Congressional measures calculated to dispose of the matter find their way into the statute-book.

But it is impatiently asserted that this process takes time. It certainly is open to that objection. Meanwhile, on the other hand, the results thus far reached through that other process by which the Reagan bill was evolved—covering as they do a period of fifty years—are certainly not satisfactory. The number of statesmen who, like Senator Logan, of Illinois, think that the last results of political economy and social science may be mastered by giving to their study the leisure time of a fortnight, is considerable. Probably there are still many members of both branches of Congress who believe that in the course of half an hour they could formulate a few short laws which would settle the whole railroad question. Prof. Hadley's book would be of value to such, if for no other reason than to show how, through half a century, all the countries in Europe have been struggling with this question, and have as yet reached no satisfactory results. It might also show them that the results reached in Europe are hardly applicable to this country, and that whatever results are applicable to this country are in a large degree to be found in the experience and records of a single State. Finally, it is greatly to be hoped that, should a national commission be organized, a man so thoroughly equipped for its work as Prof. Hadley may find a prominent place upon it. His study, habit of mind, and power of patient investigation could hardly fail to affect in a marked degree the results reached by any body of which he might be a member. Probably there is no other available man in the country equally well equipped for this particular work.

THE SCHUYLERS OF NEW YORK.

Colonial New York. Philip Schuyler and his Family. By Geo. W. Schuyler. 2 vols., 8vo. Chas. Scribner's Sons. 1885.

COLONISTS on this continent from both the great national stocks which mainly produced them were piously mindful of the Scriptural injunction to replenish the earth and subdue it. The first appearance of the sturdy emigrant from Amsterdam, Peter Schuyler, is on the occasion of his marriage in 1650; and of his eleven children the nine who were married (fourteen times, among them) have left nearly 500 descendants whose names find a place in this record, besides the many undiscovered.

The race is remarkable for quality as well as for quantity. Its succession counts many not obscure nor inactive in each generation. A Schuyler of the earliest days spent his life in negotiation and diplomacy. The friend of the Indians, his policy of honesty protected the colony from their attacks and from French invasion more completely than could the weapons of either its mother, Holland, or its stepmother, England. A Schuyler of the later day has given inherited diplomatic ability to the public service in the border lands of Europe among races as fickle as the Five Nations, and only on the surface less savage. Before New York first changed its master the Schuylers were familiar with the profession of arms, as indeed the inhabitants of the outpost towns Beaverwyck and Esopus had need to become. A Schuyler held high command at the opening of the Revolution, and devoted skill and sacrificed fortune in preparing the way for Burgoyne's surrender, of which another reaped the honor. In the civil war and in the border contests which now employ our army the Schuylers maintained the family traditions of ability in action, fortitude in reverse, and courage at all times.

The author does not attempt to trace his ancestor's lineage further back than the landing from Amsterdam, merely saying that he came as a free man, not brought over as a patroon's colonist. To be sure, the authentic coat-of-arms is given from which a Burke might easily weave a connecting thread with perhaps imperial Henry the Fowler. But the writer's sensible view, that the best nobility is that of a man's own deeds, expresses itself in amusing criticism upon the efforts of certain other Dutch lines to pierce and dignify the uncertainty of their family origin. He takes pains to show genealogically that the sovereignty of Courland can never have belonged to an emigrating ancestor of the New York family bearing a slightly similar name. He puts a peasant at the head of the race of Buren, instead of the counts who bore that title as kin to the house of Orange. And the blood of the De Lanceys is rather curtly "said to have been derived from a noble family," though in this instance the claim can be clearly made out.

The first Schuylers, like most of the Dutch colonists of note and enterprise, began as traders, and ended as land buyers. Their arts were those of peace, and their possessions fairly purchased. The regulations of the West India Company for the planting of colonies obliged all settlers outside of Manhattan Island "to satisfy the Indians for the lands they shall settle upon." The Dutch faithfully and honestly practised that justice which the planters of other colonies either did not attempt at all or failed to persevere in. They had their reward in the constant friendship of the most powerful of the native tribes.

The wealth gathered in trade by the early Schuylers was prudently invested in houses and lands. Yet they did not aspire to rank among the five or six great landholders of the colony who afterwards immensely enlarged their possessions through royal grants from provincial governors. We do not read that the boundary lines of their individual purchases ran, as in other instances, for sixteen, twenty, twenty-four miles, including such natural landmarks as mountain chains and rivers. The curious land history of

New York is rather to be traced in the records of the patroon and the manor holder. Patroons were originally members of the West India Company, and, on certain conditions as to colonizing, enjoyed semi-feudal rights over their purchased territory, including the appointment of civil and military officers and the settlement of clergymen. The only patroon at the time of the English conquest was the descendant of the only one ever really recognized, Killian van Rensselaer, and his domain (but not all his dominion) was confirmed to him by royal patent as a manor, in 1685. The next year Robert Livingston obtained from Governor Dongan the erection into a manor of his great possessions; and in 1697, Governor Fletcher granted the same privilege, little else than titular, to the Van Cortlandts. Part of these great estates remains with the descendants of the original patentees, the greater portion being parcelled out among numerous families. The Schuylers do not appear to have kept together the bulk of their landed property, though we read of one descendant in New Jersey, the heiress also of other lines, who in 1765 bestowed herself and her very considerable estate upon Captain Kennedy, afterwards Earl of Cassilis, who thus became "the greatest householder in New York."

Nor was it as politicians, influential with the managers of State affairs at the capital of the province, that the Schuylers shone. The type of the men who pushed their fortunes at that remote time by such means, is Robert Livingston. As an enterprising trader, as a great Government contractor, as an office-holder for fifty years, his Scotch thrift, his Dutch alliance, his friendship with men near the throne, his influence with provincial governors, earned him high consideration. His life was stirring and adventurous. By turns displaced from office and restored, intriguing on both sides of the ocean, the patron of Kidd, now the friend and now the enemy of Bellomont and Burnet, once a Leislerian and again an anti-Leislerian, he is the most notable example of the versatile politician of his day. He left a great estate, and a name as conspicuous as any in colonial annals.

There was, however, a field for action vital to the interest and even the existence of the colony and the province in which the early Schuylers spent life and fortune, and won deserved fame. Along the northern and western frontiers of New York, beyond Albany and Kingston, stretched the territory held by the powerful confederacy of the Five Nations, numbering twelve hundred fighting men of the most warlike Indian tribes. A New England policy of seizure for the saints and persecution to extermination for conscience' sake would have turned them into relentless enemies. The Dutch spoke them kindly. What lands they wanted they honestly bought. What goods were needed they fairly bartered. Instead of a deadly terror, these savages became close friends, bound with the Dutch in a covenant-chain, and a safeguard to the English against French invasion. One English governor said, "They are a better defence than so many Christians." Another wrote, "They are our only bulwark." These trading Hollanders builded better than they knew. They built with good faith and good will, little dreaming that they were sheltering the young life of a State from the enmity of one empire till it should prosper and strengthen into the might to cast off the oppression of another. In 1686 Peter Schuyler, son of the Amsterdam immigrant, appointed by Governor Dongan Mayor of the newly chartered city of Albany, was officially chairman of the Board of Commissioners for Indian Affairs. Thenceforward for nearly forty years he continued in this service. His bravery, his hospitality, and his self-respect in dealings with the Indians gave him an unbounded influence over their capricious and suspicious natures. They trusted "Quidor"—the nearest imitation of the name of Peter they could frame—when they would trust no one else. "During this time," says the author, "his prudence in council and his authority among the Five Nations saved the province from serious difficulties." More than once his timely warnings gave protection to the settlements in Massachusetts also.

Before the conversion of the Dutch colony into the English province the Five Nations had usually been hostile to the French, who made more than one inroad with disciplined forces into their territory, and suffered the horrors of savage retaliation. With the near approach of English power, the French changed their policy. If they hoped to succeed in the struggle for empire on this side the ocean, the Indians would be useful allies. If presents, and the promise of trade, and the persuasions of Jesuit missionaries could not win their aid, at least they might be conciliated and held neutral. For the English it was essential to maintain the friendly relations nursed by the Dutch, brightening and strengthening the old covenant-chain. The Five Nations were shrewd enough to profit by the quarrels of kings without pledging allegiance to either Power, or directly aiding either by arms. In this crossing of interests and purposes the tact and experience of Peter Schuyler found ample occasion for their display, and the English governors were content for the most part to borrow his influence and claim at home the credit for its fortunate results. The singular usurpation of Leisler for a time disturbed this condition of affairs, which was further complicated by the declaration of war between England and France. Schuyler wrote that the Indians would side with the strongest. Leisler, gaining possession of Albany, deposed Schuyler, who was, however, restored to office within three months, on Leisler's fall and execution. Thereafter he continued to conduct negotiations with the Indians, to convoke and attend councils, and to command attacks upon Canada, some of them brilliantly successful, till the peace of Utrecht, in 1713, gave repose to the province for thirty years, until long after the death of Schuyler.

The study of Peter Schuyler's public career leads to the conclusion that there was no citizen of the province in his day to whom its safety and prosperity owed so much; and the retrospect of its history teaches us that his repute in England, the other colonies, and France, as the great obstacle to French plans of empire on this continent, was well deserved. His name has outlasted the existence of the tribes he controlled. The State doles out a few thousand dollars yearly to the remnant of the great Indian confederacy, but their public action lingers only in an occasional lease of lands to a corporation or the grant of a railroad pass for their annual meetings; unless, indeed, some trace of their character may be supposed to be adopted and to survive in the treaties and the treacheries of Tammany sachems.

As is the case with all the early Dutch families, the bearers of the name of Schuyler, in the second generation even, by no means represent all the character and influence of the line. Before half a century from his coming the children of the founder had intermarried with almost all the principal settlers of Beaverwyck. In the next generation the complication of inter-alliances thickens, and the genealogical tables and comments that fill many pages of these volumes present a tangle of cross-relationships as entertaining—to those concerned—as a Chinese puzzle. Such intermarriages promoted unity of interest and action at Albany, while in New York the effect upon the intimately allied inhabitants of public changes was very different. At the court end of the province the caprice of governors lifted families into importance or dropped them out of favor and employment. Leisler, connected by marriage with leading people, divided society into hostile factions whose violence, embittered by his execution, disturbed the town for generations. The presence of Government, of course, fostered a strong Tory party in later times, so that the Revolution found brother arrayed against brother and compelled cruel divisions among kindred. Leading families were broken up, crushed by confiscation or exile, and on the ruins of their fortunes new ones rose, the obscure growing prosperous. Mutations of politics affected Albany less. Its citizens had, of course, their factions, but at no time did Leislerians or Tories control.

The history of Albany, indeed, is the history of the province separate from that of the capital, and is more purely and distinctly colonial than that of New York city. In making this history the work of the Schuylers was direct and constant and on the right side. Albany stood independent from the beginning. Her patroon held his rights firmly against the Dutch Directors. The city yielded to Leisler for a few months only, through force and by persuasion of the other colonies. Self-protection amid constant dangers compelled united action. The war-path from Montreal and from Onondaga led straight to her homes. She stood sentry at the outpost of greatest peril. The fidelity, courage, and sacrifice of her chief citizens entitle them to a record that has been unfairly overshadowed by the more varied and exciting annals of the capital.

Whatever of that history may be gathered from these volumes is full of interesting detail and curious anecdote. They do not aim to present it compactly or continuously. The nature of their subject requires tedious repetitions. The incidents of the family record, however, with some pains taken in comparisons, piece out a tolerably connected narrative of public affairs in colonial times. This faithful study of an ancestral line throws a strong light upon the solid virtues of the Dutch founders of our commonwealth, and deserves the praise of all New Yorkers who are proud of the truth that Holland is an equal sharer with England in the building of their State.

SCHLIEMANN'S TIRYNS.—II.

Tiryns. The Prehistoric Palace of the Kings of Tiryns: The Results of the Latest Excavations. By Dr. Henry Schliemann, Hon. D.C.L., Oxon., etc. The Preface by Prof. F. Adler, and contributions by Dr. Wm. Dörpfeld. With 188 woodcuts, 24 plates in chromo-lithography, 1 map, and 4 plans. Charles Scribner's Sons. 1885. Pp. lxiv., 385.

THE *megaron* was the principal room in the palace, in which guests were received and entertained. This *megaron* measures about 38 feet by 31, and was supported by four pillars, of which only the round stone bases remain. The floor was covered with a concrete, chiefly of lime, on which was painted "a bright, simple carpet-pattern" (pp. 225, 226), made by bands of three parallel lines dividing the surface into squares and rectangles. Distinct traces of red color remain in some of the squares, and faint traces of blue in the dividing bands. In the middle of the room is a circle, about 10½ feet in diameter, in which there is no concrete: this is without doubt the hearth of the house, the centre of domestic life. The four pillars of the roof surround it; and we have before us the scene of the 'Odyssey,' when Nausicaa directs Ulysses to her mother. He is to go directly to the *megaron* of the palace, where he will find the Queen "sitting at the hearth in the light of the fire, leaning against a pillar, plying her spindle with sea-purple wool,

while behind her sit her hand-maidens." Against the same pillar stands the seat of her father, "on which he sits and sips his wine like an immortal" ('Odyssey,' vi., 305—309).

Near the great *megaron* on the east, but without any direct communication with it, is a small courtyard, upon which opens a smaller *megaron* through a nearly square vestibule, which here represents both *prodomos* and *aithousa*. This *megaron* measures about 25 feet by 18; it has a central hearth, but no supporting pillars; and its vestibule appears to have had no columns between its antæ. This is a repetition, on a smaller scale, of the principal court and its hall, and there can hardly be a doubt that it is the women's dwelling so frequently mentioned by Homer. The plan of the palace will show that, although there was no direct passage between these apartments and the great hall, there was a very indirect means of communication through several narrow and winding passages in the rear of the palace, and possibly another between the two inner courts through a third court on the east. There was also a narrow passage leading from the women's court directly to the outer propylæum of the palace. It is difficult to reconcile some references in the 'Odyssey' to the women's quarters in the palace of Ithaca with the more complicated arrangements found at Tiryns, especially as regards communication between the two *megara;* but we can easily understand that in a palace with only one or two courts the separation of the women's apartment from the men's would be much less complete.

The discovery of these courts and *megara* at Tiryns sheds new light on the similar buildings found on the acropolis of Troy. It is now obvious that the two structures at Hissarlik, which were called temples by both Schliemann and Dörpfeld in 'Troja' (*Nation*, No. 974), are *megara* with vestibules, built on the same general plan as those at Tiryns. The greater hall at Troy had a central hearth, and was much larger than that at Tiryns; it was about 33 feet wide, and 60 feet long to the edge of the northern trench dug by Schliemann, by which the greater part of the building was cut off before its existence was suspected. It is hard to decide whether the smaller structure at Troy (called Temple B. in 'Troja'), which had three divisions, was the women's apartment, or (as Dörpfeld suggests) "a smaller men's house" (p. 224). What we hear of the domestic arrangements of the large royal family of Troy gives us wide range for speculation. We can now understand the structure southeast of the supposed temples at Hissarlik, which is obviously a gateway to an inner court; indeed, the open passage and the great stone threshold of the gate were found in 1882, although they are not marked on the plan in 'Troja.' We think we can see, further, why this structure was built directly over the long covered way which led into the hill from the lower level of the southern gate (NF in 'Troja'): a flight of steps from the covered way to the propylæum would give the inner court of the palace a direct communication with the southern gate below, while the gateway itself would be approached on the same level by the great southeast gate of the acropolis (OX in 'Troja').

In the northeast corner of the palace at Tiryns are many rooms of various sizes, which may have been bedrooms or storerooms, and others on the west have been swept away with the western wall. One most interesting room remains on the west, which at once suggests the elegant hospitality of an heroic prince, the bathroom. This measures about ten feet by eight and a half, and its floor consists of a single slab of limestone, more than two feet thick, with its upper surface "carefully levelled and polished." The use of the room is made certain by "a square gutter" in the northeast corner of the floor, by which water was carried into a drain. Evident traces of drainage are found in other parts of the building (pp. 232, 233). The room was probably wainscoted, as is shown by rows of dowel-holes. Even a fragment of the bath-tub has been found, and it is shown in plate xxiv. It was made of terracotta, painted inside with spirals and outside with stripes; it had a thick upper rim and strong handles; and it seems to have had the shape of a modern bath-tub (p. 232). This can hardly be one of Homer's "well-polished bath-tubs," which perhaps were made of metal. In the palace of Menelaus were two silver baths, given to him by his friend Polybus, of Egyptian Thebes, whose wife gave Helen a silver work-basket on wheels, with rim of gold, and a golden distaff. The bathroom was approached by a small anteroom, which had two opposite doors, one opening on the corridor which led to the *prodomos* and also to the courtyard, the other on the winding passage which led to the women's apartment. It was thus accessible to the women by a private way, and it could easily be reached from the central hall, while a guest arriving in the courtyard could be conducted to his bath without entering the palace, and could afterward enter the *megaron* through the side-door of the *prodomos*. It will be remembered that the two young princes in the 'Odyssey' are taken to the bath before they enter the *megaron* or are received by Menelaus. If the bathroom of the palace at Mycenæ should ever be found, it would have a most tragic interest for readers of Æschylus.

As none of the walls of the palace now standing are more than three feet high, they give us no help on the many chronic questions of roofing, lighting, and door-fastening. There are, of course, no remains of an upper story, but it is thought that traces of a staircase can be seen in a small room near the women's apartment. In the rubbish on the floors and in a few places on the walls themselves were found pieces of plaster with excellently preserved fresco painting, of which many specimens are given by Schliemann in colored plates. The walls were first covered with clay, then plastered with lime and painted. Only three colors, blue, red, and yellow, are found besides white and black. Many of the patterns are surprisingly modern, and some are extremely fanciful; the strangest is the figure of an acrobat (?) dancing on the back of a leaping bull, which appears in gold on the outside of the volume, and in its real colors and of nearly its real size in plate xiii. Several fragments of a remarkable frieze, on alabaster slabs about two feet wide, have been found built into a wall to which they cannot have originally belonged. The pattern consists of semi-ellipses and rosettes inlaid with pieces of blue glass and ornamented with blue glass bands. Dörpfeld is confident that we have here a veritable *kyanos*-frieze, like that which adorned the palace of Alcinous in the 'Odyssey.' He refers to the argument of Lepsius, showing that the Homeric *kyanos* "was not blue steel, as was universally believed, but either the natural *lapis lazuli* and the real ultramarine color, or the artificial blue Egyptian glass." On this basis Helbig ('Das Homerische Epos aus den Denkmälern erläutert') argues that, as it is impossible to conceive of the real *lapis lazuli* as used for the long bands of a frieze, therefore the *kyanos* of Homer must be the artificial kind, "a glass paste colored blue with copper ore, sometimes with cobalt, which imitated *lapis lazuli*" (see 'Tiryns,' pp. 284–292). Dörpfeld thinks that this conjecture of Helbig is wonderfully confirmed by the frieze found at Tiryns.

The discovery of this most interesting palace, with its ground plan so perfectly preserved and the character of its rooms so clearly indicated, would be a most important event in archæology even if we were compelled to assign it to the very latest period of the history of Tiryns. We have no building of this character, even for that recent age, which we can compare with it. But the great question with us all is, whether we have really found a genuine palace of the prehistoric kings who reigned before the Dorian invasion, in the sense in which we have their fortresses in the walls of Mycenæ and Tiryns. We have previously (*Nation*, Nos. 658, 659) given grounds for the strong presumption (which we think few will absolutely deny) that relics of royal state or even of high refinement and elegance found at Mycenæ are to be assigned to the old Achæan kings rather than to any subsequent Argolic dynasty. These arguments are equally strong when applied to Tiryns. The Dorian kings of Argos can no more have built the palace of Tiryns than they can have been buried with gold and silver treasures in the royal tombs of Mycenæ. There is every reason for believing that both these cities were seats of powerful kings in the heroic age before the Dorian invasion, and no reason whatever for believing that they were so at any subsequent period, but every reason for the opposite opinion. We have, therefore, a right to expect that those who assign either the tombs or the palace to any later date should give strong reasons for their decision. No theory of a later origin of the tombs of Mycenæ has ever found favor with scholars; on the contrary, we think the decided tendency of opinion among those who dissent from Dr. Schliemann's view has been towards an earlier rather than a later date than his. Professor Adler, in his preface to 'Tiryns' (p. xxviii.), pronounces these tombs to be the burial places of the older Perseidæ rather than of the Pelopidæ; the same view is taken by Steffen in the text of the *Karten von Mykenai* (mentioned above), published by the German Archæological Institute; while Köhler believes them to be Carian tombs. If the palace of Tiryns is once admitted to the heroic age, there will be no reason for making it later than the great outer walls. Dörpfeld *regards it as certain* that the walls and the palace were built at the same time (p. 252). Among the proofs of great antiquity found in the palace itself we may mention the conclusive evidence that the pillars and the antæ were made of wood. On no other theory can we explain the fact that, while the stone bases of 31 pillars and 26 antæ remain in place, not a single fragment of the upper parts has been found. Many of the antæ-blocks have dowel-holes in their upper surfaces, evidently to hold the woodwork. Many of the bases of the columns are burned at the edges, and not in the centre. We abstain from more than a brief mention of the important collection of pottery found in and about the palace, which is described by Schliemann in chapters iii and iv, and copiously illustrated in the text and in the colored plates, because we believe that ancient pottery should be left, for some time to come, to experts to discuss, before others can have a rational opinion about its age or its relations. We leave also the wall-painting and the alabaster frieze to those who can discuss them more intelligently after careful examination of the fragments that are preserved. We can believe that the palace was built in the heroic age, and yet admit that it was preserved, repaired, and used in later times. Marks of later walls in the courts and in the *megaron* show that extensive changes were at some time made in the original plan. It is too early yet to decide how much that has now been discovered may belong to these later restorations; but this question is entirely distinct from that of the origin of the palace itself.

Dörpfeld is positive in his statements that the upper parts of the palace walls were built of sun-

dried bricks, like the buildings of Hissarlik. As no brick walls are now standing, except two which are admitted to be late, the evidence for this is found chiefly in the masses of brick débris and half-burnt bricks with which "almost all the rooms of the palace were filled" (p. 258). He also believes that the great southwest tower of the outer wall had an upper story of brick, "as scarcely any stones, but almost exclusively half-baked, sun-dried bricks and red rubbish," were found in the closed rooms within the tower. Some very ancient walls, which clearly belonged to a building older than the palace, Dr. Dörpfeld tells us, were found buried several metres deep in brick rubbish; and in this rubbish a trench was dug to make a foundation for the terrace wall of the upper citadel. No one who has read Dörpfeld's essay entitled 'Der antike Ziegelbau und sein Einfluss auf den dorischen Stil' will be surprised at these statements. We do not profess at this distance to judge independently of evidence which has convinced so good an architect and so acute an observer as Dr. Dörpfeld. But we do feel that it is now too late to dispose of all the evidence of the use of bricks in Greece and Asia Minor in the heroic age by the simple statement that no bricks were used there at that time. Perhaps this is true; but it must be proved by showing, on independent grounds, that the brick buildings at Hissarlik, Hanaï-Tepeh, Tiryns, and perhaps Mycenæ, do not belong to the heroic age, and not by merely denying the age of the buildings because they are built of brick. After his experience at Tiryns, Dörpfeld abandons the theory which holds so important a place in 'Troja,' that the brick walls of Hissarlik were baked by fires built around them after they were built, and he now believes that all the bricks used at Tiryns and at Troy were sun-dried and unbaked, and that the burning of them must be ascribed to the conflagrations which destroyed both cities. We may mention here the tragic verse preserved by Hesychius, and ascribed to Æschylus by Nauck ('Trag. Frag.,' p. 685): Τιρύνθιον πλίνθευμα, Κυκλώπων ἕδος, *brick-building of Tiryns, seat of the Cyclopes.*

The discovery of the palace at Tiryns at once suggests the probability that a similar one may be found on the still unexplored height of the citadel of Mycenæ, where the palace of the Pelopidæ must have stood. We hope that Dr. Schliemann will not allow his spade to rest until he has again explored Mycenæ in the light of the experience which he has gained on the hill of Tiryns.

Chosön, the Land of the Morning Calm. By Percival Lowell. Boston: Ticknor & Co.

THE number of white men who have seen Corea beyond tide-water is so few that, after Hamel and his Dutch compatriots in the seventeenth, and the French Jesuits in the nineteenth century, we wonder if there be even one. Of sailors and ship men who have touched on the coast; of diplomats, missionaries, and curious visitors to treaty ports and the capital on the river and near the sea, we have had hundreds. Some of these have written letters or taken photographs of natives and scenery; but, excepting Lieutenant Bernadon and Ensign Foulke, our naval attachés of the Legation in Séoul, we know of none who has really seen the interior of Chō sen. These venturesome young men, bent on exploration, were recalled from their inquest by royal messengers, on the outbreak of the riots in Séoul in December a year ago.

Mr. Percival Lowell, of Boston, who accompanied from Japan the Corean Embassy to New York and Washington, returned with Hong Yŏng Sik, the Liberal envoy, and by royal invitation wintered in the capital. He saw little of the country except Pusan, the port opposite Japan, and the road between the west-coast port Inchŏn and Séoul, barring a trip to a monastery, and the mountains and valleys near the city. His book, then, is not about Corea, but an account of one city and his adventures in it. Fortunately, Mr. Lowell is an amateur photographer, and the most valuable portion of his book lies in the illustrations. Twenty-five full-page Albertypes of Corean natives and scenery form no mean addition to our stock of knowledge concerning Chō-sen. They present new subjects; the smaller woodcuts being of minor value, and treating chiefly of costume, on which much has already been written, with illustration by pencil. When one contrasts the triple title (quadruplicate, if the Chinese ideographs be added) with the table of contents, he will find a wide discrepancy. If he expects the information which the labels suggest, he will be disappointed. Paris may be France, but Séoul is not Corea, and it is the capital and not the country which the author describes. In Appendix B Mr. Lowell says: "The name the Koreans give their land is Chosŏn. By way of forestalling any want of appreciation on the part of others, they also call it Tè Chosŏn—Tè signifying 'great.'" Now, as matter of fact, the prefix *tè*—or *ta*, as the French missionaries write it—does not mean "great," as do the words *dai* in Dai Nippon or *ta* in Ta Tsing, but "all," "entire," "the whole"; so that Tè Chosŏn, or Ta Chō-sen, means all Corea. The Coreans do indeed often use the grandiloquent phrase in Chinese fashion, as do the Japanese; but in that case it is written *tai*. The latter word is Chinese, and the former, *tè*, is pure Corean, a different native spelling and ideograph being used in each instance.

Little or no reference is made by the author to any previous writers or authorities upon the subject which his book professes to treat. His information was gained from personal observation or from natives or foreigners on the soil. It is therefore fresh and unhackneyed, and presented in perspicuous style. His English is excellent, and his text readable and highly entertaining. In many places it is decidedly humorous, but in his effort to avoid dulness he becomes laborious in his lightness. One would willingly spare his funny paragraphs for the sake of more solid knowledge of his subject. Much of his matter received at first hand from his Corean mentors is vitiated by dilution. Into the legends and traditions of the country he mixes a mass of nonsense and funny comment that lowers not a little of his text to the level of country-newspaper humor. One is vexed at the flimsiness of the narrative. Anything like exact statements, dates, or statistics it would be hard to find in the volume, except in an appended note, in which the population of the kingdom and the capital is stated at 12,000,000 and 250,000 respectively. The map, which professes to be "complete," has less than twenty names in the peninsular portion, while in the Chinese province of Shing-king, the old "walls of stakes" remain, though they have been burned into firewood and erased long ago, and Chinese settlers cultivate farms clear up to the Yalu River.

If, however, our appetite for more knowledge of the recluse nation is whetted, instead of being satisfied, by Mr. Lowell, we have our compensation in reading his entertaining philosophy and his often original comments on what he has seen. He is best at analysis, and his chapters on "The Triad of Principles," "The Quality of Impersonality," "The Patriarchal System," "The Position of Woman," are of fascinating and permanent interest. Wholly charming is his opening chapter, "Where the Day Begins," which may rank as a classic. On native costume, diet, houses, scenery, court life, he is full and interesting. The foul and filthy things of heathenism are lightly touched upon, and everything is looked at with imperturbable good nature. There is but one "Chapter of Horrors," in which the native procedure of justice is glanced at. Thirty decapitated human bodies, with their thirty heads tumbled off at a distance, lay in the muddy highway outside the city on a winter's day, and told of Corean severity toward thieves. Of course, Mr. Lowell saw the king, and gives us his portrait. He enjoyed much pleasure in the society of the members of the Foreign Office, and is happy in his pen pictures of "Winter Revels in a Monastery," in "The Flower-Stream Temple," and in "The House of the Sleeping Waves." At these stag-parties the only members of Corean female society present were the dancing girls, who are often highly accomplished, though vastly less numerous than their sisters in Japan. Those were the glorious days of the Liberal reign of power. Mr. Lowell speaks with just praise of Hong Yŏng Sik, who, with Ming Yŏng Ik, visited our country. The former was liberal and radical, while Ming was in reality conservative and reactionary. In the bloody feuds of December, 1884, the former was killed and the latter frightfully wounded. The hospital presided over by the American Doctor Allen is now established in Hong Yŏng Sik's house, while at last accounts Ming had fled to China. Mr. Lowell's visit was made in the nick of time.

Fletcher of Madeley. By the Rev. Frederic W. Macdonald, Theological Tutor, Handsworth College, Birmingham. A. C. Armstrong & Son. 1886.

JEAN GUILLAUME DE LA FLÉCHÈRE, known to the English-speaking world as Fletcher of Madeley, undoubtedly deserves a place in the series of popular biographies which is devoted to the "Heroes of Christian History." He was the Melanchthon of the Methodist reformation, the gentle advocate and scholar of a movement of which John Wesley was the autocratic head, Charles Wesley the eloquent hymnist, Whitefield the flaming evangelist. It was the year 1770, the year of Whitefield's death, that afforded Fletcher his most distinguished opportunity to be of service to the faith which he had so heartily embraced. It was a service that went far to neutralize the work of Whitefield, which was intensely Calvinistic, and to make of Methodism an Arminian sect, while the Calvinistic party was reabsorbed in the Established Church—the Low Church, so called, witnessing to its vitality. It was in 1770 that Wesley wrote the famous Conference minutes that were a declaration of war against the Lady Huntingdon and Whitefield party. It was Fletcher's 'Vindication' of these "Minutes" and his simultaneous 'Checks to Antinomianism' that secured his standing in the quadrilateral of Methodist fame. It is not a little strange that Switzerland, the cradle of Calvinism, should have furnished its most vigorous antagonist in the Methodist controversy. It is even stranger that a foreigner should have so soon become the master of an English style so free and bold that it gave his argument a currency that it never could have had on its intrinsic merits. Stevens and Tyerman, the most voluminous historians of Methodism, are of the opinion that Fletcher's 'Checks' is read to-day as much as ever. His new biographer does not believe it, and no more do we. But in general his tone is one of unqualified admiration. For the work of Fletcher at Madeley his praise could hardly be too strong. Paul's fighting with beasts at Ephesus was an antetype of his experience. This, and not the aptitude for controversy which made him Wesley's "designated successor," was his crown of honor.

A more critical mind would have brought to light some aspects of his character that Mr. Macdonald has left, perhaps unconsciously, in the

deepest shadow. His sense of blood-relationship was expressed by a remarkable indifference: the entreaties of his widowed mother to visit her he resisted, lest he should "lose precious time and incur expense." The abject humility of his letters to Charles Wesley and Whitefield has no doubt been much admired, as one proof among many of his "saintliness." Here is an example: "That such a sinful worm as I should have the privilege to converse" with Wesley, "the thought amazes, confounds me, and fills my eyes with tears of humble joy." "I am confounded," he writes Whitefield, "when I receive a letter from you. Present and eternal contempt from Christ and all his members is what I deserve." Wesley and Whitefield probably knew how much these phrases meant; and when he says, "My infancy was vicious and my youth still more so," proper allowance must be made for the religious habit of the time, so prone to wreak itself upon expression.

BOOKS OF THE WEEK.

HAVE NOW READY:

THE HISTORY OF THE ENGLISH CONstitution. By Dr. RUDOLPH GNEIST, Professor of Law in the University of Berlin. Translated by Philip A. Ashworth. Two volumes. Octavo, cloth, gilt top, $8.

"A constitutional history must portray the reciprocal action continually going on between State and society, Church and State, Constitution and Administration, State life and popular life, political and private economy, between the greatest and the smallest interests. . . . It has to deal with the living body of the State in its origin, its life, and its progress, and the successive and unbroken evolution of enactments which have remained in force until the present day"—*Extract from Preface.*

MECHANICS AND FAITH. A Study of Spiritual Faith in Nature. By CHARLES TALBOT PORTER, C. E. Octavo. Cloth, $1 50.

"The conception of the identity of matter with force must be regarded as fundamental in true philosophy. In every department of thought there is to be observed a reluctance to recognize the fact that we are surrounde. by mysteries. While, in reality, all things pass the limits of our understanding, there are not wanting minds which refuse to acknowledge that anything does so."—*Extract from Author's Preface.*

INQUIRENDO ISLAND. The Narrative of a Voyage of Discovery. A Romance. By HUDAR GENONE. 12mo. Cloth, $1 50.

MAXIMS AND REFLECTIONS. By BATCHELDER GREENE. Oblong 32mo. Uniform with the Nutshell Series. Cloth extra, 75 cents.

An Unheard of Proposition.

I will send to any *subscriber* to "The Nation" a cloth-bound copy of my "Handbook of Boston," just out, to be returned or paid for as the subscriber selects after holding the book thirty days for examination. I take all risks and stand all costs. Send in your order at once on these terms, never offered before by any one.

MOSES KING, Publisher,
279 Broadway, New York.

READ THIS.

In making new editions of his Handbook of Boston, Moses King, the editor and publisher, has invariably revised, enlarged, and improved the book every time, so that although the general character and appearance remain the same, the contents are decidedly altered. In comparison with the first edition the present edition has one-third more pages of text and about as large proportion of new illustrations. There is hardly a page of the whole book that has not been changed, and probably three-fourths of the book has been reset since it was first issued. This constant revising and improving is in keeping with Mr. King's plan of making each successive edition practically a new book of Boston as it is at the time of publication. The new edition, just from the press, contains upward of 400 octavo pages with over 200 engravings, and is handsomely printed and prettily bound. It is probably the largest and most successful book of its class made for any city in America, and is certainly the finest book ever offered for its popular price of one dollar. The addresses of MOSES KING are Harvard Square, Cambridge, Mass., and No. 279 Broadway, New York.

MEXICO.

ILLUSTRATED LECTURES:

I. NATURAL WEALTH.
II. ANCIENT CITIES.
III. MEXICAN INDIAN.
IV. MESTIZO AND CREOLE.
V. REIGN OF THE VICEROYS.
VI. MEXICO TO-DAY.

These lectures were delivered before the Lowell Institute, Boston, and the Peabody Institute, Baltimore, large audiences testifying to the prevailing interest in Mexico.

VII. 'PICTURESQUE MEXICO' (with 80 illustrations) has received many most flattering testimonials.

Lecture Committees are respectfully invited to send for descriptive pamphlet to

Just Published:

OUTLINES OF Universal History.

By GEORGE PARK FISHER, D.D., LL.D.,
OF YALE COLLEGE.

1 vol. 8vo. 690 pages.

This work, designed as a text-book and for private reading, is a clear and condensed narrative, brought down to the present year, comprising not only a record of political events, but also a sketch of the progress of literature, art, and science from the beginning of history to the present time.

It contains full lists of books for reading and reference, and is furnished with 32 historical maps, mostly colored, and many of them folded.

The lucid arrangement, together with the use of different sizes of type, has rendered it possible to bring together a great amount of matter within a brief compass, and in a readable form.

Extra cloth binding, with leather back. Price by mail, postage free, $3.00.

HAVE JUST PUBLISHED:

I.

French Dishes for American Tables.

By PIERRE CARON, formerly *chef d'entremets* at Delmonico's. Translated by Mrs. FREDERIC SHERMAN. Small 12mo, cloth. Price, $1 00.

The receipts in this volume come from a *chef* of great experience, and are written with singular clearness, so as to be comprehensible to any person of ordinary intelligence. There are many people of moderate income desiring to live well and yet within their means, and to this class this book will prove specially useful. While economy is not its sole object, the variety of receipts for palatable dishes that may be prepared at small cost is very large.

II

The Correspondent.

By JAS. WOOD DAVIDSON, A.M. Cloth, small 12mo. Price, 60 cents.

The aim of this book is to give, in convenient and immediately accessible form, information often needed by the American correspondent in regard to forms of address—salutation, complimentary close, superscriptions, etc.—and other matters connected with correspondence.

III.

Jacob Schuyler's Millions.

A NOVEL. 16mo, paper cover. Price, 50 cents.

'Jacob Schuyler's Millions' is an American novel, the action taking place in New Jersey near New York city and in the metropolis. The story is of strong interest, affording a graphic picture of life a quarter of a century ago. The characters are well portrayed, the style is fluent and easy, and the mystery surrounding Jacob Schuyler's millions is ingeniously managed.

For sale by all booksellers; or will be sent by the publishers, by mail, postpaid, on receipt of price.

Diderot and the Encyclopædists. 2 Vols. March.
Compromise. Revised and Enlarged. One Vol. April.
Miscellanies. Two Vols. May.

AMIEL'S JOURNAL. The Journal Intime of Henri-Frederic Amiel. Translated, with an Introduction and Notes, by Mrs. Humphrey Ward. Crown 8vo, $2.50.

In this mixture of the faith which clings and aspires with the intellectual pliancy, which allows the mind to sway freely under the pressure of life and experience, and the deep respect for truth which will allow nothing to interfere between thought and its appointed tasks, that Amiel's special claim upon us lies. It is this balance of forces in him which makes him so widely representative of the modern mind, of its doubts, its convictions, its hopes. He speaks for the life of to-day as no other single voice has yet spoken for it.—*Translator's Introduction.*

ELEMENTS OF PROJECTIVE GEOMETRY. By Luigi Cremona, LL.D., Professor of Mathematics in the University of Rome. Translated by Charles Leudesdorf, M.A., Fellow of Pembroke College, Oxford. 8vo, $3.25.

The CENTURY for FEBRUARY,

THE MIDWINTER NUMBER,

CONTAINS:

THE MINISTER'S CHARGE.

By W. D. HOWELLS.

The first chapters of the new novel, which will continue through the year. The hero is a country boy, who goes to Boston [illegible] his fortune. The minister is already k[illegible] 'The Rise of Silas Lapham.'

ANTOINE LOUIS BARYE.

An appreciative account of the famous French sculptor and his work, by Henry Eckford, with a portrait and twenty engravings.

THE DANCE IN PLACE CONGO.

By Geo. W. Cable. First paper in a series on "Creole Songs and Dances." With illustrations by Kemble, and the music of the dances described.

PREPARING FOR THE WILDERNESS CAMPAIGN.

BY GENERAL GRANT.

The most striking of all of General Grant's contributions to THE CENTURY War Series, being a brief, vigorous, and highly characteristic description of this great campaign, with estimates of different commanders. A fac-simile of Lincoln's God-speed letter to Grant is given.

OUR MARCH AGAINST POPE.

By Gen. James Longstreet, who was a West Point classmate of Gen. Pope. A concise and direct account of the Confederate movements in the Second Bull Run campaign, with illustrative anecdotes of the Confederate generals. Accompanying this article is one by Allen C. Redwood, entitled "With Jackson's 'Foot Cavalry' at the Second Manassas," describing the campaign from a private's point of view. Both papers are richly illustrated.

ANECDOTES OF McCLELLAN'S BRAVERY.

An unsigned article by a companion officer, with a frontispiece portrait.

CITY DWELLINGS.

An article in the series "Recent Architecture in America," by Mrs. Van Rensselaer, with pictures of some notable houses.

A BORROWED MONTH.

The first part of a novelette by Frank R. Stockton, based on a curious psychological theory.

HEBE.

A narrative illustrated poem by E. C. Stedman.

INTERNATIONAL COPYRIGHT.

A timely symposium by James Russell Lowell, John G. Whittier, and forty other authors.

OTHER FEATURES

Include a short illustrated story of Georgian Life; chapters of Mrs. Foote's serial, and the conclusion of Henry James's "The Bostonians"; some short Essays, Poems, Open Letters, Bric-à-Brac, etc. *Subscribers beginning now will get first chapters of Howells's and Stockton's stories.* Subscription, $4 00 per year; 35 cents per copy. Sold by all dealers.

First Edition All Sold. Second Edition Just Ready.

SCIENTIFIC THEISM.

By Francis Ellingwood Abbot, Ph.D. 12mo, cloth, 242 pages.

*** Sent postpaid on receipt of TWO DOLLARS.

"Dr. Abbot has come forward with a discussion of the problem that is destined to make an epoch in the world of thought. . . . Only once in a great while does a work of such moment appear. . . . In this little book there are laid the foundations of what may again dower the barren and prosaic world with sublime theologies, [illegible] work of grand and sanely imaginative intellects."—*Louis Tiffany.*

"Dr. Abbot's theory is therefore a new departure of commanding interest and importance."—*Rev. J. W. Chadwick.*

"Dr. F. E. Abbot's new book, the 'Science of Theism,' confirms the opinion of the few best able to judge, that he is the ablest philosophical thinker in America, and that his work seems to be the foundation of that deeper religion of the future, sure to come, which will satisfy both the head and the heart of man."—*Mr. E. B. Haskell, in Boston Sunday Herald.*

"Such a book should make an epoch in the intellectual history of our country. The book is a very great performance."—*Boston Beacon, editorial.*

"He may find, as Darwin did when he brought out the 'Origin of Species' as preliminary to a great work, that he has done enough already to found a school of investigation and to establish himself as the master of a new departure, profoundly original and significant, in the highest form of research."—*Boston Transcript.*

"One of the few carefully prepared and noteworthy books of the year."—*Chicago University.*

"Dr. Abbot has the one quality which should command the attention, at least, of the many: he is an intense believer. He has faith in natural science, which, indeed, is in no lack of devotees to-day; and he has as much faith in religion, which has now no superabundance of real friends; and his two faiths are thoroughly one. . . . 'Scientific Theism' is one of the great books of our generation."—*Rev. N. P. Gilman, in Boston Christian Register.*

"The book . . . must take an honorable place in the literature of the subject; and from its falling in, in so many particulars, with the peculiar tone of the age, will be very likely to be set down even above its merits, great as those merits unquestionably are."—*Boston Literary World.*

Madame de Maintenon:

AN ETUDE.

By J. COTTER MORISON.

Square 16mo, parchment, 50 cents.

*** A vivid sketch of the life and times of Madame de Maintenon.

England Under Gladstone.

1880—1885.

By JUSTIN H. McCARTHY, M.P.

Second Edition, revised and enlarged, cr. 8vo, cloth, $2.40.

Gladstone's House of Commons.

By T. P. O'CONNOR, M.P. Demy 8vo, cloth. $5.00.

"An admirable and vivid picture of times of which we can never know too much."—*Pall Mall Gazette.*

Robertson of Brighton.

With some Notices of his Times and Contemporaries. By the Rev. F. ARNOLD. Post 8vo, cloth, $3.60.

Sketches of the History of Christian Art.

By the late LORD LINDSAY (Earl of Crawford and Balcarres).

New Edition. Two Vols., crown 8vo, cloth, $9.00.

In these volumes the late Earl of Crawford and Balcarres traced the history of art, of sculpture, architecture, and painting in Christian countries and under Christian influences. Their origins and development are set forth, and the works of the principal masters in each branch are described and criticised.

In reviewing the book in the *Quarterly Review*, MR. RUSKIN wrote:

"As a contribution to the History of Art, his work is unquestionably the most valuable which has yet appeared in England. His research has been unwearied; he has availed himself of the best results of German investigation—his own acuteness of discernment in cases of approximating or derivative style is considerable—and he has set before the English reader an outline of the relations of the primitive Schools of Sacred Art which we think so thoroughly verified in all its more important ramifications, that, with whatever richness of detail the labor of succeeding writers may illustrate them, the leading lines of Lord Lindsay's chart will always be henceforth followed."

WANDERINGS IN CHINA. By C. F. GORDON CUMMING, Author of 'At Home in Fiji,' 'A Lady's Cruise in a French Man-of-War,' &c. With a portrait of the Author and numerous Illustrations. 2 vols. 8vo, cloth. $10.00.

THE TARTANS OF THE CLANS OF Scotland. Also, an account of Celtic Scotland, Clanship, Historical Notes of each Clan, etc. 71 colored plates. 4to, cloth, $16.80.

Bohn's Libraries.

A Series of Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

HENFREY'S GUIDE TO ENGLISH COINS. Revised Edition. By C. F. Keary, M.A., F.S.A., with Historical Introduction. $2.40.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. New Catalogue of Musical Books ready.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Two Notable Works.

The History of German Literature.

By Professor William Scherer. Translated under the supervision of Prof. Max Müller. 2 vols., 12mo, $3.50.

Professor Scherer's is the first history of German literature worthy to be called at the same time masterly, in a scholarly sense, and popular. It is already a recognized authority of the highest rank in its own country; and this translation, with the sponsorship of the first of Anglo-German scholars, will occupy a place among our own means of instruction which there has been nothing else to fill.

"Professor Scherer has written a history of German literature which is as full of entertainment as it is of instruction, and comprises within a convenient space all that is important to know of German literature."—*Prof. H. H. Boyesen.*

"One of the very few really good books on the language and literature of the Germans ever translated into English. . . . It is not too much to say that the author interprets the development of German literature more rationally than the literature of either France or England has ever been explained."—*Boston Beacon.*

"Persons in search of a trustworthy guide through the labyrinth of German literary culture will be glad to find this work."—*Philadelphia Times.*

"A singularly interesting volume."—*New York Tribune.*

Oceana; or, England and Her Colonies.

By James Anthony Froude, M.A. Illustrated. 1 vol., crown 8vo, $2.50.

"A very valuable and entertaining contribution to the literature of travels."—*Washington Post.*

"The best picture of English colonial life and institutions we have been given in recent times. . . . Mr. Froude's judgments upon what he learned of colonial life from actual contact are full of suggestiveness. His opinions are incisive, yet amiable, and are never weakened by sentimentality."—*Brooklyn Times.*

This volume is the outcome of Mr. Froude's recent journey around the world. The author's route led him from England to the Cape Colony, thence to Australia, New Zealand, the Sandwich Islands, California, New York, and home. It is not only the region, but the people also who are described. The question of Imperial Federation is discussed, but the chief portion of the volume is occupied with Mr. Froude's interesting narrative of his travels. Among the illustrations are several very interesting engravings made from drawings by the author.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 4, 1886.

The Week.

THAT eminent expounder of the Constitution, Mr. Riddleberger, of Virginia, has come to the front in the Senate as the champion of the Republican doctrine that the upper branch of Congress has the right to demand of the President any papers bearing upon the cases of removed or suspended officials, and that it is the duty of the Executive to comply with such a demand. Mr. Pugh, of Alabama, has made answer for the Democrats with a series of resolutions, defining the respective prerogatives of President and Senate in matters of appointment and removal, and sustaining Mr. Cleveland in his refusal to furnish information as to his motives for exercising his power to remove or suspend an official. The issue thus joined will come up for discussion in open session, and the debate cannot fail to be a good thing for the country. It will be the first step toward that complete publicity regarding the disposition of the offices which the country is resolved to have. We observe that Mr. Edmunds on Tuesday repeated his familiar lecture to his colleagues about their wickedness in letting the newspapers know what is said and done about public business in executive session. The insistence of the Vermont Senator upon strict observance of this mummery is only another illustration of that pettiness of temperament which seems to be aggravated year by year, until it often counterbalances his great ability.

As we understand it, while the President stoutly maintains that the Senate has no right, in its capacity of enjoying certain executive prerogatives, to ask him for papers regarding a suspension which it proposes to consider in secret session, he would interpose no objection to furnishing any information desired for discussion and action in open legislative session. In other words, what Mr. Cleveland insists upon in this matter is publicity, and he is quite right. The consideration of nominations in secret sessions has been fruitful of abuses of every sort. There is not a single sound argument in favor of it. Senator Logan rightly declared the other day that the people have just as much right to know what is said and done in regard to nominations as in regard to legislation. He might have gone still further, and declared with perfect truth that the people are much more deeply interested just now in learning the principles upon which the Senate treats nominations than they are in the greater part of its ordinary legislation. We trust that General Logan will continue to demand the reform which he has championed, and we wish we had more faith than we have that he will carry it through. We trust also that the Republicans will take this issue about suspensions into open session, and get all the facts before the country. Publicity about the whole business of filling the offices would do more to secure the establishment of a thoroughgoing reform than any other thing. The Republicans in the Senate will do the country a great service if they will insist upon publicity. But their treatment of the suspension issue thus far has been so plainly an attempt to secure partisan advantage that we have not much confidence that they will do this.

Senator Sherman has introduced a bill to discontinue the coinage of silver dollars, and to substitute in place of such coinage the purchase by the Treasury of an equal amount of silver bars, upon which may be issued coin certificates having the same legal qualities as the present silver certificates. Such a measure would be preferable to the existing law only in two respects. It would save the cost of coining, and it would introduce a new Chinese puzzle into our monetary system, which would probably have the effect politically of mystifying so many people that the Sherman bill would itself be soon repealed. The result would be that both the Bland Act and the Sherman Act would be out of the way, and of course that would be a good thing. But Bland and Beck are too shrewd not to see all this as well as Mr. Sherman himself. We do not look for any votes for the measure which would not be given for the repeal of the Bland Act pure and simple.

The Boston *Herald* has been having a curious controversy with its filthy and mendacious contemporary the Boston *Journal* — the only morning paper in that city, by its own confession, which ventured to support Blaine in 1884 —touching Blaine's attitude toward silver. The *Herald* said he had in the Senate, in 1878, "favored a silver dollar containing 425 grains of silver in place of the standard coin of 412½ grains, to have unlimited coinage, and be an unlimited legal tender." This the *Journal* pronounced "a deliberate and wanton perversion of truth," a term which it often uses as synonymous with undoubted fact. The *Herald* now quotes from a bill which Blaine introduced in February, 1878, and which he said contained "three very simple provisions":

> "That the dollar shall contain 425 grains of standard silver, shall have unlimited coinage, and be an unlimited legal tender."

This was Blaine all over. Everything about him is "unlimited"—gold, silver, brass, stocks, and bonds. The *Herald* wonders what the *Journal* will say now.

A good many of the religious journals have hastily endorsed the extraordinary anti-Mormon measure which was recently rushed through the Senate, which proposes practically to confiscate the property of the church, by authorizing the President to appoint trustees who shall control it. The *Christian Union*, however, has taken time to examine into the matter, and finds an objection to the measure, from the religious point of view, which is even more serious than the purely secular objections. It thus states its reasons for opposing the measure:

> "If Congress has a right to appoint trustees of a religious corporation in the Territories, by a parity of reasoning the State Legislatures would have a right to appoint similar trustees in the States, and there would be nothing to prevent a legislative body governed by infidels from putting all church property into secular hands, or, for that matter, a Protestant or a Roman Catholic legislative body from dealing in a similar manner with the trustees of churches of an opposite faith."

The *Christian Union* hopes to see a "braver and fuller discussion" of this bill in the House than it received in the Senate. The hasty passage of such a measure is one of the most discreditable things of which the upper branch has been guilty for a long time.

The opponents of the Bell Telephone suit are making a great clamor over the pecuniary interest which Attorney-General Garland has in the setting aside of the Bell patent, and are charging that this is really the main motive of the Government's action; that Secretary Lamar, while having no pecuniary interest in the matter, has yielded to the personal influence of his associate, Mr. Garland, in bringing the suit. Clamor of this kind would have no weight with the public were it not based upon a certain amount of truth. Unfortunately there is only too much truth in this instance. The relations of the Attorney-General to a telephone company seriously interfere with his usefulness as a public officer in all matters relating to tele phone litigation. He is the self-confessed owner of a very large block of stock in a rival company. Documents have been published which show that he acquired this stock while he was in the Senate, and that he was given it because the promoters of the enterprise believed he would be useful to them. His own letters show that he not only "saw various channels in which he could be useful," but that he was useful in many of them. When he became Attorney-General, he was asked to bring a suit in the name of the Government to test the validity of the Bell patent. He declined to do this, as he subsequently explained in a letter to President Cleveland, because he was "disabled by being a stockholder and the attorney for the company in whose name it was intended to make the application." This refusal was given some time last summer. A few weeks later, Mr. Garland left Washington for a vacation in Arkansas, and soon after his departure it was announced that the suit which he had declined to bring had been granted to the applicants by the Solicitor-General. The popular outcry against the proceeding was very great, and the Attorney-General's relations to the company bringing the suit were fully exposed. The President called upon him for an explanation, and it was given in a long communication dated October 8. In it Mr. Garland admitted the truth about his stock in the rival company, explained, as cited above, his reasons for declining to grant the suit, and declared that the Solicitor-General's permission had been obtained without his knowledge or consent. The President then intimated very plainly to the Solicitor-General that he had better revoke his permission for the suit and refer the question to the Interior Department, and this was done. Secretary Lamar's decision to allow the suit to be brought has caused great surprise, and has revived the whole subject of the Attorney-General's relations to the question.

Defence of Mr. Lamar's action may be possible, and if it is it should not be delayed. There is no light to be found in his official announcement of his decision, for he gives no opinion upon the merits of the case. It was very evident that he had not carefully examined the subject, for he states, as a reason for bringing the suit in the name of the United States, that no private suit could avail to set aside a patent which had been fraudulently obtained, whereas the Revised Statutes (section 4920) expressly provide that this issue can be raised in a suit brought for infringement. If he was not influenced by his personal regard for the Attorney-General and the other eminent Southern gentlemen who are also stockholders in the Pan-Electric Company, he should make that fact as plain as possible. The great pity of it all is that no explanation can free the Administration from more or less scandal in the matter. Mr. Garland is the head of the Department of Justice, and if the suit is to be tried in the Government's name, his Department will have charge of the prosecution. That he will not take charge of it personally does not materially lessen the objection. He owns a half million dollars' worth of stock in the Pan-Electric Company, or one-tenth of its whole capital. The company has eight licensed branch companies, with an ostensible capital of $40,000,000, of which 40 per cent. belongs to the Pan-Electric Company, and one-tenth of this 40 per cent. belongs to Mr. Garland. If the Bell patent were to be set aside, Mr. Garland's interest, which is now little more than paper capital, would become enormously valuable, and this contingency will be certain to affect the conduct of every man associated with him. Under these circumstances neither he nor a department controlled by him ought to have any connection with a suit of such great importance and brought under such suspicious circumstances. It would not be sufficient for him to dispose of his stock altogether, for his former relations would be certain to affect his conduct. We are frank to say that there is only one of two courses for the Government to follow, and that is either to order the abandonment of the suit or to call for the resignation of Mr. Garland. His continuance in office under the present conditions is doing the Administration irreparable injury.

While it is doubtful if much will be accomplished by the inquiry which the House has authorized concerning the Government expenditures in the proposed telephone suit, the mere fact that a Democratic House has felt obliged to take notice of the subject is a striking illustration of the impression which the telephone scandal is creating. The Committee on Expenditures in the Department of Justice, which is to make the inquiry, is not a remarkably impressive body of men. It is composed of Gibson, of West Virginia; Hammond, of Georgia; Seymour, of Connecticut; Ward, of Illinois; Milliken, of Maine; Hanback, of Kansas; and Sawyer, of New York. Of these Mr. Hanback is the author of the resolution under which the inquiry is to be made. He says he is determined to have the whole matter thoroughly investigated, but the terms of the resolution limit the inquiry to the expenses incurred by the Department relative to the suit. They do not give the Committee authority to inquire into the Attorney-General's relations to the Pan-Electric Company, which constitute the real ground for the present scandal. The question is not how much money the Government has spent in allowing the suit to be brought, but upon the impropriety of allowing it to be brought at all under an Attorney-General who has personal and pecuniary interests in the result.

The House on Monday, by a vote of exactly three to one, passed the bill increasing the pensions of widows and dependent relatives of soldiers from $8 to $12 a month. This was to have been expected, and as it is estimated that the change will add only about $6,000,000 to the annual pension roll, the country will probably not grumble. The amendment removing the limitation of the Arrears Act, which the Pension Commissioner says would cost the Treasury more than $300,000,000, was ruled out of order, but its advocates mean to push it as a separate proposition later, and will carry it through unless public sentiment pronounces strongly against it.

The decision of the Supreme Court in the Virginia coupon cases, announced on Monday, is another great triumph of honesty over fraud. The State of Virginia, to cut the matter short, made the coupons on its bonds receivable for taxes, and then, under the guidance of the "readjusters," repudiated them, first by requiring that every holder of a coupon who offered it for taxes should prove its genuineness, so as to make their use intolerably troublesome and expensive; and at last by open and brazen declaration of their worthlessness. The Court of Appeals of the State sustained this swindle, but the Supreme Court of the United States has put an extinguisher on it. The whole affair shows that Mahone did not spring up on stony ground. He was produced by a rotten public sentiment.

The legislative row at Columbus during the past week was a disgrace to the State of Ohio. At the October election the Cincinnati Democrats managed to count in their candidates for Senators and Representatives in Hamilton County by tampering with the true returns of the votes. The forgery by which the narrow Democratic majority was secured has been clearly exposed, and at least one honest man among the company who thus secured certificates has openly confessed that he and his fellows had no right to the seats which they claimed. The job was put through by the corrupt McLean gang in a desperate attempt to manufacture a Democratic majority in the Legislature and elect the *Enquirer* editor to the United States Senate. It failed, but it rendered the Legislature uncomfortably close, the Democrats having three majority in the Senate and the Republicans six in the House. The natural course would have been for the Republican candidates from Cincinnati to claim the seats of the Democratic incumbents in each branch, and for the Senate and House to institute a thorough investigation in a deliberate way. This course would doubtless have been pursued but for the complication of the Senatorship. The Republicans had three majority in the whole Legislature, but Mr. Sherman's friends had good reason to fear that two or three members of the party were so much opposed to his reëlection that they would vote for some other Republican and elect him with Democratic help, if indeed they might not go so far as to support a Democrat outright. The Republican majority in the House therefore concluded to turn out the ten Democratic representatives from Cincinnati in short order, and the Republican contestants were admitted after a hasty and brief investigation. It was theoretically an abuse of power by the Republicans; but as, practically, the Democrats had no valid claim to the seats, the public was disposed to excuse the performance.

Senator Sherman was reëlected, and no excuse was left for any haste or heat in settling the contested seats in the upper branch. But the Republicans had come to regard brute force as a good weapon, while the rather harsh treatment of the Cincinnati Democrats in the House had put the Senators from that city in an ugly frame of mind. The Senate consisted of twenty Democrats and seventeen Republicans, and was presided over by the Republican Lieutenant-Governor, whose duties as presiding officer are not clearly defined by the State Constitution. The Democrats took it for granted that he would claim great powers, and attempted to restrain him by establishing a set of rules which made him only a figurehead. The question of the right of the four Cincinnati Senators to their seats came up; the Lieutenant-Governor held that the sitting Democratic members had no right to vote upon it; the seventeen Republicans sustained the Lieutenant-Governor; the sixteen Democrats whose seats are not contested, with the four from Cincinnati, denied his power to make such a ruling; and confusion worse confounded ensued. After some days of rival Senates and narrow escape from bloodshed, the sensible members of both parties got together, and agreed upon a compromise, providing for a fair investigation by a properly constituted committee, whose report is to be accepted as final. If this proves to be the issue of the controversy, the Senators will only have adopted, after a disgraceful squabble, the course which they ought to have pursued in the beginning. It is impossible to feel much sympathy for either party to the quarrel. The Democrats indisputably have no moral claim to the seats, but the Republicans would have made their case infinitely stronger if they had been content to go more slowly.

A man who fought to preserve the Union should have a right to share in governing the country which he helped to save; yet there is one State where a large number of veterans are to this day under some circumstances by law debarred from voting. A bill was introduced in the Rhode Island Legislature last week which proposes the submission to the electors of the State, at the April election this year, of a Constitutional amendment extending the right of suffrage to all Union soldiers and sailors of foreign birth resident in the State who served during the war of the Rebellion. Rhode Island still maintains the property qualification so far as foreigners are concerned, and no citizen of this

class, however meritorious his services, can vote unless he has a freehold. Something over one-fifth of the State's population in 1860 was of foreign birth, and among the 23,699 men furnished to the Union army during the war there must have been some thousands of foreigners, the survivors of whom have never acquired the right to vote, although no freehold qualification is required of a native who had not courage enough to join the army. Rhode Island sticks obstinately to old ways, but it hardly seems possible that a majority of those who now enjoy the right to vote will longer deny it to men whose assistance to the State was needed and welcomed in the greatest crisis of her history.

Senator Edmunds has persuaded the Judiciary Committee to report adversely upon the nomination of Mr. Merrick as Judge of the Supreme Court of the District of Columbia, on the ground that he is too old, having reached his sixty-sixth year when he was named for the position last spring. It will be interesting to see what stand will be taken upon this question by sundry of Mr. Edmunds's associates—like his colleague, Mr. Morrill, for instance, who has recently entered upon a new term of six years at the age of seventy-five; Mr. Evarts, who expects to deliver his inaugural address as President in 1889, just after completing his seventy-first year; Mr. Sawyer, who has the pipes all laid for his reëlection by the Wisconsin Legislature next winter in his seventy-first year; Mr. Dawes, who is running for reelection in Massachusetts next year, when he will be well along in his seventy-first year, as "the Indian's friend," and vindicating his claim by dashing about over the Western country every summer; and many other Senators on each side of the chamber, who are Judge Merrick's seniors, but are busily scheming for another term of office. Mr. Edmunds is sound enough in holding that, as a rule, it is better not to appoint a man to a judgeship after he has passed sixty, because he is unlikely to serve long; but with so many examples as we have, from the Supreme Court down, of men able to do good service on the bench after they have reached seventy, it would be unjust not to make an exception in the case of a man like Mr. Merrick, who is vigorous in body and mind. Old age is not an absolute term, but a matter of individual constitution. Mr. Edmunds himself is only fifty-eight, but he manifests more of the querulousness usually associated with advancing years than many Senators who are a decade older.

The correspondence touching the authenticity of the remark attributed by General James B. Fry to General Sherman, that, "had C.F. Smith lived, Grant would have disappeared to history after Donelson," proves that General Sherman did use that language in the identical words quoted. The context shows, also, that the words were used in connection with the misunderstanding that then existed between Grant and Halleck, concerning which General Sherman says, "I had the highest possible opinion of Halleck's knowledge and power, and never blamed him for mistrusting Grant's ability." The statement that "had C. F. Smith lived Grant would have disappeared to history after Donelson," contains nothing derogatory to General Grant, and nothing out of the range of probability, and nothing inconsistent with the spirit of true friendship between Grant and Sherman. If Grant had been definitely superseded after Donelson and had retired to Galena, as he was on the point of doing after Shiloh, and would have done but for Sherman's entreaty, he would have "disappeared to history." Evidently this thought was in General Sherman's mind when he wrote his hasty note to Colonel Scott, from which General Fry quoted. The contingency which, together with Sherman's personal intervention, kept Grant in the army at that critical juncture, was the death of General C. F. Smith, who would unquestionably have been put in command of the Army of the Tennessee if he had lived—not through any act of Sherman's, but in consequence of the then prevailing distrust of Grant's ability. General Sherman says that he never blamed Halleck for sharing in this distrust. Nor is Halleck to be fairly blamed.

Of course, General Sherman had forgotten that he used those words in his letter to Col. Scott. The question arises, Why did not General Fry tell him at once what his authority was for the quotation? The answer is not far to seek. General Sherman never asked General Fry that question, but asked a third party to find out for him. Military men are apt to be punctilious, and when an officer finds himself treated cavalierly by a brother officer, he is excusable for standing on his dignity. This is what General Fry did and had a right to do. If General Sherman had addressed him a respectful inquiry asking what his authority was, he would probably have received a respectful and categorical answer. If he had not received such a response, General Fry would have put himself as much in the wrong as General Sherman now is.

One of the singular things about boycotting in this country is the equanimity with which its victims submit to attempts to extort money from them by the boycotters. The New Haven *Morning News* is at this writing undergoing persecution of this sort from the "Trades Council," of New Haven, because it will not discharge all its present compositors, and employ others furnished to it by the Typographical Union and pay $500 as the cost of its own humiliation. It refused this and proposed arbitration, which the Council refused, and the "Joint Boycott Committee" then announced in a letter to the *Morning News* Company that, in addition to the "indemnity" previously demanded, "it was decided at a meeting of the Committee held yesterday that they should be charged $50 per week after the present week as a just share of the expense incidental to the boycott." Now the Typographical Union has a perfect right to strike, or order a strike, or make any demands it pleases as regards the dismissal or employment of compositors; but unless the law of Connecticut differs from that of most other civilized communities, demanding money as the price of desisting from attempts to injure or interfere with a man's business is there a criminal offence. In this State it is "blackmail," under the Penal Code, to threaten "to do any injury to any person or any property in order to extort or gain any money or other property." Surely this or something like it must be the law in Connecticut too. If it be, why does not the *Morning News* Company have this "Joint Committee" arrested and brought to justice?

Parnell could not have taken the Irish Secretaryship, as it was rumored he would consent to do, without losing all influence in Ireland, so familiar have the people there been in times past with the practice of stopping the mouths of Irish Parliamentary patriots by giving them office. Moreover, he is, as he himself says, pledged to opposition to all legislation dictated by "alien feelings," which legislation for Ireland in London is and must continue to be. In fact, this phrase contains the real strength of the home-rule position. Legislation in our day to produce content has to be the work of men who both understand and sympathize with the people for whom they legislate. In fact, this may be called one of the essentials of modern government This sort of legislation, Englishmen, it has been fully proved, no matter how much pity they may feel for the Irish or how earnestly they may desire to serve them, cannot furnish. In fact, an Englishman filled to the chin with justice and pity for people whom he looks down upon, is probably one of the most exasperating rulers in the world. His subjects, no matter how much he does for them, never get over the desire to hit him with something. This really gives a touch of pathos to the position of the Liberal party toward Ireland at this moment.

Since the adjournment of Congress, Mexican politics have worn a calmer exterior, but it is evident that a great deal of intriguing is going on. Governors and generals are unexpectedly found in the capital conferring with the President; Gonzales himself comes to look after his interests on the spot; and the rumor is renewed that Lerdo, whose name is still one to conjure with in Mexico, is about to return from his exile in New York to dictate terms for himself and his faction. The best opinion seems to be that the quarrel between Diaz and Gonzalez has been adjusted, on the basis of an agreement by the latter to abandon all pretensions to another term as President, leaving the Administration to arrange the succession, on condition that all the proceedings against him for misuse of public funds be at once dropped. It is said to be in pursuance of this compact that Gonzalez has so passively allowed the work of displacing his followers in Nuevo Leon, Tamaulipas, and Coahuila to go on. The Government is far from having extricated itself from the financial difficulties bequeathed to it by the former Administration. It is vigorously insisting upon the rigid execution of the funding laws of June 22, as affording the only hope of permanent relief. Protests against that legislation, petitions for its amendment, and requests for exemption from its operation are pouring in upon the President, but he remains firm. He is reported recently to have said that the Mexicans had hitherto only known what it was to make laws, but that he was now about to teach them what it was to obey the laws.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 26, to TUESDAY, February 2, 1886, inclusive.]

DOMESTIC.

THE President, through the Attorney-General, on Friday refused to transmit to the Senate in executive session the papers with reference to the suspension from office of the District Attorney for the Southern District of Alabama, because "it is not considered that the public interests will be promoted."

The Democratic Senators in a caucus on Saturday unanimously resolved "that we approve the action of the President communicated to the Senate through Attorney-General Garland, in his letter of January 29, 1886, and that we cordially support the Executive therein." A Democratic Senator, speaking of the caucus, said that it was harmonious; that no suggestion of opposition was made in any quarter; that the Democratic Senators intend by this resolution to endorse the general policy of the President, and do not limit their approval to the answer from the Attorney-General; and that their decision is to apply to the issue which is now made between the Executive and the Senate.

Attorney-General Garland's letter was laid before the Senate in executive session on Monday. Mr. Edmunds moved that the letter be referred to the Committee on the Judiciary, of which he is Chairman, and that that Committee be given authority to report its opinion of the matter in open session. Mr. Hoar suggested that the letter should be sent to the Committee on Privileges and Elections, of which he is Chairman. The matter went over on an objection by Senator Butler (Dem., S. C.).

The controversy between the Senate and the President was brought up in the open Senate on Tuesday morning by a resolution introduced by Mr. Riddleberger (Readj., Va.) in these words: "Resolved, That it is the sense of the Senate that the Executive of the United States is not restricted by the Constitution or law in removing or suspending appointees; that the Senate has no constitutional right to require that reasons shall be given for said removals or suspensions. But it is the right of the Senate to call for any papers relating to the conduct of suspended appointees, or the qualifications and fitness of all persons whose names are presented to the Senate for confirmation or rejection; and that it is the duty of the Executive to comply with all demands for the same." Mr. Riddleberger said his object was to secure a discussion in open session. The resolution, which represents the Republican position, went over for one day. Mr. Pugh (Dem., Ala.) also introduced a resolution designed to state the Democratic position as to the relative powers of the President and Senate. The purport of it was that it would be an encroachment upon the constitutional rights of the Executive to furnish any information that could be used directly or indirectly in the matter of suspensions or removals.

The Senate Committee on Indian Affairs will report adversely on the nomination of Morris R. Thomas, of Maryland, to be Indian Inspector.

Senator Sherman on Thursday introduced a bill to amend the Coinage Act of February 28, 1878. It provides for the immediate suspension of the coining of the Bland dollar, and authorizes the Secretary of the Treasury to purchase "silver bullion in bars, not less than nine-tenths fine, at the market price thereof, not less than 2,000,000 ounces Troy per month, nor more than 4,000,000 ounces Troy per month, and he shall issue in payment therefor coin certificates of the United States in denominations of not less than ten dollars each, corresponding with the denominations of the United States notes; and the bullion so purchased shall be retained in the Treasury for the security and for the payment of the same; and the amount of such certificates at any time outstanding shall not exceed the cost of the bullion purchased by such certificates, and the certificates thus issued shall be receivable for customs, taxes, and all public dues, and when so received may be reissued; and the Secretary of the Treasury shall redeem in coin the same certificates on their presentation for redemption at the office of the Assistant Treasurer of the United States in the city of New York, in sums not less than $50. Any holder of standard silver dollars or gold coin of the United States, or gold bullion at its mint value, may deposit the same with the Treasurer or any Assistant Treasurer of the United States in sums of not less than $10, and receive coin certificates therefor similar in denomination and legal effect to the certificates provided for in the preceding section. The coin deposited for or representing the certificates shall be retained in the Treasury for the payment of the same on demand." This bill is understood to be an attempt to give effect to some of the main provisions of the Warner bill.

The argument upon the bill for an international copyright was begun before the Senate Committee on Patents on Thursday morning. The American Copyright League was represented by Mr. A. G. Sedgwick, Dr. Howard Crosby, J. B. Gilder, George Walton Greene, and Mark Twain. On Friday Mr. James Russell Lowell spoke strongly in support of the law.

The House of Representatives on Wednesday passed the bill declaring forfeited certain land grants to the States of Mississippi, Alabama, and Louisiana to aid in the construction of rail roads, amended by providing that the lands restored to the public domain shall be subject to entry and settlement under the provisions of the Homestead Law only; if, however, sales of any such lands have heretofore been made by the United States, such sales are confirmed.

The House of Representatives on Monday passed the following resolution: "That the Committee on Expenditures in the Department of Justice be empowered to make full inquiry into any expenditure on the part of the Government relative to the rights of the Bell and Pan-Electric Telephone Companies; and for the purpose of this investigation, and to the end that the people may be fully advised, the Committee is granted the right to send for persons and papers—all expenses to be audited and accounted from approved vouchers, and when so approved to be paid out of any moneys in the Treasury not otherwise appropriated." Some of the Arkansas members were indiscreet enough to seem to put themselves in opposition to the inquiry; but Mr. Morrison asserted his leadership, shrewdly asked for unanimous consent to have the resolution considered, and it was passed.

By a vote of 198 to 66 the House on Monday passed the bill increasing the pensions of widows and dependent survivors of Union soldiers from $8 to $12 a month.

The Pensions Committee of the House instructed its Chairman on Monday to report the Mexican Pension Bill at the earliest opportunity. The bill gives $8 monthly to all Mexican soldiers and their widows.

The Secretary of the Navy has received information from the Pacific Mail Steamship Company that another revolution is threatened on the Isthmus of Panama. Rear-Admiral Jouett, commanding the North Atlantic Station, was on Friday directed by telegraph to remain at Aspinwall with the *Tennessee* for the present.

Mr. Maynard, Second Comptroller of the Treasury, has made a report upon the adjustment and settlement of the accounts of the disbursing officers of the Signal Service, in which he asserts that many apparently irregular and unauthorized disbursements have been made.

The public-debt statement for January shows a reduction of $8,672,553 81.

The Supreme Court of the United States has reversed the decision of the Court of Appeals of Virginia, and decided that the tender of coupons in payment of taxes is legal.

Despatches were received on Thursday, dated Nacori, Sonora, Mexico, January 21, from Lieutenant Maus, United States Army. They say that the troops under Captain Crawford, on January 11, surrounded and attacked an Indian camp fifty miles southeast of Nacori. A two-hours' running fight took place, and a number of Indians were wounded, but all escaped. The hostiles sent word that they wished to hold a conference. While the troops were in camp awaiting the time fixed for the conference, they were attacked by 154 Mexican soldiers. Efforts were made to let them know that the troops were Americans and friends. Captain Crawford and Lieutenant P. Maus advanced to talk with them, when a volley was fired. Captain Crawford was shot in the head, and died on the 18th. The Mexican fire was returned by the scouts of Captain Crawford's command, but only sufficiently to keep the Mexicans at a distance. The firing lasted half an hour, when Lieutenant Maus succeeded in having a talk with the officer in command of the Mexicans, their captain having been killed. He was told the Americans were taken for hostiles owing to the darkness. Other reports say that the attack was intentional. The Mexicans lost four killed and five wounded.

The following day two squaws from the hostiles, who had escaped, came to Lieutenant Maus to treat for terms. He refused to talk with them and also refused to talk with two bucks, who followed soon after. Geronimo, the head chief, and Natchez, another chief, then appeared to make terms. They said they were utterly discouraged, and were tired of being hunted from rock to rock. Lieutenant Maus would consent to nothing but an unconditional surrender. The chiefs then agreed to meet General Crook at a point on the line between Mexico and the United States. They sent hostages to the American camp. The hostiles are now on their way to the place of meeting with General Crook, and expect to reach there by February 4th. The party numbers twenty-two bucks, and is supposed to comprise all the renegades.

The third annual report of the New York Civil-Service Commission to the Governor was presented to the Assembly on Wednesday morning. It gives the following statistics: Number of persons in the service of the State subject to civil-service regulations 15,179, including 7,355 in New York, and 1,931 in Brooklyn. During the year, 4,822 persons were examined and 2,725 appointed. The Commissioners say the importance of securing the best qualified physicians for health officers is apparent, but regret that the provisions made to prevent the appointment of incompetent and inexperienced men for reasons of political or personal favoritism have not been as effective as they should have been. The whole number of hea th officers in the State is 1,282. Only 241 have been appointed in conformity with the rules.

The New York Senate on Wednesday passed a resolution for an investigation by the Railroad Committee of the granting of the Broadway franchise in this city. The vote was twenty-five to five (four Republicans and one Democrat.)

The trial of General Shaler, President of the Board of Health of this city, for accepting a bribe was concluded on Thursday by the jury disagreeing.

The aggregate resources of the savings banks of this city at the commencement of the present year were $301,000,000. The amount due depositors was $256,000,000, an increase in deposits of $11,000,000 during the year. Total surplus on market values at the same date was $45,000,000. The number of depositors or open accounts was 640,000. During the year the sum of $8,300,000 of interest has been credited to depositors. The amount deposited

during the year was $75,000,000 and the amount withdrawn $71,000,000.

The Massachusetts Senate on Friday rejected the order to investigate the sale by the Governor and Council of the bonds of the New York and New England Railroad held by the State. The vote was 19 to 7, four of the eleven Democrats voting with the Republicans.

Professor Thompson, of the University of Pennsylvania, has been engaged by Yale College to deliver a course of lectures on political economy from the protectionist point of view. It is said that his salary is paid by a few Connecticut gentlemen who do not believe in Professor Sumner's free-trade views.

David R. Atchison died at his home in Missouri on January 26, aged seventy-nine. He was United States Senator from that State from 1843–1855, and was twice President *pro tem.* of that body. While holding that position in 1849 it was said that he was practically President for one day, Sunday, March 4th; President Taylor not being inaugurated until March 5th. At the outbreak of the war he was active in organizing the Confederate forces in Missouri, and took part in several battles.

Henry P. Kidder, senior partner of the banking firm of Kidder, Peabody & Co., of Boston and New York, died in this city on Thursday afternoon, aged sixty-three years. He was one of the Overseers of Harvard College.

Mrs. Bayard, the wife of the Secretary of State, died in Washington on Sunday morning. Her health had greatly improved since last summer, but the death of her daughter caused a shock which resulted in brain trouble. She became unconscious on Saturday and did not rally.

Gen. David Hunter (retired) died in Washington on Tuesday, aged eighty-four. He commanded the Departments of Kansas and the South during the civil war, and held other important positions. On May 9, 1862, he issued his famous proclamation declaring the slaves of Florida, Georgia, and South Carolina free, by virtue of martial law. This proclamation the President annulled on May 19. He was brevetted Major-General in 1865, and retired the following year

John D. Philbrick, Superintendent of the Boston public schools from 1856 to 1874, and before that State Superintendent of Public Schools for Connecticut, died at his home in Danvers, Mass., on Tuesday morning, after a lingering illness. He had been engaged in educational work from the time of his graduation from Dartmouth College, in the class of '42, and was among the most prominent teachers in the country.

FOREIGN.

The British Cabinet crisis remained unsettled for several days after the Tory defeat. It was thought at one time that the Queen would summon Lord Hartington to form a Cabinet, but on Friday morning the London *Standard*, Conservative, announced that the Queen would unquestionably summon Mr. Gladstone.

The Queen on Friday summoned Mr. Gladstone to a conference at Osborne in regard to forming a Cabinet. Mr. Gladstone left London on Monday, and was greeted with enthusiasm on his journey. He received the personal command of the Queen to form a Cabinet.

A trustworthy forecast of Mr. Gladstone's Cabinet, published on Tuesday, asserts that Lord Northbrook will be Viceroy for Ireland, Mr. John Morley Chief Secretary for Ireland, and Sir William Vernon Harcourt Home Secretary. Lord Northbrook will not have a seat in the Cabinet. Mr. Gladstone will be Chancellor of the Exchequer, combining this office with the Premiership. Mr. H. C. E. Childers will be Minister of War, Sir Farrer Herschell probably Lord Chancellor, Lord Viscount Hampden, Lord of the Privy Seal, and Earl Spencer very likely Viceroy of India. Mr. Chamberlain was designated First Lord of the Admiralty, but has declined the post. Lord Richard Grosvenor will have an office, possibly that of Postmaster-General. Mr. G. O. Trevelyan will be President of the Local Government Board, and Mr. Mundella President of the Board of Trade. The reason of the Queen's delay in summoning Mr. Gladstone has generally been stated to be her dread of home rule This is contradicted. Her Majesty's hesitation was caused by fear of Granville again being Foreign Secretary at this critical moment of European politics. He will not be, but the Foreign Secretary will most probably be Earl Rosebery, who is personally on the best terms with Bismarck.

It is authoritatively announced in London that Lord Hartington will not join the new Cabinet. The *News* believes that he will remain neutral and will not seek to trammel Mr. Gladstone.

The Dublin *Freeman's Journal* on Monday said it had reason to believe that Mr. Gladstone has agreed with Mr. Parnell to join forces in Parliament for the passage of a bill which shall establish a native Parliament in Dublin to deal with Irish affairs; the new Legislature to be so constituted as to add to the present safeguards of the integrity of the Empire and the rights of the Crown.

Mr. Parnell, it is asserted, will firmly demand that the local government question be settled by Parliament before the land question, or that both subjects be discussed together.

Mr. Parnell was recently asked whether under any circumstances he would accept the Chief Secretaryship for Ireland. His reply was "Certainly not. To administer any law an honest man must be in sympathy with it and believe it to be a just and righteous law. Now, I am not in sympathy with the English rule of Ireland, but believe it to be both unjust in itself and prompted by alien feelings. Believing this, under no possible circumstances would I have part or lot in administering it."

The Duke of Westminster has retracted his recent charge against Parnellites of squandering Irish donations in debauchery. He says he is unable positively to prove the charge.

Lord Carnarvon, ex-Viceroy of Ireland, left Dublin on Thursday. He was followed to the railway station by enormous crowds and was enthusiastically cheered.

Miss Mary Gladstone, daughter of Mr. Gladstone, was married on Tuesday morning to the Rev. Harry Drew, of Hawarden. The ceremony was performed in St. Margaret's Church, Westminster. The Prince and Princess of Wales were present.

Prince Bismarck on Thursday, in the debate in the Prussian Landtag on the expulsion of the Poles from Germany, made a remarkable speech, occupying two hours in its delivery. He said the primary cause of the Government's action was the disloyalty of the Poles to the German Crown. They were constantly engaged in intrigues against the Government, and had made themselves a steady annoyance to Prussia. By acting as accomplices of the Opposition in the German Parliament, they effected a majority against the Government, and the Crown could do nothing less than either deny the demands of such a majority, or else destroy the evil element which made the majority possible. The Polish agitation in Germany, Prince Bismarck said, had always appeared to him an element of danger, and had compelled him to keep a watch upon Russia. The Poles had been constantly, and not always unsuccessfully, endeavoring to set foreign States against Prussia. "Hence," continued the Chancellor, "we have determined to buy out all the real estate owned by Polish nobles in Prussian Poland, and place German colonists on the lands hitherto occupied by the expelled people. In order to make the colonization inure permanently to the benefit of the empire, the colonists will be prohibited from marrying Poles. The cost of the undertaking will be about 300,000,000 marks (about $75,000,000), but the State will lose no more than 10 per cent. of this—a loss made necessary by the exigencies of the case, buying out an alien class and reselling to Germans—while the gain to the empire will be immeasurable. The Government will never concede the restoration of Poland, nor a hair's breadth in that direction. Religion is in nowise connected with the expulsions."

The discussion of the Polish expulsions was continued in the Lower House of the Prussian Landtag on Friday evening. The Polish members denied that the Poles were trying to eliminate the German element from eastern Prussia, although they confessed that a hope was entertained of the restoration of the Polish kingdom. Herr von Puttkamer, the Minister of the Interior, replied that any efforts to obtain the re-establishment of the Polish kingdom would constitute an act of high treason.

The Polish policy of Prince Bismarck has produced a general excitement throughout Germany and Austria. The immense Lubrienski estate, containing about 200,000 acres, one of the largest estates in Prussia, is offered for sale next April, as a result of the expulsions of the Poles. The inhabitants of the estate have for years been mainly Poles, and the edict of expulsion, by forcibly removing the tenantry and depriving the estate of its revenue, has thrown it upon the market. Addresses of sympathy have been sent to Bismarck by Germans in every part of the empire, and many have already reached him from people in Austria, especially from Bohemia.

In the latest collective note the Powers agree to prevent any warlike steps in the Balkans or territorial modifications.

It was reported on Wednesday that the warlike views of the Greek Cabinet had suddenly changed, and that they had issued a declaration that "Greece would comply with the wishes of Europe."

It was reported on Saturday from Athens that the King of Greece had become tired of the politics of the Athenians and especially their present warlike attitude, and would probably soon abdicate and retire to Copenhagen.

Turkey and Bulgaria have reached an understanding by which Prince Alexander will receive the title of Mushir and Governor-General of Eastern Rumelia. In case they are needed, Bulgaria will contribute 80,000 troops to the Turkish army.

The text of the treaty between France and Madagascar has been submitted to the French Chamber of Deputies. French property in Madagascar is to be inviolable without the sanction of the French Consul. Complete amnesty is to be granted to the prisoners taken on both sides during the recent war.

The French Cabinet has approved M. de Freycinet's scheme for a protectorate over Tonquin and Anam. A council of protection will be established at Hué. M. Paul Bert will be Resident-General, and there will be two Assistant Residents, one at Hué and the other at Hanoi. The protectorate will be a special independent department, having its own laws, budget, and general autonomy. Subsidies will be granted it as long as needed.

The French Government has appointed a permanent commission to examine into questions in relation to the monetary standard at home and abroad.

M. Armand Baschet, the French author, is dead at the age of fifty-seven. His reputation rests principally on many interesting publications resulting from his researches among the archives of Venice.

The St. Petersburg police authorities, having ascertained that a Nihilist plot was being formed, arrested twenty-three persons on Friday. On the discovery of the conspiracy the police, fearing that injury to the Czar was intended, advised him to return to his palace at Gatchina. He, however, declined to do so.

The Spanish budget shows a deficit of about $4,000,000. The Minister of Finance proposes certain reforms to restore the equilibrium.

THE PRESIDENT'S POSITION.

SOME day, and probably before many years, people will look back at the controversy now pending between the President and the Senate with wonder. The President is the Chief Magistrate of a nation of 60,000,000, and probably enjoys more real power than any constitutional monarch in the world. The Senate is universally admitted to be now the most powerful upper house in existence. The interests over which both President and Senate watch are vast almost beyond comparison, and the future for which they have in some degree to provide is so great that it overpowers the national imagination. The turning of the Republican party out of office, too, after having carried the nation through a great revolutionary crisis, was an almost unprecedented feat of peaceful politics. We do not believe any party so thoroughly entrenched in power was ever before dislodged by a popular vote with so little disturbance either to the orderly march of the Government or to the commercial interests of the country.

When one thinks upon these things, however, and then turns to the business which has been engaging a large part of the attention of both the Senate and the Executive during the past year, and especially during the past three months, one is filled with amazement. The President has had to fill 1,282 offices in his immediate gift since he came into power. Of these vacancies only 645 were due to removals. The rest were caused by resignation and death and the expiration of terms. It is melancholy that he should have had so many appointments to make. His time was meant for, and ought, to be devoted to better things. But considering the condition in which he found the civil service of the Government—that is, officered entirely by political partisans for political reasons, and officered, too, almost entirely with creatures or nominees of the Senators of one party—his moderation in making changes is wonderful. We doubt whether any ruler called on to deal with a great evil, and acting under powerful pressure from his own followers, ever applied the knife with so sparing a hand. While we yield to no one in the earnestness of our advocacy of tenure during good behavior, and the complete divorce of the subordinate branches of the public service from politics, we confess our astonishment that a man has been found, who, bred in the ordinary traditions of the Democratic party since Jackson's day, has had the courage and self-restraint to proceed as slowly as President Cleveland has done in the abatement of a monster evil, and make as manful a resistance as he has made to demands for party revenge which it requires almost superhuman virtue not to call legitimate.

That he has made many mistakes we admit and have often admitted, but this is simply confessing that the Democratic party did not nominate an angel unawares. But he has, all things considered—the composition and history of his own party, the condition of the civil service, the state of public opinion, and the demands of his place on his time and strength—made so few mistakes, has displayed so few weaknesses, and given so many evidences of preferring the public interests to those of party, that one cannot help regarding his appearance at this crisis in our history as something providential. If he were more of a reformer than he has proved himself to be, he would probably have made reform odious; if he were less, he would probably, like his predecessor, Mr. Hayes, have made it contemptible.

All that he claims for himself now, in this controversy with the Senate, is that, in considering the comparatively few changes he has made, the presumption shall be in his favor—that is, that it shall be taken for granted, until the contrary is proved, that in making any particular removal he has acted from good motives, and with an eye to the public good. To this presumption, it seems to us, he has shown himself fully entitled. Both what he has done and what he has refrained from doing give him a fair claim to have a favorable construction put on his acts. This is what he now asks of the Senate. That is, he expects as a matter of courtesy and justice that he shall not, at the demand of each of the very few petty officials whom he has removed, be called upon to show publicly that his action was not due to base or unworthy motives. We do not say, we repeat, that he has proved a perfect President. But we do say that he has, in all that relates to his management of the patronage, shown himself so much superior to any of his predecessors within the last fifty years that he at least ought not to be exposed to any indignity or impertinence from which his predecessors were exempt. To call him to the bar of the Senate and ask him to tell why he turned Smith out of this post-office and Brown out of that gaugership, is an indignity and an impertinence. Moreover, the Senate should be the last body in the community to offer it, for probably 90 per cent. of all the removals and appointments which have during the last twenty-five years, brought loss or discredit on the Government, or helped to corrupt and debase the politics of the country, have had their origin in the Senate Chamber. It is certainly not the Senate which can furnish judges to sit on President Cleveland's Administration in aught that relates to the purity of the public service.

Whether the President should himself be freer in letting the public know the reasons which have actuated him in making removals is another matter. We think it wise for him to take the people into his confidence with regard to such changes to any extent which his time and strength will permit. We believe nothing but good to him and the things he has most at heart could come from his letting all the world know both why he has removed so many, and yet so few. For nothing to us seems clearer than that in any attempt to put the Government on a business footing he will have to rely for success on the support he gets from public opinion. From men in public life he will in nine cases out of ten meet with either secret or open obstruction. The plain people who live by honest industry will be his best friends in trying to administer public affairs honestly, as they were the best friends of Lincoln in prosecuting the war for the Union. President Cleveland, unless we are greatly mistaken, is, in fact, doing what President Lincoln would have tried to do had he lived, and doing it in much the same way in which President Lincoln would have done it—slowly, cautiously, and with constant remembrance of the fact that there is a great deal of human nature in man.

THE COPYRIGHT QUESTION AGAIN.

THE copyright question is again before Congress, and various authors and literary men have received a hearing from the Committee of the Senate, on a bill which has been introduced by General Hawley at the instance of the American Copyright League. Another bill has, however, been introduced by Senator Chace, which is supported in a pamphlet by Mr. Henry C. Lea, the well-known author and publisher of Philadelphia. Senator Hawley's bill simply offers reciprocity to the foreign author, so that he could come here and secure copyright for his books, on complying with the requisite legal formalities, if his own country did the same thing for the American author. It is, in fact, an author's bill pure and simple.

Mr. Lea objects to this on behalf of the American reader, inasmuch as it would probably in its practical operation make books dearer; next on behalf of the paper-makers, printers, and binders, who would lose the work they now get in reprinting foreign or rather English books, inasmuch as the English author on obtaining copyright here would almost invariably have his book produced at home. On this point Mr. Lea makes the usual protectionist argument on behalf of native industry. Senator Chace's bill, on the other hand, provides for the manufacture in this country of all foreign books obtaining an American copyright, and absolutely prohibits the importation of foreign editions of the works so copyrighted. This prohibition, Mr. Lea says, is essential, and that it is "an invariable rule in all countries where copyright exists," but he fails to mention that it is a rule for the benefit of the author, not of the manufacturer. An English author can grant a permit to import foreign editions of his books, if he owns the copyright at home. Under Mr. Chace's bill no author could do anything of the kind.

Now, we understand the position of the protectionist opponents of the Hawley bill, or any author's bill, perfectly. We see why they desire to save the home paper-maker, printer, and bookbinder from foreign competition. What we do not understand is the exceptional way in which they seek to secure this protection. Against all other products of foreign industry all they ask by way of protection is either high import duties or total prohibition. But as regards foreign books, they claim the right of seizing the commodity and selling it for their own benefit. That is, they allow of its introduction and then convert it to their own use, unless the foreign producer chooses to accept their terms. When pushed to the wall for a moral defence of this system, they fall back on what we have always considered a most dreary bit of metaphysical slipslop. The air of profundity with which the ordinary champion of protectionist copyright produces it has always seemed to us very comic. We are far from putting Mr. Lea in this category, however, and yet we could hardly read in

his pamphlet without a smile that old story that "society recognizes no absolute and unlimited ownership in any species of property. All that the individual earns or inherits is held under such limitations as society sees fit to impose, in return for the protection which is afforded by the social compact, and the value which is imparted to ownership by the aggregation of individuals in communities."

This is all true as Gospel, but it is no more true of literary property than of property in houses and lands and railroad shares. Property in these things is also limited by the "social compact" and divers other more tangible agencies. But one of the great differences between civilized and uncivilized communities, between Dahomey and the United States for instance, is that in the latter the limitation on property is not enforced by "Society," except for the benefit of the whole community and on making due compensation to the owner. Society among civilized men in practice does not take any man's property away from him, or allow it to be taken, except for public use, and after giving the owner its value out of the Treasury. The one solitary exception to this rule is made in the case of literary property, and it is now only made by the United States. It is only here that civilized men get up and defend, on "high priori" grounds, the practice of taking away from a man, as not property, a thing which they themselves sell on the market as property.

The truth is, that whatever any man can sell and make a profit on is, or ought to be, in the eye of the law property. The dress, called a book, in which a man clothes his ideas is property, because, like cows or horses, it can be traced, identified, and sold on the market, and is therefore entitled to such protection as its peculiar nature calls for, like all other possessions. The ownership in land is not proved or protected in the same way as the ownership in railroad stocks; nor the ownership in railroad stocks in the same way as that in a bill of exchange. The difficulty of protecting property in books is greater than the difficulty in protecting any other property, because the thief can multiply the stolen article indefinitely; but the law is not called on to make all kinds of possessions equally secure. The law is called on to provide, for everything a man produces, and which anybody else would buy if he could not steal it, that simple, primary form of protection which consists in the prevention of open robbery or a robbery pure and simple in broad daylight. To this foreign authors are entitled from us, whatever may be our views about the tariff, or the need of protecting our native printers and bookbinders. We may protect these as we protect other producers, by any duty, however high, but we have no right to say to the foreign author that he must pay his duty or have the fruits of his industry appropriated by the first comer without any compensation whatever. It is the offer of this alternative, and this only, which brings discredit on the American name in this copyright matter, and it is made worse by being defended on metaphysical grounds. The a priori argument in its favor irresistibly reminds one of the way Dr. Johnson disposed of Boswell's attempts to prove that a certain lady was, in spite of appearances, a virtuous woman. It was short and incisive, but will not bear repetition.

NEW YORK IN THE SENATE.

New York, although the greatest commercial State in the Union, has now for many years been represented in the Senate by gentlemen who, to all outward appearance, took no interest in economical or financial questions. Its foremost Senator from 1867 to 1881 was Mr. Roscoe Conkling, who, we believe, contributed nothing that any one can remember to the debates which preceded the remonetization of silver and the resumption of specie payments, important as these were. New York owes her rapid growth and present supremacy almost entirely to foreign trade. It is her port which has made her what she is, yet in all the debates on the tariff and on custom-house management Mr. Conkling generally advocated whatever was likely to make the port of New York less attractive to foreigners, and to diminish the volume of trade passing through it. Mr. Edwin D. Morgan has in fact, extraordinary as it may seem, been the only person connected even remotely with foreign trade who has appeared for New York in the Senate since the close of the Rebellion. Ira Harris was a lawyer from the interior, Reuben E. Fenton was engaged in what are called "mercantile pursuits," but they were strictly domestic. Francis Kernan was a lawyer also. What Thomas C. Platt was or is, we think it would puzzle his warmest admirers to say. Warner Miller, as everybody now knows, is a paper manufacturer, and very hostile to "abroad," and Elbridge G. Lapham was a lawyer. Not one of these gentlemen, except Mr. Morgan, in any way represented or spoke for, or we might almost add understood, the basis on which the greatness of this city rests.

A great many people supposed, when Mr. Evarts went to the Senate, that this bad tradition would be broken. He speaks with fluency on so many subjects, that they supposed he would of course speak on the things which must make for the prosperity of this city and State, and foremost among these is a fixed and steady standard of value. All the great commercial cities of the world, Venice, Amsterdam, and London, have found this absolutely necessary to the maintenance of their commercial supremacy. Both Venice and Amsterdam during their prime found that the best help to their commerce was the maintenance through their respective banks of an unchangeable standard of value. For two hundred years the "bank money" of Amsterdam occupied in Europe the proud position which the "pound sterling" of London has occupied for the last century, as something in which any man might make promises without fearing that he would have to pay more than he agreed, or might accept promises without fearing that he would have to receive less than he expected. The American dollar, as the money of the great emporium of the western world, ought as a measure of value to have a place just as high as the pound sterling. Men in the remotest ends of the earth ought to know just what it is worth to-day, and just what it will be worth ten years hence.

When Mr. Evarts entered the Senate, a good many people expected that he would battle for this great consummation; that he would stand up for the only true "poor man's money"—that is, money on the ups and downs of which rich men cannot speculate. But these simple-minded persons have thus far been sadly disappointed. Not one word about currency or standards has been got out of him in the Senate. As far as the currency question is concerned, he might as well be on a journey or asleep, like the god Baal, who treated his worshippers so badly. They called, as Mr. Evarts's admirers are now doing, "on the name of Baal from morning until noon, saying, Oh, Baal, hear us! but there was no voice nor any that answered."

All that we have heard from Mr. Evarts as yet about the silver question consists in a somewhat mysterious appeal to the American people, uttered in Boston, to exert "pressure" about silver, more on one side than on the other; but as to the side of himself on which he would like the greatest pressure he has failed to give the slightest hint. That he has opinions about silver his friends, however, still stoutly maintain, in spite of his address before the Monetary Conference, which greatly puzzled the foreign members, for they expected to be addressed in terms of money, and were surprised to hear the American delegate discuss the question in terms of transcendental philosophy. He cannot, however, much longer remain silent. He cannot, without being unfaithful to his great trust, refuse to say on which side he would like "pressure." He must know that at such a crisis the State in which a large part of the national revenue is collected must have something to say about the standard of value. He must know, also, that if it had been supposed that his mind was a blank on the subject of currency, or that his researches had carried him no further than the conclusion that there ought to be a currency of some kind, but that, as the Irishman said, "the divil only knew" what kind of currency it ought to be, he never could have been elected. In fact, everybody who examines or observes him feels now every day more confident that a speech on silver is coming, and that it will be clear and concise, and that he will take his stand on the great principle known to the logicians as the Excluded Middle.

ENGLAND: ON THE EVE OF THE SESSION.

London, January 19, 1886.

Never since the meeting of the first reformed Parliament, more than half a century ago, has the opening of a Parliamentary session been watched with so much curiosity and anxiety as now fills the minds of the British people. It is not the mere eagerness of London quidnuncs or professional politicians to know into whose hands power and patronage will fall; it is more than the earnestness of the advocates of some scheme of reform to discover what the mind of Parliament will prove to be towards their projects. It is the perplexity of people who find themselves in a position wholly unprecedented, with questions calling for solution which touch the whole system of English government, and before which the most practised statesmanship halts and hesi-

tates. The circumstances are as peculiar as their course is menacing. The House of Commons is divided into three parties, each bitterly hostile to the other two. One of them is all but equal in strength to the other two. None is strong enough to assume and carry on the government of the country uuless it receives a large and steady support from one of the others, or from some considerable section thereof ; and no such support can be looked for except upon terms which would oblige the party receiving it to forego much of its own policy. As the Liberal party is very much stronger than the Tory (by about eighty members), the natural thing would seem to be for the Tory party, now in power, to resign or be turned out, and for its more moderate men to help the Liberals face the crisis. This comes nearer to the usage of government by a majority than a continued tenure of power by a Ministry which is in a minority of 160 or more of the whole House. But the Liberal party is itself so divided that it might prove unable to hold together, and keep its leaders in power as a Ministry. In previous letters I have called your attention to the serious differences of view that separate the moderate or Whiggish from the advanced or Radical section of the Liberals. These differences of opinion, expressed and aggravated in and by personal antagonisms between some of the leading men, would make the formation of a strong Liberal Cabinet no easy matter, even apart from the Irish question. But the Irish question seems to be producing a still deeper rift. The disposition to favor some scheme of home rule for Ireland (*i. e.*, a separate Parliament for that island, with control of Irish affairs), which has been attributed to Mr. Gladstone since the middle of last December, has, as your readers know, produced a copious and vehement discussion of the Irish problem. So far this discussion has been almost wholly on one side. The opponents of home rule have argued and declaimed with great force and fertility of illustration. Its advocates have scarcely replied, so that one cannot well tell what numbers or influence to assign to them. But, so far as can be judged, they are in a minority, perhaps a small minority, even in the ranks of the Liberal party itself. Nearly all the territorial magnates who head the Whig section of the party, including such men as the Dukes of Argyll, Bedford, and Westminster, are strongly opposed to the plan attributed to Mr. Gladstone. All the moderate men, and that solid centre of the party which includes the wealth and respectability of the upper middle class (so far as it belongs to the Liberal party), are equally averse. Many of the Radical chiefs, including, it is believed, Mr. Chamberlain himself, who used to be represented as too indulgent to Irish schemes, regard with distrust equal to that of the Dukes the idea of giving to such men as the Nationalist members the unchecked control of Irish destinies through an Irish Parliament.

It is not hard to explain this sentiment and see why it should unite men so far asunder as the Duke of Argyll and Mr. Chamberlain. The Nationalist party has done its utmost at Westminster to paralyze, to discredit, to insult the House of Commons of the United Kingdom. Some of its members have been reasonably suspected of connivance with agrarian as well as political crime. They have shown little aptitude for constructive legislation, little disposition to respect the security of property and person in Ireland. The Nationalist newspapers have been furious and brutal to a degree which even our respect for the liberty of the press finds it hard to tolerate. Every calumny is heaped upon English statesmen, every means taken of kindling Irish hatred against the whole people of Great Britain. At the last general election, the Irish vote was everywhere cast solid, under Mr. Parnell's orders, against Liberal candidates, even where the individual candidate had shown sympathy with Irish claims; and it is owing to this policy of the Nationalist chiefs that Mr. Gladstone does not now command a majority of the House of Commons. While the campaign was at its height, he appealed in passionate terms to the electors to place the Liberals in a majority sufficient to enable them to resist Mr. Parnell and to save the House of Commons from being left at the mercy of a faction which desired to injure it for their own purposes. No wonder, then, that the bulk of the English Liberals, who have for the last six years looked on the Parnellites as their bitterest foes, are bewildered when they are told that the main claim of the Parnellites is substantially a just claim, and may have to be conceded. This seems to them a sudden change of front, which they are not prepared to execute without much more thought than they have yet bestowed on the grave issues involved.

Among those Liberals who are disposed to give home rule a fair or even favorable consideration, two types of view may be distinguished. There are some who, wearied and disgusted by the long series of failures on the part of England to pacify Ireland, to establish good government and evoke good feeling, think that the time has come for a new departure. They admit that home rule is a dangerous experiment, but they add that, however bad, it can hardly be worse than a continuance of the policy of the past eighty years. When the old remedies have failed with a lamentably unbroken uniformity, the time has come for a new prescription. There are others who scarcely venture to argue the matter, but are moved by the instinct of loyalty to Mr. Gladstone and confidence in his superior insight. If he, they say, after all his experience of Irish troubles, has come to the conclusion that an Irish Parliament gives some sort of chance of making things better, there must be grounds for his hopes, and we are willing to follow and support him. The number of these men would probably be larger but for the alarm produced among them by the explosion of hostility to Mr. Gladstone and his supposed scheme from the other section of the Liberal party. People will tell you under their breath that they would be willing to give home rule a fair hearing and probably a trial, only the country is so evidently opposed to it that there is really no use at present in treating it as a possible course. Perhaps we may have to come to it after all, but not now. Such reticence makes it hard to say what support Mr. Gladstone would get were he to announce a policy such as that which has been ascribed to him; but so far as can be conjectured at present, that support would not much exceed, if it reached, one-half of the Liberal members of the House of Commons. Under these circumstances, with so serious a question standing in the near foreground, the prospects of Liberal union are not bright. Should Mr. Gladstone waive the home-rule question for the present, he may keep his party together. Should he declare himself in favor of an Irish Legislature, it seems impossible for him to do so. It is useless to speculate as to his intentions, because they may probably have been declared before this letter reaches you.

The attitude of the Tory party can be more easily and briefly described. Traditionally they are opposed to all concessions to Ireland, and, having resisted the Church Bill of 1869 and the Land bills of 1870 and 1881, they are *a fortiori* inclined to resist the grant of a separate legislature. They are moved not only by general Conservative sentiment, but also by alarm for the security of property and horror at the precedent that would be set by the dispossession of Irish landlords, which an Irish Parliament would soon effect were the reins thrown on its neck. The English landed aristocracy is, moreover, attached by family ties as well as by class sympathy to the Irish landlords, and all the Loyalist members who come from Ireland belong to the Tory party, and would revolt against it were it to yield to Mr. Parnell. Notwithstanding all this, it is credibly reported that the present Tory Government was at one time disposed to entertain a plan for the creation of what would have been in reality, whether or no in name also, a separate Parliament for Ireland. The dropping of the Crimes Act last summer, the sending over as Viceroy of Lord Carnarvon, who has just retired from that office; the intimate relations which subsisted (according to common belief) between a prominent Tory minister and the Nationalist leaders, all confirm this suspicion (some minor grounds for which I forbear to give). There would have been nothing wrong in their taking such a course, for they might have said that experience had shown the failure of previous attempts to govern Ireland from Westminster and through a centralized bureaucracy in Dublin, and that it was better to admit that they, as well as other English statesmen, had previously erred than to persist in a policy condemned by experience. Lord Salisbury's references to the home-rule question during the election campaign were so carefully worded as to leave it quite open to him to propose a scheme of home rule, and he scrupulously avoided anything that could give offence to the Nationalists so long as it seemed possible that by the aid of the Irish vote in England he could obtain a majority in the House of Commons. However, he did not obtain that majority, and very shortly afterward came the statements of Mr. Gladstone's alleged intentions. The storm of opposition which these statements evoked dispelled such doubts as may have lingered in the mind of the Tory Cabinet regarding the line they ought to take. They were not strong enough to carry a home-rule measure, even with the help of the Parnellites, if the Liberal party opposed it, especially as their contingent of Irish Tories, seventeen strong, would have revolted. They saw, moreover, that the general sentiment of the upper and middle class in England disliked the notion of home rule. This sentiment was as strong and more general in the Tory party than in the Liberal. Hence, it was clearly the wisest course to drop all ideas of home rule and Parnellite help, to put the ship promptly about, and fall off on the other tack, trusting that the breath of popular dislike to anything like surrender to the Irish would fill their sails. I do not say that this was the way they reasoned, for the Tory Cabinet as a whole may never have contemplated the policy which some of its members were meditating. But, anyhow, such reasonings were natural, and seem to offer the best prospect of party success.

Every one now expects the Cabinet to deliver itself in an energetic and patriotic sense in favor of the complete maintenance of legislative union with Ireland. Whether they will also propose a new coercion bill is more doubtful. The *Times* and the bulk of their own party in the country urge them to do so, while many Liberals would support them in Parliament in carrying such a measure. But it is understood that what they would like best is to escape that and every other responsibility by retiring from office. The position is so difficult and dangerous that they discover no hope of facing it through a whole session, except in the unlikely event of a section of the Liberal party coming over to them. It is probable enough that Liberal votes might float their ship over a coercion bill. But with a majority of 160 opposed to them on general questions, what prospects have they of carrying their Budget two months

hence,and weathering the other storms which the session is sure to have in store? If they must go, better go at once than after they have committed and entangled themselves by producing a programme. However, they cannot well resign without an adverse vote of the House of Commons, and it is supposed that they will go as far as usage permits in courting such a vote, and shifting the burden of the present position on to the Liberals. As this might open a schism in the ranks of the latter, these desire to prevent it, and if possible to keep the Tories in power for some while longer. It is like a duel in which both combatants seek to avoid delivering the first blow, or a game of chess where the side that moves first expects to lose the game. Much skill is needed. Mr. Gladstone is the most skilful player, but he has also the most difficult game, and his advanced age makes it harder for him to play that waiting game which may turn out to be the safest. Y.

THE PERMANENT DIFFICULTIES OF ENGLISH FOREIGN POLICY.

OXFORD, January 3, 1886.

JINGOISM has failed; anti-Jingoism has failed. Lord Beaconsfield's love of adventure, Mr. Gladstone's fear of responsibility, have ended in failure. No honest Conservative can pretend that Lord Beaconsfield solved the Egyptian problem; no honest Liberal can now deny that the Egyptian policy of Mr. Gladstone has been from beginning to end a series of blunders. What makes the failure of English statesmanship in the management of foreign affairs the more noteworthy is that both Lord Beaconsfield and Mr. Gladstone brought to the service of their country very extraordinary talents and enjoyed very remarkable opportunities for success. During the Conservative rule England might assuredly, had she chosen, have annexed Egypt. When Mr. Gladstone had bombarded Alexandria, the success of our fleet, combined with the voluntary withdrawal of France, left the game in our own hands. Neither want of talent nor want of opportunity prevented the Tory or the Liberal Prime Minister from achieving a triumph. The failure of England has flowed from general causes, and it is well worth while to examine into the nature of the difficulties which at the present moment hamper the foreign policy of the country. These sources of failure are various.

England, in the first place, is not, relatively to other countries, the Power which she was seventy years ago. England, it is true, possesses a reserve of strength which it is easy for pessimists to underestimate. The Great Britain of 1886 is a more contented, a more flourishing, a more united country than was the Great Britain of 1815. In Wraxall's 'Memoirs'—that curious repertory of inaccurate gossip which nevertheless contains a striking picture of the times—it is said that one reason against retaining Napoleon as a prisoner in England was the dread lest he should place himself at the head of the discontented classes. The fact that any man of judgment should have thought it possible for a French exile to revolutionize England, is as singular a proof as can be found of the feeling which, during the Regency, pervaded even the Tory party, that the people were not loyal to the national institutions. No Tory of 1884 would dread the presence in England of a modern Napoleon. But strength in matters of policy is a comparative term, and if the England of to-day is absolutely a more powerful country than the England of our grandfathers, it is equally certain that the England of 1884 is, in comparison with the leading states of Europe, a weaker nation than the England of 1814. To say this is nothing more than to assert what nobody in his senses would deny, namely, that the nations of the Continent have made immense progress during the last seventy years. United Germany, United Italy, Republican France, have each in their way established that supremacy of fixed law which was at one time the peculiar characteristic of English society, and which was to England a source of marvellous and almost unlimited strength. We must, too, remember that foreign states which until lately were solely occupied in the rivalries and the intrigues of the Continent, have now followed the example of England, and have begun to covet and acquire colonial empire.

The foreign policy of England, in the next place, betrays a greatly increased tendency to vary with fluctuations of public opinion. This influence of opinion is in itself no new phenomenon. The Peace of Utrecht and the Peace of Versailles are each monuments of a reversal in national policy as sudden as the change from the imperialism of Lord Beaconsfield to the humanitarianism of Mr. Gladstone. But a phenomenon which is not new in kind may become so much more developed in degree as to have the importance of a new fact; and few observers would dispute that the violence and the rapidity of the fluctuations in English public opinion have greatly increased. Nor is it certain that this is a transitory feature of modern England. Every change which for seventy years past has taken place in our institutions and habits has added weight to that most uncertain of all influences which is called public opinion. Nor is the changeableness of public sentiment the only, or perhaps the most, serious feature of the case. A matter of at least equal importance is that free discussion produces something like an equal balance of opposed convictions. Politicians talk boldly of the people wishing or demanding this and that, whereas in fact the millions who are supposed to have one distinct will, consist of a mass of individuals entertaining different and often opposed principles or prejudices. But when public opinion means nothing but a balance of opposite wishes, the result comes near to the non-existence of any real public opinion whatever.

The opinion, again, of the English electors is not only fluctuating, as popular sentiment always is, but also (what it very often is not) unknown, and for the moment, as regards foreign affairs, unknowable. The constituencies have till recently left diplomacy wholly in the hands of statesmen. In this they have shown English good sense. Mr. Gladstone's appeal in 1880 to the public on Eastern policy broke in disastrously upon the tradition of English politics, and it is quite uncertain whether a habit of self-restraint, once broken down, can or cannot be restored. Add to this that the newly enfranchised electors are, on all subjects affecting foreign lands, profoundly ignorant. Of the rustics who three or four weeks ago gave the Liberals a majority, and whose vote therefore went a good way toward determining the relation of this country to Egypt, probably not more than one in a hundred knew more of the valley of the Nile than can be gathered from the Book of Genesis. Dean Stanley used to say that the general interest exhibited by the crowd in the Shah arose from the knowledge of Persia gained from the Bible, and it is not rash to suppose that to many intelligent electors Egypt may still be the land of the Pharaohs. Popular stupidity need not of itself be inconsistent with popular resolution or obstinacy, and it is possible that the influence of a great statesman, or some dim perception of the importance to England of maintaining her influence at Cairo, or even the instinctive tenacity with which the nation has for centuries held fast to imperial power, may at last lead the English democracy to approve a policy in the East as consistent and as thorough-going as the policy ultimately sanctioned by the democracy of the Northern States during the war of secession; but at the present time, on all great political issues, and especially issues on questions of foreign diplomacy, the leaders of public opinion are uncertain in what direction and to what extent they would be followed by the people whom they profess to guide. English statesmen are as uncertain whether the democracy does or does not value imperial greatness, as up to 1860 were the politicians of America whether the Northern democracy was prepared to resist the break-up of the Union. The embarrassment caused by this state of things, though a real and a great impediment to consistent action, will pass away. The statesmen of England will, after no long time, understand the will and the wishes of the electors of England.

The real secret, however, of the paralysis which affects the action of England in regard to foreign states lies (I am convinced) a good deal deeper than any of the external difficulties already enumerated, though these difficulties are in their own way real enough. The source of national weakness and hesitation may be best found, not by examining the public acts of the Government, but by reflecting upon the sentiments which, as each man really knows or surmises, affect his own political conduct and the conduct of his friends. Self-knowledge is as indispensable in politics as it is in morals or religion. The examination into what, if I remember rightly, metaphysicians call the contents of consciousness, shows that the mind of each individual and therefore the general mind of the nation is divided between different, though not (perhaps) radically inconsistent, principles, and is attracted by diverse if not inconsistent ideals. We all know that government depends at bottom upon force. We all, on the other hand, feel with Mr. Bright that for many evils force is no remedy. We most of us perceive that liberty itself depends upon obedience to law, but we also feel, in a way in which no other generation has felt, that there are crises at which the individual conscience asserts the right to obey a "higher law" which may easily conflict with the provisions of acts of Parliament. There is not the remotest reason to suppose that the courage of Englishmen has declined. We are as bold as our forefathers: we know the extent of a risk; we, like them, are prepared to run it; but we venture less because we know more. George III. and his ministers would not have gone with a light heart into the contest with the American colonies could they have foreseen all that the conflict involved. Ignorance with them was not only bliss but courage. When a modern statesman is called upon to determine how he shall deal, say with Egypt or with some demand made by France or Germany, he, unfortunately for his calmness of mind, sees a little though not much beyond the matters actually before him; and what is true of statesmen is true also in a measure even of the humblest of their followers. Hence hesitation in beginning schemes of action and fluctuation in carrying them out. Hence, to give one example of my meaning, the bombardment of Alexandria to put down a rebellion against the Khedive, and the refusal to allow the nominal ruler of Egypt to execute conquered rebels for rebellion. Here, again, time will by degrees, it may be hoped, bring a remedy. Increase of knowledge will bring the next generation out of the twilight caused by that half-knowledge which is only another form of ignorance. On one or two leading points of policy men's minds will at last become settled. We shall have again that most useful though much abused guide, a diplomatic tradition; and it will be a tradition founded on facts, and not, like many forms of traditional policy, on fictions, or rather on reminiscences of facts which were once important, but which have ceased to be of moment.

This unstableness of conviction no doubt affects every part of public life. It is, however, more visibly operative than elsewhere in the department of foreign policy. The first need for Englishmen is to recognize in this uncertainty of aim a true reason for modesty, for caution, for reserve in action. We must follow Sydney Smith's advice to individuals, and as a nation take "short views" of life. The next need for the country is that educated Englishmen, who will for long be the guides of the uneducated masses, should make up their own minds on the answer to be given to the leading questions of policy. To know one's own mind is the basis of sound resolutions. When these are arrived at, England will show little hesitation in carrying them into effect. A. V. DICEY.

Correspondence.

THE IRREPRESSIBLE CONFLICT.

TO THE EDITOR OF THE NATION:

SIR: Events at Washington seem to arrange themselves, like the experiments of a lecturer on physics, for the illustration of a great principle. The Senate is aching—Democrats as well as Republicans—to get the upper hand of the President, but it is a game which requires great caution in the playing. The next move turns upon the furnishing of information ostensibly for the guidance of the Senate in the matter of confirming appointments or rather removals. There are several courses open to the President and his advisers. They may send in the information to the secret session of the Senate, which is very much as if the garrison of a town were to send out all the weapons and munitions from their arsenal for the besiegers to help themselves, while the besieged were under bonds to remain shut up in the casemates. Information given in open session would be in practice just as bad, as the Republicans would, of course, color it to suit their own purposes, and we have already seen what support the President can expect from his nominal party allies, who are Senators much more than Democrats. If the President refuses the information altogether, he will put himself in the wrong, because concealment always excites snspicion—a tendency which his amiable opponents will not be slow to nourish.

The next step on the part of the Senate seems likely to be the summoning of the Secretaries before the executive session, or more probably, as it would carry a more distinct assertion of superiority, before the Judiciary Committee. I read in the despatches from Washington that "already Senators are wishing they could be in the sombre precincts of the Judiciary Committee room when Chairman Edmunds proceeds to interrogate Cabinet Minister Garland for contempt." Is there not something exceedingly pleasant in the idea of a Senator from the little State of Vermont putting the confidential adviser of the President, the representative of ten millions of voters, to torture in an inquisitorial dungeon for "contempt"? If the President values his independence, he will politely but distinctly refuse to allow his Cabinet officers to appear before any secret body whatever.

There remains one course open, and it is the only one which is at once manly and consistent with the dignity and independence of the Executive. He can say to the Senate: "You can have all the information you want, provided that my representatives, in furnishing it, are placed upon an equal footing before the country with members of the Legislature. If you desire the attendance of the members of the Cabinet in open session of the Senate, they are ready to appear, and to answer, upon due notice given, any questions which you think fit to put."

There would be very little risk in such a course, as Senators with the eye of the country upon them would be extremely cautious in making their attack. They live quite too much in glass houses to be very reckless about throwing stones. Indeed, the proposition would no doubt be highly distasteful to them, while yet a failure to accept it would completely shut their mouths. Even if some of the President's appointments have been political, it would be a perfectly good defence to show that the precedents of the last twenty years have made complete resistance to political influence upon a change of party almost impossible, while in fact much more has been done in the direction of resistance than of concession.

The effect of such a course upon the future of civil-service reform would be inestimable, as the certainty that the appointing power would be held to personal and public responsibility in the open Senate would be the most powerful of all restraints on the abuse of appointments. The President has before him an opportunity of making his administration an era in history.

G. B.

BOSTON, January 30, 1886.

SILVER PARTISANSHIP IN THE SENATE.

TO THE EDITOR OF THE NATION:

SIR: In the leading editorial in your last issue you state that Senator Morrill's speech on the silver question is the only defence that has been made in the Senate of the President's position on silver coinage. Is not this doing injustice to Senators Gray and McPherson, who have both made sound and able speeches in support of the Administration? They are entitled to all the more credit because they have proved the courage of their convictions in the face of bitter opposition on the part of most of their brethren.

If, as is often supposed, the Republican party is possessed of greater sanity or less insanity in financial matters than their opponents, the supposition has scarcely been verified by the current debate on Senator Beck's resolution. The majority of the present Republican members of the Senate may be satisfied of the unwisdom and danger of the Bland Act; but if so, they are wrongfully suppressing their opinions—probably, as you have recently suggested, by way of scoring a point against the Democrats in the campaign of 1888. It is only a very low standard of political ethics that can sanction such a course on the part of the majority, on the ground that to maintain their real views in vigorous debate might seem to be giving aid and comfort to the Executive, their political enemy.

With a good working majority, it will scarcely be possible for the Republican Senate to avoid sharing responsibility with the Democratic House for any troubles following the action or inaction of the latter on this chief issue of the hour, unless they themselves vote to repeal the Bland Act, and do not replace it with any other mischievous measure. Whether the Republicans can do this is extremely doubtful, unless they receive some conservative Democratic votes. They are only less divided on the question than the Democrats. Among the most intemperate of all the silver advocates are the "Argentine" Republicans from Colorado, Kansas, and Nebraska. Even Senator Sherman, the great apostle of resumption, risks his reputation as a financier on a bullion bill almost as objectionable as the latest heresy of Warner; and Senator Morrill alone of all the forty-one Republicans is outspoken in support of the President. There is a small number of Democratic Senators—at least two—who are sound, as the *Nation* and most of its readers count soundness, on both the coinage and tariff questions. Can as much be said of a single Republican in that body? In the House there may be as many Republicans as Democrats who are prepared to repeal the Bland Act on its merits (not to substitute something as bad or worse)—possibly more; but there are not nearly as many of the former, we venture to assert, as of the latter who favor both that repeal and a tariff for revenue only. The balance of wisdom does not incline strongly to either side. Each contains a vast deal of ignorance and demagogy. But as to silver, so long as the President and Secretary Manning hold such an impregnable position as defenders of the nation's credit, we do not think the Republicans are liable to gain much partisan advantage, no matter what the House may do; certainly they cannot unless they make a clear positive record for the right in the body which they control. Honesty is the best policy, and if all members in both branches of Congress would realize it, and act according to their best judgment, the prevalent silver mania might be checked.—Very respectfully, F. C. EATON.

COLUMBUS, O., January 30, 1886.

SOUTHERN OPPOSITION TO THE BLAIR BILL.

TO THE EDITOR OF THE NATION:

SIR: Your editorial of the 21st inst. on "Federal Aid to Education" presents, I think, an objection to the plan so strong and sound as to convince the great majority of reflecting men, whatever their political opinions or preconceived views of the subject. Your proposition that "the vital element of any success that is worth achieving in this world is self-reliance," is beyond successful controversy; and your reference to the development of our infant colonies into American commonwealths is as apposite as it is indisputable.

I have been a school commissioner in the county in which I live for six years, under circumstances which require me to give to the school board the regular public day of the week, notwithstanding it is the busiest day in my profession of law, and I have accepted the place because I feel that I can render no better service to the State to which I owe allegiance than to aid in the maintenance of a system of education, just alike to the taxpayer and the pupil; but I think that there can be seen already in this State a tendency unduly to extend the scope of the public schools and to leave nothing to individual effort.

To those who, like myself, hold that the war between the States has left their rights and obligations unchanged, except as affected by the constitutional amendments, it is impossible consistently to accept the Blair bill. If we fall short of our duty, ours will be the blame, and if we meet it, ours will be the credit. We hold today, as we did at the time, that the wholesale enfranchisement of the colored race was not less a political crime than a blunder; and we believe now, as we did then, that it could not have been effected except with a view to the perpetuation of political power by the Republican party. But we know that this error has passed beyond the power of correction, and that we can do nothing better than to deal with the problem of education which confronts us, as generously toward the illiterate as is consistent with just and wise taxation.

I am not unmindful that the South would receive far the larger share of the $100,000,000 proposed to be thus expended, and I remember that the whole sum, even, would not compare with that by which the North has been enriched at the expense of the South, through the operation of the tariff, the fishing bounties, and other measures, and I regret that I cannot give my sup-

port to the measure; but two wrongs do not make a right in politics, any more than in morals, and retaliation is not good government.

I have no hesitation whatever in opposing in every way in my power the Blair bill or any other measure which teaches our people to shift the burden of any just responsibility upon the Federal Government, and I hope our representatives in Congress will not give this measure their support for the sake of the pecuniary aid it offers, nor without thorough consideration of the matter in all its bearings.

I have read with great interest the adverse views of Judge Tourgée in his 'Appeal to Cæsar,' and I cannot but admire the candor and force of his presentation, but my conviction is unshaken, first, that there is no constitutional warrant for the assumption by the general Government of the education of the people in the States; and second, that even if such warrant should be thought to exist, sound political judgment forbids the exercise of the power. No amount of education and consequent accumulation of wealth can compensate for the decay of manhood which must attend this scheme if adopted, and I trust you will continue to exert the influence of your paper against its adoption.—Yours respectfully,

JAMES A. PEARCE.

CHESTERTOWN, MD., January 25, 1886.

TO THE EDITOR OF THE NATION:

SIR: I am a Southern man, and very naturally solicitous of the welfare of my section, both morally and physically, and for the latter reason I could not object to the Government sending a few millions down this way for educational or other purposes. But of its being a moral benefit to the negro I have very grave doubts, and that is the class which it principally concerns. My observation of this portion of our citizens has led me and many others to the conclusion that more education or "book-learning" is a positive injury to the welfare of these people. We hope it may bear fruit in the future; it bears no good fruit now. The young colored man or woman (especially the former) fresh from the graduating class is generally a worthless citizen. He thinks labor is not for such as he, and yet what vocation does he fit? Their best friends cannot satisfactorily answer this question. Something should have preceded education or should now do so; but what and how is as difficult of solution as the tariff question. Millions for education will not, in my opinion, improve the moral status of the negro race in the South, and will be of little benefit to them physically.

I think it would be much wiser to give them the "mule and forty acres" long ago promised them by somebody. If Congress would pass a bill giving every negro man in the South fifty acres of land—either that now owned by the Government, or by purchase for them—and make deed in entail, so that they could not sell out to the first cross-roads store, a real and lasting benefit would accrue to them and the whole South; education and better moral training would naturally follow. The negro who owns real property in the South is always a good citizen. Let us, then, make them good citizens first, and education will and must follow. The LeMoyne Institute, a colored school located here, is now having built a large workshop, that the pupils may have the advantage of a mechanical education, practically illustrated by actual labor, and I predict more good from this than from all the other schools combined. J. P. J.

MEMPHIS, TENN., January 24, 1886.

TO THE EDITOR OF THE NATION:

SIR: In your article of January 21, on Federal Aid to Education, I noticed certain facts which would sustain the position taken against such aid, although no point was made by them. The article shows that nearly as many children in proportion to the population are attending school in the South as in the North. Why, then, has the South more need of school facilities than the North? Is it possible to educate adult ignorance? If a school-house were planted at the door of each negro cabin and every cracker's log hut, no practical man would expect the adult negroes and the adult crackers to enter the school, or, if they did enter, to derive any advantage from it. They must earn their livelihoods in the first place, and their poor ignorance is too set to hope for change. Education offered to any but the ignorance of childhood would be the old offering of pearls to swine. The ignorance of the adult poor of the South is awful, but what power on earth can change it? The only part of the population capable of receiving education is receiving it in as large proportion as in the North. Why, then, does the South need Federal aid to education more than the North? J. H. M.

BOSTON, January 28, 1886.

THE BELL TELEPHONE DECISION.

TO THE EDITOR OF THE NATION:

SIR: Your leader in the *Nation* of the 21st instant, on "The Telephone Case," is admirable and well calculated to do substantial good. The dispassionate statements it contains will commend themselves to every one (not interested in the plaintiffs' attack), who is in any way able to form and hold an opinion. I write to express the earnest hope that you will follow up with your vigorous logic this many-sided subject, in the interest of those who love truth and justice and honest common sense.

The injury which Mr. Lamar's decision has done Mr. Bell and his company, though undoubtedly great, is far exceeded by that inflicted on the whole people and on public morals, and its inevitable effect will be to depreciate property of as legitimate a kind as any in existence. The decision is revolutionary in its nature, and will surely bear the most pernicious fruit, by establishing a precedent for similar attacks whenever the stake is large enough. In an amiable and easy-going way Mr. Lamar, having also some doubts in his own mind which he would like to have settled, proposes to give the anti-Bell corporations, of dubious origin, and their lawyers, a chance, by attacking for them at Government expense a well-sustained patent. I will not venture to recite the *positive* reasons which determined this decision; but there is one *negative* reason of much potency which should not be lost sight of. This is the fact that the four gentlemen who sat as judges at this hearing, and who came, it seems, severally and independently to the same conclusion, knew nothing about patents or patent law, and less about the relations existing between inventive progress and the development and prosperity of the country. And in this opinion, though it may seem somewhat harsh, remembering that the Commissioner of Patents was one of the four, a large number of persons will certainly agree; indeed, it would be difficult to find the man, unbiassed by circumstances, who does not look upon the patent system as suffering serious decadence at this present time. That system, fairly and honestly administered, is thoroughly democratic in the beneficent protection it gives the poor as well as the rich man. It rewards the true and first inventor, whoever and wherever he may be, by giving him a monopoly for a limited number of years in return for something not possessed by the world before. That such a man is the actual inventor, and has given the necessary information in return for a temporary monopoly, is ascertained by the examination, which, under the law should be most thorough.

Herein the American system surpasses all others to a degree which may be crudely estimated by the excess in number of the United States patents over those of other countries, and by the wonderful progress in the arts made here. Every attempt to nullify the broad principle underlying these grants; to confuse and mystify the public as to the nature and equity of the protection afforded; to destroy the efficiency of the examination and so take from the prima-facie value of each patent, or to break them down after issue by Executive interference, is a blow at the rights of property legitimately and, as a rule, very laboriously acquired, and at the manufacturing industries and comforts of the people. When a plausible request by interested persons, addressed to officials as unversed in patent law and practice as in science and technology, is sufficient to bring the great powers of the Government into activity against its own grant, then indeed will patented property of every kind be at the mercy of the speculator and stock-jobber.

Obvious criticism and brilliant suggestions are easily made after the fact; they affect more or less even the strongest minds, while with shallow persons their force is generally overwhelming. Somewhere in his writings Baron Liebig says—not in these words, but to this effect—that every great and far-reaching discovery passes through three well-defined stages or epochs before it is finally accepted by the world. In the first stage the innovation is pronounced—Impossible! In the second it is admitted to be possible but is clearly—Worthless! In the third it is seen to be both possible and useful, but—Old! The foremost invention for many years is now passing through this third epoch, and there is reason to fear that it will be a long and arduous one for Mr. Bell and those who put faith in him.

Before concluding, I wish to point out one statement of yours (the only one) which few Washington people interested in such matters will be found to endorse. You speak of Mr. Lamar's conclusion as "amazing," and you apprehend that it "has surprised no one more than the plaintiffs themselves." My impression is that they were not at all surprised. I know of no person who was. Mr. Lamar is quite intelligent enough to see that there were only two essential questions to be considered, namely: Had a fraud of a certain kind been committed? and, if so, could the Government act? Argument pertinent to these questions could have been soon heard and a decision reached. This was not done; on the contrary, extraneous matter of all sorts calculated to manufacture public opinion was freely admitted, and the hearing, as well as the subsequent consideration of the briefs, was allowed to drag to such a length that it did not require much prophetic capacity to tell in what direction things were drifting. The honest presumption was, and should have been, in favor of the Bell patent; the real effort was to justify a foregone conclusion. ERFINDER.

WASHINGTON, January 26, 1886.

"THREE ACRES AND A COW."

TO THE EDITOR OF THE NATION:

SIR: In a recent number of the *Nation* appears a statement from which it would be gathered that the cry of "Three Acres and a Cow" was simply raised by way of derisively summing up an appeal to the baser instincts of our rural electorate in the recent English general elections.

This is very far from being the complete statement of the case. I beg respectfully to call your attention to a pamphlet for which I take as the title the words of which I was the author, 'Three Acres and a Cow.' This expression sums up the

facts of a very important and interesting state of things on the estate of Lord Tollemache and Cheshire, and is further used by me to enforce, what I believe to be the fact, that by means of similar action throughout the grazing and dairy districts of Great Britain the position of our rural laborer can be enormously improved.

Pardon my intrusion upon your notice, which I would not venture upon did I not believe this question to be a vitally important one to many poor men, and also that I might rely on your courtesy to allow some statement to appear which should put before your readers the true explanation of the words "three acres and a cow."—I am, yours faithfully,

FREDERIC IMPEY.

95 COLMORE ROW, BIRMINGHAM, January 16, 1886.

AN INTERNATIONAL PARCELS POST.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the communication signed "L." in the *Nation* for January 21, expressing a need for an international parcels post, permit me, as a sufferer from our present defective system, to add my voice to the cry. On two occasions I have been obliged to import small articles, which, being for church purposes, were duty free. Notwithstanding my precaution in having the parcel transmitted in care of the United States Express Company, on each occasion the parcel was, without my order, turned over to certain conscienceless sharks termed "custom-house brokers," who seem to be on hand to "gobble" all packages which are not claimed by the consignee. The only notice which I received of its arrival was through this firm of sharpers, and I was obliged to deal with them, paying all their charges as well as the freight and custom-house "fees." The total amount of the cost of transportation was in each case fully equal to the value of the goods imported. By all means let us have an international parcels post. F.

January 23, 1886.

TO THE EDITOR OF THE NATION:

SIR: What your correspondent "L." says about the desirableness of our Government's joining the International Parcels Post must be heartily concurred in by anybody who has received such a bill as this:

Duty	$1.10
Custom-house fees	.60
Foreign charges and freight	1.98
Cartage	.75
Storage	.55
Brokerage	2.00
	$6.98

These charges were made upon a package containing about a hundred cubic inches, and weighing two pounds. To bring it from Berlin to New York cost $1.98; to transfer it in New York from the custom-house to the express office cost $3.30.—Respectfully,

LUCIUS HERITAGE.

MADISON, WIS., January 23, 1886.

"AMERICAN SOVEREIGNTY."

TO THE EDITOR OF THE NATION:

SIR: The fact that your correspondent, "P. B.," is known as one who has given not a little attention to the above subject, makes his conclusions seem all the more remarkable to those of whom he speaks, who believe that the masterly analysis of Austin has never been shaken, and that sovereignty exists somewhere as a unit in every independent political community.

He says, in substance, "that with us there is no such thing as sovereignty"; that there is no State or people which has no political superior; that "the Federal state and its people—that is, the aggregate people—and also each local State and its people, as to important subjects" have each a superior in the other and are therefore not sovereign; and that, if sovereignty ever existed, it has been divided and destroyed.

This view differs from the common one, which has ever found such abundant expression in our judicial and political literature, wherein it is assumed that sovereignty is divided, "no matter how," between the Federal Government and the States, each being sovereign within its sphere. Neither of these views rises above the agents which American sovereignty employs, and to which it intrusts the execution of its powers. The one claims a complete destruction of sovereignty, merely because of the independence as regards each other of certain of its important agents. The other sees no further than the agents themselves, and because it finds them wielding between them the powers of sovereignty concludes that they are the sovereign parts of a divided sovereignty.

The idea of an independent political community wherein sovereignty does not exist is a mere fancy which has no basis in reason or in fact. And, with all due respect for judicial *dicta* and lay opinion, a divided sovereignty is a contradiction of terms. Sovereignty may create or adopt agents, divide its powers among them and restrict each to its intended sphere, but it cannot itself be subject to any control beyond its own will. "P. B." says that "if sovereignty ever existed, it has been divided, destroyed, no matter how; it no longer exists, it cannot exist with the irrevocable loss of its necessary powers." But, if sovereignty existed, did it divide and destroy itself, or what power divided and destroyed it? What has become of that power? And what authority has "P. B." for saying that the loss of its powers is irrevocable?

That must have been merely a *de jure* sovereignty which could be thus divided and destroyed and have its powers irrevocably distributed. The power that created and adopted the various agencies of government in this country; that delegated and "reserved" to them the sovereign powers which they wield; that defined such powers and restricted their exercise by a written constitution; that from time to time has added further expressions of its will, and that may at its pleasure resume the powers thus placed in the hands of its agents and redistribute them, is sovereign in this country. Its agents are powerful, but they are not sovereign and not beyond its control. It is not the Federal Government. That is merely one of its agents, created and intrusted by it with only a part of its powers. It is not the local State. That is but another agent which is completely subject to its will. Nor is it the aggregate people of the local State. There is no power granted or "reserved" to the local State or its people which may not be taken away without their consent. They possess no power which is not held at the will of a power higher and outside of themselves.

This view may not conform to the intent of the framers of the Constitution or to later opinion as to the effect of their work; but, what is of more importance, it conforms to actual facts as they exist. We have now reached a point where we can afford to see the facts as they are, and we shall escape much confusion of thought if we cease to talk of sovereign States and a divided sovereignty. Yours very truly,

EDWIN BURRITT SMITH.

CHICAGO, January 25, 1886.

EDUCATION FOR THE PUBLIC SERVICE.

TO THE EDITOR OF THE NATION:

SIR: The last few years have seen the establishment in the United States of three separate "Schools of Political Science"—at Columbia, at the University of Michigan, and at the University of Pennsylvania. In the same time the courses in economic and political science at Harvard, at Johns Hopkins, and at several other of the leading colleges have been vastly improved and extended. It is easy to see a connection between these improvements and the present general movement for the reform of the methods and of the personnel of the public service. The public is beginning to demand that trained efficiency shall be accounted a better recommendation for office than political adroitness. The aim of the newly established Schools of Political Science, we may fairly infer, is largely to supply the general training which is beginning to be demanded of public servants; in effect, they are in large measure established as semi-professional schools of preparation for the civil service.

It is obvious, however, that the training afforded by these schools, being mostly general in its nature, has very little bearing on the preparation for those grades of the public service which at present are approachable by the road of competitive examination. It is equally obvious that until the higher grades also, such as those of the consular service, are made approachable by the same road, the possible usefulness of these schools will be greatly restricted. Until the public service in America is made a profession, such as it is in most of the States of Europe, there will be little use in offering to young men a professional training for it. Until that time arrives, these schools—in so far, at least, as their aim is to provide this training—can only hope to attract a dilettante or an academic clientèle; few young men will be attracted to their courses except by curiosity or with the purpose of fitting themselves as teachers of political science.

More than all this, in considering their programme of studies, one is driven to entertain serious doubts as to whether any one of the three is adapted, even by anticipation, to the end of preparing young men for the higher grades of the public service, even were these grades to be thrown open to competitive examination. When this reform is accomplished, possibly our Schools of Political Science have the intention of rearranging or of enlarging their courses, with the view of directly providing this preparation. I doubt, however, if they would find this practicable.

There are several reasons assignable why none of these schools could supply the need for such a training. In the first place, such a school ought to be situated at the national capital, where is the centre of administration for all the higher grades of the service; secondly, it ought to be independent of any other school or university; and thirdly, its courses ought to be arranged with the greatest possible attention to definiteness of aim and to practicalness of method. In short, *mutatis mutandis*, it should be modelled directly after the plan of the admirable École Libre des Sciences Politiques at Paris. It should be situated at Washington, in order that the bulk of its faculty could be drawn from those actually engaged in the public administration; it should be kept free from official connection with any other school, in order to be saved from any danger of doctrinairism, and in order also to have the greatest possible opportunity for free development in the attainment of its own ends; and naturally it would best attain those ends by always keeping the methods and the matter of its instruction as practical as possible.

The School at Paris to-day supplies a large number of those employed in the higher administrative offices in France, in the Ministry of Foreign Affairs, in the consular and diplomatic service, in the prefectures, in the inspection of finances, and in the Cour des Comptes, and this School admirably fulfils the three conditions I have named. A majority of its Faculty consists

of those who formerly have been or actually are in the Government service. Among these are Léon Say, De Foville, Dunoyer, Ribot, and Charmes—names sufficiently well known in French politics. The school stands by itself, with no connection with parties, and, I believe, no Government aid. Its courses are directly arranged to prepare for the civil-service examinations in the several branches of the public service which I have just named. The School is now in its fifteenth year.

All the friends of administrative reform in America are substantially agreed upon the necessity of extending the present civil-service reform to cover all purely administrative branches of the public service. The change is probably only a question of time. When it comes about, measures will surely be taken to establish some sort of a school to fit candidates for the examinations. There is a great number of offices of the higher class under each department at Washington, especially under the Departments of State and of the Treasury, to efficiently fill which the best of preparation could be given by a school definitely organized for that purpose. I have, therefore, considered it worth while publicly to call attention to the example of the Paris School of Political Sciences, and especially to contrast the direct and practical nature of most of its courses with the too academical nature of the courses (from this point of view) of our three American schools. These have doubtless drawn many suggestions and much of their inspiration from the Paris institution; nevertheless, when the time comes it will be practically impossible for them to play the same rôle in relation to our public service which is played by the Paris School in relation to the French public service; it will be impossible for them to take the place of a central, independent school, located at Washington, and having the predominating end in view of preparing its pupils to pass the examinations for the higher grades of civil and diplomatic service.

F. I. Carpenter.

Paris, January 12, 1886.

GEORGE BORROW'S WORKS.

To the Editor of The Nation:

Sir: I think that Professor Knapp will be glad to add to his list of Borrow's works the following title:

'Faustus, his Life, Death, and Descent into Hell. Translated from the German by G. Borrow.' With Colored Frontispiece. London, 1825. 12mo.

Mr. A. Egmont Hake, in Stephen's 'Dictionary of National Biography' (vol v, p. 408), gives fresh facts regarding Borrow's writings. Among other works apparently not known to Professor Knapp, he mentions a translation from the Danish of Ewald's poem, "The Death of Balder," and a translation into Turkish of "Blue Beard," which latter is perhaps the same as the posthumously published 'Turkish Jester.' Mr. Hake furthermore states that Borrow's stepdaughter, Mrs. MacAubrey, is in possession of several valuable manuscripts not yet published.

In *Notes and Queries* (1st series, vol. xi, p. 339) is a curious article by Borrow worth looking at; in it he speaks of riding "Lavengro's wild cob." The 'Autobiography' mentioned by Allibone can only be 'Lavengro.'

Lindsay Swift.

Boston Public Library, January 30, 1886.

Notes.

Harper & Bros. have in press 'The Massacres of the Mountains," an illustrated historical work relating to the Indians, by J. P. Dunn, jr.; and part ix. of Dr. J. M. Carnochan's 'Practical Surgery.'

G. P. Putnam's Sons make the important announcement that Prof. Alexander Johnston, of Princeton, has in preparation a 'History of the United States from 1840 down to the Close of 1885,' to be published in the course of the present year. No people more than the American needs to have its records of the immediate past accessible, for none is so forgetful. The same firm will issue 'Documents Illustrative of American History, 1606-1863,' edited and annotated by Howard W. Preston; 'Flights Inside and Outside Paradise: Sketches of Travel in Japan and Elsewhere,' by Geo. Cullen Pearson; and 'Summer Haven Verses,' by James Herbert Morse.

D. C. Heath & Co., Boston, will add to their series of "Educational Classics" Richter's 'Levana.' Moreover, they will begin in February a new monthly periodical, to be called the *Citizen*, and to be edited by the members of the American Institute of Civics, of which the President is Henry Randall Waite.

A new edition of Mr. Charles B. Reynolds's 'Old St. Augustine,' with six fresh illustrations and a "coquina" imitation binding, will be brought out by E. H. Reynolds, of that city.

The Worthington Co. will publish immediately Swinburne's study on Victor Hugo, making a volume of 230 pages.

Houghton, Mifflin & Co. will soon publish the seventh volume of Mr. John Burroughs's agreeable studies of out-door life and literature, under the appropriate title of 'Signs and Seasons.'

Ginn & Co. announce Hans Andersen's 'Fairy Tales,' edited for home and school by J. H. Stickney, in three series; and 'Analytic Geometry,' by G. A. Wentworth.

Mr. William Winter is preparing a volume of criticisms of Miss Mary Anderson as an actress, which will be published by Mr. George J. Coombes. In both form and substance it will resemble the volume on 'Henry Irving in New York,' which Mr. Winter wrote and Mr. Coombes published late last spring. There is already an English biography of Miss Anderson, by Mr. Farrar, but it is quite uncritical.

Of the serial novels now appearing in the magazines, Ticknor & Co. will issue shortly Mr. Howells's 'Indian Summer,' and later Mrs. Mary Hallock Foote's 'John Bodewin's Testimony.' Macmillan & Co. will publish Mr. James's 'Bostonians,' both in London and New York, as they did his 'French Poets and Novelists.' It will appear in England in the British three volumes, and in America in the more natural single volume.

Henry Holt & Co. i sue this week 'A Cardinal Sin,' one of two posthumous novels by "Hugh Conway."

D. Lothrop & Co., Boston, will shortly bring out 'Social Studies in England,' by Mrs. Sarah K. Bolton.

The Rev. J. D. Stockbridge, who is engaged upon a catalogue of the Harris Collection of American Poetry, lately devised to Brown University by Senator Anthony, is receiving, we understand, abundant evidence that the work will be taken up on its appearance. The British Museum has already bespoken a copy.

Mr. Wm. Henry Burr, of Washington, is bringing out in parts (Brentano Bros.) a work entitled 'Bacon and Shakspere,' and proving that Bacon wrote the sonnets ascribed to the latter.

'Love Made to Order, and Other Comedies,' by Francis Gellatly (Chicago: Knight & Leonard; 1885), gives little encouragement to the theory of Mr. Stedman that the drama is the coming American form in literature. The three plays of this volume are rapid in movement and contain some farcical situations; they have also the merit of contemporaneity; but the life they depict is of the vulgarest kind, the wit is confined to punning and puerilities of Shaksperian parody, the humor is too often dependent on impure suggestion, and the satire is so generally aimed as to lose effectiveness. The subjects are not in themselves objectionable, but the manner in which they are treated and developed calls for the full measure of disapprobation. The stage could not tolerate them with self-respect; much less can literature admit them.

The garb of the 'Voltaire' which introduces us to the new and uniform edition of the works of Mr. John Morley (Macmillan & Co.) is attractive in the extreme. The volume is a handy duodecimo, bound in wine-colored cloth, and openly printed on paper of excellent quality. One can but contrast it with the second edition of 1871-2, an octavo of much inferior merit typographically, and taking up much more room with its 354 pages than does the present unassuming edition with 365. An historical work in which the foot-notes are not more numerous than in this one, could not choose a better model in all respects. It would be superfluous to praise the contents of the 'Voltaire.'

Mr. Robert Laird Collier has gathered into a very pretty volume, 'English Home Life' (Boston: Ticknor & Co.), half-a-dozen essays on the interior domestic arrangements and customs of the higher-class English families, and he has compressed into these narrow limits an amount of information regarding English daily life which is really wonderful. The reader, and especially "the fair reader," will acquire from it a fund of knowledge both interesting and suggestive. Mr. Collier is not altogether a eulogist, but when he is either dissatisfied or displeased, as any American must be with certain phases of English society, he explains in what way such objectionable things are rooted in the soil and institutions. The chapters on the government of the family and what is called "the atmosphere" of the house in which the children grow up, are especially valuable to those interested in training the young, and we commend them to the attention of reformers anxious to have "morality" taught in the public schools of our country, either with the denominational attachment which President Eliot has patented, or without.

Scribner & Welford have brought out in dainty parchment form Mr. J. Cotter Morison's *étude*, 'Madame de Maintenon,' of which one cannot speak too highly as a delightful essay. Of the extent to which the historical estimate of her enigmatic character is to be modified by the discovery that her letters were seriously tampered with by their first editor, it is as yet impossible to judge. The author follows the traditionary safe course by assuming that she was neither saint nor sinner, and that her rise was not deliberately ambitious from the start, but largely the result of circumstances; her main aim, in his view, was "to make the most of both this world and the next." The sketch is executed with great delicacy of touch, and the passages depicting the scenes at St. Cyr are marvels of picturesqueness, interest, and satire that is wholly good-natured.

Mr. John G. Allen's 'Topical Studies in American History' (Rochester, N. Y.: Scranton, Wetmore & Co.) will be found a very useful aid to teachers of American history. It consists of brief memoranda, extracts from documents, topics for special preparation, and notes for conversation, arranged under chronological heads, but with no attempt at uniformity of treatment in the several periods. The idea seems to be that of the greatest freedom and elasticity. In the margin of nearly every page is given a list of books for reading—histories, biographies, poems, novels, and essays. The compilation of the book shows industry and good judgment.

Mr. Frederick Saunders's 'Evenings with the

Sacred Poets' shows, like his other compilations, a wide and catholic taste, and a happy faculty of combining quotation and anecdote with wise observation. The work, which was originally published about ten years ago, is now reissued (by A. D. F. Randolph & Co.) with two additional chapters, on 'Recent American and English Writers,' which continue the stream of sacred song, and reveal a depth of faith in the modern writers like that of the older hymnists. In fact, the ground and reason of the hymn writer is faith and trust; he writes to comfort sorrow or inspire effort, and the bulk of the writers build on the language of the Bible, so that their thoughts move largely in one sphere. Mr. Saunders refers to the more well-known verses of the hymn-books by their first lines only, but among the choicer of the old and the modern English, and from the best translations, especially of the German and the Latin, he quotes many fine examples which are pleasing to read once and refer to often, and he mingles with his quotations numerous interesting biographical statements and anecdotes. Some of Mr. Saunders's "waifs," unacknowledged, at the end of the volume, are so good, and withal so familiar, that one suspects them to be acknowledged. "How easy 'tis to keep sin-free," for instance, is by Coventry Patmore. Two cases of oversight occur in the earlier part of the book, where, under the somewhat general heading, "German—Thirty Years' War," Luther is classed with a few of the writers of that period, and on one page the date of Giles Fletcher's death is given as 1623, and again as 1650, the former being correct; but these are mere oversights.

Silvio Pellico's 'My Ten Years' Imprisonment' forms the first issue in Cassell's ten-cent National Library, according to our recent announcement. It is a little pocket volume of 200 pages, in small but not trying print, and paper covers. Professor Henry Morley supplies a brief introductory sketch of the author.

Besides the text edition of the 'Bacchantes,' edited by Professor Beckwith, of which we spoke last week, there is another edition, with notes, which we had overlooked.

We are glad to record the completion of volume one of Mr. N. Ponce de Leon's 'Diccionario Tecnológico' with the fifteenth number, and to learn that the enterprise has been so well supported that this English-Spanish portion will be directly followed by the Spanish-English. It is a very valuable addition to all existing vocabularies. The publication office is at No. 40 Broadway.

'Recollections of a Book Worm' is the alluring title of a collection of essays on books and book-collecting written by Mr. J. Roger Rees, to be published in London by E. Stock.

We have received from the compiler, Professor Joseph Kürschner, the eighth annual issue of his 'Litteratur-Kalender.' As regards its general features, we can but repeat the praise we have given to former issues. The present volume, however, contains a steel portrait of Hermann Heiberg, perhaps the cleverest of the newer German novelists. In the necrology we notice the names of Karl Andrae, Georg Curtius, Karl Hillebrand, F. Hiller, Karl Richard Lepsius, A. Meissner, Gustav Nachtigal, and Robert von Schlagintweit.

The February number of the *Book-Buyer* appears with a new cover and initial letters by Mr. G. R. Halm, with a portrait of Mrs. Burnett and an account of her methods of work, with the first of Mr. Laurence Hutton's interesting papers on American Bookplates, with a review of Lieutenant Greely's book by ex Chief Justice Daly, and with other illustrated articles and reviews, the cuts being chiefly borrowed from the books of the month. In one of the advertising pages we note a list of the books published during 1885 by Charles Scribner's Sons, nearly seventy titles in all, not ten of which, or less than fifteen per cent., are the work of English authors. Perhaps twenty years ago the proportion of American books would not have exceeded this. Elsewhere in this number of the *Book-Buyer* we are told that Messrs. Scribner will publish a new guide to Mexico by Mr. Thomas A. Janvier, and two first novels by American authors distinguished in other walks of literature: 'Domesticus,' a social satire in prose, by Mr. William Allen Butler, and 'The Late Mrs. Hull,' a long story by Mr. Frank R. Stockton, one of the most skilful masters of the short story.

The hundredth anniversary of the birth of the brothers Grimm (January 4, 1885—February 24, 1886) has been celebrated by the eminent Icelandic scholars, Vigfusson and Powell, by the publication of a group of essays relating to their studies. There are seven of these essays, besides a "Prologue in Berlin," by G. V., and an "Epilogue in Oxford," by F. Y. P. The first, which gives its name to the volume, is entitled "Sigfred-Arminius," and is an attempt to show that the legend of Sigfred is an outgrowth of the historical career of the great German hero, Arminius. *Hermann*, as an equivalent for this name, the author rejects, holding that *Arminius* was a merely Roman name, and that the real name of the hero must have, according to Germanic custom, contained the same radical syllable as that of his father, *Sigimer*, and other kinsmen, *Segestes*, *Segimund*, etc.; then why not *Sigfred?* The arguments are ingenious and many of them plausible; but, after all, what real ground is there for supposing that *Arminius* was not his true name? A short paper upon the defeat of Varus brings up some interesting illustrations from sagas, etc., of the Germanic custom of felling trees in the way of an advancing enemy—such as Dio's account makes probable in the defeat of Varus. The longest paper is the closing one, by Mr. Powell, upon "Traces of old law in the Eddic lays"; it contains a great deal of interesting matter in the comparative study of ancient law.

Mr. Waters's "Genealogical Gleanings in England," in the January number of the *New England Historical and Genealogical Register*, touches upon the kinsfolk of the Poores, of Newbury, Mass., and the Hawthornes of Salem, and among other wills gives that of the father of the first Sewall who came over (the ancestor of Judge Sewall), which furnishes the clue to a connection with the Hornes of Salop, and extends the Sewall line one more generation backwards. Mr. Waters has also edited from three contemporary copies in the British Museum a valuable manuscript 'Relation concerning the Estate of New England,' to which the approximate date of 1634 is assigned from internal evidence. A large part of this relation, following some of the MSS., had been printed before, but in a limited private edition. Noteworthy, too, in the same number, is Professor Horsford's discussion of the meaning of three Indian names for Boston, accompanied by several old maps. We can only mention his conclusions: Sha-um-ut (Shawmut), *Near the Neck;* Mushau-womuk, *Canoe-place;* Messatsoosec (Massachusetts), *Great-Hills-Mouth;* Accomonticus (Agamenticus), *Beyond-the-hill-little-cove.* The Neck referred to in "Shawmut" was not the Boston or Roxbury Neck of American history, but one near Haymarket Square, now quite as effectually obliterated as the former by filling in.

A pamphlet report of the commemoration of the bi-centenary of the Revocation of the Edict of Nantes on October 22, 1885, by the Huguenot Society of America, is before us. As interesting as any single feature of this celebration is the fact that it was held in a French church in this city organized by the refugees in 1687, and in whose successive edifices "services in the French tongue have been continued from that day to this."

To the January number of the *New York Genealogical and Biographical Record* Mr. Thomas C. Amory contributes a discursive but interesting paper on the Boston-born Admiral, Sir Isaac Coffin, of the British navy. An engraving after Stuart's portrait accompanies it.

Shakespeariana for January (Philadelphia: Leonard Scott Publication Co.) renders a useful service by indicating in detail the differences in the successive editions of Mr. Halliwell-Phillipps's 'Outlines of the Life of Shakspere'—editions for which shelf-room would be lacking in the house of any but a Shakspere scholar, and none of which is provided with an index, or with the tables of contents of its predecessors.

'The Wilderness Road' is the subject and title of the second publication of the Filson Club (Louisville, Ky.: John P. Morton & Co.). Mr. Thomas Speed describes, in an interesting manner, with the aid of rare books and old journals and itineraries, the routes by which emigrants passed from the seaboard into Kentucky, and particularly that by way of the Shenandoah Valley and Cumberland Gap, with the last section of which, the "Wilderness Road," Daniel Boone's name (if not his fame, as ought to be the case) is connected as the pathfinder. Mr. Speed pays a high tribute to the skill with which Boone laid out this thoroughfare (hardly more than a trail for many years).

The elaborate report of the Massachusetts Drainage Commission with reference to the sewage problems offered by the valleys of the Mystic, Blackstone, and Charles Rivers, has just been printed and will command widespread attention. It is accompanied by numerous maps of the basins under consideration, and several photographic views of sewage filters and farms in this country and in England.

A very interesting account of an ascent of the volcano Popocatepetl is given by Prof. A. S. Packard in the February number of the *American Naturalist.* Curious, too, are Mr. C. Brent's "Notes on the Leaf-Cutting Ants of Trinidad." In the Editors' Table, Professor Cope estimates in some detail the expenses of an Academy of Original Research, which he holds up as a suitable monument for any millionaire ready to make the necessary endowment.

The *Hawaiian Almanac* for 1886 reports the population of the islands on December 27, 1884, to have been 80,378, a gain in eight years of 2,393. Japanese immigration began in 1885, the Chinese continues under regulations as to numbers whose evasion causes trouble; and Portuguese are about to arrive again. The editor, in a paragraph on the importation of Christmas toys, classes Hawaiians and Chinese together in contrast to "the foreign population"—meaning Europeans. The islands boast two railroads, one having a station called Spreckelsville—an unlovely compound. There is a capital paper on music in Hawaii. The natives find only the 2-4 or 4-4 time quite natural, and the instrumental band which a skilful German leader has made out of them, has had the most trouble in getting the mazurka or waltz movement. Few of the tunes which this band plays are caught up and whistled by the natives, but the opening chorus of "Pinafore" proved exceptionally taking. The natives play the guitar with great feeling, and of late have acquired the banjo and a "hideous small Portuguese instrument now called 'taro patch fiddle.'" Outside the natives, the writer thinks there is no place in the world "where so many pianos are to be found in proportion to the number of the population."

With its December number *Mélusine*, that delightful folk-lore journal over which MM.

Gaidoz and Rolland preside with so much grace and learning, completed its second volume; and seldom has it contained any tales more curious and amusing than the five *historiettes*, Talmud-like but not of the Talmud, taken from an anonymous collection of the sixteenth century. In the January number are continued the Notes and Notelets on popular melodies contributed by Anatole Loquin, in which words and music are given, often with several versions of each.

We have received from Mr. Schoenhof, Boston, the prospectus and the January number of a new periodical, *Les Lettres et les Arts* (Paris: Boussod, Valadon et Cie.). This "revue illustrée," which is published by the successors of Goupil, outdoes in size and price every other literary magazine of France. Each number will form a large quarto volume of 144 pages, besides a *feuilleton* of twelve pages containing literary and artistic notices. It is magnificently printed on the most beautiful paper, and illustrated by some of the first artists. The cost is 30 francs a number, or 300 francs a year (320 francs by post). The name of the editor, M. Anatole France, is a certain guarantee of the high tone which the new review will aim to keep. The present number is rich from both a literary and an artistic point of view. The two most attractive articles are "Le Déisme pendant la Révolution," by M. Frédéric Masson, with its luxury of illustrations, and M. E. Caro's fine criticism of the Abbé Roux's 'Les Pensées d'un Solitaire.' The number opens with a reminiscence of his school-days, "Les Poètes de Collège," by M. Édouard Pailleron. M. Henry Houssaye writes a few pages to accompany the full-page illustration in colors by Detaille, "La Charge." M. Gounod writes on sacred and profane music in illustration of the picture of his nephew, Guillaume Dubufe, which is reproduced. M. Widor contributes the music to accompany a very pretty poem of Sully Prudhomme, and there are interesting articles by MM. Jules Simon, Jules Lemaitre, Leconte de Lisle, José-Maria de Heredia, and others. The whole number is a pleasure to the eye, and the literary value of the text is of the highest kind.

— The mid-winter *Century* opens with a series of illustrations from the works of Barye, whose name and characteristics are not to be unknown to the American public, if the magazines can help it. The cuts are varied and interesting, and amply supply whatever was lacking in the profusely illustrated article which appeared some months ago in *Harper's*. A second pronounced feature of the number is Mr. Cable's account of the Place Congo dances, with the musical scores. He has reproduced the look of the heathenish amusements of the slaves there with surprising vividness, and as much openness as the subject will permit. Mr. Howells's new novel, "The Minister's Charge," also attracts attention. We pass over the pages rapidly, however, to come to the extraordinary chorus of authors demanding international copyright as with the blare of the trumpets before Jericho. Mr. Lowell's quatrain is quotable:

> "In vain we call old notions fudge
> And bend our conscience to our dealing;
> The ten commandments will not budge,
> And stealing *will* continue stealing."

— In the February *Lippincott's* many readers will turn with curiosity to see how Mr. Dorman B. Eaton has met his engagement to "reply" to Gail Hamilton's previous article on the Civil-Service Reform. He begins with a half-apology for having got himself into the disagreeable situation of having to make a rejoinder to a woman whom the only way to answer is to "answer back." As was to be expected, he can find no serious argument or understanding of the matter in hand in "G. H.'s" (Greater Humbug, as he interprets) diatribe, but only a rich and copious vocabulary of fish-wife compliments which he rehearses. It is evidently not pleasanter for him than for others to get into a wordy warfare in such primitive English. He does his best, however, to find something in his antagonist's position capable of serious discussion, and in the most telling part of his article explodes the common word-dodge of those speakers who are continually telling us that the Government has not lost money by the corruption of officials. His examination of the Internal Revenue report for 1881–82 is a final answer to that mischievously plausible argument. In the rest of the magazine we can note only the very carefully finished and delightful story by "J. S. of Dale," whose brief tales are models of literary workmanship. The fidelity of the river-scenes, and the selection of suggestive and memoried detail, together with the charm of the narration, make the most hackneyed and commonplace of simple plots a fresh and true thing. The author shows only one regrettable tendency—to preciosity.

—The new school of historical study has at last created for itself a worthy organ in the *English Historical Review*. Germany and France already possessed similar periodicals. Sybel's *Historische Zeitschrift* has for nearly thirty years represented the highest standard of historical work in Germany, and for ten years the *Revue Historique* has done the same for France. These two reviews are not on exactly the same plan. Both contain a certain number of solid articles, generally not more than two or three, presenting in a literary form the results of some special study or exploration. The *Historische Zeitschrift* is then, for the rest, made up of book notices, generally short, but often elaborate and detailed; and, as the books reviewed are for the most part German, one can find here a very complete account of the contemporary historical literature of Germany, while that of other countries is apt to be neglected. The French *Revue*, on the other hand, makes it distinctly its aim to present a complete view of contemporary historical literature, and for this purpose obtains correspondents in every country, who from time to time give elaborate reports upon the recent publications of their own countries. This may be called the distinctive feature of this review. The regular book notices are comparatively few in number; between the "articles de fond" and the "bulletins" there are miscellaneous documents and shorter articles, and at the end there comes a list, several pages long, of all the periodicals in the world which deal with historical questions, with the titles of their articles—often briefly characterized. We have thus a perfect record of historical literature in all countries and all departments. The projectors of the new English *Review* have been able to take advantage of the experience of its predecessors, and to judge where it was best to copy them, and where to supplement them. They have wisely abstained from undertaking to rival the French review in its specialty — the bulletins. This difficult work once done need not be done over again. Apart from this, the *Review* is admirably full and well-arranged in the department of intelligence. The "list of historical books recently published" will be very acceptable to all students; and its "contents of periodical publications," while similar to that in the *Revue Historique*, has the advantage of being arranged by nations, and is thus easier of consultation.

—There are more regular book reviews than in the *Revue Historique*, but not nearly so many as in the *Historische Zeitschrift;* and it seems to us that here if anywhere is the defect of the work—one does not find in it a complete survey of the field of historical composition for England, such as the other two reviews afford for France and Germany. The solid articles occupy, we should judge, rather more space in proportion than is the case with the other reviews. They are five in number, besides a prefatory note. The first is upon German schools of history, by Lord Acton—a very intelligent presentation of the course of historical study in Germany, occasionally a little obscure from a certain allusiveness of style. The next is a short paper upon "Homer and the Early History of Greece," by D. B. Monro, Provost of Oriel, very suggestive in its discussion of the geography of Homer, and the light thrown by it upon primitive history. The Homeric map, he shows, is not merely totally different from the historical map of Greece, but "is also different from the mythical map, as we may call it—that is to say, the map which would have been naturally produced by bringing together the most famous heroes and legends." He thinks that for the birthplace of Homer we must look to Greece proper—Thessaly, Bœotia, or Argolis. Then follows a long and characteristic article by Mr. Freeman upon "The Tyrants of Britain, Gaul, and Spain, 406–411"—very valuable for the student of the period of the migrations. The next article is by Prof. Seeley, "The House of Bourbon." Its real subject is the family compact of 1733—"the most important document of the middle period of the eighteenth century, and the most indispensable to history." The last article is unsigned: "Notes on the Greville Memoirs." Between the articles and the reviews comes a miscellaneous section, entitled "Notes and Documents." Here we find two notes of interest in American history—"Mather and Randolph," by C. E. Doble, and "The Campaign of Gen. Braddock," by J. C. Wilson. This is a very strong and interesting number; and the appended list of contributors promises the maintenance of the same standard. Among them is a considerable number of American names. The review is edited by Rev. Mandell Creighton, author of a history of the papacy, and is published quarterly by Longmans (in this country by the International News Co.). The subscription price is five dollars.

—The fifth volume of Mr. Leslie Stephen's great enterprise, the 'Dictionary of National Biography' (Macmillan), carries the work through Bottisham. The grandees of the present instalment are James Boswell (by the editor), who fills eight pages, Admiral Blake (9 pp.), and Blackstone, of the Commentaries (some 7 pp.). Many legends concerning Blake are set aside in the article devoted to him, nor is his great rival Tromp allowed his traditional broom. Four pages are given to William Blake, the poet and artist, who is sympathetically judged. He is quoted as saying, toward the close of his life, apropos of academic modes of study: "Natural objects always did and do now weaken, deaden, and obliterate imagination in me." Blake made the well-known designs for Blair's "Grave"; and Blair himself is commemorated in the same volume, with an analysis of his single great poem. Four pages are allotted to St. Boniface, who here finds himself in alphabetical company with Mary Blundy, murderess. In four pages, likewise, the career of Admiral Boscawen is sketched, and in three that of Sir Thomas Bodley, founder of the great Oxford library. But the lesser lights possess even greater interest than these, because, for one thing, they are nearer our time, and the common dictionaries have less (or nothing) to tell about them. The Blackwoods, Adam Black, John Black, editor of the *Morning Chronicle* and friend of James Mill; Laman Blanchard, of the *Examiner* and of so many other journals; H. G. Bohn, the Countess of Blessington, Dr. Bleek, of Hottentot fame; George Boole, Mme. Anna Bishop and

her husband, Sir Henry R. Bishop, that most prolific composer; Peter Borthwick, champion of the West India planters, and hence of a system separating husband and wife at pleasure, yet author of "the Borthwick clause" in the poor law which forbids the separation of couples over the age of sixty on entering the doors of the poor-house—are a few names, taken at random, which one is glad to meet with here. The American interest in this volume is not slight. An ancestor of Longfellow's occurs in that Richard Bonython who settled in Maine in 1631. And here also are William Blackstone, once owner of Boston Common; the Rev. James Blair, the founder and president of William and Mary College; Commander Johnston Blakely, U. S. N., who took his *Wasp* into the British Channel in the war of 1812, and went down, with ship and crew, somewhere in the North Atlantic, probably, in the year 1814; the ill-fated Blennerhasset, the elder Booth, William Birch, painter and engraver, one of Washington's portraitists, etc.

—Part xxi of Grove's 'Dictionary of Music and Musicians' (Macmillan) is of special interest to violinists and to admirers of Wagner's music. To the articles Violin and Violin Playing thirty one pages are devoted, and to Wagner thirty. Other important articles are on Violoncello, Virginal Music, Voice, Volkslied, Vogler, Wallace. The writer of the article on the violin does not believe in the Oriental origin of our bowed instruments: "The harp and lyre were borrowed by the Greeks from Egypt—probably, like the alphabet, through Phœnicia; but here the debt of Europe to the stringed-instrument-makers of the East begins and ends. The Arabic and Hindoo instruments from which Fétis and others deduce the violin evidently belong to a totally distinct family. . . . The fiddle has developed out of the lyre and monochord." The writer shows specifically that every detail of the peculiar form of the modern violin has its acoustic reason for being so and not otherwise: and he gives a full account, with illustrations, of the various odd forms through which the violin's predecessors passed before the one was found which seemed fittest to survive. He protests against "the groundless idea that no good fiddles have been made since the golden age of the Cremona makers, which terminated 120 years ago, and that the secrets of violin-making are lost." The prices of the best Italian instruments range from $1,000 to $2,500. "In the writer's opinion, the prices now paid for old Italian violins, always excepting the very best, are high beyond all proportion to their intrinsic excellence. . . . No one with any real idea of the use of a violin would pay £100 for instruments by Montagnana, Serafin, or Peter Guarnerius, when he could buy a good Vuillaume, Pressenda, or Lupot for from £20 to £30; yet the writer has constantly known the first-named prices realized for Italian instruments of decidedly inferior merit." Nevertheless, many of the best violin-makers seldom make new instruments, their principal occupation being the purchase, restoration, and sale of old ones. A violin consists of seventy distinct parts, each of which must be studied separately, and "the restoration of old instruments demands a knowledge of the fiddle which is wider and deeper than that required for the mere fiddle-maker." The article on violin-playing gives an interesting account (with a table) of the various "schools" of violinists and their peculiarities. The writer thinks there can be no doubt that the number of good violinists is very much greater at the present time than it ever was before. The article on the violoncello is good enough so far as the instrument is concerned; but when Mr. Payne comes to talk about the compositions for it, the English Mendelssohn madness crops out again. He not only declares Mendelssohn's weak and artificial sonatas to be among the finest works in the 'cellist's repertory, and laments that his intention of writing a concerto was frustrated by his death, but takes occasion to sneer at Schumann's Concerto, the slow movement of which, as a matter of fact, brief as it is, has more genius in it than anything Mendelssohn ever wrote. Nor is this all. Mr. Payne mentions and commends 'cello compositions by such composerlings as Dotzauer, Kummer, Lee, Viotti, and even Offenbach (!), but has not a word to say about Rubinstein's two magnificent sonatas for 'cello and piano, his equally fine concertos, and his three morceaux; or Chopin's highly poetic Sonata, which disputes with Rubinstein's Second Sonata the honor of being the best composition ever written for 'cello and piano. We may remark, by the way, that one of the most significant things about Rubinstein's genius is that the English have not yet "caught on" to it, whereas Mendelssohn they took to heart at once. A failure of immediate appreciation in England, as experience shows, prognosticates the immortality of musical genius.

—It is most unfortunate that this dictionary, otherwise so excellent, should be edited so largely from the Mendelssohnian point of view. Many of the articles are in consequence not up to date, and Dr. Grove would do well to publish a special supplement giving "post-Mendelssohnian" information. In this respect Dr. Riemann's 'Musik-Lexicon' is vastly superior to Grove's. There is, however, one article in the issue under consideration which is fully abreast of the times. Mr. Dannreuther's article on Wagner is the best of its length ever written in any language, extensive as is the Wagnerian literature. He does not waste his space by incidentally lamenting what Mendelssohn did not do, but tells us what Wagner did accomplish. The article comes upon us as timely as a magazine essay just at present, when two or three of Wagner's operas are heard here every week. Mr. Dannreuther arranges his material under four heads—biographical and personal; literary; musical; chronological lists, and a list of valuable books on Wagner and his music. Dannreuther is well read in Wagner's ten volumes of literary works, and wherever possible he introduces the composer's own words on biographical and critical points. He has also been so fortunate as to have access to Wagner's privately printed autobiography, which he repeatedly quotes from. Particularly full are the details regarding Wagner's early life in Paris and his struggles for fame and bread, which were so severe that at one time he applied—in vain—for a place as a "choriste" at a small boulevard theatre: "I came off worse than Berlioz when he was in a similar predicament. The conductor who tested my capabilities discovered that I could not sing at all, and pronounced me a hopeless case all round." Brief résumés are given of Wagner's principal æsthetic treatises, the secrets of his instrumentation are explained, and his opinions of and relations to other composers made clear. A striking portrait of his appearance, habits, and temper is drawn on page 365.

—'Translations from the Poems of Victor Hugo,' by Henry Charrington (London: Walter Scott; New York: Scribner & Welford), and 'Selections Chiefly Lyrical from the Poetical Works of Victor Hugo,' now first collected by Henry Llewellyn Williams (London: George Bell & Sons; New York: Scribner & Welford), agree in lacking an English version of Hugo's only sonnet. Dean Charrington's is the more scholarly of these two attempts to render Hugo's poetry into English verse—a task of unspeakable difficulty and danger; and on the whole it is the more satisfactory. There are several poems in Mr. Williams's collection far more finely translated than any in Dean Charrington's, but the general average of the single-handed version is very much higher than that of the eclectic. We are inclined to believe that a selection of the best translations from any very popular poet ought to be more successful than the attempt of any single translator can hope to be. No foreign poet, for example, has been as adequately represented in England as Ferdinand Freiligrath, whose daughter chose the best English renderings of his lyrics, herself translating only those which had not already been translated advantageously. But this method calls for finer taste and sounder judgment than Mr. Williams possesses, and his selection of the English translations of Hugo is very unsatisfactory and misleading. Of course, he has included some admirable verses, by Mr. Lang, Mr. Garnett, "Father Prout," Toru Dott, and other competent translators; but his own work is in general hopelessly wrong in form and in spirit. Dean Charrington's collection is of uneven quality, but it never sinks so low as Mr. Williams's. Of course, no one has been bold enough to venture on English versions of the "Djinns" and the "Pas d'Armes du Roi Jean"—as characteristic of the French poet as they are untranslatable.

—Whoever has visited the Plantin Museum at Antwerp will be attracted by the first of a series of articles on Rubens and Balthasar Moretus, by Max Rooses, curator of the Museum, in No. 518 of *L'Art* (Macmillan). The visitor sees on the walls original paintings by Rubens, and in the cases his sketches for title-pages beside the printed designs, the engraved plates, and the painter's receipts for his pay. Among the scrupulously preserved papers of the grandson of Christopher Plantin are many evidences of his close relations, in friendship and in business, with his old schoolmate, and M. Rooses's investigations have enabled him, as he does in this article, to throw much light on Rubens's career, and on the dates of some of his works. A fine portrait of Moretus is reproduced in connection with the text. Rubens reappears in another article, with a disagreeable subject, "Demoniacs in Art," which has many curious illustrations from a great variety of sources. In etchings, the December numbers 518 and 519 have a holiday richness: a group portrait of Fr. Snyders and his wife, after Van Dyck; a Flemish interior, also involving a formal portrait of man and wife, after G. Coques; and a fancy "January," typified by a dangerous young woman in furs. Add a photogravure showing a newly discovered Madonna and Child by Mantegna, as it now is, and as it lately was—painted over so that its origin was not suspected by the custodians of the art museum at Brera. No direct indication is given that the right-hand view is the restored one, but one's doubts are set at rest in the *Illustrazione Italiana* for January 10. The book notices are much more numerous than usual, and naturally deal with illustrated works, giving samples of the engravings. One such, from 'Manners and Caricature in Germany, Austria, and Switzerland,' shows "the ship of the Caucus," having on board the Genevan authorities, called by their enemies, as we are told in a foot-note, "Caucus (petit clou, petite association fermée)"—*i. e.*, a close corporation. The *Courrier de l'Art* for December 17 reports the very amusing debate on the subject of the rejection of certain paintings offered to the Louvre by a public-spirited group of private art lovers. The attack on the Ministry of Fine Arts was very discursive, and had a party bitterness, the Radicals calling for the discharge of all the "reactionaries" connected with the Louvre. The proprietor of *L'Art* being involved, to his credit, in the controversy, the *Courrier* gives a spirited editorial comment on the debate, revealing, among

other things, the long-standing jealousy of *L'Art's* rival, the *Gazette des Beaux-Arts*.

—Decidedly the most attractive, and probably the most heroic, figure among the Protestant commanders of Germany in the Thirty Years' War is Duke Bernhard, of Weimar. Young in years and spirit throughout his warlike career—he was born in 1604 and died in 1639—brave, chivalrous, learned, keen of perception, steady in his aims, quick in action, unflinching in adversity, he was worthy to avenge Gustavus Adolphus at Lützen (1632), and succeed him in command. Nor did he lose his prestige by the defeat at Nördlingen (1634), where he met overwhelming forces. But he accepted the Emperor's pardon after Tilly's victory at Lutter (1627); he incurred Oxenstiern, the great Swedish Chancellor's, suspicions, and concluded agreements with Richelieu which secured him princely advantages under the protection of France; and on his death his trusted lieutenant, Erlach, surrendered his stronghold and troops to that foreign and Catholic Power. Can he, in the light of all this, be considered a German patriot, true and steadfast? Goethe made an effort to compose a life of the hero of Weimar, but gave up the task, being unable to get at a clear conception of his subject. The historian Luden had the same experience. Röse's biography ('Herzog Bernhard der Grosse von Saxen-Weimar, mit Urkunden,' 2 vols., Weimar, 1829), presents no solution. Dr. von Gonzenbach, who devoted three volumes to the life of Erlach ('General Hans Ludwig von Erlach,' Bern, 1880-82) warns his readers not to seek in Bernhard a patriotic hero according to the conceptions of our time: he was no more than a brilliant princely *condottiere*. Entirely different, however, is the view taken by Prof. Gustav Droysen, the younger historian of that name and biographer of Gustavus Adolphus, whose 'Bernhard von Weimar (2 vols., Leipzig, 1885) is the product of many years of research in the archives of Dresden, Gotha, Paris, and Stockholm. If Droysen's picture is correct, Bernhard was not only the noblest type of a warrior of his age, but a German patriot in the truest sense of the word. Protestant Germany will be prone to accept this decision.

THE PHILOLOGICAL SOCIETY'S DICTIONARY.

A New English Dictionary on Historical Principles; founded mainly on the materials collected by the Philological Society. Edited by James A. H. Murray, LL.D. Part II.—Ant—Batten. Oxford: at the Clarendon Press; New York: Macmillan. 1885.

In the crowd of serials that are constantly appearing, it may seem a little out of the way to claim a place for the Dictionary of the Philological Society, the second part of which now comes up for examination. Yet we doubt if the most popular of them all will, for an educated man, surpass this work in interest; we are sure that nothing but a production of genius could pretend to rival it in permanent value. It is without any intention of reviving or referring to the venerable jokes connected with publications of this kind that we remark that delay, such as has existed, in bringing out successive portions would naturally tend to the destruction of general or sustained interest in this enterprise. It is nearly a year since the first part was noticed in these columns, and more than a year has intervened between the appearance of the two parts; but a delay of this kind, inevitable in this instance, will probably never take place again. The work of digesting the material is now well in hand, and arrangements have been perfected by which the successive parts will appear with comparative regularity. It is expected, indeed, that the letter B will be finished early in the present year, and that hereafter publication of the successive portions will occur once every six months.

To come to particulars, the present part contains all the words from *Ant* to *Batten*. The total number explained in it is 9,135. As *A* is now finished with over fifteen thousand words, and as this letter contains in dictionaries of English about one-sixteenth of the alphabet, the editor calculates that in the completed work there will be comprised about 240,000 words. This is practically double the number found in the largest existing dictionaries, to say nothing of the altogether fuller treatment that is bestowed in this upon each of the entries. We venture to add, moreover, that this will be found an under rather than an over-estimate. It will certainly be so if the process of reading for it is kept up while the various parts are successively going through the press, and this we assume will be the case. The plan which has been adopted, or at any rate the one which has been followed, admits on a generous scale the formations of the hour. We do not believe in its advisability, because it can never be made exhaustive, and, if it could, would add little appreciable value to the work; but the adoption of the principle insures a pretty constant supply of new words, and it will be strange if the latter portion of the alphabet is not swelled, in consequence, beyond its legitimate proportion.

This second part, it may be said in general terms, is far more interesting than the first. It contains comparatively few of those words which made the latter seem, on a hasty glance, more like a technical lexicon of science than a purely English dictionary. It has cost, moreover, far more labor in its preparation; and it is a pleasure to bear witness to the skill, the judgment, and the thoroughness with which the work has been done. The editor has certainly earned the right to speak with gratification of the result accomplished, as well as with some feeling of the labor involved. Statistics can never give a satisfactory idea of the time and thought expended upon any point. Still, one does get a rough conception of the magnitude of the task that has been undertaken and accomplished when he finds forty-two closely printed columns given up to *Anti* and its compounds, twenty-four to *Back* and its compounds, and seven columns to the various uses of the preposition *At*. There is, in fact, not a page in this part in which even the general reader will not find much to interest, nor one from which the profoundest scholar will not gather information. As a single instance of the way in which this mass of illustrative quotations becomes self-explanatory, the word *babery* invites attention. This, in an older form, has long been one of the puzzling words in Chaucer, in whose writings it occurs once. It evidently perplexed the ancient copyists as much as it has done later commentators. It appears in the different manuscripts and editions as *babeuries*, *babeuwryes*, *babeweuries*, *rabewyures*, and *rabewynnes*. The latter forms, which are the ones now usually found in print, originated, without doubt, from the confusion of capital *B* with *R*. The illustrative quotations from other writers not only settle the spelling of the word, but also fix its meaning as "antic shapes" in architecture, which is the very sense the context in Chaucer may be almost said to require.

From the philological point of view this work is peculiarly strong. It is strong not merely for what it says, but for what it refrains from saying. The editor is utterly free from any desire to make conjecture take the place of knowledge in etymology, and the caution he shows in matters of derivation is a most welcome, and, we may add, a rather unexpected proceeding in productions of this kind. In truth we think so highly of the work as a whole, and of the manner in which it has been executed, that it seems a particularly ungracious task to call attention to shortcomings in details. The great merits of the dictionary so overbalance any petty defects that to speak at any length of the latter is liable to make the criticism misunderstood by the careless reader as well as resented by the careful editor. Yet, as was pointed out in the notice of Part 1, there are deficiencies in the work, some of which are doubtless slips practically unavoidable in an undertaking of this magnitude, but others of which seem to us to arise from the deliberate choice of a wrong method.

Naturally what would most attract attention at first in this country is the treatment of American usage. In this matter we are generally impressed with the accuracy of the work. We shall probably not be far out of the way in supposing that this state of things must be due largely to the supervision of Mr. Fitzedward Hall, whose valuable linguistic communications have appeared more than once in the columns of this journal. Whatever sins there are, are usually sins of omission. The feeling, too, comes over one at times, in examining the dictionary, that no great harm would have been done had this particular kind of sin been extended in some cases to the writers from whom the quotations have been made. The point of view, however, is everything in the matter of words as of usages, and our surprise at certain things which fail to appear as well as at some which do appear may not be shared by the intelligent Briton. Yet what member of the old anti-slavery party, with its forty years of bitter political agitation and the waste of wealth and loss of blood in the four years of war it indirectly caused, can help feeling a slight shock of amazement at not finding its title explained in the forty-two columns devoted to *Anti-* and its compounds, and barely recorded at the beginning as a specimen of a "synthetic combination"? What American, too, has not heard of the Argonauts of '49, the adventurers who, in seeking the shores of the Pacific, faced fearlessly perils greater than Grecian hero ever encountered, and direr than Grecian poet ever dreamed? Even some Englishmen must have heard of Bret Harte's 'Tales of the Argonauts'; but if they have, they have not thought fit to communicate their knowledge to the compilers of this dictionary. If these can be counted errors on the side of too little, there are others on the side of too much. *Approbate* for "approve," we learn, is "often used in the United States." The sole instance given is from the year 1849, where it is cited from the Proceedings of some Philological Society which seems then to have existed. We do not deny the verb "used," though we have never heard the word or heard of any one employing it; but we do deny the adverb "often." There is one singular instance of editing, which reminds us of the *logicize* of Bartlett's Dictionary. To an American authoress, Mrs. Whitney — whose writings seem to have been read for this work with special zeal, and to have contributed several formations previously unknown to the language—is credited the word *asideness*. To this is appended [U. S.] in brackets. Now the addition, if it means anything, means that the term is an Americanism. But in order that a term shall properly be called an Americanism, it ought surely to be used by a number of Americans, to say the least. It is an utter misapplication of its meaning to include under it the coinage of an individual writer, which is so far from being found in the common speech that it has probably never been heard or seen save in the productions of its originator. Moreover, if it be properly added here, it has been improperly omitted after *apparition* as a verb, and several

other words, to which there is precisely the same reason to append it.

Again, in the definitions of Americanisms there is sometimes a lack of precision, due to a lack of knowledge, which will be certain to mislead the ignorant reader who consults the work. *Barnburner*, for illustration, is given as a nickname of a section of the Democratic party in the United States. It was never employed outside of New York, and is now practically forgotten there along with many other similar terms which the faction fights in that State have brought into temporary existence. In like manner *banter* is given as a word used in this country with the sense of challenging to a race or shooting-match. To the vast majority of Americans it would be as strange a meaning as it could possibly appear to an Englishman. The authority from which these terms are taken specifies the places where they are used; and to neglect this limitation is as misleading in an English dictionary as it would be for a peculiarity of the East-Anglian dialect, for instance, to be credited in an American dictionary to the whole of England. But, after all, the most inexplicable thing in this work in its treatment of usage as found in this country is its failure to admit the spelling *armor* along with *armour*—a failure made more significant by the fact that it is careful to say that etymologically the spelling is properly *armure*. It is not a matter about which any one will be much concerned. In a language where every scholar recognizes the orthography as disreputable, the form given to a single word is not a thing to treat with special seriousness. Still, a fact is a fact, and it is the first business of a dictionary to recognize and record it. The fact in this case is that full one-half of the English-speaking race, if not more, spell this word as *armor*, and are likely to continue doing it; and it is no recognition of the fact to put this method of spelling among the variant forms which have been found from the thirteenth century to the present time. Webster and Worcester give only the form *armor*: they do not even admit the existence of *armour*. But a great dictionary of the language, such as is this, has no business to adopt national peculiarities and preferences, still less individual opinions.

This discussion leads naturally to the subject of possible divergences that already exist or may spring up between the language as used in England and in this country. To many readers it will be a surprise to learn that in the popular speech the "autumn" of the former country begins and ends a month earlier than that of the latter. There are certain senses of words put down here as archaic, also, which strike an American with some astonishment. One of these is the meaning of getting up from sitting or kneeling which belongs to *arise*. This verb, to be sure, is not so common with us as the simpler form *rise*; but that it never was anywhere in any period of its history. We venture to say that no one in this country would hesitate about using it in this sense, or would think it strange to hear it used by any one else. There are, indeed, many words which belong much more to the language of writing than of conversation, but it would certainly be questionable to register them as archaic simply because, after having belonged to the language of the latter, they had passed over almost entirely to that of the former. Again, have *apparel* and *assisting* ever been much employed in the spoken tongue? If they have not, is it not misleading therefore to represent them as they are represented here as going out of use? And while on this subject of possible divergences it may be worth while to say that in this country *apothecary* is only a 'druggist'; but we must add that it is impossible to make out from the definition found in this work what is his precise position in England.

It is on the purely literary side, however, that this dictionary displays any real weakness, and it displays that only by contrast with the strength of the philological treatment which characterizes it. It cannot be insisted upon too strongly that a great work of this kind, which is destined to remain a conspicuous literary monument for generations, should be not merely a record of usage, but of the very best usage. If a choice of two examples equally good has to be made, the greater author is to be selected in preference to the less. It is only peculiar appositeness that can justify appealing to the latter rather than to the former. The rule is certainly often violated in this dictionary, and possibly is not accepted. Were we disposed to felicitate ourselves upon the progress of what are sometimes supposed in England to be American ideas, we might point to the literary impartiality shown in this work as rather a striking illustration of their spread. Certainly the doctrine that one man is as good as another has never been more consistently and thoroughly carried out in the case of authors. If it be the main aim of a lexicographer to show the wealth of written matter that has been put under contribution for his work, such a course may be a fitting one. But if it really be, as it seems to us it should be, his aim to give in every instance the highest attainable authority for every usage of every word, it is not a course to be recommended. We cannot be expected to be thankful for a gift of pebbles, when pearls could have been furnished as easily. The fundamental principle to be adhered to in undertakings of this character is that all the works of all the great writers should be gone over most religiously; that the examination of them should be exhaustive; that no usage of theirs, no opinion of theirs on word or on usage, should be left unrecorded. Especially ought this rule to be followed in the case of words which are of comparatively rare occurrence. No quotation from an inferior author should, under such circumstances, ever be cited in preference. How much more weight would attach to *bacchanalias*, and *bacchanal* in the sense of "drunken orgy," with quotations that might have been taken from Milton and Dryden instead of the obscure writers of their times from whom the extracts given are derived! There is a special application of *avatar* in the title of the poem which contains Byron's terrific attack upon George IV., which ought to have found place here. "I rejoice," writes Gray to Walpole in 1751, "to find you *apply* (pardon the use of so odious a word) to the history of your own times." He corrects in another letter Walpole's use of *arrive* for "happen." This is the sort of literary opinion—entirely independent of its correctness or incorrectness—which ought always to be set down in a great national dictionary, whenever writers of the first authority have given expression to it. It is usually set down in this work; that it is not so invariably is doubtless the fault of the readers rather than that of the editor. Still, that there should be any failure at all, detracts somewhat from that satisfactory feeling of absolute trust in its completeness which we should all like to entertain. This demand for completeness, it is to be remarked, is asked only in behalf of the greatest authors. It is to deficiencies in their case alone that any criticism of ours is confined. While this dictionary nearly fulfils all that can be demanded, it does not fulfil it so perfectly that we can feel certain beyond all question that, in the treatment of any single great author's vocabulary, the last word has been spoken; we mean, of course, the last word in the light of present knowledge, and not in that of future.

Let us take Chaucer as an illustration. We specify him because he is an author who deserves special consideration, not merely for his position in regard to our early literature, but on account of the increasing interest which is now taken in his writings, and the neglect which his vocabulary has received from previous lexicographers. One explanation of a perplexing word has already been given; and this is far from being the only one to be found here. But along with this generally full and accurate treatment of Chaucer's language, there is occasional wobbling which at times leaves on the mind an unpleasant impression. Urry's edition is quoted; it is not an edition that deserves to be even looked into. In the "Knight's Tale," Venus, in the council of the gods, after the defeat of Palamon, her favorite, says, "I am ashamed douteles." She means of course that she has been brought into discredit by the result. This is a sense that is not recorded here, though it is fair to add that it is one which can be inferred from a signification given to the verb. In the "Man of Law's Tale," the famous crux, *atazir*, which baffled generations of scholars, and which has only recently been explained, is here conspicuous by its absence. The same is true of *apiked*, one of the words of the Prologue. *Avauntour*, not in the general sense of 'boaster,' but in the special sense of 'a boaster of female favor,' is not found. The use of *on* with *assent* ("Troilus and Criseide," ii, 1,300) is not recorded. We could give a few other instances in the treatment of the vocabulary of this one author which are not entirely satisfactory, but a very large number where insignificant writers of or near his period have been cited in preference to him. These latter omissions, which are doubtless made intentionally, seem to us serious defects. Not so the others referred to, which are far from being numerous at most, and against the occasional occurrence of which it would require almost supernatural insight and oversight to guard.

In the way of more general criticism we notice the failure to record the special use of *author* in the sense of 'editor.' This was certainly a common employment of the word during a large part of the last century. It is "to the author of the *Gentleman's Magazine*," "to the author of the London *Evening Post*," and all similar daily, weekly, and monthly periodical publications that communications were then directed. Occasional omissions occur of words used in the text. *Apple-jack*, we are told, is the name in America of apple-brandy, in the East of England of an apple-turnover. But what is an apple-turnover? The dictionary does not tell us, and while we can guess at its meaning, we cannot be certain of it. Under *aphis* it is said that the aphides are sometimes called 'ant-cows.' But he who meets with the latter word must know also its scientific name, for it has by itself no place or explanation in this work. Nor, coming to a question that belongs to philology rather than lexicography proper, do we believe that the preterite *aris* was derived from the past participle. The theory which originates forms like "sprung," "flung," and many others now in use, together with "smit," "ris," "aris," "strid," and others once employed but now discarded, from an intrusion of the past participle into the preterite instead of from the plural of the preterite, seems to us untenable. It is not implied by this that the participle had no influence, only that it is not from that quarter that the forms mentioned actually came. But the subject is too large to justify here anything beyond an expression of dissent.

There are other things of which we had purposed to speak, but we have left ourselves no space for their discussion. They concern, however, like most of what has gone before, only matters of detail, and do not affect the substantial value of the work, which can safely defy the most hostile criticism that is ever likely to be directed against it. This is, indeed, a dictionary that no one who seeks to make even the most su-

perficial study of our tongue can afford to be without. It cannot be long before the possession of it will be regarded as a necessity by every man of education; and in the confident assurance of the coming of that time, its projectors may rest satisfied that it will be as successful from the financial point of view as it is already honorable from the point of view of scholarship.

Vergebens. Roman von Maria Werkmeister. Chicago: Franz Gindele Printing Co. 1885. 244 pp.

It is written in the signs of the times that unless potential novelists shall have a new revelation, the plain story-teller must soon become a dodo of literature. The evil day is so near at hand that a volume of tales by Wilkie Collins is a boon to the host whose only conviction about the art of fiction is, that it was discovered, or invented, or decreed, by some beneficent being solely for the mental distraction of travellers through this working-day world. To the literary reader, no matter what may be his estimate of the intrinsic worth of Collins's stories, or of their rank as intellectual creations, there is pleasure in contemplating work done by a method clearly perceived and thoroughly mastered. Collins understands his own resources so exactly that scholastic warfare and dilettante counsel are alike impotent to disturb or to confuse him. Among the younger breed of novelists, who take their profession solemnly, the feeling about Collins is that "any fellow could do that if he would." The severe and binding character of his method is contemptuously ignored. There is no eagerness to discern that a mastery of it implies the possession of many unusual qualities, such as a correct sense of selection, accurate knowledge of the force of dramatic surprise and climax, and a nice judgment about the fitness of a word to its place. It demands, too, the power to perceive an inevitable end before the first paragraph is written—a power which the young fry apparently either consciously despise or have developed away from. Collins always proposes to himself a strange and unexpected dénouement, frequently an improbable or unnatural one. He invariably plays upon the inexhaustible reserves of curiosity, and from the beginning imposes upon his reader the obligation to discover the secret he holds, whether after all his secret be worth revealing or not. He knows, too, how to compel close attention, and is so ingenious in the contrivance of routes to his goal that, though they may be long, winding, and perplexing, they rarely fatigue. Only after the end is reached do we reflect on the lack of grace, polish, atmosphere, and proclaim that our taste has been violated, our sensibility shocked, by the author's pronounced mannerisms and intrusive eccentricities.

In his last volume, "The Ghost's Touch" and "Percy and the Prophet" develop the influence of supernatural agency on worldly affairs. Both have the author's distinguishing merit of method, and the latter has, in addition, two or three interesting characters. Mr. Blowmore, the eloquent advocate of the British citizen's rights, the protector of the unwritten Constitution, is almost a bit of burlesque; he certainly insinuates enough absurdity into the tale to suggest that all the wonderful occurrences narrated presented themselves to the author in a ludicrous light. The third story, "My Lady's Money," is excellent. In a degree it refutes the accusation that Collins in every instance sacrifices character to movement. Here the ten characters, including the terrier, "Tommie," are so distinct that they not only account for what they did and left undone under existing circumstances, but they convey a lively notion of what they would do in a totally different set of emergencies. Though the story is short, this effect is achieved without any evidence of haste or incompleteness.

Until Mr. Farjeon resolved to establish his claim to the title of novelist, by issuing a volume of fiction every two or three months, he was an acceptable story-teller, over-fond of calling on the rains to beat and the winds to blow a significant accompaniment to his drama, but still with something novel to say, and an agreeable way of saying it. He used not to appear so much like Dickens as he does now, or, at all events, he did not appear so much less than Dickens. The longest of his three recent volumes is the romance of 'The Sacred Nugget.' The scene is in Australia when the gold fever was at its height. Mike Patchett, the lucky finder of the cross-shaped nugget and of tons of precious ore, is Boffin reduced to bathos; Mrs. Whitmarsh is a colonial echo of Mrs. Wilfer; Mr. Horace Blakensee recalls Eugene Wrayburn and Mortimer, though neither of those gentlemen, peculiar as were their tricks to emphasize their social position, ever hit upon the distinguished device of incessantly polishing his finger-nails in public. In 'Self-Doomed,' the chief figure, Gideon Wolf, is introduced, labelled by the author, incomparable villain. The record of his uniformly wicked behavior reveals nothing to discredit the label, but is a wholly uninteresting confirmation of its descriptive truth. In 'Christmas Angel,' which is the best of the three because it has some sympathy and purpose, Farjeon expresses the philanthropic spirit of the times, as Dickens, in all his work, gave words to a tempest of humanitarian sentiment in the man. When Scrooge went off with the Christmas ghosts, he was wafted along by the strength of Dickens's personal desire that all the world should have roast-beef and plum-pudding on Christmas Day. When "Charlie's father" is led by the wraith of his son through scenes from which he awakens a sadder and wiser man, one feels that Mr. Farjeon is part of a "movement," and that he is thus contributing his share toward its advancement. If the imitation of Dickens were limited to catching up and carrying on his sympathy for suffering and his charity for sin, no word of adverse criticism could be spoken, but a copy of his melodramatic, sentimental manner is offensive. Dickens's versatility, his superb vitality, his inexhaustible spontaneity, place him beyond the canons of taste and form. His extravagances were his own, and their brilliant idiosyncrasy condoned their falseness. For that very reason he is the worst sort of a literary model.

The sketch 'Houp-là,' by the author of 'Bootles' Baby,' illustrates the best modern method of stimulating compassion for human misery and admiration of heroic qualities. It is a simple, straightforward, dramatic rendering of a bit of real life, in its movement subjecting character to the finest test. Bootles, who reappears, establishes himself as a figure in literature, a typical contradiction of the sneer that heroism went out with periwigs and ruffles.

If all the novelists who conceive the expression of a moral meaning to be the ultimate object of art, could convey their meaning as artistically as the author of 'Houp-là' (who, rumor says, is a woman), much splendid argumentative talent might pine and die for want of an attractive subject of discussion. But the numbers of tentative, uncertain, unskilful efforts bid fair to keep what the "Gamps" call "arguefiers" busy for many a day. The utilitarian fiction dedicated to the service of the Lancashire workingman is, in itself, a bonanza of disquisition. Mr. William Westall, in 'The Old Factory' and 'Ralph Norbreck's Trust,' has hesitated between the relative artistic values—or, can it be, relative drawing power?—of stern reality in Lancashire dialect and wild romance in glittering rhetoric. As a consequence, he has produced neither good contributions to social science nor blood-curdling adventure, and he has done nothing at all to relieve harassed inquirers into the mission and meaning of art.

Mr. Grant Allen, in 'Babylon,' has not quailed before the immensity of this problem, as far as it affects or is affected by painting and the plastic arts. The human interest in his novel is soon exhausted. Neither the American landscape painter, nor the Dorset peasant sculptor, nor any one of the more prominent characters, has a breath of the vitality imparted to Cecca, the queen of the Roman models. She is the conventional passionate, revengeful, unscrupulous Italian; but she lives, and in her alone the author shows power as a painter from the life. The curious reader, however, will turn over the pages twice to quarrel or agree with the art criticism, to be amazed and amused by the display of philological prejudice. Though there is no definite confession of faith, the essence of Mr. Allen's artistic creed undoubtedly is, that the highest, and indeed only considerable, object of art is to express beauty, and that that expression has reached perfection when the beauty of the spirit is made visible through the beauty of the form. The artist's moral lesson to humanity is taught through the spiritual elevation which contemplation of his work excites. Hiram Winthrop accomplished this mission by his sensitive paintings of his native woods and weeds and marshes; Colin Churchill, through the spiritualization of noble and heroic form in marble. It is easier to assent to Mr. Allen's creed than to approve his expression of it. The technical, critical phrases, strangely out of place in a novel, would be pedantic if they were not purely journalistic. Their unfitness is peculiarly noticeable, considering Mr. Allen's sensitiveness about the use and sound of words. What he calls the "Great American Language" has offended him deeply, and through the story runs a strain of peevish comparison between harsh, shrieking American corruptions, and "pretty, melting" Dorset dialect, dignified by the appellation "West Saxon of the Court of King Alfred." Preference of a burr to a twang is a matter of taste, but faithful reproduction of dialect is a matter of close observation and delicate perception of sound, and memory. After reading Mr. Allen's reproduction of the rural dialect of New

York State, one can define the imaginative passages of 'Babylon.' Some of his objections to verbal usages in America, though captious, are valid; but when he disparages *sick*, as an Americanism, one wonders if, for instance, he habitually reads Calphurnia's message to the Senate, "Say he is *ill*."

The opening scenes of 'The Unforeseen' are in a *habitan* village in the heart of the Canadian forests. The French Canadians are a comparatively unwritten people, and offer to the novelist a field where reality is almost one with romance and picturesqueness. Miss O'Hanlon, like several other novelists who have attempted it, begins very well, but abandons her fine opportunities for the attraction of conventional background to her figures. Though Mme. Vandeleur very soon loses her distinctive *Canadienne* personality, she is a clever and brilliant adventuress, and her career is logically drawn, from its obscure beginning to its despairing end. She is by no means typical, but she is possible. Claudia Estcourt, the contrasting figure, is typical, and though poetic justice may cry for the punishment of vanity, selfishness, and cruelty, a wide experience of life will commend the author's inflexibility. The novel is overladen with characters, and spun out, but it is carefully constructed, guided by taste and fine intention, and, moreover, it is interesting and enjoyable.

Such commendation cannot be given to 'Goblin Gold,' by May Crommelin, whose earlier novels promised a fair future. It is the threadbare story of a hypocrite who, attaching himself to a singularly ingenuous and generous man, drags him through a sequence of scrapes in order to oust him from his inheritance. This character is a survival. He is like the leering, hissing, hand-wringing villain still popular in melodrama, and unlike any human being that ever was.

His double appears in 'Primus in Indis.' The hero of this story is introduced hurrahing and intriguing for Prince Charlie. The machinations of the villain prevent the hero's being more than a handsome and somewhat noisy supporter of the bonnie Prince; so, as a soldier of fortune, he follows Clive into India. Here the number of his adventures is more striking than their coherency, and, after they are told, Peterkin's interrogation, "What was it all about?" springs naturally to the lips.

The supernatural incidents in the 'Rabbi's Spell' are a concession to Mr. Cumberland's reputation as a wizard. The tale of murder and retribution could have been told as well without them. The real motive is to expose and censure Russian officialism, and, eliminating pages expressive of bitter personal hostility to Russia and the Russians, the motive is successfully realized through the action. Several scenes are skilfully managed, notably those between Count Soltikoff and his subordinate, Nevikoff. In these the author gives a lesson in the diplomatic art of making your desires understood without saying one word compromising to dignity or honor.

'King Solomon's Mines' is a capital boy's book, to which the purely fabulous foundation is no drawback. The marvellous adventures of Captain Good and his friends in the land that lay beyond the "Suliman Mountains" appeal, through devices familiar and novel, to the healthy boy's ardor for fighting savages and coming off victorious, with the spoils of Golconda to boot.

'Nuttie's Father,' by Miss Yonge, is not intended for children only; it may be read at any age with a perfect sense of security that moral bulwarks shall not be assailed. It has all the amiability and sincerity which have endeared Miss Yonge to two generations, but the girl who goes up for the Cambridge examinations is too abnormal a development for her to grapple with. It is very edifying to hear that Nuttie is going in for "higher education," but we can only feel that she has gone in heart and soul for mild dissipation, sanctified by convictions about the saving grace of the High Anglican ritual, and that the quadrilateral of the tennis ground represents to her consciousness the purest mathematical beauty.

Encouraged, probably, by the reception of her novel, Charlotte Dunning has gathered a few of her short stories together into a volume, which has been issued as one of the numbers of "Harper's Handy Series." It takes eleven tales to fill out the 200 pages, and, as a rule, they are quite short, airy, and light; yet they strike one as being more than sketches, after all. Whatever may be the facts in the case, one feels in reading them that they were not dashed off with recklessness: they seem to show the finishing marks of a careful hand. It is entirely to this finish of form and an engaging delicacy of style that the stories owe their charm, for there is nothing strikingly original, new, or distinctive about them; in fact, there is a flavor of other writers to be detected in one or two of them that is just slight enough to escape the appearance of imitation. "Told Between the Acts" recalls immediately a form in which Balzac liked to cast his sketches. The author's fondness for making a plot of the simplest materials and for turning the story on the very slightest incidents is noticeable throughout, and one finds one's self wondering, when the volume is put aside, what there was in it that interested him; but the interest is there, nevertheless.

The story of Margaret Kent is neither a new nor a pleasant one. It is told with a certain degree of facility, however, that gives it the air of a commonplace, clever piece of fiction-writing. There is no lack of incidents or situations, nor of characters not well enough drawn to be worthy of praise, nor yet poorly enough drawn to deserve unqualified censure. The novel, in a word, is commonplace throughout; it is not quite sensational, nor is it quite simple and natural. It has violent contrasts, a brisk movement, and excites an interest of a sort; but it is not an elevating or worthy interest. One is at a loss to see what Mrs. Kent finds in Dr. Walton to make her love him; and her faithfulness to her worthless husband, who returns from South America just as she is on the point of asking for a divorce, is rather too much forced upon her by circumstances for us to give her any great credit—for Dr. Walton's disgusted and almost brutally passionate attitude when he discovers that she is not a widow, as he had thought her, leaves her no alternative. The final complication, when Dr. Walton's mistake is reversed—when she is really a widow and he thinks it is not her husband but the latter's cousin who is dead—is a needless piling up of improbabilities. From the character of the book as a whole, however, one is inclined to think that the author has tolerably succeeded in what he set out to do, and one remembers that

"Not failure, but low aim is crime."

'Vergebens' is a pretty story, of the quiet or domestic order, which contrives to be interesting and to leave a pleasant impression in spite of its familiar plot and incidents and the melancholy character of many of the scenes. From its being written and printed in Chicago, the reader might suppose that it dealt with phases of German-American life, which would have given the work a unique interest; but this merit the author by no means claims. It deals, in fact, with life in a small South-German town fifty years ago; the characters, the author explains, being described partly from memory, but partly also from tradition. That, with scenes so distant and incidents which, though neither realistic nor commonplace, have long been common property with writers of fiction, the author should have been able to infuse vividness and vitality into her characters, argues considerable powers of sympathy and discernment.

LAUGHLIN'S BIMETALLISM.

The History of Bimetallism in the United States. By J. Laurence Laughlin, Assistant Professor of Political Economy in Harvard University. D. Appleton & Co. 1886.

It was very important that, with the beginning of the silver controversy as a live issue in politics, there should be put within easy reach a collection of all the stores needed for such a campaign. Nobody can have failed to notice how, since the assembling of Congress, this question has gone to the front, passing by easy stages the civil-service and the tariff and all other questions in its claims upon public attention. Yet it has been a momentous question ever since the 28th of February, 1878, when the Bland-Allison bill was passed over President Hayes's veto. Indeed, the controversy started two or three years earlier, as soon as the decline of silver below our old ratio of sixteen to one was recognized as a permanent change in the relative values of silver and gold. The public mind, however, appeared to take a rest after the passage of the silver-coinage law; and although nearly all instructed persons saw that great mischief was impending, and many used their best efforts to arouse public opinion to a sense of the coming danger, they were not able to gain attention. Now, however, the ball is opened. Masses of people are for the first time really taking sides. All the signs point to a protracted struggle, at the end of which most assuredly the silver men will be worsted, although they may prevent any action adverse to the Bland dollar in the present Congress. The conditions are such that the opponents of the arbitrary coinage of silver must continue to fight, however often they may be worsted, and must fight all the harder the oftener they are worsted. No such stress is imposed upon the other side. On the contrary, the larger the accumulation of Bland dollars in the Treasury, the less reason is there for continuing to coin.

Professor Laughlin's work is an extremely painstaking collection and methodical arrangement of all the facts needed by the student, the statesman, or the editor to fit him for taking part in this battle. Along with the collocation of material we have a clear and dispassionate argument, not of the controversial sort, maintaining the views held by nearly all economists of the present day on the subject of monetary standards. It is worth mention that prior to 1876, when the extraordinary decline in the price of silver began, the subject of bimetallism had not been much considered by English or American writers. The old discussions which antedated the adoption by England of the single gold standard were forgotten. So also were the debates of our own statesmen, in their gropings after the truth, which they eventually reached in practice in the year 1853, but did not embody in the law until 1873. In the former year it was found that true "metallism" consisted of a gold standard with a silver subsidiary coinage, the bullion value of the latter being sufficiently below the money value to prevent its being melted and exported and the country thus left without any small change. The settlement reached in 1853 was the acme of human wisdom simply because it was the embodiment of human experience carefully noted, and noted, too, by the evidence of no little suffering.

Professor Laughlin supplies us with the history of this long pursuit after truth in all its details. Nothing more instructive can be found in the history of any country. Indeed, all countries go through a like experience at one time or another. The laws of political economy are laws because

they fit the whole world. The exceptions which are made so much of by the professorial socialists form interesting studies by themselves. It is vastly interesting to know why nations go to war and destroy life and property in such reckless fashion as we observe that they do, but it remains true that man's instinct is to save his life and his property, and that this instinct is so nearly universal that it may be resolved into a law. It will be interesting to know why the United States, after so much hard experience in learning the truth about the use of the two precious metals, abandoned it and adopted a practice utterly unknown and unexampled in the world's history—that of coining dollars on Government account. Monetary science is not concerned with this eccentricity. Political science is concerned with it by way of noting how a great people may follow an *ignus fatuus* into a Serbonian bog, and how they may toil back again after they have waded in it sufficiently. It is just as certain that the United States will come back to the single gold standard, with a silver subsidiary coinage, in law and in fact, as it was that all the nations of western Europe would come to that conclusion. The question now is whether we shall momentarily abandon the gold standard *de facto* before we turn our steps out of the bog.

As we have said, Professor Laughlin has grouped together all the scattered material of our own history, and nearly all that is useful from the history of other nations, to equip those who desire to enlist in the fight on the side of correct principles of finance. The arrangement of statistics regarding the production and coinage of gold and silver is especially valuable, presenting in graphic form the yield of the mines in each of the periods in the world's history marked by any unusual increase of one or the other metal, and also of the whole period from the discovery of America to the present time. It is not at all remarkable, but will be surprising to many readers, to observe how many of the otherwise inexplicable variations in the relative values of the two metals are accounted for by a glance at these charts, which are simply the setting forth of the law, or rather the facts, of supply. The other factor in the problem, the demand, is to be drawn from the history of commerce; and this, too, is supplied in due measure by the author. The two, taken together, make the law of supply and demand which governs the price of the one as measured by the other in all cases whatsoever. Incidentally, Professor Laughlin demolishes the most distinctive portion of the work of Mr. Dana Horton—that relating to the supposed disturbance of the equilibrium of the precious metals by the Bank of England's resumption in 1819—and gives the reader a strong impression of the superficiality of Mr. Horton's studies.

The only thing of importance that we miss from Professor Laughlin's volume is a chapter on the resumption of specie payments by Italy. This was a recent event of the first magnitude, pregnant with answers to many disputed questions of the sort which bimetallism has to do with. The appendices to the work are copious and well chosen. We wonder, however, why the table showing the coinage of the French mint stops at the year 1876. Surely they must have been doing something there the past nine years.

THE SHORTER PIECES OF FLAUBERT.

Œuvres Complètes de Gustave Flaubert. Tome vi. Trois Contes, suivis de Mélanges Inédits. Paris: A. Quantin; New York: Christern. 1885.

If it can be said of a reprint, we should say unhesitatingly that few more interesting books of literature have appeared last year, or will appear next year, than this latest and final volume of the eight volumes of Flaubert's works just issued by Quantin in his beautiful *ne varietur* edition. It is the only volume of the eight which could be put, by one who cares for Flaubert, into the hands of one who had not yet acquired a regard for him, with strong confidence that the general impression would be agreeable; and to those who value everything Flaubert has written, it is welcome as containing a considerable amount of material not heretofore published—though, as the new matter is mostly youthful work, its interest is chiefly biographical.

The volume opens with "Un Cœur Simple"—an extraordinarily vivid representation of the outer and inner life of a servant-woman, the servant of a widow in a small town. In force of imagination and power of expression this little tale could scarcely be surpassed. As a piece of writing it is very remarkable, and as a conception of a human existence its truth, spiritualized by its tenderness, and its tenderness invigorated by its truth, render it a masterpiece. It belongs to the same category as 'Les Reliques Vivantes' of Turgeneff, and to say that is to give it the highest praise.

The next tale is the legend of St. Julian Hospitaller, told with the utmost directness and simplicity, and with an astonishing *naturalness* of rendering, manifesting the supreme dramatic gift of living the life conceived. In Flaubert's case this gift has power to communicate itself singularly to the intelligence of the reader. Not only his own mind transmuted itself into that of the servant or the saint, feeling what they must have felt, seeing what they must have seen, senseless to all things not perceived by them, but we, too, see, feel, suffer, triumph, in their persons. This is largely an effect of *style*. Phrases, pages, in which every word rings true to the thought, stamp on the reader's mind so unusual a clearness and vividness of impression that one can scarcely distinguish it from a spontaneous act of the mind itself. The mingled conciseness and lingering of Flaubert's manner increase this intimacy of sympathy. When he is in the presence of what is familiar, he but glances at it and passes on, speaking only the necessary word to make it visible to us; when he encounters what is peculiar to the moment or the individual he pauses, watches, waits, gazes, intently listens, and, so gazing and listening, delivers those cadenced and magic utterances which create the universal out of the particular, the ideal out of the real, and art out of nature.

The third tale is the story of the death of John the Baptist (under his name of Iaokanann), considered as an incident in the accompanying historical movement. It is perhaps less successful than the other two, but the three together form a very perfect reflection of the three faces of Flaubert's mind—his observation of the present, his study of the past, and his leaning toward the supernatural; and their merit seems all the more apparent from the restriction of their compass.

These tales are followed by a preface (published in 1870) to a posthumous collection of the verses of Bouilhet, between whom and Flaubert existed the closest friendship—admirably expressed by this paper. Its quiet reserve gives great dignity to the feeling pulsating through it and vivifying it, and ennobles the outburst of emotion with which it closes. As if counselling two friends connected by such ties as had just been severed for himself—

"When one of them dies," he says, "let the other preciously cherish his memory as a rampart against all that is mean, as a succor in moments of weakness, or yet more like a household place of prayer where he will go to breathe out his sorrows and to ease his heart. How many times, at night, looking into the shadows behind that lamp which was wont to shine on both their brows, he will vaguely seek an indistinct form, almost questioning it, 'Should it be thus? Shall I so do? Tell me.' And if this remembrance is the eternal nourishment of his pain, it will be at least companionship in his loneliness."

We are obliged by honesty to confess that we have assumed a misprint in the text: the use there of the feminine form of the adjective in the clause "prête à l'interroger" would make the shade ("l'ombre") the questioner. But a similar misprint of "il" for "elle" on a subsequent page perhaps justifies us, and our rendering of the passage is borne out, in spirit at least, by the tone of Flaubert's letters during the months immediately following Bouilhet's death. "In losing my poor Bouilhet I have lost . . . one who saw my thought more clearly than I myself. His death has left for me a void of which I am every day more conscious." Again: "I feel no longer the need of writing, because I wrote especially for one sole being who exists no longer." He adds (it is to Mme. Sand): "You say to me things which are very beautiful, and very good too, trying to restore my courage. I scarcely have any, but I act as if I had, which perhaps comes to the same thing." For a long while—perhaps always—afterward it is evident, to use his own phrase (in 'Madame Bovary'), "il se sentit triste comme une maison démeublée."

In a letter written while composing the Preface, Flaubert says: "The difficulty is to know what not to say. I shall allow myself the relief of blurting out two or three dogmatic opinions on the art of writing; it will be an occasion to express what I think—a pleasure which I have always denied myself." These opinions are so inwoven with criticisms of his friend's work that they are not quotable, but they are well worth reading and considering. For the most part they are amplifications of the thought which La Bruyère declared in these terms: "Il faut exprimer le vrai pour écrire naturellement, fortement, délicatement."

Of the remaining half-volume, a hundred and fifty pages are occupied by hitherto unpublished sketches of a three months' walking tour in Brittany in 1847, when Flaubert was twenty-five years old, and ten pages by notes written on the Nile in 1850 (which appeared in *Le Gaulois* after his death). The Brittany sketches are eminently picturesque, and effective with touches of historical reminiscence, imaginatively treated, which produces an unusual and poetic mingling of past scenes with present ones. On one page is the funeral service of a poor fisherman, on another the bed of Diana of Poitiers, on another the "bagne" of Brest, and next the daring surprise of St. Malo in 1589—in "that prodigious sixteenth century . . . when the episode stands sharply out from the history, and yet holds its place in it in a marvellous fashion, brightening its colors and widening its horizons." He pictures brilliantly that period when, "even if we disregard the things visible at first glance, the beliefs cracking to their foundations like crumbling mountains, the new worlds discovered, the lost worlds unburied, Michael Angelo under his dome, Rabelais who laughs, and Shakspere who observes, and Montaigne who meditates—where shall we find elsewhere more development of passion, more violence of courage, more eagerness of will, and finally a more complete expansion of liberty, circling and beating up against all native fatalities?"

It was in these Brittany wanderings "par les champs et par les grèves" that Flaubert first drew the portrait of the beggar who ten years afterward was to be so conspicuous a figure in 'Madame Bovary.' Here, too, he came across an attempted assassination of two women, and gave them his services as a surgeon.

The Nile notes are less interesting, less simple,

less thoughtful, more personal; and, concerning themselves rather with souvenirs of French life than with records of Egyptian days, they are lacking in picturesqueness.

Flaubert's enthusiasm for the sixteenth century gives special interest to an essay on Rabelais among these "mélanges inédits." It is undated, but probably belongs to the author's early years. It is not only a criticism of Rabelais, but of the judgments passed on his work by the sixteenth, seventeenth, and eighteenth centuries; thus setting forth its relation to its own age and the following ones with point and vigor. It is a careful study, but not an important one. One of the noteworthy thoughts in it is this: "Great writers are to the world of ideas what capitals are to kingdoms: they receive the influence of every province, of every individuality, and, mingling with this what is personal to themselves and original, they amalgamate it, they arrange it, giving it back transformed into art."

The remaining papers are valueless but powerful fragments from three of the many works Flaubert left in manuscript. Two of these three are dramatic rhapsodies on Death and Sin, Time and Eternity; but there is a list also of some dozen romances and tales, half-a-dozen historical essays, and several other more or less finished performances, all written from 1835 to 1843. It was not till 1857 that 'Madame Bovary' appeared, and though that cost him five years' work and he put an interval of six or seven years between that and each of his two next works, one is curious to know what, besides 'Madame Bovary,' occupied him in the fourteen years between the dates of the last manuscript and the first publication. The forthcoming volumes of his correspondence may perhaps inform us. The precocity of his talent, and at the same time its shrinking from publicity, were almost as striking as its force in maturity; it is evident that the passion for perfection of form, which was his life-long inspiration, moved him from the first. Such a passage as this is certainly remarkable for a youth of twenty years, and it must be remembered that it loses greatly by translation:

"I loved life, but life expansive, radiant, irradiating. I loved it in the wild gallop of horses, in the twinkling of the stars, in the movement of waves flowing toward the shore. I loved it in the throbbing of beautiful naked breasts, in trembling looks of love, in the vibration of the strings of a violin, in the rustling of oak trees, in the setting sun which gilds the windows and carries the thought to the balconies of Babylon, where queens leant and looked upon Asia."

This was his emotion at twenty, and at fifty *this* (in yet more untranslatable phrases):

"As for me, poor wretch, I am glued to the earth as if by leaden sandals; everything agitates me, lacerates me, destroys me, and I vainly strive to climb up higher."

"Sed quia semper aves quod abest, præsentia temnis,
Imperfecta tibi elapsast ingrataque vita."

John de Witt, Grand Pensionary of Holland; or, Twenty Years of a Parliamentary Republic. By M. Antonin Lefèvre-Pontalis. Translated by S. E. and A. Stephenson. 2 vols. Boston: Houghton, Mifflin & Co. 1885.

PIETER SIMONS'S work on the Grand Pensionary bears the title, 'Jan de Witt en zijn Tijd'; James Geddes's, 'History of the Administration of John de Witt,' etc.; M. Lefèvre-Pontalis shows by his sub-title still more distinctly that the theme is historical rather than biographical. And yet the Grand Pensionary is not the representative of a government or of a period, but the chief actor in a grand political drama—a leader, a combatant, and a victim. He is a man of surpassing intellect and ability, of indomitable energy and resolution, and of spotless civic virtue; and his end is as tragic as any recorded in history, modern or ancient. What induces his recent biographers to merge his life in his times is in part the scantiness of materials illustrating "the social, non-political, non-official side of him (the human side of him, in short"), as Mr. Geddes expresses it, and in part the ease with which the mountains of documents and correspondence left by him enable his biographers to connect almost every day of his public life with the doings and schemings of the leading statesmen, diplomats, and princes of his age. John de Witt loses in biography, as a striking individuality, by the constant association of his name with Cromwell, Charles II., Louis XIV., and the young William of Orange, whose antagonist he was successively, as well as with the rulers, princely or official, of Spain, Sweden, Denmark, Brandenburg, and the Empire, whose aid he managed to secure for the United Provinces. Besides, the Grand Pensionary was a mighty man of the pen only, and though he did not shrink from risking his life under the naval flag of his republic—when he thought it expedient to follow it as commissioner—his quiet achievements were eclipsed by the deeds of Tromp, of Ruyter, and even of his own brother, Cornelius. No page of the two volumes before us shows John de Witt in as heroic an attitude as that in which Cornelius appears at the side of Ruyter, in the naval battle of Solebay, very shortly before the day (in 1672) on which both brothers were to be torn to pieces by an infuriated mob of Orange men:

"The courage shown by Cornelius de Witt was no less worthy of admiration [than Ruyter's]. Ill, suffering from rheumatic pains in his arms and legs, but triumphing by the strength of his mind over bodily weakness, he took his place close to Ruyter near the helm. Incapable of standing, he had a chair brought to him bearing the arms of the republic, and sat there as if in the seat of government, to give the signal of command and to share at the post of honor the dangers of the crew. In order to represent with dignity the sovereignty of the States General, whose delegate he was, he was escorted by twelve guards carrying halberds; three fell wounded at his feet, three more were killed, and their bodies thrown into the sea. Careless of the balls that were falling round him, having already dedicated his life to the service of his country, he remained calm and immovable on the deck till the close of the day. . . ."

John was no less patriotic and no less firm, but, unfortunately for his stature in a Pantheon, his "diplomatic despatches alone, at three sous a sheet, had in twelve years been worth 4,900 florins to his principal clerk." He was also too economical in the service of the State as in his thrifty household—"the cost of copying . . . he had reduced from four to three sous a page"—too balanced and free from ostentation, too religiously domestic, to make a shining figure. His excellent wife, whom he lost early, and his children reflected in their plainness no lustre upon his home circle. The highest trait in the character of the family was their resignation, in which Roman and Christian fortitude appeared blended. Cornelius, tortured on the rack, shamed his judges into abandoning the false accusation of his having conspired against the Prince of Orange; and when the two brothers were soon after massacred, not only their sister, Johanna de Zwyndrecht, evinced a spirit undisturbed by fear and despair, but her firmness was surpassed by that of Cornelius's widow, Maria Hoeuft.

"The next day, as she was returning to Dordrecht, she met on the boat a passenger just come from the Hague. He had been a witness of the scene, and gave an account of it to the bystanders, winding up by exhibiting a finger which had been cut from Cornelius de Witt's hand.

"Maria, who had listened in silence, advanced towards him, and asked to look at the finger which he was showing. She examined it with reverent attention, and said suddenly, 'This finger was yesterday still on the hand of my beloved husband—I know it well.' At these words the passenger, who had not expected to find himself face to face with the victim's wife, fell down overwhelmed with emotion, and all who were with him on the boat were struck with pity, whilst Maria remained calm and collected in her sorrow."

It should not be inferred from our extracts that the history before us abounds in striking delineations of scenes, situations, and character. Far from it: it is a diplomatic history, full of lengthy and occasionally tedious, though always instructive, accounts of negotiations, debates, and changing political phases, and often overladen with details more apt to obscure than to amplify the narrative—a defect which the work shares with too many historical productions of our time. On the other hand, the French historian of De Witt is fortunately free from his English contemporary's, Geddes's, excessive "lack of enthusiasm for his subject, and the coldness, both of his judgment and diction," which we have had occasion to remark upon before (*Nation*, No 837). M. Lefèvre-Pontalis would never have said, like him, "The period . . . is not an heroic period, and John de Witt is in no sense a hero"; nor, in summing up the main activity of the Grand Pensionary—in opposing the centralization of Dutch power in the hands of an Orange stadtholder—"This surely was poor work, even taking it at its best." He sees in him a statesman who not only faithfully served his country and liberty, but who secured the former a place in the highest rank of European policy, and firmly established the latter—"a man of worth greater than any mere statesmanship, and character higher even than his talents." His work was good, and did not perish with him.

"The ineffaceable traces left by the long ministry of John de Witt were useful in keeping up the fidelity of this attachment to tutelary institutions. The power which he had exercised for twenty years bore without detriment the supreme test by which a good government is recognized, which even after downfall seems to live again in the benefits it confers. Before the United Provinces, threatened with the loss of their independence, had appealed to the Prince of Orange to save them, the Grand Pensionary of Holland had placed them out of the reach of the usurpations of a despotic power by accustoming them to rule themselves."

The Lives of Robert and Mary Moffat. By their son, John S. Moffat. With an introduction by William M. Taylor, D.D. With portraits and maps. A. C. Armstrong & Son. 1885. Pp. xix, 484, 8vo.

AMONG the persons sent out by the London Missionary Society to South Africa in the year 1816 was a young Scotch gardener named Moffat. The son of a customs officer in humble circumstances, he was early accustomed to severe toil and privations. The want of a regular education was of little moment, as from a boy "he had a craving, which clung to him through life, to learn something of whatever he came in contact with." After a short delay, the lad (he was but just twenty-one when he landed) was sent to the kraal of the noted outlaw chief Afrikaner, who had for many years been a terror to the colonists, but had now consented to receive a missionary. During the year spent at this station Moffat gained an extraordinary influence over the natives, as well as the strong personal attachment of the chief. This was owing in part to his noble presence, his singularly winning face and manner, but more to the perfectly fearless confidence and honesty with which he treated them. The Government was not slow to recognize this influence, especially after seeing the change wrought upon Afrikaner, whom Moffat had persuaded to accompany him to the Cape, and "imperious" proposals were made to him to become Government missionary to the Kaffirs. This invitation was declined in order that he

might continue the work he had begun among the Bechwanas.

In 1819 he was married to Mary Smith, a daughter of a former employer, and a person admirably fitted to be his companion. Her courage was proof against every danger. Her faith was unfaltering, and her devotion to the missionary work equal to his own. They made their home on the banks of the Kuruman, nearly four hundred miles beyond the then border of the colony, and in a few years, under their fostering care, the desert began literally to "blossom like the rose." The civilizing influence of neat houses, and gardens filled with fruit trees, upon the natives, however, was long unattended by corresponding religious results. The brutish savages, untouched by the devotion of their teachers, seemed deaf to their appeals, and for ten years they labored without a convert. Nevertheless, their confidence in the truth of their Gospel message never wavered. At a time when there was "no glimmer of the dawn," a letter was received from a friend in England "asking if there was anything of use which could be sent." The answer of Mary Moffat was, "Send us a communion service; we shall want it some day." It came three years later, the day before the first converts were baptized. About this time Moffat undertook to provide a literature for his flock, and after thirty years of frequently interrupted labor, he had translated and printed the Bible and several other books in the Bechwana language. He made, also, numerous journeys both to the coast and into the interior, to gain the confidence of the natives, to secure openings for missionary work, to mediate between hostile tribes, and to prevent raids upon the white settlements. These journeys were never unattended by dangers, and were often exceedingly tedious. Twice Mary Moffat was detained more than a month on the banks of the Orange and Vaal Rivers, waiting for the waters to subside sufficiently to permit wagons to cross. Lions were very numerous and bold, besieging the travellers at times and destroying their oxen, while during the journeys into the interior the peril from bands of marauding savages was never absent. It was a trying life, in which the frequent and long separations of husband and wife, and parents and children, were the hardest to bear.

In 1839 a much-needed rest was taken in a visit to England, during which time the New Testament was printed, and Moffat, besides continuing his work of translation and delivering numerous missionary addresses, wrote his 'Labors and Scenes in South Africa.' After four years spent in this manner they returned to their station and were met on the banks of the Vaal by David Livingstone, who "had ridden from Kuruman, a distance of a hundred and fifty miles, to bid them welcome." The references to their future son-in-law are comparatively few, but they are sufficient to show that while the attachment between him and the Moffats was very deep, his giving up the missionary work for that of an explorer was a grief and disappointment to them. Livingstone, on his part, shared in this feeling to such an extent that he supported a missionary, to be his deputy, as it were, out of his own private resources, devoting "more than a fourth of his Government salary to this object." The old life, with its multitude of pursuits, was taken up again. Gordon Cumming, the famous hunter, who passed through Kuruman on his way to the interior, says of Moffat: "Minister, gardener, blacksmith, gunsmith, mason, carpenter, glazier, every hour of the day finds this worthy pastor engaged in some useful employment." The most interesting episode of this part of his life was his third and last visit to the noted chief Mosilikatse, who had conceived an extraordinary affection for him. When he reached the chief's house, Moffat says, "I entered: he grasped my hand, gave one earnest look, and drew his mantle over his face. It would have been an awful sight for his people to see the hero of a hundred fights wipe from his eyes the falling tears. He spoke not, except to pronounce my name, Moshete, again and again. He looked at me again, his hand still holding mine, and he again covered his face."

In 1870, having completed a half century of work in the missionary field, the aged pair returned to England, Mary Moffat to die shortly after she landed, Robert Moffat to receive public honors such as probably no missionary in our time has ever received. The Queen twice sought an interview with him. The University of Edinburgh conferred the degree of D.D., the Corporation of London the freedom of the city upon him. Dean Stanley invited him, a Wesleyan, to speak in Westminster Abbey. The Lord Mayor of London gave him a public breakfast at which the Archbishop of Canterbury made the principal speech. And yet he had done no great work, had made no important discoveries, but had simply devoted his life to the welfare of an obscure tribe of savages. It was the missionary, not the man, whom his countrymen delighted to honor. He died in 1883, in the eighty-eighth year of his age.

The editor of this deeply-interesting biography, the son and successor of Dr. Moffat in his missionary work, has done his part well, though he has passed too briefly over the earlier part of his father's life, under the mistaken impression that his readers would be familiar with it from Dr. Moffat's own account. The burning questions of Cape politics are barely touched upon, but enough is said to show that Dr. Moffat was most strongly opposed to the giving back of the Transvaal to the Boers, and also to the Zulu war. The numerous letters which the editor gives show both his parents to have possessed, in addition to very earnest piety, considerable powers of description as well as a vein of strong common sense. Some of the expressions in them strike us as very felicitous, as, for instance, in speaking of his frequent interruptions, Dr. Moffat says, they "dart on one with the uncertainty of a shooting star, and render the appropriation of time as devious as the flight of the bat." The two maps of South Africa in 1820 and 1884 are very meagre, many of the places referred to in the narrative being left out. It is often difficult on this account to trace Dr. Moffat's journeys into the interior.

New India; or, India in Transition. By H. Y. S. Cotton, Bengal Civil Service. London: Kegan Paul & Co. 1885.

THIS little book is an earnest and well-reasoned plea for the concession of a large measure of political liberty to the people of India; and the argument derives additional weight from the fact that Mr. Cotton is a member of the Anglo-Indian bureaucracy which at present rules over India with virtually irresponsible power. The need for some change must be very urgent, indeed, when a member of the Bengal civil service does not shrink from pressing upon his countrymen the propriety of such radical alterations in the established order of things as are recommended in 'New India.' Of the profound importance of the subject discussed by Mr. Cotton there cannot be two opinions. The problem in process of solution is whether or not it is possible to graft upon Oriental minds the practical capacities of the West, and upon the immobility of Oriental institutions the progressive and adaptive attributes of European civilization. Should this problem be worked out successfully, then there can be little doubt that the new life breathed into the people of India will gradually extend itself over the entire continent. If, on the contrary, the experiment fails here, "the light of Asia" will be, as it were, extinguished.

The great delicacy and difficulty of the existing situation are due to the fact that it is a product of two antagonistic influences which have been operating in British India for the better part of a century. As a result of one of these influences, the British Administration has become more centralized and despotic than before, and, consequently, a great deal less susceptible to the currents of native thought and feeling. As a result of the other, the most energetic, able, and aspiring portion of the people have become inspired with ideas and opinions which cause them to feel an alien despotism as a grievous injustice and an almost intolerable burden. In the earlier days of the East India Company, British power in India was the newly sprung authority of one band of adventurers among many. When Hyder Alee ruled in Seringapatam and the Mahratta Peshwas at Poonah, the struggle for empire was still a doubtful one. Indeed, but for the alliance of other native States, it is not improbable that the company of English merchants might have succumbed to the forces arrayed against it. Such a relationship between the two races had the effect of bringing Englishmen and Indians together upon a footing more nearly approaching equality than has been possible since the former became the one unquestioned and paramount Power throughout the Continent. Then, again, the effect of British rule has been to destroy the ancient aristocracy, and to grind down all classes to one dead level of helplessness and poverty. This levelling down of society consigned the two or three English officers in each district to an almost unbroken solitude, so far as the body of the people was concerned. They were brought into direct contact with the criminal classes, and they maintained of necessity certain formal relations with their own native subordinates; but they lived cut off from all that knowledge of the people and the country which is obtainable only in the free and equal intercourse of private life. It was this long-continued isolation which gave rise to those grotesque conceptions of native character which are prevalent among Englishmen in India, and which have received literary expression in the description of the Bengalese to be found in Lord Macaulay's essay on Warren Hastings. They ascribed to the people in general the same characteristics which most impressed them in the two classes of which alone they had any direct experience. Because the petty native officials, liable to dismissal and ruin at any moment from the caprice or ill-temper of their English superiors, endeavored to secure their position by sycophancy and obsequiousness, therefore manliness and independence of spirit were qualities not to be found anywhere in India. Because the complicated procedure of English law courts fostered a vast amount of perjury in those who had to appear before them, therefore *all* natives, in all relations of life, were wholly actuated by a spirit of lying, treachery, and deceit. These opinions, loudly and repeatedly expressed, had the natural effect of compelling sensitive and self-respecting natives to hold aloof from the society of their English rulers. They could not, in truth, venture into it except at the risk of being grievously insulted. And though few sensible Englishmen, at the present time, continue to speak or to think in this outrageous way, the gulf which was then dug between the two races is still very far from being filled up.

"The really best men," Mr. Cotton says, "among the natives of India who influence opinion and lead society, . . . do not care to make the acquaintance of Government officials

if they can help it, and they do not thrust themselves on the Government. . . . Englishmen hear little of them, and the Government, as a rule, knows them not, but their names are household words among the homes of the people."

These leaders of the people are at present a rapidly increasing class, owing to the spread of English education. No one at all acquainted with the Indians can doubt the activity and acuteness of their minds; and when Western knowledge was placed within their reach, they devoted themselves to its acquisition with a passionate eagerness. But, as Mr. Cotton has acutely pointed out, this Western knowledge did a great deal more for the people of India than inspiring their leading spirits with new political ideas and methods of language. It provided them with a common language, and, in so doing, removed the great impediment which checked the growth of a national feeling:

"No other bond of unity was possible; the confusion of tongues was an insuperable obstacle. But now the English language is established as the channel through which the fire worshippers of Bombay and the Baboos of Bengal, the Brahmins of Madras and the Mahrattas of Poona, the Pathans and Rajpoots of Upper India, and the Tamil and Telugu-speaking races of the other extreme end of the peninsula, are able to meet on one common platform, and to give expression to their common interests and aspirations. . . . A quarter of a century ago there was no trace of this; the idea of any Bengalee influence in the Punjab would have been a conception incredible to Lord Lawrence. Yet it is the case that during the past year the tour of a Bengalee lecturer, lecturing in English, assumed the character of a triumphal progress; and at the present moment the name of Surendro Nath Banerjea excites as much enthusiasm among the rising generation of Moultan as in Dacca."

Here, then, are the two antagonists who must be induced to work together in harmony if the structure of British power in India is not to be shattered by internal revolution. On the one side there is a ruling caste of foreigners who have hitherto enjoyed a monopoly of place and power, and a complete immunity from criticism; on the other, a yearly increasing proportion of the subject people whose intellect, ambition, and independence of spirit have been trained, educated, and equipped with appropriate weapons by the ruling caste itself. By the educated natives themselves there is nothing more earnestly deprecated than a violent solution of this difficulty; and so long as they retain their ascendancy over their countrymen, internal peace and order are secure. But unless the Anglo-Indian bureaucracy is prepared to surrender a portion of its power, there must come a time when this ascendancy will be snatched from them to pass into the possession of more daring and adventurous spirits. And so far, all the indications show that nothing short of compulsion will persuade the bureaucracy to yield one jot or one tittle of its authority. Again and again, in royal proclamation and Parliamentary resolution, has the principle been affirmed that the service of the state in India is to be thrown open to all British subjects, without regard to their race, color, or religion; but they are uttered to deaf ears so far as the ruling bureaucracy is concerned. The pledges thus solemnly given to the people of India remain unredeemed to this day, and will remain so forever, until some force is applied to the English in India which they are unable to resist. If the nation at home fails to apply that pressure there, it will certainly, sooner or later, be applied after a very destructive fashion by the people of India.

Mr. Cotton urges upon his countrymen to be wise in time. They profess to have been educating the people of India for the duties and responsibilities of self-government. The period of education he considers to be now past, and the time to have arrived for fulfilling, at any rate in part, the hopes and the promises which have been held out to them. The future of India, he is of opinion, will be a federation of independent States cemented together by the power of England; and it is toward that issue that English effort in India should be directed:

"Years must elapse, generations may pass away, before we can expect the consummation of the policy I advocate. But it is a policy which we should always keep before our eyes, to which all our efforts should converge. Sooner or later India must again take her old rank among the nations of the East, and all our action should be devoted to facilitating her progress to freedom. Not in mere vague talk, but strenuously and of set purpose, it should be the principal object of our Indian Government to address itself to the peaceful liquidation of its concerns, and the reconstruction of native administrations in its own place."

Traité d'Épigraphie Grecque. Par Salomon Reinach. Paris: E. Leroux. 1885.

THE last few years have been marked by an increased attention to epigraphy. Of the importance of epigraphic studies there has never been any question among scholars, but the interest has been much heightened of late years, so that the caution which Dr. Jowett expressed in his 'Thucydides,' that "in any sound study of ancient Greek inscriptions we must be prepared for slender results," grated harshly on a large class of enthusiasts. This increased interest is due to increased exploration. Without exploration there can be no deep professional interest, no contagious enthusiasm. The palæographer and the textual critic need not be one, but without palæographic vision the textual critic is sure to flounder. So the multiplication of explorers has greatly increased the number and zeal of the students of epigraphy. The inspection of the monuments themselves gives a sense of immediateness that nothing else can give. It is one thing to read in Grote of the famous inscription which commemorates the citizens of "the Erechtheid tribe who were slain in one and the same year in Cyprus, Egypt, Phœnicia, the Halieis, Ægina, and Megara"; another thing to be brought face to face with the stone itself in a corner of the Louvre. But wholly apart from this intangible and imponderable element, the value of inscriptions has never been so much appreciated as it is to-day for the fruitful study of morphology and phonology; and the testimony of the stones is the most important testimony we can have as to the life of the classic languages, especially of Greek. And though it must be confessed that it is hard to read anything into or out of many inscriptions, the most insignificant fragment may contain a most momentous fact for the student of dialect, of lexiology. Ephebic inscriptions are not exhilarating: the lesson they convey is soon learned, and the official style of Egyptian Greek soon ceases to amuse; but, as if to reward the zeal of the modern epigraphist, new treasures are always turning up, as, for instance, the great find at Gortyn in Crete, which is fresh in the memory of our readers, and which is as full of interest for the student of law as for the student of Greek life and language. Americans have not been content to be passive recipients of European learning and research in this province, and no book on Greek epigraphics is complete without a reference to the work of the Assos expedition, to the explorations of Doctor Sterrett, to the interpretations of Professor Merriam and Professor Allen.

Once, in order to get a notion of Greek inscriptions, it was necessary to handle the ponderous tomes of Boeckh's monumental work, and it is still true that no compendium can ever take the place of the publications of the Berlin Academy. All students—yes, even beginners—should be encouraged to make themselves personally acquainted with the great folios of erudition as well as with the manifold handy books that meet the immediate need. And yet manuals are necessary for daily use, and Cauer and Dittenberger and Kaibel and Roehl and Hicks and Collitz and his associates have made admirable collections from different points of view. Of books for reading, for practice, there is no immediate lack. What M. Reinach has undertaken to supply in the present volume is a work that shall replace the 'Elementa' of Franz—an admirable treatise, which unfortunately has become rare, and which in the advance of epigraphic knowledge and of epigraphic appliances has also become in a measure antiquated, though it is much to be doubted whether a good book ever becomes really obsolete. M. Reinach tells us that the famous epigraphists of Europe have declined the task; they have not dared put to the touch "the reputation slowly acquired by monographs that have been more praised than perused." And so he has come to the rescue. As he well says, a man who published a Manual of Classical Philology at twenty-one cannot plead modesty at twenty-seven, and so we have the 'Traité d'Épigraphie Grecque'—not only a work of astounding industry of the bibliographical sort (M. Reinach has prepared us for being astounded), but a book full of life and freshness. We are not always ferreting among dusty periodicals and forgotten magazines; we are not always straining our eyes over faint photographs and unsatisfactory squeezes. We are in the free air, climbing ruins, wading mill-races, liberating the fine old stone from a coat of envious plaster, or cajoling some secretive Greek or speculative Turk to guide us to the hiding-place of some epigraphic beauty. M. Reinach, to be sure, does not go into the details that make Schliemann's narrative so quaintly personal, but we feel everywhere that we are favored with the bright presence of a man who has lived what he writes.

After a fairly long introduction, in which he gives an account of the *raison d'être* and plan of the book and a general letter of instructions to the beginner in epigraphic exploration and study, M. Reinach presents us in two chapters with a translation of Mr. Newton's admirable Essay on Greek Inscriptions, accompanied with many notes of his own, which bring the bibliography down to the most recent times. Then follows M. Reinach's own special contribution, entitled "Traité des Inscriptions et des Formules," in five chapters, comprising the history of the Greek alphabet, the orthography and grammar of the inscriptions, inscriptions in general, public acts, miscellaneous and private inscriptions, a chapter of miscellanies on eras, names, and the like, with addenda and corrigenda, in which the latest numbers of European and American journals are diligently used.

This is not the place for detailed criticism of a work which, by its very nature, presents numberless points on which malignity might fasten. How is it possible that a false date, a false reference should not have crept in, that some Dryasdust memoir should not have been overlooked? It is a book for which all those who need guidance will be duly grateful, and not least for the sharp tone in which the author summons the goodly fellowship of epigraphists to the manifest though painful duty of appending translations to the inscriptions which they publish. The omission of such translations, he says, "is a very bad habit, which leads many people to publish what they do not understand, and to dwell in their commentaries only on those passages which they can make out. Nothing is omitted except the difficulties, and as these are passed over adroitly in silence, the kind reader who does not understand imagines either that he is very ignorant or that the editor is more erudite than himself." It is the old evil of school editions of the classics transplanted

to a higher sphere, and M. Reinach does well to expose it.

Institutes of Logic. By John Veitch, LL.D., Professor of Logic and Rhetoric in the University of Glasgow. Edinburgh: William Blackwood & Sons. 1885. 8vo, pp. 551.

THE first question that a man should ask himself when he thinks of writing a book on logic is, Have I thoroughly comprehended my Mill? Whoever does not know that Mill has done more than any other writer since Aristotle to rescue logic from the charge of being too useless and too puerile to deserve the name of science, can hardly hope to write a book that shall be worth the writing. Whoever thinks that what Mill has had to say on most of the subjects of logical discussion is both foolish and unimportant, will have to contend against a pretty strong presumption in the mind of his readers that a great part of his own book will turn out to be unimportant and foolish, if nothing worse.

Mr. Veitch presents a mind of curious quality: the psychologists would find it an interesting study. It is remarkable that the same man should be able to point out the secret of Hegel's contradictions so clearly as he has done, and to make, himself, so many plain and simple errors. He says: "What appears to sense may be affirmed as a sensible fact and denied as a transcendental or supersensible fact. . . . Vacillation in regard to the sphere of the affirmation and negation is at the root of most of the current Hegelian fallacies. Their apparent profundity is only lack of transparency." This is admirably stated. Mr. Veitch's contributions to logic are not equally forcible.

Most people will think twice before they allow themselves to suppose that they have discovered a new form of syllogism; the antecedent probability of accomplishing that feat is about as great as that of pointing out a hitherto unnoticed sun in the heavens. Mr. Veitch offers this (in the negative form) as his discovery—he has named it the Syllogism of Collection: "The crops this season are not good in quality, the crops this season are not good in quantity; therefore the crops this season are not good in either quality or quantity." "This," he says, "is a perfectly simple form of reasoning in common use, though not fitting into any of the received formulæ—nay, in the negative form even apparently violating the rule against two negative premises." After this, one is anxious to know what Mr. Veitch supposes syllogism to be. This is the way he gives his definition: "It is that I have two propositions—not one merely, as in the case of immediate inference—and out of these two I not only get, but I am obliged to get, a third." In this he puts in an unessential feature of syllogism and leaves out an essential one. No one is obliged to draw any conclusion at all from two premises. It may not occur to him to see what can be said without reference to the middle term. If any one asks him the question, or if it enters his mind of its own accord, the conclusion, it is true, is forced upon him, but no more so than in immediate inference. Can any one refrain from admitting that if the moon is not made of cheese, it is, all the more, not made of green cheese, if the idea has once entered his head? The essence of syllogism—what Mr. Veitch has omitted to notice—lies in the fact that it accomplishes the elimination of a term common to the two premises, and enables one, by dropping half the information which the premises together contained, to preserve the remaining half in a form convenient for use. What Mr. Veitch calls a new syllogism, logicians consider to be a grammatical device for saying in one sentence what might be said in two.

Mr. Veitch shows as little skill in dealing with the theory as with the form of syllogism. He fails to see the *petitio principii* which every syllogistic argument contains. He says, "May I not know that all mineral acids are poisons without knowing that salt is a mineral acid?" Certainly you cannot, is the easy reply. Suppose salt turns out to be a mineral acid and not to be a poison: what becomes of your too hasty generalization then? It is not without the aid of some misrepresentation that he finds Mill so often "ludicrous" and "ridiculous." Mill shows that the conclusion gives nothing that is not given in the two premises. Veitch says (p. 377) that it is absurd of Mill to think that the conclusion gives nothing that is not given in *one* premise.

Any one who can devote eighty weary pages to moods and figures, and forty to the quantification of the predicate, will not be expected to have much that is luminous to say on the difficult subject of induction. To Mr. Veitch it appears that the canons exert a weak and unsteady influence compared with formal logic, that they cannot for a moment be placed on the same high level with the laws of thought. That may be true, but the fact remains that children seldom make mistakes in syllogism, and that the wisest may be grateful for any real guidance in the art of making general propositions. Induction, Mr. Veitch thinks, is but a poor process, necessarily imperfect, and Mr. Jevons, he says, has amply endorsed this view. It is no doubt a great pity that the Creator of the universe did not send down a copy of its laws ready made. We should have been spared an endless amount of trouble, and we should never have been plunged into that deep gulf of uncertainty from which we have now no hope of escape. As it is, however, perhaps our wisest plan is to make our poor little craft as seaworthy as possible, and not to waste our time in sighing for other worlds than the world in which our unhappy lot is cast.

An Atlas of Practical Elementary Biology. 4to, 24 plates, with explanatory text. With a preface by Professor Huxley, P.R.S. Macmillan. 1885.

LIKE McAlpine's 'Biological Atlas,' this work has special reference to Huxley and Martin's 'Elementary Biology,' the usefulness of which, as frankly admitted by Professor Huxley in his preface, has been greatly interfered with by the absence of illustrations. The twenty-four plates represent the principal features of the anatomy, histology, and development of the frog, crayfish, earthworm, snail, mussel, hydra, unicellular organisms (vorticella, amœba, protococcus, yeast plant, and bacterioid), fungi, stoneworts, fern, and several flowering plants. As compared with McAlpine, the figures are more elaborate, more numerous—somewhat crowded, indeed, on certain plates—and, upon the whole, more accurate, though not free from error. They are not so readily understood by the student, because uncolored and less distinct in outline, and because the parts are designated by abbreviations instead of the entire names, and the explanatory text does not face the plates. The directions and descriptions are more extended, and there is a very complete bibliography of manuals and original papers upon the forms treated of.

In connection with works like the present, there arise three questions, here stated in an order inversely to that of their comprehensiveness: What "forms of life" should be selected for elementary study? In what order should they be taken up? At what stage ought such instruction to be given? Conceding that the vertebrates are to have but a single representative, it should probably be an amphibian; but the structure of the frog is so exceptional in many respects, that it is to be hoped that efforts may be made to introduce into biology-studying countries the more generalized Necturus of North America. Theoretically, the lowest forms should be considered first, and perhaps they might be practically if the Amœba and yeast plant were large and easily handled. Again: since, upon the whole, vegetable organisms are lower than animal, plants might be taken up first. But, finally, a vertebrate with limbs and distinct head is readily comparable with the human body, and is therefore easier to begin with. It is to be noted that the 'Elementary Biology' and 'McAlpine' begin with the unicellular organisms and end with the frog, while the present work, presumably with the approval of Huxley himself, presents the forms in the order given in the early part of this notice.

At present—in this country, at least—work like that implied in this atlas is only provided for in colleges. But the college professor, even when his chair is nominally that of "Biology," is almost inevitably a botanist or a zoölogist. If a practical knowledge of organic types could be gained in the schools—and without encouraging the student to regard himself as a "biologist" on that account—it would be an advantage in several directions which cannot be particularized here.

Songs from the Novelists, from Elizabeth to Victoria. Edited, with an introduction and notes, by William Davenport Adams. London: Ward & Downey; New York: Scribner & Welford. 1885.

MR. DAVENPORT ADAMS has prepared as interesting an anthology as we have seen for several years. He acknowledges in his introduction that his work was suggested by Bell's well-known collection of 'Songs from the Dramatists.' This stopped with Sheridan, although there are not a few songs of the later dramatists which deserve inclusion—the "Wearing of the Green" from Mr. Boucicault's 'Arrah-na-Pogue,' for instance, and "If my Glances have Betrayed Me," from Robertson's 'Ours.' Mr. Adams, beginning quite as far back as Bell, has brought his collection down to date—at least he has thought best to extract and preserve certain alleged songs by certain of the distinctly third-rate British story-makers of our own time. But in general his choice has been as commendable as his research has been wide. He begins with Sir Philip Sidney, Robert Greene, and Thomas Lodge. Then he moves along to Fielding, Richardson, Smollett, and Goldsmith. Scott brings us into the present century, where the name of the novelist is Legion and the songs of the novelists are abundant. It is not a little surprising, even to one whose business it is to be well read in English fiction, to see how many familiar songs are embedded in equally familiar tales. Goldsmith's "Elegy on a Mad Dog" and "When Lovely Woman Stoops to Folly" are both in the 'Vicar of Wakefield,' "Gaffar Gray" is in the 'Hugh Trevor' of the revolutionary Thomas Holcroft; Lover's "Widow Machree" and Lever's "Widow Malone" are both to be found first in their Irish stories; in a novel Lever put his version of the "Pope of Rome," another version of which was made by Thackeray, and in a novel Thackeray put his "Ho, pretty page with dimpled chin"; "A place in the memory, dearest," is said or sung in Gerald Griffin's 'Collegians,' from which Mr. Boucicault was to borrow the 'Colleen Bawn,' without even changing the names of the characters; and "O, Mary, go and call the cattle home," made its first appearance in Charles Kingsley's 'Alton Locke.' Omissions there are not a few, for in declaring the text of an anthology like this every man may make his own canon. For example, we may ask in vain for the jolly song in Mr. Walter Besant's 'Readymoney Mortiboy,' or for the tender lyric in his later historical novel,

'Dorothy Forster'; and we may wonder at the omission of the pretty verses in 'Their Wedding Journey.'

The songs are arranged in what seems to be a sort of irregular chronological sequence—by the death dates of the authors—and so not altogether happily. There is a detailed table of contents and a final table of first lines; there are excerpts from the novels to explain the circumstances of the story in which they were supposed to be sung, and these appear as foot-notes; and in an appendix there are such other and more ample explanatory notes as were called for.

Madame Mohl. Her Salon and her Friends. A Study of Social Life in Paris. By Kathleen O'Meara. Boston: Roberts Brothers. 1886.

To say that this is an extremely interesting book would be faint praise. Perhaps no one has an easier task, in entertaining the reader, than the author who writes of people who spent their lives in making life socially agreeable in a brilliant sphere; and, indeed, one must be very ill-furnished with taste and discretion to make any account of the famous salons stupid. In the case of Mme. Mohl, there is a good deal to give special character to the old story of the evenings of the conversationalists. In particular, she was an English woman, and the eccentricity of the race was markedly developed in her. She was, in fact, a character, and the frankness of her expression gave full effect to her peculiarities. It was not merely in her dress, which seems to have been frightful, nor her deportment, which was often surprising, but in her qualities, that her originality was most pronounced. The secret of the attraction which gathered about her for so many years the intellectual society that was at Paris, either permanently or temporarily, is not easily discovered; and those who submitted to the charm gave the most diverse accounts of its power. It is not unlikely that from the time when she alone could chase the *ennui* from Chateaubriand's old age, to that when the venerable Thiers confessed to her that he was her too timid lover in his student days, the fascination passed through many changes; yet the testimony is strong that it never failed. She had prejudices, as was proper to her island extraction, and these led her into the most inexcusable rudenesses, as in her notorious insult to Ristori, though this was unpremeditated; but she does not seem to have had ideas, nor are any witty sayings of hers remembered. In herself she was very variously compounded, and not a few disagreeable traits entered into her personality: clearly she was mistress of the art of displeasing. In the midst of the piquant anecdotes and situations which enliven the volume, one finds that his sense of comedy is not infrequently appealed to—not ungraciously, but greatly to the damage of Mme. Mohl's dignity. In spite of all faults, she maintained her empire; and her affections, which were quick, strong, and faithful, bound to her some of the most distinguished of her contemporaries. She would not have been the Englishwoman without this strength of heart in conjunction with her force and oddities of character. Her old age is presented as singularly devoid of charm. Generally speaking, the lines of the portrait are drawn too much from her later years; but it is extraordinarily lifelike, and a valuable addition to the salon gallery.

What We Really Know about Shakespeare. By Mrs. Caroline Healey Dall. Boston: Roberts Bros.

THIS tasteful volume is issued as a popular handbook of the results of scholarly research into the facts of Shakspere's life. One-half of it is occupied by an "outline biography," made up of the documentary evidence in regard to the Shakspere's station in life, business transactions, and family affairs, in which the only novelty one remarks is the certainty with which the author "feels" that Shakspere was on the Continent from 1587 to 1592. The rest of the volume is filled with a bundle, rather than an arrangement, of abstracts, notes, tables, quotations, etc., which involve some repetition. The entire book contains, in one place or another, mention of about every document or contemporary reference having relation to the poet, and a large part of the references to him in the literature of the next century; and is a sort of digest of the special scholar's volumes of Halliwell-Phillipps and of Ingleby's 'Centurie of Prayse,' to which Mrs. Dall makes no secret of her indebtedness. With regard to this she says in her prefatory declaration: "As my outline pretends to little originality, I have not paused to use quotation marks, even when I use the very words of better authorities." The book is really aimed at the "Baconians," and is meant to show that Shakspere was a man of substance, position, and character, incapable of such a part as is assigned him by the adherents of Bacon. But those who are blind enough to be "Baconians" are deaf to argument, and lack indeed no deficiency except the sole one that would grace them—to be dumb. This publication is really serviceable as a book of reference, a kind of encyclopædia of the facts of Shakspere's life, so strangely heterogeneous and disconnected.

Rocky Mountain Botany. Manual of the Botany of the Rocky Mountain Region, from New Mexico to the British Boundary. By John M. Coulter, Ph.D., Professor of Botany in Wabash College, and Editor of the *Botanical Gazette.* Ivison, Blakeman, Taylor & Co. 1885.

THIS is an offset, as it were, of Gray's 'Manual,' planted in the virgin soil of the Western Plains and the Rocky Mountains. It was much wanted and is to be of great use—first, to the botanists of this newly settled but now populous region, and to the many tourists who visit the mountains in summer; next, to the schools and colleges which are springing up in all the principal places. All these scattered folk are like sheep without a botanical shepherd when they get beyond the range of Gray's 'Manual,' and so it is needful and most fitting that they should have a manual of their own. This which is now provided for them will be all the more natural and convenient for being conducted, as it is, on the lines of the familiar model, both in substance and in typography. And we note one decided improvement, in that—the flora of the region being still so largely in the state of nature, and the introduced weeds few—the author has kept the intruders out of the body of his fair pages, relegating them to foot-notes. We wonder there are so few of them; indeed, we suspect that their presence has in a degree been ignored. But the unwelcome foreigners are coming nevertheless; and by the time the second edition is called for, like the "tall buttercups" which an English poetess sings, "they will be seen, whether we will or nay." Still, as long as we can have a flora of pure native Americans, let us enjoy it.

The present work, which, so far as we can judge, seems very well done, comes naturally from Professor Coulter. He was the author, conjointly with Professor Porter, of a synopsis of the flora of Colorado, which was published ten years ago as one of the Hayden Geological Reports, has been in great demand, and has long been out of print. So that, as the preface states, "in the wonderful development of the decade since then lies the confidence that a more convenient book, covering a greater range, will be welcome to many."

French Student and Self-Instructor, and Ready Speaker Assistant. By Alfred Sardou. Boston: Carl Schoenhof.

ALTHOUGH as a rule the various "Self-Instructors" in the modern languages are merely catch-pennies for the ignorant, an exception must be made in favor of the work before us. In spite of the awkward title and overcharged title-page, the book is what it professes to be, a complete and condensed method for beginners as well as for advanced pupils. Of course the author has been obliged to have recourse to some method of transcription for the French sounds. Those who know how difficult it is to transmit or to acquire these even with all the help of oral instruction, may smile to see "Vous ne voulez pas de pommes de terre" represented by *Voon—voo-lay pahd pom duh tair;* but it must be admitted that M. Sardou has done his best to overcome the impossible. He is careful throughout in his representation of the unaccented *e*, and of the linkings and grouping of words. The treatment of the pure diphthongs, in such words as *bien, juin,* is not quite satisfactory. The book is in five parts, bound in three volumes, but it very much needs an index to make it really useful to an unaided learner. The grammatical portions are clear and the diagrams well arranged. The conversational parts are progressive and comprehensive, with an extensive, well-chosen vocabulary, graceful and varied constructions, useful phrases, interesting allusions to Paris, and incidental explanations of French customs.

Our Young Folks' History of the Roman Empire. By William Shepard. Illustrated. Philadelphia: J. B. Lippincott Co. 1885. 8vo, pp. 478.

MR. SHEPARD has told the story of the Roman Empire in a manner well adapted to interest the young people for whom his book is designed. He has the art of entertaining without sacrificing the "dignity of history"—a quality which is worth maintaining, after all. The book is excellently printed, too, in good clear type; but we cannot praise the illustrations, very few of which have any historical merit. They are for the most part "made-up" pictures, composed with neither knowledge nor imagination. In this the book is neither worse nor better than most histories written for the young. We shall continue to protest against this style of illustration—which does not illustrate—until publishers begin to have some conception of what their duty is in the matter. The account given by Mr. Shepard is for the most part the traditionary one, and does not indicate any familiarity with the latest results of scholarship. We would not, of course, burden a book for children with the details of recondite learning; but even children have a right to be told the truth, and not to be put off with exploded fables. They ought not, for instance, to be told (p. 44) of Tiberius that "he was mean and cruel, and wicked enough to sacrifice anybody that stood in the way of his ambition. But he knew how to hide his real character under a cloak of pretended meekness and humility." Now Tiberius was not mean, but throughout his reign displayed a wise liberality. Neither was there any pretence of meekness in him—humility, perhaps, whether pretended or not we will not undertake to say. Even cruelty, as a characteristic, it is hardly fair to attribute to a man who displayed no traces of it up to the age of nearly seventy. The summing up of Tiberius's character (p. 91), and the comparison of him with Augustus, are on the whole very fair. But the statement (p. 44) that Agrippa Postumus (not *Posthumus*) was slain by his order, has not a particle of evidence in its favor. The word *princeps,* spelled correctly on page 27, is three times printed *principus* on page 68. On the same page

it is incorrectly stated that the Senate wished to call Tiberius *Dominus*. On page 284 Ctesiphon is spelled Otesiphon.

First Year of Scientific Knowledge. By Paul Best. Pp. 344. 8vo. Paris: A. Colin & Cie.; New York: Christern. 1885.

THE well-known French ex-Minister of Public Instruction owes much of his popular reputation to a little book which he prepared on the rudiments of Natural History and what used to be called Natural Philosophy, for the use of children. This book, we are informed, is in use in all French schools of the lower grades, and many editions have been sold. An English edition has been issued, printed in France, and translated by Mme. Bert, who is a Scotchwoman. For children and beginners in general it is, of course, necessary to sketch such matters in broad outlines without regard to minor detail. This being understood, we find the book well adapted in plan and contents for its purpose. It treats of animals, plants, stones, and soils, elementary physics and chemistry, animal and, lastly, vegetable physiology. It is clearly printed and fully illustrated. It will require a certain amount of intelligence in the teacher, whose relation, in French schools, to his scholars is more intimate than in most of our public grammar schools; but there is nothing which is not clearly set forth, and nothing to which the most fastidious could take exception. The illustrations are good, but so small that some of them are rather obscure. The translation is now and then defective in giving the French rather than the real English equivalent for a French word, but not sufficiently so to constitute a serious fault. We have no work which fills the place this is intended for, and should be glad to see this one in general use.

Elementary Algebra for Schools. Hall and Knight. Macmillan. 1885. Pp. 308.

THE authors of this book have had an experience of twelve years in fitting pupils for the army and university examinations, and the result is that they are convinced that algebra can be most easily studied in an order different from the most logical order. There is always a strong presumption that a subject will be most readily taken in by a youthful mind in the order in which it actually had its rise. Algebra was from the beginning the science of the equation. Complicated operations in fractions and in factoring were only subsidiary to the solution of the equation; there is no reason why they should be forced upon the rebellious student at a time when he sees no reason for their existence. We have no doubt that these authors are quite right in putting the easy and interesting parts of algebra first, and that the student will make quite the most rapid progress in this way. His tender reasoning powers, which have remained wholly unexercised in arithmetic as usually taught, should not be subjected to too sudden and severe a strain when he first enters upon a real branch of mathematics.

The book contains an excellent collection of examples—3,500 in number.

BOOKS OF THE WEEK.

Bert, Paul. First Year of Scientific Knowledge. Translated from the French by the author's wife. London: Reife Bros.
Feich, I. K. Poultry Culture. Chicago: W. H. Harrison, jr. $1.50.

Zeller, Dr. E. Outlines of the History of Greek Philosophy. Translated. Henry Holt & Co. $1.75.

Fine Arts.

AMERICAN WATER-COLOR SOCIETY.

THE Water-Color Exhibition is always one of the pleasantest picture shows of the year, and the nineteenth annual exhibition, now open at the National Academy, is no exception to the rule. The white and gold frames and the pale colors are always agreeable in general effect; and, for the same reason that it is almost impossible for any work, however good, to detach itself from the others and make a powerful effect, it is equally difficult for any work, however bad, to impose its badness upon one in the imperious fashion of some bad oil pictures. There is a common notion that water-color painting is an easier art than painting in oil, which is expressed in the old rhyme:

> La peinture à l'huile
> Est bien difficile,
> Mais c'est beaucoup plus beau
> Que la peinture à l'eau.

But the truth is that the facility of water-color is in its difficulty. The difficulty of attaining full tone or elaborate modelling in water-color approaches impossibility, and the result is that, when they are wise, water-color painters hardly attempt these qualities at all, but confine themselves to the rapid and facile sketching which is easily within the powers of the material. For the greater number there is safety in this limitation of aims, and therefore, while one seldom sees a very impressive work in an exhibition of water colors, one is seldom shocked by the atrocity of failure attained by bad painters in oil.

These remarks apply more particularly to pure wash drawing, or what is generally known as "legitimate water color," and less strictly to gouache or distemper. Why these latter are more or less "legitimate" modes of working it is hard to see, but they are different, and have only deadness of surface, and consequent paleness of color, in common with pure water color. The most prominent examples of opaque water-color work in the present exhibition are certainly Mr. Chase's two large distemper paintings. One hears some murmuring against them as not "legitimate" water colors, but surely, if Mr. Chase finds the material suited to his aims, he has a perfect right to employ it, and since there is no special exhibition for works in gouache and distemper it would seem that the hanging committee have done well to stretch a point, rather than to deprive the public of a view of two works of such importance. The larger of the two, "A Summer Afternoon in Holland," is one of the very best things Mr. Chase has done, and, apart from some questionable drawing in hands and ankles, is almost entirely satisfactory. The justness of observation and sureness of eye and hand displayed in it are quite wonderful, and as a study of light (and that is undoubtedly what Mr. Chase intended it for) it would be hard to imagine it bettered. The absolute truth of relation between the broad shadow and the glowing spots of sunlight, and the dazzling play of reflections among the tea-things, are specially remarkable, and scarcely less so is the translucent green of the foliage overhead. Mr. Chase's other contribution, the "Madrid Dancing-Girl," is much less interesting, having little of the swing and movement that the subject requires, and comparatively little charm of color. Is it possible that at its perspective distance the fan upon the stool (or is it a table?) should appear so large?

If these are the most important examples of opaque water color in the exhibition, Mr. Abbey's "Old Song" is certainly the most important example of transparent water color to be found there. It is Mr. Abbey's "old song"—the song we all know so well and do not tire of—full of gentle refinement and sweetness, and only better sung than ever. Mr. Abbey is evidently constantly increasing in technical mastery, and apart from its beauty as a picture this is as fine a piece of water-color painting as one could wish to see.

An importance of another sort, the importance of a very celebrated name, belongs to Detaille's large military picture — an importance only partially justified by the actual performance. The composition is confused, the color unpleasant, and the values are non-existent. There are many things in the exhibition by young Americans which are better in everything but drawing than the work of this too celebrated Frenchman. His drawing is indeed sound and good, but even that is somewhat uninteresting and mechanical, and he seems to owe his fame largely to the choice of subject which flatters French pride and love of military glory.

There are 846 numbers in the catalogue, and it is inevitable that in reviewing such a mass of work one should have many sins of omission to answer for. Abandoning any attempt at much system, we will note here and there such works as for any reason have attracted our attention.

Mr. Weir has six contributions in the exhibition, mostly flower pieces in his well-known manner. They are, as ever, very handsome in sober tone—exquisite in color, though approaching almost to black and white—and they are also, as ever, rather formless. One could desire to see flowers better drawn, but scarcely to see them better painted.

Mr. Murphy has a number of his facile and not very profound landscapes, of which perhaps the best is entitled "November." The distance in this picture contains more nature than most of his work, and is very handsome in color, but the left-hand side of the picture is decidedly artificial. To the artificial style of landscape belong also Mr. Crane's numerous contributions, with their thin trees which grow altogether too

cleverly. Mr. Bolton Jones has a landscape of his usual type, well and solidly done, without much emotion; and Mr. Tryon, a quiet-toned "November," which, while it will not add to his reputation, will take nothing from it. Other landscapes we have noticed are a charming, tapestry-like little picture by Mrs. S. N. Carter; a queer, dark little "Woods Near Cedarhurst," by Oliver H. Perry, which would give more assurance of talent if its companion were not so bad; a couple of gray, pastel-like compositions by C. Melville Dewey; a quiet "Evening," by W. Dodge MacKnight; a handsome black-and-yellow "Low Tide," by Ross Turner; a good little "Moonlight," by W. A. Coffin, in the vein of an oil picture recently seen at the Union League Club; a good, low-toned "Sandy Hook," by G. H. McCord; a strange black and green picture, by B. R. Fitz; a "May Twilight," with a white heifer in it, by C. Morgan McIlhenney; a vague and misty "Morning in Acadia," by Horatio Walker, very handsome; the "Bank of the Georges River," by Charles Copeland; a "Water-Mill," by Edward A. Bell, and several drawings by William J. Whittemore.

Mr. Smedley has two figure subjects, entitled respectively "June" and "November," which are marked by his usual quiet refinement, but perhaps by a little less than his usual power. Subjects of a similar sort are treated by Mr. Dielman and Mr. C. Y. Turner, in neither case with any great success. Mr. Turner's picture is of much the same color and texture throughout, and Mr. Dielman's, though pretty and pleasant, is rather spotty in technique. Mr. Church's two drawings are of his usual vagueness, and perhaps have a little less than his usual charm.

Mr. Weldon's "Incense" is conceived somewhat in the spirit of Louis Leloir's work. The almost insuperable difficulty of modelling nude flesh in water color has been too great for him. He has tried to overcome it by recourse to stippling, and the result is the rather disagreeably red and speckled look that nude flesh generally has in water-color paintings, and which Mr. Maynard, in his otherwise charming "Bather," has not been able to avoid. Mr. Millet and Mr. Blashfield are also represented by classical figure subjects. The architectural background of Mr. Blashfield's little drawing is excellent, but the figure is rather less carefully drawn than we should expect from him, and the bright red shadows of the drapery are surely impossible. Mr. Quartley has an excellent little figure subject, "Washing Pilchards"; Mr. Lippincott, a pale-colored landscape with figures, which is pretty and pleasing, and Leon and Percy Moran have several of their clever but ill-drawn productions. One of the best things in the exhibition in its way is a little head of a "Barbizon Peasant," by Theodore Robinson, in an oblong decorative panel. Some clever sketchy heads are signed by Elizabeth Nourse, and Mr. Beckwith sends also a head which is very charming.

Mr. Blum's "Sister's Advice" comes from Holland, and shows in a very interesting way the effect of the Dutch masters upon his brilliant talent. There is much delightful work in it, and it is none the less delightful for the tempering and added soberness that have come to him from his present surroundings. From Holland also come some fine and sober interiors by H. Keever. Mr. John Johnstone has sent two rather curious attempts at the fiery coloring of La Farge.

Mr. E. D. Boit sends a couple of his brilliant sketches of Parisian street scenes; Mr. Charles A. Platt, a good view of the "Quay at Honfleur"; Mr. Childe Hassam, a very clever beach scene at Scheveningen; and Mr. Nico Bastert an excellent little "Still-life."

As usual, the quaintest things in the exhibition are signed by William Walton. Mr. Walton's ideas are always so out of the way and so original, and there is such an evident sincerity in his strange way of carrying them out, that we always enjoy his work, with an enjoyment certainly different in kind but not unequal in degree to that which we receive from work of infinitely greater technical accomplishment.

A word in closing about titles. One exhibitor actually calls his picture, "It is as if the pine trees called me from ceiled room and silent books to see the dance of woodland shadow and hear the song of summer brooks"! Another—a lady, this one—calls hers "Roses that gave out their odorous souls in an ecstatic death"; and there are others nearly as bad. When will some of our artists learn that one must put his poetry into the picture and not into the title, and that a Corot is no whit less poetic for being called simply a "landscape," and a mediocre performance no more than mediocre though it have a yard of poetry tacked to it like a tail to a kite?

Henry Holt & Co.,

29 West 23d St., New York,

PUBLISH SATURDAY:

One of the two remaining Posthumous Novels

OF

Hugh Conway.

A Cardinal Sin.

By the Late F. J. Fargus. 16mo, Leisure Hour Series, $1; Leisure Moment Series, 30 cents.

OTHER WORKS BY THE SAME AUTHOR:

Leisure Moment Series (Paper Covers).	Slings and Arrows, etc.	.30 cts.
	A Family Affair	.30 "
	Carriston's Gift, etc.	.30 "
	Bound Together (tales)	.30 "
	Dark Days	.25 "
	Called Back	.25 "

*** All the above may be had in a style fit for the library at $1 each in the *Leisure Hour Series.*

Massage and Swedish Movements

Given by MISS ANNIE TOWNSEND
(Pupil of Dr. Douglas Graham),
70 Dennis St. Roxbury, Mass.

1841. S. DAVIS, JR.'S 1841.

DIAMOND HAMS,

CINCINNATI.

"*They well sustain their ancient renown.*"—From a patron of 1842. Washington City, Feb. 24, 1872.
Sold by leading Grocers, who have circulars how to cook hams.

FOR SALE.—A copy of Pertz's Monumenta Germaniæ Historica, complete as far as yet published; thirty volumes folio and quarto series. Address Box 1283, Boston P. O.

FOR SALE.—A File of the Richmond (Va.) Daily Dispatch, in four bound volumes, running from February 6, 1861, to April 3, 1865.
G. A. BARKSDALE, Gallego Mills, Richmond, Va.

ROBERTS BROTHERS' NEW BOOKS.

Zeph.

A posthumous story by HELEN JACKSON (H. H.), author of 'Ramona,' 'A Century of Dishonor,' 'Bits of Talk,' 'Bits of Travel,' etc. One volume. 16mo. Cloth. Price, $1.25.

The lamented author of 'Ramona' was writing 'Zeph' when her fatal sickness seized her, and one of her latest acts was its hasty completion before sending the MS. to her publishers.

Madame Mohl:

HER SALON AND HER FRIENDS. A study of social life in Paris. By KATHLEEN O'MEARA. A very lively and charming book, the memoirs of a gracious, odd little figure, conspicuous both in Paris and London, and who had many friends among travelled Americans. With a likeness from a sketch by WM. W. STORY, and one from a portrait by herself, and a fac-simile letter. One volume. Crown 8vo. Cloth, gilt top. Price, $2.50.

A Short History of Napoleon the First.

By Professor J. R. SEELEY, of the University of Cambridge, England, author of 'Ecce Homo,' etc. With a superb steel-engraved portrait and two views of the head of Napoleon from a cast taken after death. One volume. 16mo. Cloth. Price, $1.50.

Rachel.

By NINA H. KENNARD. The eleventh volume in the Famous Women Series, being a life of the celebrated French Tragedienne, Rachel Félix. 16mo. Cloth. Price, $1.00.

Our Little Ann.

A Story. By the author of 'Tip Cat,' 'Miss Toosey's Mission,' and 'Laddie.' 16mo. Cloth. Price, $1.00.

Sold everywhere. Mailed, postpaid, by the publishers,

ROBERTS BROTHERS,
Boston.

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, postpaid, on receipt of price.
HENRY HOLT & CO., New York.

NEW BOOKS:

GEORGE ELIOT'S COMPLETE Works. Édition de Luxe.

The first fine library edition ever issued. This edition will contain all the author's novels, essays, and poems, and a concise biography by the Rev. Geo. Willis Cooke.
It will be embellished with a series of proof impressions of entirely original painter-etchings and photo-etchings. Among the artists who will contribute to the work may be mentioned Frederick Dielman, F. S. Church, Wm. Unger, Will H. Low, J. Wells Champney, George Fuller, H. Sandham, W. St. John Harper, Walter Satterlee, W. L. Taylor, E. H. Garrett, F. T. Merrill, S. A. Schoff, S. G. McCutcheon, J. Henry Hill, and others.
The Text will be printed from new electrotype plates made and printed at the celebrated University Press at Cambridge.
The paper will be of the finest quality of parchment linen drawing paper, uniform in size and quality with that of the *édition de luxe* of Carlyle issued by us.
Complete in 12 volumes, 8vo; price per vol., $6. Edition limited to 500 numbered copies.

THE COMPLETE POETICAL WORKS OF

PERCY BYSSHE SHELLEY. The text carefully revised, with Notes and a Memoir, by William Michael Rossetti. This special limited edition will consist of fifty copies, each copy numbered. 3 vols., 8vo, cloth, gilt tops, and illustrated with a frontispiece on India paper, $10.50.

"Mr. Rossetti's edition takes a prominent place among works of modern criticism. His investigation of original sources, where they were accessible, has been most painstaking, and the recovery of many a lost Shelleyan pearl is due to his zeal."—*Pall Mall Gazette.*

"This will in future be *the* edition of 'the imperishable poems'"—*Liverpool Daily Post.*

"This edition will be welcomed as a great advance on Mr. Rossetti's former labors in Shelley's magnificent poetry."—*Daily Telegraph.*

THE EARLY HANOVERIANS. A new volume of the Epochs of Modern History. By Edward E. Morris, Professor of English in the University of Melbourne. With Maps and Plans. 1 vol., 16mo, cloth, $1.

The above will be for sale by all booksellers, or sent, postpaid, on receipt of price by the publishers,

ESTES & LAURIAT,
Boston, Mass.

A General Index to the Nation.

No trade or other discounts. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794 New York or Q. P. INDEX Bangor, Maine.

The Nation

VOL. XLII.—NO. 1076. THURSDAY, FEBRUARY 11, 1886 PRICE 10 CENTS

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

Discussions on Climate and Cosmology.

By JAMES CROLL, LL.D., F. R. S., author of "Climate and Time," etc. With Chart. 12mo, cloth. Price, $2 00.

CONTENTS: Misapprehensions regarding the Physical Theory of Secular Changes of Climate.—The Ice of Greenland and the Antarctic Continent not due to Elevation of the Land.—Mr. Alfred R. Wallace's Modification of the Physical Theory of Secular Changes of Climate.—The Physical Cause of Mild Polar Climates.—Interglacial Periods and Distribution of Flora and Fauna in Arctic Regions.—Temperature of Space and its Bearing on Terrestrial Physics.—Probable Origin and Age of the Sun's Heat, etc., etc.

II.

A Conventional Bohemian.

A NOVEL. By EDMUND PENDLETON. 12mo, cloth. Price, $1 25.

Although a society novel, 'A Conventional Bohemian' reaches at times the heights of passion, and reveals a remarkable knowledge of the motives and conflicts of the human heart. The style is noticeable for epigrammatic wit and wisdom in the lighter scenes and for dramatic power in the serious ones. There are a number of well-drawn characters, the heroine being a peculiarly felicitous study, and the hero a virile and striking portrait. It is a novel sure of many admirers among those who delight in intellectual subtlety and artistic execution.

III.

Class Interests:

THEIR RELATIONS TO EACH OTHER AND TO GOVERNMENT. A Study of Wrongs and Remedies to ascertain what the People should do for Themselves. By the author of 'Conflict in Nature and Life'; 'Reforms: their Difficulties and Possibilities.' 12mo, cloth. Price, $1 00.

"The problems under discussion in the volume I believe to be the greatest and most urgent of any that now demand attention. I have contributed my little toward their solution, and all I ask for it is candid 'consideration.' "—*From Preface.*

IV.

For Maimie's Sake:

A STORY OF LOVE AND DYNAMITE. By GRANT ALLEN. 12mo, paper cover. Price, 25 cts.

'For Maimie's Sake' is a remarkable story, very novel in its leading idea, concentrated in its action, and has at least two situations as striking and even startling as anything in fiction.

For sale by all booksellers; or will be sent by the publishers by mail, post-paid, on receipt of price.

1, 3 & 5 Bond Street, New York.

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York.

THE DAWN OF THE 19TH CENTURY. A social sketch of the times. By John Ashton, author of 'Old Times,' etc., with 116 illustrations from extemporary engravings. 2 vols., large octavo, $10.00.

☞ *A limited letter-press edition.*

"Mr. Ashton has rummaged in a most fascinating historical work, and has brought together from original and authentic sources a great variety of interesting material."—*Commercial Advertiser.*

"Even to those who are well informed in a general way, 'The Dawn' will be a revelation, and in many things a veritable dawn of intelligence."—*Inter-Ocean, Chicago.*

THE HISTORY OF THE ENGLISH CONSTITUTION. By Rudolph Gneist, Professor of Law in the University of Berlin. Translated by Philip A. Ashworth. 2 vols., octavo, cloth, gilt top, $8.00.

☞ *A limited letter-press edition.*

THE LIFE OF HENRY FAWCETT. By Leslie Stephen. Octavo, with two portraits, $3.50.

☞ *A limited letter-press edition.*

"Fawcett," writes Mr. Stephen, "had been for thirty years one of my most intimate and valued friends. It would be strange if during that period I had not learned to understand one of the simplest and most transparent of men."

"In this sentence Mr. Stephen hits off, with exquisite skill, the most striking trait of Fawcett's character, and proves, if proof were needed, that he thoroughly understood the friend to whose fame he has raised the most touching, the most truthful, and therefore the most honorable of monuments."—*Evening Post.*

THE STORY OF THE JEWS. By Prof. J. K. Hosmer. Vol. III. of THE STORY OF THE NATIONS. Large 12mo, with illustrations, cloth extra, $1.50.

"Prof. Hosmer has written a work which will rank high in a series where every volume thus far has seemed to be an improvement on its predecessor."—*N. Y. Observer.*

*A HANDBOOK OF WHIST, and READY-*REFERENCE MANUAL OF THE MODERN SCIENTIFIC GAME. By Major Tenace. 16mo. cloth extra, 75 cents.

"This little volume is a handy one for the pocket, and treats extensively each one of the following subjects: The suit from which to lead, the card to lead from the suit chosen, trump leads and the inferences therefrom, conventional leads, plain suit leads and the inference therefrom, the play of the second, third, and fourth hands, the discard, and the laws of whist."—*Rochester Express.*

MECHANICS AND FAITH: A Study of Spiritual Faith in Nature. By Charles Talbot Porter, C.E. Octavo, cloth, $1.50.

"The conception of the identity of matter with force must be regarded as fundamental in true philosophy. In every department of thought there is to be observed a reluctance to recognize the fact that we are surrounded by mysteries; while in reality all things pass the limits of our understanding, there are not wanting minds which refuse to acknowledge that anything does so."—*Extract from Author's Preface.*

THE ADIRONDACKS AS A HEALTH RESORT. Showing the Benefit to be Derived by a Sojourn in the Wilderness in Cases of Pulmonary Phthisis, Acute and Chronic Bronchitis, Asthma, "Hay Fever," and Nervous Affections. By Joseph W. Stichler, M. S., M. D. 16mo, cloth, gilt top, $1.00.

Putnam's New Catalogue forwarded to any address upon application.

Houghton, Mifflin & Co.'s

NEW BOOKS:

[*Ready Saturday, 13th.*]

Frank's Ranche;

Or, My Holiday in the Rockies. Being a Contribution to the Inquiry into What we are to do with our Boys. By the Author of 'An Amateur Angler's Days in Dovedale.' With Illustrations. 1 vol., 16mo, $1.25.

A fresh and entertaining book by an English gentleman, describing his visit to a son's ranche in the Far West.

VERSES: TRANSLATIONS and Hymns. By W. H. Furness, D.D., of Philadelphia. 1 vol., 16mo, $1.25.

A delightful little book, containing poems of remarkable elevation and beauty. Dr. Furness possesses both scholarship and poetic expression in so high a degree that his translations are admirable, while his hymns have a tone so lofty and pure, and a spirit so trustful and sympathetic, as to give them a peculiar and enduring charm.

MACAULAY'S COMPLETE Works. New Library Edition. A new and very desirable edition of the Complete Works of Thomas Babington Macaulay (Baron Macaulay). Including the History of England in 8 volumes, the Essays in 6 volumes, and the Speeches and Poems, with Papers on the Indian Penal Code, in 2 volumes. The set, 16 volumes, crown 8vo, gilt top, carefully printed and tastefully bound. Price, in cloth, $20; half calf, $40.

LIFE OF OLE BULL. By Sara C. Bull. With a Steel Portrait and other Illustrations. New edition. Price reduced from $2.50 to $1.50.

"An interesting memoir of his brilliant, laborious, brave, kind life; of his genius, originality, ... ventures."—*Boston Advertiser.*

Public Library 98 29 98

A FEW FLOWERS.

In common with most plantsmen, it has been our custom to issue every Spring a catalogue of the plants we have for sale. This catalogue is necessarily a repetition, and we fear of little value to plant buyers. It has occurred to us that this annual expense might be better incurred in the issuing of pamphlets, describing a few of the very best plants, giving practical cultural directions and suggesting new and better arrangements for gardens than those commonly used. At present we are sending out the new edition of our book, "A FEW FLOWERS WORTHY OF GENERAL CULTURE," in which we have endeavored to show how a most beautiful and fascinating garden can be made with hardy plants, and how great a mistake the present almost universal custom is of using nothing but the so-called bedding plants, geraniums, coleus, etc., for gardening purposes. The book is superbly printed, and among its contents are the following illustrated pages: "Hardy Plants are Best;" "Hardy Plants and the Modes of Arranging Them;" "Rhododendrons, Kalmias, and Hardy Azaleas;" "Splendid Garden Effects with Hardy Lilies;" "Clematises, their Culture and Uses;" "Decorative Possibilities of Hardy Climbers;" "Success with Hardy Roses;" "Tropical Garden Effects;" and "Some Fine Lawn Trees." The illustrations are profuse and most artistic, and are made to show the garden effects of different plants.

This book is of real merit and exquisite beauty, and will be sent free with a splendid colored lithograph, made by Messrs. Armstrong, of Boston, of the wonderful new hardy English Rose, "Her Majesty," on receipt of ten cents in stamps for postage. This new Rose has received the highest award of merit at every principal rose exhibition in England the past two seasons.

A new American Rose of equal merit is the AMERICAN BEAUTY. It is extra large and fine, and remarkable for its ever-blooming qualities and ease of culture. We offer strong plants at a low price.

B. A. ELLIOTT CO., Pittsburgh, Pa.

A BUSINESS OF THE HIGHEST character invites a month's investigation in the office of the advertiser. An inquirer, looking to investment and active association, must be a *gentleman* of business instinct, with influential acquaintance in New York, and able to pay in $5,000 if examination prove satisfactory. Best references given and required. Address "South," care of the *Nation*.

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

NEW BOOKS.

Domesticus:

A Tale of the Imperial City. By William Allen Butler, author of 'Nothing to Wear,' &c.

"A satire quaintly and delicately conceived and agreeably written. . . . His satire is never harsh or biting; on the contrary, it is light, ingenious, often gracious, and invariably just."—*N. Y. Sun.*

Mr. Butler, who made for himself a vast circle of readers when he wrote 'Nothing to Wear,' has now given them in this book a novel which is not less charming or original than we had reason to expect from his pen. Constructed in unwonted lines, it is therefore the more acceptable. It is the brightest and most thoroughly enjoyable book in the lighter literature that has been published for a long time.

An Apache Campaign in the Sierra Madre.

An Account of the Expedition in Pursuit of the Hostile Chiricahua Apaches in the Spring of 1883. By Captain John G. Bourke, U.S.A., author of 'The Moquis Indians.' 1 vol., 12mo, illustrated, cloth, $1.00; paper, 50 cents.

Captain Bourke's narrative is not only a very important one, but is also a thrilling and absorbing story, and affords a glimpse of Indian life at close view.

What Does History Teach?

By John Stuart Blackie. 1 vol., 16mo, cloth, 75 cents.

A most interesting and suggestive little volume, discussing the influences of history on church and state, written with the earnestness and vigor which distinguishes all that comes from Prof. Blackie's pen.

THIRD EDITION.

Strange Case of Dr. Jekyll and Mr. Hyde.

By Robert Louis Stevenson, author of '. he New Arabian Nights,' &c. Cloth, $1; paper, 25 cents.

MR. FROUDE'S NEW BOOK.

Oceana; or, England and Her Colonies.

By James Anthony Froude, M.A. 1 vol., crown 8vo, illustrated, $2.50.

"The Murray of Matrimony and the Baedeker of Bliss."

HOW TO BE HAPPY THOUGH

Married. Being a Handbook to Marriage. By a Graduate in the University of Matrimony. 1 vol., 12mo, $1.25.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 11, 1886.

The Week.

THE reported decision of the Cabinet, to answer the Bland resolution of inquiry about the Administration's silver policy by having Secretary Manning send to the House copies of his own report and the President's message, with the silver passages in each marked, is a dignified and ample response to Mr. Bland's unnecessary questions. The attitude of the Administration on the silver question is clearly enough defined already. What is not clear is the attitude of Congress, and especially of the Republican members who are supposed to have honest convictions upon the subject. For the childish purpose of annoying the President, they allowed the Bland resolution to pass by a large majority, thus giving the silver advocates the advantage of winning the first move in the contest, and the still greater advantage of seeming to have a large majority on their side. If the Republicans in both branches of Congress continue their present policy of doing only those things which are likely to embarrass and annoy the Administration, no matter if the public interests suffer thereby, they will have a protest from the country presently which will set them to thinking. It is of a great deal more importance at present to stop the coinage of silver than it is to split the Democratic party, and the sooner the Republican statesmen comprehend this fact, the better will it be for them.

In the Senate on Monday Mr. Eustis, of Louisiana, offered a resolution directing the Finance Committee to inquire concerning the treatment of silver at the New Orleans Sub-Treasury. Mr. Eustis said that the cashier of a national bank at New Orleans had written him stating that shipments of silver dollars had been made by banks in the interior to their correspondents in New Orleans, but the Sub-Treasurer at New Orleans had refused to receive the silver dollars on deposit, and that that refusal had been approved by the Treasurer of the United States. He had received information from another cashier of a bank giving the startling information that country merchants were refusing to receive silver dollars except at a discount. Mr. Chace, of Rhode Island, made the innocent inquiry whether country merchants were refusing to take silver dollars for debts or were refusing to sell goods for them. Mr. Eustis was unable to answer that query, but he understood that they were discriminating against silver dollars, refusing to take them except at a discount. Evidently something must be done to put a stop to this sort of thing. Since silver dollars are legal tender, and since the Government virtually redeems in gold at the custom-houses, we can see no reason why the country merchant should discriminate against them except that it costs him something to get them transported to New Orleans, New York, and other places where he has to pay his debts. A law of Congress compelling the express companies to carry them for nothing would apparently be the right sort of a measure for the crisis. It would be clearly unjust to compel the country merchant in the interior of Texas to take silver at par, and then pay $5 to $8 on every $1,000 to get them carted to the city merchant. Express companies are "organizations of wealth" which ought to be dealt with in a summary manner. The Sub-Treasurer in New Orleans, we venture to say, will be able to clear his skirts completely when the charges against him are investigated, but we have our doubts about the express companies.

The recent resolution of the Senate, that the Secretary of the Treasury should furnish it information concerning the origin, amount, and disposition of what is known as the "Conscience Fund," has had the effect of enlightening the country as well as the representatives of the country concerning a very dark and mysterious matter. It is fair to assume that Mr. Ingalls, who introduced the resolution, entertained the common notion that the aggregate amount of those remittances of which we see mention nearly every day in the newspapers, as "contributions to the 'Conscience Fund,'" must be at this time very great, and that these, being kept distinct from the beginning, could be made available in time of need for appropriations for Government purposes. It is quite likely that many have considered that this "fund" was not accounted for, that it was subject to little or no supervision, and that it consequently furnished much of the money with which corruption was practised during election times. We now know that it is not a "fund" at all, but simply a part of the money in the general Treasury, coming under the head of "miscellaneous receipts," just as do consular fees and the proceeds of sales of public lands. Under this head the Secretary of the Treasury has not failed annually to report the amount of money received from "persons unknown." These receipts amount to nearly a quarter of a million of dollars, and date back to 1827, though doubtless the greater portion has accrued since the war. Mingled with the receipts from other sources, these have of course been year after year appropriated by Congress for one purpose and another, and now the learned upper branch desires to be informed what has become of "the fund." The resolution is a striking commentary on Mr. Woodrow Wilson's remark, in his 'Congressional Government,' that our financial policy has not been to equalize receipts and expenditures, to subordinate everything to economical administration, but to make trades prosperous, and to hold the resources of the Government as incidental to the industrial investments of private citizens.

Senator Hoar's bill providing that Congress shall meet in 1887 and every other "odd" year on the first Monday in October, and in 1888 and every other "even" year on the second Monday in November, has been reported favorably from the Committee on Privileges and Elections, and ought to pass. The Constitution provides that "the Congress shall assemble at least once in every year, and such meeting shall be on the first Monday of December, unless they shall by law appoint a different day." After trying various other dates for the opening of the session, the first Monday in December was settled upon early in the history of the Government, and has been maintained ever since. At that time it was perhaps as good a date as could be selected, since it left three good months for the short session in the days when a Congressman went to the capital to stay until adjournment, and when Christmas was much like any other day in the almanac. But now the general observance of the holiday season, combined with modern facilities for travel, renders the early part of every session practically worthless, and the real work of the winter hardly begins before members return from the Christmas recess toward the middle of January—less than two months before the expiration of Congress in the short sessions. A bringing forward of the time of meeting to early October in the odd years, and to early November in the even years, will save even more time than the additional weeks represent, since members will go to Washington with the expectation of really attacking business before the holidays. The later date selected for the years of Congressional elections relieves the scheme from the objection of interfering with the time allotted to political canvasses, and there seems to be no valid ground for opposition to the change.

The Senate on Friday passed the bill for the admission of the southern half of Dakota as a State. The division corresponded almost exactly with party lines, all the negative votes being cast by Democrats and all the affirmative but that of Mr. Voorhees by Republicans. Partisanship of course ought not to enter into the decision of such a question, but it always does. Sometimes, however, it operates to the public advantage, as promises to be the case in the present instance. The Democratic House will refuse to ratify the action of the Republican Senate upon partisan grounds, but the result will be most fortunate upon public grounds. The movement for the division of the present Territory and the admission of the lower half as a State is the most anomalous and unjustifiable performance ever known in the history of the formation of States. In all previous cases a majority of the people of a Territory have declared by popular vote in favor of the erection of the Territory into a State. In this instance a scheme is pressed for the division of a Territory and the admission of half of it without the submission to the people of the fundamental question, whether they favor a division. The ambitious office-seekers of southern Dakota who are pushing this project, claim that a majority of the people in the Territory endorse their plan, but they have always opposed anything looking toward a positive expression of the popular will in the only way recognized under our system of government, by a vote of all the people. All other considerations aside, the pending measure ought to be defeated because there is no evidence that a majority of the Dakota people favor it; and until such evidence

is presented by a clear expression of opinion at the polls, it would be a violation of the principles of popular government for Congress to assume to interpret their will.

The *Times* of Thursday gives only one reason, besides its own assertions, for thinking the intervention of the Government necessary between the Pan-Electricians and the Bell Telephone Company, but unhappily this takes the form of a precedent which the *Times* itself apparently did not understand. Its contention is that, if you wish to have a patent cancelled for fraud, the Government must bring the suit. "Private parties," it goes on to say,

"however, may test the validity of a patent by compelling the patentee to bring a suit for infringement. But the failure of this remedy not only against powerful monopolies like the Bell Telephone Company, but against petty swindlers brazenly claiming patents they never got or owned, is demonstrated every day in forced compromises, in the abandonment of lawful rights because their defence and establishment would be extravagantly costly, and in the payment of blackmail under the name of 'royalties.'"

It then cites as an illustration of the superior effectiveness of the Government's remedy the Colgate case, in which the Attorney-General in 1867 brought, at the instance of the Western Union Telegraph Company, a suit against Colgate, as the assignee of one Simpson, to determine the validity of a patent for a gutta-percha insulator. The writer in the *Times* gives the history of the case, and then, with a fatuity which is happily rare, describes it as having ended, not in cancellation, but in—a compromise. The following passage deserves a place in *Puck:*

"Mr. Colgate, it appears, shrank from such a searching scrutiny of the validity of his patent, and speedily ended the proceedings by a compromise—just as the Bell Telephone Company compromised its suit with the Western Union Telegraph Company when it took on a too threatening look."

In other words, the proceedings terminated just as the suits brought by private parties are apt to terminate. We have ourselves no doubt whatever that the Pan-Electricians are now in pursuit of exactly what Colgate got. Consequently we are still left without reasons for believing Mr. Lamar's action wise and necessary, but are as open to conviction as ever. We think, however, the Pan-Electricians ought to get their case stated by a more powerful and mature hand than the writer in the *Times*.

A case is under argument in New Orleans at this moment which throws some light on the Pan-Electric movement. The Bell Telephone Company is there asking for an injunction to restrain the National Telephone Company from using its telephones. The defendants claim, in answer, that the Court should not entertain the application pending the attack of the Government on the validity of the Bell patent. We shall probably now see this plea put in all over the country, and, if it is found effective, the Bell Telephone Company would for two or three years be a prey to all comers, its stock lowered, and that of hundreds of rival claimants correspondingly raised. We do not mean to say that this is a reason why the Government should not interfere, but it is a reason why the necessity of its interference should be clear beyond question.

The most striking and encouraging fact in our politics to-day is the hearty support given President Cleveland in his reform policy by the South, as manifested by the utterances of the leading Democratic newspapers in that part of the country. With scarcely an exception the representative journals, like the Charleston *News and Courier* in South Carolina, the Savannah *News* in Georgia, the Jacksonville *Times-Union* in Florida, and the New Orleans *Picayune* in Louisiana, heartily sustain the President and vigorously condemn his assailants. The *Times-Union's* remark that "the efforts of the demagogues and dishonest partisans to hinder and embarrass him in his work will prove as abortive as their efforts to defeat his election," and the *Picayune's* declaration that "the Democratic leaders who oppose President Cleveland are guilty of party treason," are only samples of the current tone of discussion in such papers. It becomes plainer every day that the South believes in civil-service reform; and as the South, by the uniform testimony of Republican organs, controls the Democratic party, the discovery is of the highest significance.

Another thing which becomes plainer every day is that the only hope of blocking the great pension jobs, which claim agents and political demagogues are trying their best to push through Congress, depends upon the opposition of Southern Representatives and Senators. It is discouraging to find how many Northern Republican newspapers, which understand perfectly well the injustice and wrong of such vast schemes as the proposition to repeal the limitation as to the time ot filing applications under the arrears act, are encouraging Congress to pass bills which will take hundreds of millions out of the Treasury. With such encouragement, doubtless many Republicans who have previously opposed such schemes will follow the example of Senator Sherman, who has eaten his own words of two years ago and come out in favor of the arrears job, which he once truthfully declared had "no equity in it." Some Northern Democrats think that they can capture the "soldier vote" in their districts by championing these projects, and their votes, combined with those of most of the Republicans in the House, will come near to making a majority. The sole chance of defeating the jobbers is through a combination of the Southern Democrats with those Northern members of both parties who are above demagogism in this matter.

The recklessness of partisanship is strikingly illustrated in the flagrant misrepresentation of the President's course regarding the removals of officials, made by the Philadelphia *Press* in a leading editorial upon this subject. "*Thousands of men*," it declares, "have been turned peremptorily out of office in the middle of their terms." The *Congressional Record* of December 18 contained a complete list of the appointments made by the President, with information in each case as to whether the appointee was to fill a vacancy caused by death or resignation, or to succeed an official who had been suspended. From this statement it appeared that the President had removed in all *only six hundred and forty-three* officials, divided among the departments as follows: State, 80; Treasury, 160; Post-office, 266; Interior, 76; Department of Justice, 61. As there are about 4,000 offices filled by Presidential appointment, it follows that the first Democratic executive in a quarter of a century had removed, during three-quarters of a year, less than one in six of the Republicans whom he found in office. However, it is perhaps no wonder that a Republican organ which remembers that Mr. Blaine removed an even larger proportion of the Republican officials under his special oversight in the consular service, during the brief period that he enjoyed full swing under President Garfield, should suppose that Mr. Cleveland must have turned out men by the "thousands."

It is always interesting to trace the development of a national habit. Among the "literary remains" of the Rev. Homer Wilbur, pastor of the First Church in Jaalam, which were collected in the "Biglow Papers" a score of years ago, is a reference to what that worthy divine styled "one of the most inexcusable weaknesses of Americans"—their habit of signing their names to what are called credentials. The Rev. Mr. Wilbur thus recorded an illustration of this weakness which had fallen under his personal observation:

"But for my interposition a person who shall be nameless would have taken from this town a recommendation for an office of trust subscribed by the selectmen and all the voters of both parties, ascribing to him as many good qualities as if it had been his tombstone. The excuse was that it would be well for the town to be rid of him, as it would ere long be obliged to maintain him."

In process of time, as the recent "Bernard Conroy, Esq." incident in Indianapolis shows, the recommendation business has been carried a stage further. The Selectmen of Jaalam tried to get their man appointed to keep him out of the poor-house, while the Governor and other leading Democrats of Indiana recommended that Conroy be given an office apparently because they thought that was the only way of keeping him out of the penitentiary, where he had been sent more than once as a private citizen. Unfortunately for Postmaster General Vilas, no public-spirited citizen like the Jaalam pastor interposed and saved him from the necessity of revoking an appointment which never ought to have been made. Doubtless he and all the other members of the Administration, from the President down, are quite ready heartily to endorse the Rev. Mr. Wilbur's conclusion: "When I see a certificate of character with everybody's name attached to it, I regard it as a letter of introduction from the Devil."

The white Democratic taxpayers of Vicksburg are urging the passage by the Mississippi Legislature of a law overthrowing the present system of electing the city government by popular vote, and substituting the appointment by the Governor of a Mayor and Aldermen, because non-tax-paying Republican negroes are in the majority. Republican organs in Boston are profoundly shocked at such evidence of distrust of the people. And yet the Vicksburg plan is only an extension of the same principle which the Boston Republicans persuaded the Massachusetts Legislature to adopt last year, when they secured the passage of a law taking the appointment of Police Commissioners from the (Democratic) Mayor of the city and giving it to the (Republican) Governor of the State. The theory of home rule was definitively abandoned when the Massachusetts Republicans declared

that a Mayor chosen by popular vote could not be trusted to appoint the men who supervise the police force. It is only a step further to the position of the Mississippi Democrats that the system of securing a mayor and aldermen by popular vote ought to be abolished, and that the appointment of these officials ought to be vested in the Governor. Indeed, we should not be surprised any day to hear that such a change was advocated by those "respectable" but indolent citizens of Boston who decided a year ago that it was not worth while to work hard and elect a good Mayor, who could be trusted to appoint good Police Commissioners, when it would be so much easier to throw off the burden upon the Legislature and Governor.

There is an unpleasant suggestion of "hippodroming" in the course of the chess contest between Messrs. Steinitz and Zukertort. That the fortunes of the match should vary is not surprising; what is strange is that so many games should be lost and won by mistakes which, we are assured, would be unaccountable in the case of players of only moderate skill. These successive quite inexplicable mistakes, occurring as they do always just at the proper time to increase uncertainty as to the result, distinctly favor the betting "talent," and thereby are doubly unfortunate, to say the least. We would do no injustice to the players, who, for anything we know, may be the honestest men in the world, but it is a fact that the open history of the present match already excites suspicion of "professionalism," especially in view of such objectionable features as the very large stakes at risk and the undignified device of carting the game about the country. A great match rightly conducted would probably bring about a chess revival, of which there were indeed many signs at the beginning of this one, but already they have in great measure disappeared.

Society at Seattle, Washington Territory, is at last thoroughly convulsed by the attempt of its lawless element to expel the Chinese laborers. The civil authorities and the law-abiding classes have been driven to the extremity of firing on the mob and killing or severely wounding half-a-dozen of them. This, it is said, has produced a bitter feeling. We presume that it was not intended to soften previous asperities. The shooting did not begin soon enough. The proper time was months ago, when the first assault on the Chinese occurred. The only danger now is that some compromise will be effected with the rioters, which shall leave them all the substantial fruits of victory, and serve to convince them that they were right from the beginning, and that the law of the land is whatever an impromptu mass meeting of native hoodlums and unnaturalized foreigners choose to make it.

The London riot was the appropriate sequel to the demands of Mr. Chaplin and other Tory squires for what they are pleased to call "fair trade." This is the name under which "protection to native industry" masquerades in Great Britain. It teaches the destructive doctrine that Government can and ought to keep people employed at good wages. In the late electoral campaign Lord Salisbury lent his countenance and support to this theory, in a guarded manner, but with sufficient distinctness to be understood, in a speech to the electors of Southwark. The hint which he threw out was taken by the workingmen in earnest, and they accordingly waited upon him a few days ago and asked him to bring forward a measure to provide employment for them. Of course he could not answer their request in a satisfactory way, but was compelled to put them off with generalities and personal sympathy. All the materials for a "demonstration" were at hand, and it wanted only a leader to put the mass of suffering and discontent in motion. The leadership belonged naturally to the small knot of Socialists in London, because they know exactly what they want, while the others do not. The Socialists want immediate pillage and division of property. The British workmen want no such thing. They want honest work by which they can earn a living. There has never been any bond of sympathy between the so-called "International" society of the Continent and the laboring classes of England.

There was nothing more characteristic of the British mob, if this demonstration may be called such, than its voluntary dispersion after it had accomplished what it came together for—that is, after it had shown its numbers, held its meeting, and passed its resolutions. The breaking of windows and gutting of shops along the road was evidently the work of "professionals," who always attach themselves to any disorderly movement, and take advantage of the crowd and of the preoccupation of the police to fill themselves with liquor and to seize any portable property that comes in their way. If this had been a French instead of an English mob—if Paris, instead of London, had been the scene of disturbance—the streets would to-day be filled with barricades, the city would be in a state of siege, and the permanence of the Government, and even its form, would be endangered.

Mr. Gladstone is acknowledged even by his enemies to have been, under all the circumstances, remarkably successful in the composition of his new Cabinet. Mr. Chamberlain wished, report says, to be Chancellor of the Exchequer, but this would have alarmed as well as amazed "the City," where his schemes of taxation, as propounded during the last seven months, have been received with jeers and denunciation. He has therefore consented to take the Presidency of the Local Government Board, held in the last Cabinet by Sir Charles Dilke, while Mr. Mundella, a most estimable Birmingham manufacturer, who has given great attention to educational questions, becomes President of the Board of Trade — being another new recruit from the same quarter for the governing class. Lord Derby, now an acknowledged political failure, who made a dreadful mess of the Colonial Office in the last Ministry, is dropped out, apparently, altogether. Earl Granville, who was almost equally unlucky in foreign affairs, so much so that the prospect of his return to the same office is said to have made the Queen cry—deep interest in foreign politics being one of the traditions she has inherited from Prince Albert—takes the Colonies. He is a man of such genial manners, and has filled so many offices respectably, and has such a strong hold on the moderate wing of the Liberals, that, although he is over seventy, it was probably found impossible to shelve him entirely. Sir William Harcourt, who was Home Secretary under the last Gladstone Administration, now becomes Chancellor of the Exchequer. The ambition of his life has been to be Lord Chancellor, but he has of late years been so little of a lawyer that all prospect of seeing it gratified has probably passed away. Sir Henry James, who was Mr. Gladstone's last Attorney-General, would, in the ordinary course of promotion, have obtained the Lord Chancellorship, but he forfeited his claim by abandoning Gladstone and voting with the Tories in the recent amendment to the address. This has sent Sir Farrer Herschell, the late Solicitor-General, up one step, and has brought in Mr. Charles Russell as Attorney-General. Mr. Russell is a Catholic Irishman, the nephew of the President of Maynooth College, and, although not a Parnellite, a warm sympathizer with the Parnellites on the land question. He has been for some years the leader of the Common Law Bar in London. His appointment is a distinct recognition, as it would be called here, of the Irish element in the House of Commons.

Probably the most difficult place of all to fill was the Irish Secretaryship. Considering the fate which has overtaken the last three Secretaries — Mr. Forster ruined politically, Lord Frederick Cavendish murdered, and Mr. Trevelyan undoubtedly discredited—any Englishman in public life, however able or brave, might well shrink from taking the place. But if any Englishman can succeed in it, Mr. John Morley will. He has already, both as a journalist and member of Parliament, achieved distinct success in politics. He is a grave and weighty speaker, and, though not a sentimental man, has what we may call a philosophic sympathy with people of a different type of mind and character from the English, to the want of which the English failure in the government of Ireland has been largely due. He is favorable to home rule in some shape, and is ready to listen to what the Home-Rulers say, and consider it, and is not likely, when he gets to Dublin, to put on the "English gentleman" air which the Irish find so exasperating. On the whole, in fact, the new Cabinet is a considerable advance on its predecessor, as far as the Irish question is concerned especially.

The confidence of M. de Lesseps that the Panama Canal will be open for business within two or three years is simply wonderful. There is something almost sublime about the veteran engineer's anxiety to remove the business world's doubt regarding the completion of the work, "so that at the time of its inauguration shipowners and merchants may be ready to utilize it," and his consequent invitation to the leading commercial organizations to send delegates to accompany him on his tour of inspection. The New York Chamber of Commerce has done well to accept the invitation. There is probably no place in the world where people are so incredulous about the Frenchman's great scheme as in this city, but the public is interested in the project, and would be glad to know how it strikes a hard-headed American business man.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 3, to TUESDAY, February 9, 1886, inclusive.]

DOMESTIC.

THE Riddleberger and Pugh resolutions in regard to the relations of the Senate and President were tabled on Wednesday by a practically unanimous vote.

In the Senate in open session on Monday Mr. Sherman made a speech in which he held that any and all information on the files of any department belongs to the Senate. When the Senate met in executive session, the discussion broke out afresh, and was made lively when Secretary Manning's reply to the Morrill resolution was received. The resolution called for information regarding the removal of Internal-Revenue Collector McCormick, of West Virginia, and the reply of Mr. Manning is reported to have followed closely the tenor of Attorney-General Garland's refusal to furnish the papers in the Duskin case.

On Friday the Senate passed the bill for the admission of South Dakota as a State, Mr. Voorhees being the only Democrat who voted for it. The northern part is to be organized into a separate Territory named Lincoln.

Mr. Ingalls introduced in the Senate on Monday afternoon a resolution, which was adopted, directing the Finance Committee to inquire whether the statute cannot be amended so as to require the issue of $1 and $2 notes. In support of this resolution he said that he understood that these notes had been retired for the purpose of forcing silver into circulation; that no attempt had been made to force gold into circulation by the withdrawal of the $50 notes; that the people own the money in the Treasury, and want currency based upon gold and silver in circulation, and do not desire to carry coin in their pockets.

Senator Cameron (Rep., Pa.) introduced a bill on Monday to promote the foreign trade of the United States and encourage the increase of the American merchant marine. American vessels are divided into sections according to speed and measurement, and for each nautical mile run between a United States port and any foreign port, including outward and inward passage, they are to receive from the Secretary of the Treasury compensation ranging from 4 cents to 5 3-10 cents for each 100 tons United States gross register measurement. In part consideration for this, every vessel shall carry without further charges whatever mail matter is delivered to it, under regulations prescribed by the Postmaster-General, for the ports at which it expects to call. The compensation is to continue until 1905, and is then to be reduced 10 per cent. per annum of the rates given. All payments are to cease in 1915.

The Senate Committee on Foreign Affairs has reported that it is not advisable that a commission to consider the fisheries should be appointed. The Democrats of the Committee are said to have agreed with the Republicans upon this subject.

Mr. Hoar, from the Committee on Privileges and Elections, reported favorably to the Senate a bill fixing the time for the meeting of Congress in 1887 and every second year thereafter on the first Monday in October, and in 1886 and every second year thereafter on the second Monday in November.

In the House of Representatives on Wednesday the silver men showed their hands, the Coinage Committee having decided to try to get the subject in its own hands by reporting a resolution relating to the manner in which silver is treated at the New York Clearing-house. The resolution is the one calling upon the Secretary of the Treasury for information of various kinds. Mr. Hewitt moved to recommit the resolution, with instructions to report it back with the omission of the clause which calls upon the Administration to define its policy with respect to silver. Upon this a roll call was ordered, and it was defeated by 58 yeas to 168 nays. This is, however, not a test vote on the silver question, The original resolution, with two slight amendments, was then adopted by a *viva-voce* vote. The amendment modifies the strictures upon the Administration contained in the original resolution. The resolution was based upon the speech of George S. Coe, at the Bankers' Conference, relative to the policy of the Treasury in regard to silver. Mr. Morrison then reported from the Ways and Means Committee a resolution calling for information as to the total amount applied to the sinking fund between June 30, 1884, and July 1, 1885. This was adopted. The answer to these two resolutions will furnish the text for a debate on the silver question in the House.

The House on Thursday passed the Dingley Shipping Bill providing for the removal of certain fees, charges, and burdens on American vessels engaged in the inland and coastwise trade.

It is estimated that the total requirements for pensions in the next fiscal year will be $80,000,000.

The Civil-Service Commissioners on Wednesday held an informal conference with the House Committee on Reform of the Civil Service. In reply to questions as to whether it would be practicable to classify Government employees by work rather than by salaries, the Commissioners said that while it was practicable, classification by salaries seemed to them a better plan. They favored the appointment of a commission to rearrange the classification and salaries of department employees, and cited instances where the same work was paid for at different rates in different departments. The Commissioners said they thought it would require an amendment to the Civil-Service Law to allow the Commission in making appointments to take into consideration the number of employees already in office from various States. They did not consider such an amendment wise, however, as it would tend to render the whole civil-service system unpopular with the North and West, because under it the South would get nearly all the offices and thus open up a sectional question. Under the law the South was now getting its share of the offices, and would in time have its due proportion of them.

The Commissioner of the General Land Office has discovered that the Indian title to about 10,000,000 acres of land in North Dakota has not been extinguished, despite Secretary Teller's order in October, 1884, opening these lands, and their subsequent settlement by inhabitants of what may comprise fourteen or fifteen counties, most of which are organized. They contain 20,000 people, included in the Devil's Lake section, the Turtle Mountain district, and the Mouse River section. Commissioner Sparks says that in view of the presumption that the question will be submitted to Congress, he has decided to suspend all surveying contracts in the district in question indefinitely.

The suit which Secretary Lamar recommended the Department of Justice to bring to test the validity of the patent held by the Bell Telephone Company has been ordered by Solicitor-General John Goode. The lawyers who will assist the Solicitor-General are A. G. Thurman, the firm of Hunton & Chandler, of Washington, Mr. Grosvenor P. Lowrey, of New York, and C. S. Whitman, a patent lawyer. The firm of Hunton & Chandler is composed of Mr. Eppa Hunton, a former member of Congress from the Virginia district, and of Mr. "Jeff" Chandler, formerly of St. Louis. The Attorney-General will have nothing to do with the suit.

The following statement regarding the telephone controversy has been obtained as the result of a diligent search by an unprejudiced investigator: "At the time when Mr. Garland acquired his interest in the Pan-Electric Company all the stockholders, himself included, were not worth $10,000 together, and they are no richer to-day. The stock was never worth anything. He gave so little attention to it that he does not know even where his certificate is at the present moment. He would cheerfully give it to anybody who thought it worth taking. Certainly at the time when he acquired it nobody could have conceived that he (Garland) would ever be Attorney-General of the United States. Before Mr. Garland went home on his vacation last year he was approached by parties seeking to have a suit instituted in the name of the United States to set aside the Bell patent on the ground of fraud in its procurement. He replied that he could have nothing to do with such a suit, because he might be charged with an interest in its determination. He dismissed the subject from his mind, and was as much surprised as anybody in the United States when he learned that such a suit had been authorized by the Solicitor-General. If it is asked why Mr. Garland does not now divest himself of his interest in the Pan-Electric Company, the answer will be that in the present temper of his assailants, the most of whom are misled by one-sided statements and imperfect knowledge, such action on his part would be construed as an acknowledgment that he had done wrong, and in that frame of mind the public would never learn that he had been innocent from the beginning and all the way through. It is understood that Mr. Garland told the President long ago that if this adventitious circumstance were an embarrassment to him, the Attorney-General's resignation would be placed in his hands without a moment's hesitation. It is believed, however, that the President will not sacrifice an innocent man to misguided clamor in any case, but will trust to the slow development of facts for the vindication of his Cabinet."

Mr. William Dorsheimer, United States District Attorney for the Southern District of New York, has placed his resignation in the hands of President Cleveland. It will take effect as soon as his successor is named. It was Mr. Dorsheimer's intention, formed some time ago, to resign as soon as he was confirmed by the Senate. He found that his editorial duties on the *Star* seriously interfered with his official work, and it became a question which position he should vacate. He decided to retain his editorship.

A report is current in Kansas that the Knights of Labor are boycotting the State militia throughout the State. Several firms have been warned against employing militiamen.

The strikers in the coke regions of Pennsylvania caused serious trouble on Monday by attacking non-union workers.

Four hundred Chinamen were driven from their homes in Seattle, Wash. Ty., on Sunday by a mob, and the passage money for 100 of them paid on a steamer for San Francisco. No physical violence was done to them. The Chinese were prevented from sailing on Sunday night by a writ of habeas corpus. On Monday they were taken into court and informed individually by the judge that they could go to San Francisco or stay, as they wished. If they took the latter course they would be protected to the full extent of the law. About 195 in all took passage on the steamer. The several hundred remaining marched back to Chinatown escorted by the Home Guard. The mob attacked them, and the militia fired, wounding five men. This increased the bitterness between the mob and the order-loving citizens, and a serious outbreak is apprehended. The President has been called on by the Government for Federal troops. On Tuesday the President issued a proclamation ordering all people assembled for unlawful purposes in Washington Territory to disperse before 6 P. M. February 10. If the proclamation is not obeyed, the military will interfere.

Governor Hill on Friday nominated P. Henry Dugro, of New York, as Commissioner of Immigration. He has been a member of the State Legislature and Congress, and is Grand Sachem of Tammany Hall.

George T. Lanigan, a bright journalist author of the *World* fables, and at one time

editor of the Rochester *Post-Express*, died on Friday in Philadelphia, at the age of forty-one. He has recently been on the Philadelphia *Record* staff.

Dr. Alfred C. Post, a noted surgeon, died in this city on Sunday at the age of eighty. In 1851 he was appointed to the professorship of surgery in the Medical Department of the University of the City of New York, a position which he held at the time of his death.

Major-General Winfield Scott Hancock died at Governor's Island, New York Harbor, on Tuesday afternoon. He had been ill for some time with a carbuncle and diabetes. He was born February 14, 1824, and was graduated at West Point in 1844. In the Mexican war he served with credit. In 1861 he was made a Brigadier-General of Volunteers. He distinguished himself at South Mountain and Antietam, and, having been made a Major-General of Volunteers, led a division of Sumner's Corps at Fredericksburg and Chancellorsville. In June, 1863, he was appointed to the command of the Second Corps of the Army of the Potomac, and at the battle of Gettysburg, in July of that year, he commanded the Union left centre and was severely wounded in the repulse of Longstreet's attack on that part of our lines. The thanks of Congress were voted to him in May, 1866, "for his gallant, meritorious, and conspicuous share in that great and decisive victory." He was also engaged in the siege of Petersburg in 1864. His commission as Brigadier-General of the United States Army was received in August, 1864, and in March of the following year he was brevetted Major-General of the Army for gallant services at the battle of Spottsylvania. On July 26, 1866, he was commissioned Major-General, and at the time of his death he was the senior officer of that rank. For a number of years he has commanded the Department of the Atlantic. In 1880 he was defeated as the Democratic candidate for President.

FOREIGN.

The new British Cabinet was officially announced on Wednesday as follows: William E. Gladstone, Prime Minister and First Lord of the Treasury; Sir Farrer Herschell, Lord High Chancellor; Earl Spencer, Lord President of the Council; H. C. E. Childers, Home Secretary; Earl Rosebery, Secretary for Foreign Affairs; Earl Granville, Secretary for the Colonies; Earl of Kimberley, Secretary for India; H. Campbell-Bannerman, Secretary for War; Sir William Vernon-Harcourt, Chancellor of the Exchequer; Marquis of Ripon, First Lord of the Admiralty; Joseph Chamberlain, President of the Local Government Board; George Otto Trevelyan, Secretary for Scotland; A. J. Mundella, President of the Board of Trade; Mr. John Morley, Chief Secretary for Ireland. The following appointments have been made under the new Administration: Earl Sydney, Lord Steward of the Queen's Household; Mr. Arnold Morley, Patronage Secretary; Mr. Charles Russell, Attorney-General. Altogether the selections meet with favorable comment, except those of Earl Granville, the Marquis of Ripon, and the Earl of Kimberley. Earl Rosebery and Mr. John Morley are the striking features of the new Ministry. Both are the best possible selections, and are very warmly received.

The Earl of Aberdeen has been appointed Viceroy of Ireland, and Baron Wolverton Postmaster-General. The office of Lord Privy Seal has not yet been filled. It is reported that Earl Granville will soon retire from the Colonial Secretaryship and be appointed Lord Privy Seal; that Earl Rosebery will be transferred to the Colonial Secretaryship, and that Sir Charles Dilke will be appointed to the Foreign Secretaryship.

The following additional appointments under the new British Ministry have been officially announced: Chancellor of the Duchy of Lancaster, Edward Heneage; Lord Chancellor of Ireland, John Naish; Attorney-General of Ireland, Samuel Walker; Solicitor-General of Ireland, The MacDermot; Secretary to the Admiralty, John T. Hibbert; Under Foreign Secretary, James Bryce; Under Colonial Secretary, George Osborne Morgan; Under Secretary for India, Sir U. K. Shuttleworth; Under Secretary for the Home Department, Henry Broadhurst. The appointment of Mr. Broadhurst has caused a sensation in political circles, as he is the first workingman that has ever risen to the Ministry.

The Salisbury Ministry delivered their seals of office to the Queen on Saturday morning at Osborne. The Gladstone Ministry received them from her Majesty a few hours later.

Mr. Gladstone on Thursday issued an address to the electors of Midlothian. In it he says that there are three questions concerning Ireland which demand the attention of Parliament—the question of social order, the question of land reform, and the question of self-government. The desire for self-government, he says, must necessarily be subject to the law of imperial unity. The Government hope to find a safer and more effectual method than coercion to remedy the social troubles. The new Government will institute an inquiry into the entire land question in Ireland, and into the question whether there exists any necessity for the introduction of any specially coercive measures in legislation for the Irish people; but the main policy of the Government, the address declares, will be to endeavor to reach the source and seat of the mischief generally admitted existent in that country. The following sentence in the address indicates the character of the Irish policy decided upon by Mr. Gladstone: "Although the difficulties of the task make it impossible to anticipate success with confidence, we shall draw comfort from the knowledge that we are engaged in a great work of peace."

John Morley, in a speech at Newcastle on Monday, said: "This Ministry may fail. But the course upon which we are about to enter is the only course by which the problem can be solved. We may fall. We may fall soon. We may be a short-lived Government. But I hope, I am sure, when I think of the nerve and humor of the leader of the Ministry at this moment, that we shall not be a weak or wavering Government. A line will be fixed upon—has been fixed upon. Mr. Gladstone is not the man to leave it. He is not the man to take a great work in hand and then turn faint of heart. And I think he will find that some of his lieutenants are as resolute and as intent as he."

Messrs. Healy and Biggar arrived at Galway, Ireland, on Monday, to support Mr. Lynch against Mr. O'Shea, Mr. Parnell's nominee, in the Parliamentary contest in that city. Mr. Parnell went to Galway on Tuesday, and was received with disfavor. After a short conference, however, with Mr. Lynch he persuaded the latter to withdraw from the Galway contest.

Archbishop Croke has written to the London *Statist* approving the scheme of Robert Giffen to buy out the Irish landlords.

The "starving mechanics" of London met around the Nelson Monument in Trafalgar Square on Monday. About 10,000 men were present, the Socialist element predominating. Many policemen were present. Mr. Burns, the Socialist, was a conspicuous member of the crowd. He ascended the pedestal of the Nelson monument to deliver a harangue, but was forcibly removed by the police. The mob soon brushed the officers away, and Burns again ascended the pedestal and waved a red flag. A fiercely worded resolution was read, denouncing the existing order of things, and summoning Parliament to immediately relieve the distress of British workmen. The police again charged the mob and pulled the speakers from the monument. The great and increasing crowd then spread through the adjacent streets, stoning club-houses and dwellings, sacking saloons, and smashing windows. Several thousand pounds' worth of jewelry, clothing, etc., were looted. The mob dispersed during the evening of its own accord, the police, however, breaking up some of its remnants. The meeting was really started by fair-traders, but Socialists got control. A number of arrests have been made.

An extraordinary fog Thursday morning put an end for a time to the excitement caused by the riot. Later in the day the fog cleared and the mob began to assemble in Trafalgar Square. By 3 o'clock in the afternoon 10,000 ruffians had assembled. The police charged them twice without effect. Finally, at 4:30 P. M., the authorities becoming alarmed, enormously increased the police force. A vigorous charge was made and the mob driven into the side streets. Many of the rioters were arrested.

The principal landlords in Wales have combined to resist the demand of the Farmers' League for a reduction of 25 per cent. in farm rents.

At the annual meeting of the shareholders of the Anglo-American Cable Company in London on Friday it was reported that the receipts for 1885 had been reduced £93,926 as compared with those of 1884. This was explained by the cutting of rates and the competition of the Mackay-Bennett Company.

The French Chamber of Deputies on Thursday agreed that the crown jewels should be sold to provide a fund for aged workmen. The debate on the subject was attended with great excitement. Comte de Lanjuinais predicted that the Republic would be speedily overthrown. His prediction was received with a chorus of howls. It is estimated that the jewels that are to be sold will produce $40,000,000. Some that are of historic interest will go to the Louvre collection. The gems of artistic and educational interest, valued at 13,000,000 francs, will be handed to the Museum and School of Mines. The Radicals gave notice of a motion to expel princes of former reigning families.

Louise Michel will not go to Russia, but will start an Anarchist paper in Paris called *Terre et Liberté*.

Count St.-Vallier, a French diplomat and statesman, is dead at the age of fifty-three. He was sent to Stuttgart in 1868 as Minister Plenipotentiary. During the Franco-German war he was Commissioner-General of the army of occupation. In 1876 he was made a Senator, and subsequently was appointed Minister to Berlin, where he was favorably received.

The agreement between France and Germany regarding their respective possessions on the west coast of Africa and in the South Sea, has been submitted to the German Reichstag. The agreement contains an amicable understanding with respect to the rival claims of the two Powers to the territory lying on Biafra Bay; Germany surrendering her assumed sovereignty and protectorate over all that part of the country lying south of the river Campo, north latitude 3°, and France abandoning all claim to any territory north of that river.

Prince Bismarck has ordered the hauling down of the German flag on the islands of the Caroline group occupied by the Germans previous to the decision of the Pope in regard to the ownership of the islands.

It is authoritatively stated that Greece will immediately disarm, provided Turkey cedes Epirus in accordance with the Berlin treaty.

Prince Alessandro Torlonia died in Italy on Sunday, at the age of eighty-six. He was one of the greatest landowners in Italy. His princely title he received from Victor Emanuel in acknowledgment of his service to the State in draining Lake Fucino, on the border of the Neapolitan province. Many of the most important excavations and discoveries of art treasures were made by him, and his collection of antiquities ranks second only to that in the Vatican.

The notorious Russian Nihilist, Sergius Ivanoff, has been captured.

MR. GARLAND'S POSITION.

THE *Evening Post* prints in a Washington despatch what is undoubtedly the latest version furnished by Mr. Garland or his friends of the origin and nature of his relations to the now attacking party, the Pan-Electric Company. Mr. Garland now says that "he does not divest himself of his interest in the Pan-Electric Co., because, in the present temper of his assailants, most of whom are misled by one-sided statements and imperfect knowledge, such action on his part would be construed as an acknowledgment that he had done wrong." But this seems to us to show that Mr. Garland takes a mistaken view of the whole matter. The position of the Attorney-General is a quasi-judicial one—that is, he is frequently called on to perform functions, such as authorizing or bringing suits on the application of private parties, and giving opinions regulating the action of other officers of the Government, which are judicial in their nature, and which may, as in this telephone case, exercise a great influence on the value of property. Now, the world has agreed, almost ever since justice began to be administered, that it is not enough that a judge should be pure; that it is also necessary that nobody, not even the prejudiced and the ignorant, should have any reason to doubt his purity. There are hundreds of men on the bench who could with perfect fairness try a case in which they had a large personal interest, but it is nevertheless a well-settled rule of judicial decorum, as well as of judicial policy, that a judge is disqualified for trying a case by any interest, however small. If a judge is called upon to try a suit against a corporation in which he is a stockholder, he does not say that he knows he can try it fairly and does not care what captious or ill-natured persons may think. He either refuses to try it or sells his stock, and he does this for the express purpose of preventing captious or ill-natured people from doubting the integrity of the courts. The courts sit, and attorney-generals act, not for the benefit of the clear-headed, and candid, and impartial alone, but for the benefit of the ignorant, and prejudiced, and easily deluded. These latter form a large portion of every community, and they have a right to feel satisfied that when they go to the law officers of the Government for justice they get the genuine article. When John Quincy Adams sold all his stocks on entering public life, it was not because he was afraid the possession of the stocks might lead him from the paths of virtue, but because he did not wish anybody who trusted him to suspect, even, that his course on any particular question was affected by his private interest.

What makes Mr. Garland's position all the more delicate is that there is something decidedly queer about this Pan-Electric stock. The Company was formed, he told the President in his letter of October 8, 1885, about three years ago, and he, while in the Senate, was presented with some of the stock and made its attorney. Soon after he gave the Company an opinion that the Rogers patent which it was to work, did not in any way infringe the Bell patent. The Company appears, however, to have had neither capital nor credit, and during the following three years did nothing but distribute or try to distribute large blocks of its apparently worthless stock among members of Congress. Last March the new Administration came into power, and the attorney for the Company became Attorney-General of the United States Almost immediately thereafter—that is, as he says, "some time last summer"—the Company applied to him to get the United States to institute and bear the expense of a suit to attack the Bell patent, which he had advised the Company its own patent did not infringe at all.

He refused, but the Solicitor-General—the Attorney-General's "assistant" under the statute—did it for him in his absence. The President recommended that the application should be referred to the Interior Department, which contains two of the active promoters of the Company and distributers of the stock, in the persons of General Joseph E. Johnston, the Railroad Commissioner, and J. D.C. Atkins, the Indian Commissioner. The Interior Department thereupon authorized a suit assailing the Bell patent on the application of the Pan-Electric Company, which has suddenly discovered, since the new Administration came into power, not that the Rogers patent infringes the Bell, but that the Bell infringes the Rogers. This suit the Attorney-General's Office will have to carry on, and the cost of it will come out of the United States Treasury.

Now, there is not one fact in the foregoing brief narrative which convicts anybody of corruption or dishonesty, but there is hardly one which does not call for some sort of explanation from such officers of the United States as it concerns. As regards Mr. Garland, we think the situation is one which he cannot explain satisfactorily without corresponding action—and that action should consist either in divesting himself totally of his interest in a stock which he got for nothing, and the value of which may be largely increased by the action of the Government of which he forms a part, or surrendering the position he holds as legal adviser of the Government. Neither of these courses would be an acknowledgment that he had done wrong. The first and the easiest would be simply an acknowledgment that he had come into possession of a piece of property which exposed him to suspicions that interfered with his usefulness as a public officer. It is not the business of the Administration to vindicate him or any other man. The business of the Administration is to keep itself above suspicion, no matter what the cost may be to individuals. The "fire rule," which President Grant was so fond of, and which prevented him from getting rid of an officer as long as he "was under fire," *i. e.*, as long as people were accusing him of something, was a very good rule for indiscreet or dishonest officers, but it ruined the Administration.

VIRGINIA COUPON BONDS.

THE decisions of the Supreme Court delivered on the first day of this month are entirely in accordance with the construction which the *Nation*, nearly three years ago, put upon the first decisions relating to the same subject-matter. The *Nation*, in its issue of November 1, 1883, took the ground that the decision of Antoni v. Greenhow, over which the dishonest element in Virginia rejoiced as sustaining in every substantial particular the repudiation of the so-called Riddleberger laws, did in fact sustain them only to a limited extent. It was pointed out that although the Supreme Court refused to force the State of Virginia to give receipts for coupons tendered in payment of taxes, it none the less insisted upon the inviolability of the contract which made these coupons legal tender for such payment; that the meaning of this apparently paradoxical opinion of the court was clearly shown in a long course of past decisions, to the effect that while the court would not assist suitors in aggressive action against a State which had transcended its powers, neither would it permit a State in transcendence of its powers to commit aggressive actions against individuals; and that the court was driven to this position from the necessity of declaring that, while the Eleventh Amendment to the Constitution prohibiting suit against a State was valid, so was that provision in the main body of the Constitution prohibiting any State from passing a law in abrogation of contracts.

Such was taken to be the necessary, logical consequence of the opposing provisions of the Constitution, as indicated by the decisions thereon rendered; and the *Nation* felt safe to predict that the present court would advance the logic of its predecessors to its legitimate conclusion when a case directly called for it—as Antoni v. Greenhow did not—because it thought the attitude of the present majority of the court toward constitutional government was very clearly shown in the Arlington case. It was there decided that even the sovereign power of the United States exercised in confiscation of the estates of the leader of the forces of a great rebellion, at the very time of the rebellion, must proceed under the Constitution, and, therefore, according to due process of law. And it seemed sure ground to take, that if the United States could not exercise sovereign powers at such a time and on such an occasion, then with national sovereignty must fall the old and vicious nullification doctrine of State sovereignty; or else it must be declared that sovereignty does not exist in the United States, but that constitutional government is *per se* made up of many departments, each of limited powers.

The Virginia taxpayer who holds these coupons is now guaranteed the following rights, strictly confining the decisions to the facts actually involved in them: He may make tender of coupons in payment of his taxes, whether they be ordinary taxes or license fees, and after that his taxes are held as paid; and if any officer of Virginia seeks to make collection by seizure of his property he may be sued as a trespasser, or suit may be brought to recover the property; and if the officer plead the State law under which he acted, he will plead void laws, which can afford him no protection. As corollary to these general rights, whenever the seizure of property, such as the rolling stock of a railroad, is liable to do irreparable injury to the taxpayer, the State officer may be enjoined. These rights, on the other hand, belong to a taxpayer alone, and even he cannot bring direct suit against a tax-collector for simply refusing his coupons without other aggres-

sive act; nor suit which will force the collector to give a receipt except so far as a rather inadequate law of Virginia passed January 14, 1882, allows him to do so; for it appears that this act, as being an equivalent for a State law in existence when the coupons were issued, is considered part of the contract and in substance irrepealable.

Four justices, including the Chief Justice, dissent. They base their dissent upon the broad ground that the Eleventh Amendment, because it is an amendment, or is subsequent to the original Constitution, sweeps away all opposing clauses and renders an individual powerless to hold a State to its contract. Undoubtedly their reasoning is less subtle than the reasoning of the majority of the court. It is the cutting of a hard knot, because its windings and twistings, though possible to unravel, tire the patience. The reasoning would commend itself to the unlearned in law as much as they would deprecate its results, and the more unlearned the more it commends itself to them.

The importance of these new decisions can hardly be overrated. If they are accepted without resistance, they will mark the first victory of the Supreme Court over a really recalcitrant and angry State. The supremacy of the national power as represented by the Executive was of course triumphant in the civil war, and was before triumphant in lesser struggles, as in the Whiskey Rebellion and in Jackson's famous victory, through threats of force, over South Carolina; but until the present time the United States has never been victorious in its judiciary department over a State determined to defy it. Chisholm, it is true, in 1792 obtained a decree that judgment by default should go against Georgia if she did not appear before a certain day; but before that day the indignant and frightened State succeeded in pushing through Congress the Eleventh Amendment, under which Virginia has just sought shelter through devious and intricate legal paths. There have been many other cases before the Supreme Court in which acts of State Legislatures have been declared unconstitutional and void, but never when the State has used all its civil power, its intellect and obstinacy, backed finally by a united public opinion, to frustrate the constitutional demands of hated creditors. These decisions are, then, the first absolutely peaceable triumph of the Constitution and its honest principles over the narrowness, bitterness, and often dishonesty of local popular will, and as such they form an epoch in constitutional history. It is a triumph of the regular power of the national Government over the irregular power of the State, just as the Arlington case was a triumph over irregular power of the national Government.

CONNECTICUT'S WARNING AGAINST THE FEDERAL EDUCATION SCHEME.

The question of Federal aid to education in the States, with an especial view to overcoming illiteracy at the South, is so important that it merits thorough discussion. The letters that we have received, and continue to receive, since our recent article, and the comments of other journals upon the views then expressed, justify a recurrence to the subject. The great difficulty hitherto has been that the public has not given much thought to the vital issues involved, most people hastily yielding acquiescence to the scheme upon hearing the plausible surface arguments in its favor. Signs of a disposition to get at the fundamental principles underlying it are therefore welcome.

As we previously remarked, the North feels generously toward the South, and is therefore favorably disposed toward any measure that promises to dispel the cloud of ignorance which has overspread that part of the country. Moreover, many Northern people feel as though the nation was under an obligation to assume a portion of this burden. The *Christian Union* speaks for this class when it says:

"An appropriation for education in the Southern States is not a gift of charity; it is the payment of a debt due by justice. The nation shares in the responsibility for slavery. It is wholly responsible for emancipation and enfranchisement. If the South had enfranchised the blacks, we might leave the South to educate them; but in putting the ballot into one hand we obliged ourselves to put the school-book into the other."

It is also urged that the Federal Government virtually rendered educational assistance to the new States in the West by setting apart school lands for them, and that the Southern States, with the ignorance thrust upon them by emancipation, now stand in far more urgent need of assistance from the nation.

All the pleas for Federal aid proceed upon the assumption that such aid will be a good thing for the South. It is this assumption which we combat. We maintain that the worst thing which could befall the cause of education in the South would be a series of liberal appropriations from the national Treasury for a series of years. We mean, of course, the worst thing in the long run, for no judgment upon such a matter is of any value which is not based upon a long look ahead. We are ready to admit that more Southern voters might be able to read ten years hence if $100,000,000 should be appropriated by Congress for use chiefly in Southern schools than if the States were left to their own resources; but we insist that this temporary gain in intelligence would be purchased at the cost of a permanent loss in character vastly more important—the loss of self-reliance and self-respect.

One fact counts for more than a volume of theorizing, and it is therefore most fortunate that the demoralizing influence of outside school funds can be conclusively demonstrated from the experience of one of the oldest States in the Union. When Connecticut sold her Western Reserve lands, the proceeds were devoted to a school fund, in the expectation that this assistance would serve materially to elevate the standard of public education. The fund proved very productive, the income during the early part of this century varying from $70,000 to $100,000 a year, which was a large sum of money for a small State in those days, when the cost of maintaining schools was so much less than now. Before they had this outside income the people of Connecticut supported their schools entirely by taxation, just as the people of the South are doing now. What was the effect of receiving this assistance? The answer shall be furnished by Mr. C. D. Hine, Secretary of the State Board of Education, a recognized authority in the matters of which he speaks:

"The school fund derived from the sale of Western lands yielded an income last year of $120,855, which amounts to 80 cents for each person of the school age. The average expense of educating each of these persons throughout the State is $10 31, so that the fund now furnishes about 8 per cent. of the total cost. In those towns and cities where the people insist upon good schools no reliance is placed upon these permanent funds. Indeed, the history of our State shows conclusively that at the time when the fund was most productive, yielding $1 40 or $1 50 for each person of the school age, and when towns depended upon it, as they generally did, for the support of their schools, the schools themselves were poor and short. In fact, this was the darkest period of our educational experience. A very striking deterioration took place as soon as the fund became productive and the income began to be distributed. Before that period schools had been maintained at least six months, and at most nearly the whole year, according to the size of the district. After, and not long after, this new source of income was opened, the usual length of schools was reduced to only three months, or just the time that this fund would maintain the schools. The sums which came as gratuities relieved the people of responsibility and deadened their interest, until the schools were continued only so long as the charity lasted. Happily, the danger from this direction is passed and cannot return. The fund has probably reached its greatest productiveness, and the per capita will constantly decrease. The public schools must draw their sustenance from the people who are directly or indirectly benefited by them."

The Blair Bill simply proposes to do for the whole South what the Western Reserve fund did for Connecticut. Human nature is much the same everywhere, and if one were to try differentiating it, he certainly would not find the Southern character less likely to be demoralized by subsidies than the Northern. The men who had this fund set apart for the benefit of Connecticut's schools undoubtedly thought that they were doing the State a great service; but it has proved a curse, and the people are now congratulated that "the danger from this direction is passed," because the growth of population has forced them to tax themselves in order to educate their children. The *Christian Union* and the people who share its opinion that Federal appropriations for Southern education would be simply "the payment of a debt due by justice," are honest in their desire to benefit the South; but if they could accomplish their design, they would have proved its worst enemies.

The truth is that the South can educate herself, and is already beginning to do so. It will be a hard job, but her people, black and white, will be more manly, more self-reliant —more intelligent, in the long run — if they are left to work out their own salvation. The most hopeful sign for the South's future is that clear-headed Southern men are protesting against the efforts of well-meaning but short-sighted Northerners to give the South school money out of the Federal Treasury, which these Southern men see that she ought to raise and can raise herself.

GEORGE BORROW IN SPAIN.

Since reading the interesting papers on Borrow to which his death, in 1881, gave rise, I have been no little surprised to observe the resumption of the subject in the January number of *Macmillan's Magazine*, and a short Life in the fifth volume of the new 'Dictionary of National Biography.'* I interpret this as an instinctive clinging on the part of the public to the manly and independent author who has left such deep

* For the Review articles, see *Littell's Living Age*, Nos. 1945-47-54 for 1881, and No. 2171 for 1886.

impressions on his time, and who will, I venture to prophesy, long continue to stir the hearts of his readers as for thirty years he has stirred my own.

This conviction prompts me to record some of my observations during a long residence in the Peninsula, in which the traces of the campaigns of 1835–40 often drew my attention to the man and his work. The period of Borrow's activity in Spain was during the reign of the Queen Regent, Doña Christina, and not of Isabella II., as some of the articles have stated, for Isabella was not declared to be Queen till 1844, at the age of thirteen. Borrow was in St. Petersburg in the summer of 1835, and the preface to his 'Targum,' published there in that year, is dated June 1. He left about the 10th of October, and reached Lisbon November 11, commissioned by the British and Foreign Bible Society to make an entrance for the Scriptures into Spain. The political situation was one of high excitation. The Liberals had demanded a constitutional government, but obtained only the sedative called the Royal Statute of 1834, which, instead of allaying, only aroused the popular passions till the revolution of "The Grange" (La Granja), in August, 1836, put the Progresistas in power. The Moderados, to whom the Queen Mother intrusted the fortunes of her child, being defeated, a tilt was kept up between the two great parties, which lasted till the temporary triumph of the advanced party culminated in the expulsion of Christina from Spain in 1840, after Borrow's work was done.

His appearance, then, on the scene in 1835 was at a most critical and difficult juncture. The partisans of Carlism filled the land with all the horrors of civil war, and the attention of the Madrid Government was distracted from its legitimate cares by the sudden raids of Gomez, Cabrera, and other Carlist chieftains, threatening at times the very capital. Only those who know Old Spain can comprehend why Borrow, under these circumstances, began his mission *ex infimo*, with the lower orders. What would one of your sleek, solemn, black-gloved weaklings have wrought among the traditional *majos*, *manólos*, and *chulos*—"b'hoys" of the ring—the first to conciliate because they were and are the skirmishers of a foe that lurks in high places? What would kind words and Christian smiles have achieved among such men as you find crowded between the Lavapiés and the Calle de Toledo? We met them first in 1867, tamed by thirty years of modern civilization, with its whiz and whirr of steam and electricity. What must they have been in '37, with their red sashes bristling with knives, their cloaks concealing an arsenal of sinister tools, over the mufflers of which peeped coal-black eyes, and in whose breast pity never lodged!

Borrow's mission lay through the midst of these. The old words and the ancient strategy that had put him at the head of gypsydom in England were appealed to for personal insulation in the maze of hidden dangers in the Peninsula. With such "pals" he could defy the Captains-General, the night-prowling *alguaciles*, and even the lowest factotums of unscrupulous power. He set himself at work and became the *Inglesito*, "Master of the Seven Jargons," the friend of Montés, Sevilla, Poquito Pan, and all the guild of bull-baiting heroes once famous in the plazas of Madrid and Seville.

After long searching I at last found a copy of the Gypsy Gospel—'El Embéo e Majaró Lúcas'—which Borrow translated in 1836 at Badajóz, "opré a mixa de Laloró" (on the frontier of Portugal), and printed at Madrid in 1837: a remarkable work, and one which, with the 'Gypsies of Spain,' whose vocabulary and facts were soon reproduced in Spanish, has had no small influence on the popular language and even on the literature. The native vocabularies of Trujillo, Campuzano, Mayo, and others, which appeared since 1844, are simply Borrow's 'Gypsy Word-Book of 1841, concealed by false *caló* additions taken from the *Slang* Dictionary of Hidalgo. The celebrated dramatic author, Bretón de los Herréros, has several prose plays interlarded with Borrow's Gypsy words, a fact that is especially patent in the school editions by Germans, who know not what explanation to give them. See Booch-Arkossy's edition of "La Independencia" for ludicrous examples. The vulgar speech of the lowly at Madrid to-day cannot be understood without a knowledge of Mayo's (that is, Borrow's) vocabulary. At every turn you hear *gachó* for "cove"; *chavó* for "chummy"; *chachipé*, "that's so"; *parné*, money; *diquelár*, to see; *camelár*, to love, like, to flatter; *penár*, to say, to speak, etc., etc. Once it was the fashion in Spain to learn the Germania or cant language; Cervántes wrote a novel in it, and Quevedo several poems. Now Gypsy has replaced it, and an *Englishman* introduced the fancy! Borrow probably never knew it, but I can prove the statement by a volume of extracts, none of which will antedate 1842.

Borrow in his 'Bible' and 'Gypsies' has suffered at the public bar all those insinuations which a writer must undergo who thoroughly knows the country he describes. Most men who have attacked the subject have been prudent enough to limit their observations to what their eyes could fathom, carefully abstaining from a knowledge of the language whereby they might get at enough truth to jostle the prejudices of their readers, who want only to hear what they have been wont to believe. No scrupulous author likes to be included in a charge of exaggeration, and that apprehension often tones down his expressions till they reach untruth by the opposite extreme. The fact is, Borrow had an intimate knowledge of the Spanish character and language, and he gives us the most exact delineation of the plain Castilian to be found in literature. One of the best tests of such works is to translate portions of them to the natives of the district described. I have frequently done this before a group of the class he immortalizes, and never failed to elicit the most unequivocal marks of approval. One said, gravely: *El gachó e' mu' ducho* (the "cove" is an expert); another recognized the book to be profoundly Spanish—*muy español*—a decision which provoked unanimous assent, and from which there was no appeal. A third would condense his convictions into a most expressive exclamation, not intended for publication, but in the mind of all an apposite compliment.

The 'Bible' and 'Gypsies' are two extraordinary publications, worthy the adjectives "valuable and extremely interesting" which Mr. Longfellow applies to them. I do not remember to have discovered a positive error in them, and I have travelled with them all over the land, as in the sixteenth century Diego de Mendoza did with his 'Celestina' and 'Amadís de Gáula.' As to his exactness I will cite one example. In the London *Times* of 1836 are the political letters from Spain, perhaps by that correspondent to whom Borrow refers, on the Revolution of La Granja. The latter's statement of the affair seems exaggerated, but it is strictly true. The correspondent denies that General Quesada was mutilated that day by the infuriated mob. Borrow says he was, and that the Madrid roughs drank coffee from a monster bowl into which had been thrown the hands and fingers of the late Captain-General of the Province. Years after, the Spanish historian, Xavier de Búrgos, in his 'Annals of the Reign of Isabella the Second,' confirms Borrow in these words: "The masses assassinated and mutilated him (Quesada), and returned to the capital bringing in triumph the bloody members of their victim, which were received in the Café Nuevo with the howlings of savage exultation proper to cannibals in their execrable orgies" (vol. iii, p. 307). Búrgos was one of the cabinet ministers in those days, and was in Madrid at the time of the Revolution. In many other respects Borrow's account is better and more exact than the ones now held as historical; for I have often heard the details from those who were with Queen Christina at the Grange that memorable day, when she was compelled to yield to the Sergeant García and sign the promulgation of the Constitution of Cadiz (1812).

Everywhere that I met Gitanos, they all knew "the Englishman," and the words he left in his vocabulary were everywhere current coin. I visited them in the Triana and the Macaréna, famous suburbs of Seville, and in the Albaïcín of Granada on the slope where their *cuevas*, dug out of the solid earth, form the queerest of homes under the towers of the Alhambra. In Granada itself I once received a visit from the *conde*, or Gypsy chief, a tall, perfectly-formed man of middle age, who gave me his address written on a card in a fair, round hand: Señor António, Maéstro Herréro en el Salón—Mr. Anthony, Master Blacksmith on the Promenade (of the Genil)—a pure Jasper Petulengro of Spain.

Besides these Egyptian gentry, I met Borrow's blind girl of Manzanáres. His "girl" of nineteen was now a woman of fifty-five, I should judge; though age-telling is one of the mysteries of that country. I was returning from Portugal in 1876, and while the train stopped at this station which meets the through-line from Madrid to Cadiz, I heard a strong, but cheerful, pleasant voice cry out in the night: "Bon soir, messieurs, quelque chose pour la pauvre aveugle de Mançanarès." I saw the point at once and rushed out of the train to see her. She was decently dressed in the ordinary *percalina* of the country; her hair was now gray, but her form proud and erect, proper to the grave bearing of the peasant class to which she by birth belonged. She spoke to me in Spanish, Latin, and French, the latter more than passable. She remembered the *Inglés rúbio* (the blonde Englishman), she said, and recognized that to him she owed much of her celebrity, and not a few of the *pesetas* she received. No one stopped at the station without remembering the *pobre ciega*—the poor blind woman, who speaks the tongue of the stranger.

As for his New Testament of 1837, Borrow has been stoutly attacked by an English writer whose twaddle was copied and endorsed on this side of the water, for forcing on the Spaniards the *Lutheran Bible* "when they had one as good of their own." I wonder if the grumbler ever saw the Spanish Lutheran Bible or the native one either. Now the best of the joke is that Borrow printed and circulated in the Peninsula just that *Catholic* version those haters of Bibles said he ought to have introduced. Spain had no Bible, Catholic or Protestant, till 1791-3, and then it came out in ten *folio* volumes, costing even now $50 a set. Borrow simply reduced the New Testament of that Scio-Bible to one small volume, by leaving out the notes, commentary, and pictures; and Andrés Borrégo, the brave Liberal, still living at Madrid, printed it in the office of his journal, *El Español*.

What influence did Borrow's distribution of the New Testament exert on Spain from 1837? The influence that the wind has at harvest on a Spanish threshing-floor. The farmer drives his mules over the grain, then casts up the straw into the air, while the breeze carries away the chaff, leaving the pure wheat on the floor. Many a thoughtful man read the Englishman's book, gave

up the chaff of life, and fed for ever after on the golden grain. Who knows how many? We have met them in Galicia, at San Sebastian, at Madrid, at Valencia, at Seville, at Málaga. The well-known scholars, Luis de Usóz y Rio, Fermin Caballero, Brunet of Guipúzcoa, Andrés Borrégo; the printers, José Martin Alegría, José Cruzado (through Usóz), and many others, all dead save three, are the fruit of George Borrow's Bible in Spain. Of those whose names we cannot mention, two have surviving families, living on Government pensions, and to cite them by name would be, if not to deprive them of their sole support, at least to subject them to certain social ostracism. I met the venerable heads of these lovely families in 1872, and they told me that for thirty-five years they had held service at home, ignorant of collect, prayer, or form of worship. I possess the printed service they contrived to draw up, containing the prayers they daily read and extracts from the sacred book. When liberty of worship came in 1869 they took no overt part, well knowing that freedom in Spain was but nominal, or for the irresponsible poor. Usóz y Rio, the noble Castilian and Castilian nobleman, lived a retired life from 1842 to his death in 1865, secretly editing the twenty volumes of the ancient Spanish Reformers, printed in the cellar of Alegría's house in the suburbs of Madrid, during the dark days of Isabella's reign. Fermin Caballero, once a minister of the crown, devoted himself to books and learning, and was the author of the 'Conquenses Ilustres,' or Illustrious Men of Cuenca, in four volumes, a set of which he gave me with his trembling autograph a month before he died. I followed his body to the grave one summer's day in 1876.

Why did not these distinguished gentlemen stand forth when liberty of conscience was secured by the Constitution of 1869? Because liberty of conscience in Spain still means ruin to those who embrace it, unless they be too poor to have social bonds or are too lowly to attract official persecution.

W. I. Knapp.

FALL OF THE SALISBURY MINISTRY.

London, January 30, 1886.

Up to the very morning of Thursday, January 19, when the Queen opened Parliament, there were those who hoped that Lord Salisbury's Ministry would be kept in office by dissensions in the Liberal party, and exhorted that Ministry to show themselves valiant, and win by boldness and patriotism the support of the Moderate Liberals. But before the echoes of the Queen's speech had died from the ears of the crowd that had watched the brilliant scene in the House of Lords, men began to feel how vain were such hopes, how wasted such exhortations. The two parties confronted one another with their old hostility, and in the speech from the throne the Ministry had confessed the difficulty of its position, and its hesitation as to the policy to be pursued in Ireland. Those who counted on a coalition of moderate men on both sides perceived how potent an obstacle to any such arrangement was the presence of Mr. Gladstone, overtopping all his allies and opponents. And when the practical question arose, what sort of coercion bill ought to be presented for Ireland, by what evidence of the state of the country it must be supported, how it was to be passed against the resistance of the Irish members, the problem that lay before a Ministry in a minority looked far more formidable than the readers of newspapers had been led to believe. Curiosity and expectation had risen to a higher point than any one remembers; not only because the situation was critical, but because the tone and tendencies of the new Parliament, more than half of whose members did not sit in the last Parliament, were an unknown but decisive factor.

The interest of the first night's debate on the address in reply to the Queen's speech centred in Mr. Gladstone's discourse, which, according to custom, followed immediately on the morning of the address. Would he admit or repudiate the views about home rule ascribed to him? Would he attack the Ministry, or promise them a truce? Would he indicate a policy of his own? He had not spoken five minutes before one thing was certain, that his oratorical power had suffered no decline. Seldom has he been more delicately wary and skilful. He praised Lord Salisbury's policy in the Bulgarian troubles. He committed himself to no positive line of policy, either as respects home rule or coercive measures, insisting that the responsibility of making proposals lay with the Ministry, and he advised the new members to reserve their judgment on the necessary course till such proposals were laid before them. He showed that as respects home rule he had not gone an inch beyond the declaration contained in his address to the electors of Midlothian last September; that no Tory speakers had attacked or censured this declaration; that the expressions used by Lord Salisbury during the campaign went quite as far toward home rule as his own. With a sarcasm so fine that it might scarcely have been perceived but for the way in which the cheers of his supporters emphasized its point, he compared the language of the Tory leaders during the election, when they were still anxious to win the Irish vote in English constituencies, with that which they now held. And in two passages of solemn eloquence, which thrilled his auditors the more by their contrast with the easy and quiet tone of the rest of his speech, he appealed to the House of Commons to give a fair and large-minded consideration to any scheme which the Nationalist members or any other members could propose for ameliorating the state of Ireland and its relations with Great Britain.

The effect of this speech on the House, and particularly on the new Liberal members, was enormous. They had come up anxious and doubting, some opposed, some fearing their constituents would be opposed to anything savoring of home rule. They were now swept away by admiration for the prowess of their leader, and seemed to see the whole landscape with different eyes. A new feeling ran through the party, and made it feel itself again compact and hopeful. Mr. Parnell followed with words carefully chosen to maintain the impression Mr. Gladstone had created. He is always calm and collected; he was now also conciliatory, deprecating excitement, minimizing difficulties, expressing no impatience. The Tory leaders were guarded; they echoed energetically the declaration in the Queen's speech against any tampering with the Act of Union, but they did not commit themselves to measures of coercion, announcing in the debate of Friday that they were sending to Ireland as Chief Secretary one of their most prominent ministers to report on the state of the country with a view to legislation. That second night's debate was marked by a long and striking speech from Mr. Sexton, restating the Parnellite position, and a warm appeal by Mr. Elliott, an Anti-Home-Rule Liberal, to the Liberal leaders—particularly to Lord Hartington and Mr. Chamberlain—to declare themselves on the Irish question. The same line had been taken by Mr. Albert Grey on Thursday, and these speeches were significant as manifestations of the spirit of revolt in one wing of the Liberal party against the home-rule ideas attributed to Mr. Gladstone. If this so-called "Whig" wing, which has spoken out strongly through the Dukes of Bedford and Westminster, not to mention less important peers, were really to act together against Mr. Gladstone, and to find a powerful leader in Lord Hartington or Mr. Goschen, it would become a formidable factor in the situation. It might command considerable voting power in the House of Commons, and exercise a still greater influence in the country. However, Mr. Grey and Mr. Elliott were left alone in their protests, and the opinion gained ground on Friday and Saturday that the great bulk of the party would, for the present at least, cling to Mr. Gladstone.

These also were days of feverish eagerness and excitement. Among the Tories the question was, "What shall we do about Ireland?" The idea of moving toward home rule had been dropped, if it ever seriously existed, a month before. But was a coercion bill needed? Did the state of Ireland prove the necessity? Was it prudent to break finally with the Nationalists by introducing it? Might it not be better to go out of office at once, leaving the Liberals to face the question, and reserving the right of renewing, in case the latter proposed a coercion bill, the alliance of Tories and Parnellites? On the other hand, there was English opinion to consider, still irritated by the reports of boycotting and the refusal of rent. Since the Salisbury Ministry must soon die, ought it not to die with dignity, championing the cause of order, introducing its coercion bill, and throwing on Mr. Gladstone the odium of resisting such a measure side by side with the Parnellite "enemies of the Empire"? In the Tory party itself much disappointment was expressed at the hesitating timidity of the Cabinet, and their journals told them they were losing their hold on the country and sinking to the level of a Gladstone Ministry.

The perplexities of the Liberals were not less acute. It was now plain that they would turn out Lord Salisbury when and as they pleased, for the Parnellite phalanx was prepared to vote on their side. But was it prudent to turn out the Government? Why not give it more rope, force it to discredit itself still further with the country, leave it to struggle with the difficulties its Irish policy had created, let it show its weakness in Parliamentary debate, keep it in office till the time came for it to produce its Budget, and then kill it on some financial issue? Would not the Liberal party grow stronger and more united in opposition than if, in the formation of a new Cabinet, the differences of view among its leaders stood revealed? Would not opinion in the country come round to give a more favorable consideration to schemes of home rule if an interval were allowed it for reflection before a Liberal Ministry could be called on to produce a positive policy for Ireland? These were weighty arguments, and to them was added another which, though it appealed to members of the House of Commons only, appealed powerfully to them. The Tory Ministry had tabled a series of resolutions for the improvement of Parliamentary procedure. The need of some improvements, large and sweeping improvements, is undeniable, and had been strongly urged by Mr. Gladstone in his election address. Although there were parts of the Tory proposals on the subject which the House of Commons would have rejected, and though other changes were needed which the Ministry had not proposed, the fact that they had put forward these resolutions afforded an excellent opportunity, which might not soon recur, of settling the question and establishing new rules under which all future Governments would find it easier to despatch business.

While the minds of politicians hung in this state of doubt, it occurred to them that there were certain amendments put down to the address to the Crown on which it was possible for the Ministry to be defeated. The moving

of such amendments, unless for the purpose of taking a party vote of want of confidence, is a novel practice, which old Parliamentarians condemn. However, here these amendments stood, and if the practice was novel, so assuredly was such a situation as the present. On Sunday, the 24th, it began to be whispered that the Ministry might fall upon one of these amendments; and on Monday discussion was keen among the Liberals whether they ought to turn out the Government on this issue, among the Tories whether they ought to accept the opportunity of going out. The interest was heightened by an announcement which Lord Salisbury made on Monday evening, that within twenty-four, or at most forty-eight, hours he would declare his Irish policy. An incident in the House of Commons further increased the tension. The first amendment to the address was withdrawn. The second was a somewhat vague complaint that the Queen's speech held out no prospect of securing better conditions of tenure to farmers. So eager were the new Liberal members, especially those from the county divisions, to vote for this amendment that the Liberal whips were obliged to let it be known that they did not desire to carry it, and Liberal members went about trying to keep their fellows from voting against the Tory Government. Even with these exertions, the Government had a narrow escape, for the Parnellites went against them, and thus the amendment was defeated by no more than twenty-eight votes, some of which were given by Liberals. Such a result made every one realize how hard it would be to keep in power a Government which is in a minority of 170. It was like a cracked cup which cannot be handled without a risk of breaking it. If it escaped defeat to-day, it might meet defeat to-morrow. The position, in fact, was unmaintainable, and the only question that remained for each party was to choose the best occasion, the one for expelling their adversaries from power, the other for falling with dignity in a good cause.

The Tories made their choice first. On Tuesday afternoon they announced that next Thursday they would bring in a bill for suppressing the Irish National League and strengthening the criminal law in Ireland. This was a bold and hearty bid, albeit made somewhat late in the day, for the enthusiasm of English and Irish Tories and the support of moderate Liberals. It was an offer of battle on ground which they deemed favorable to themselves, and a challenge to the Opposition leaders to say what they also thought of Irish affairs. It evoked a prompt reply from the latter. The word was at once passed round that the Ministry were to be defeated on the amendment to the address which came on this same Tuesday evening. It was an amendment regretting that no pledge was given in the Queen's speech to bring in a bill facilitating the acquisition by laborers of allotments and small holdings. It had the advantage of conciliating the good will of the newly enfranchised rural voters, and of putting the Tory party in the unpleasant position of seeming to oppose what would be a benefit to them. But the chief reason for using it as the weapon wherewith to slay the Salisbury Ministry was that in this way the Liberals would escape the necessity of committing themselves either for or against coercion in Ireland, which they must have done had the Ministry brought in its bill on Thursday and asked, as they proposed then to do, that all the time of the House should be devoted to its consideration.

But though it was at once clear that the Ministry would be thrown out, because the Nationalists were known to be going to vote against them, there were still some Liberals who doubted the expediency of coming into power, and wished that the Tory Government had been forced to show its hand more distinctly, and therewith to show also its unfitness to grapple with the situation. These dissentients were, however, not the less resolved to vote with their party. It was on the action of another section that attention fixed itself—the moderate men, headed by Lord Hartington and Mr. Goschen, who were known to dislike both the allotments scheme suggested by the amendment, and the ulterior proclivities toward home rule with which Mr. Gladstone has been so persistently credited. They both spoke in the debate, Mr. Goschen warmly, Lord Hartington quietly, confining themselves to the immediate subject of the amendment, but virtually separating themselves from their party on the larger issue, which was deemed to lie behind the amendment. In voting for the Ministry and against Mr. Gladstone (who supported the amendment) they were followed by less than twenty members of the Liberal party, while a few other Liberals abstained from voting. The secession is, therefore, not numerically large, but it contains besides these two statesmen three or four other politicians of eminence, whose absence from a Liberal Government will be seriously felt.

At the moment of this writing the question is whether Mr. Gladstone, who has been sent for by the Queen, will succeed in forming a Ministry. The common belief is that he will, but that Lord Hartington will decline to join it. As this and much more will be known to you before these lines have crossed the Atlantic, I need not transmit to you the various rumors and speculations of the hour. But it is worth remarking that the most jubilant part of the majority which threw out the Government on the night of Tuesday, the 26th, was that which came from Ireland. The English and Scotch Liberals, except a few of the new members who enjoyed "tasting blood" in their first great party division, were sobered by the gravity of the occasion. Even those who were clear as to the policy of their vote saw many difficulties in store for the Liberal Cabinet they were calling into being, and wished it had been possible to leave responsibility for some time longer in their opponents' hands. Y.

A PATRICIAN OF VENICE.

PARIS, January 14, 1886.

M. YRIARTE has devoted himself chiefly to the study of Italian life and art. He has published excellent monographs on Venice, Florence, Rimini; he was (with M. Armand Baschet, the author of the 'Diplomatie vénitienne') one of the Frenchmen who first searched the precious archives of the Venetian Republic. With these State papers, he had the idea of reconstituting, so to speak, the figure of one of the great patricians of Venice. His work, entitled 'The Life of a Venetian Patrician in the Sixteenth Century, from the State Papers of the Frari,' had much success, and received a prize from the French Academy. As it had been for some time out of print, he has just issued a second edition, which has been adorned with many fine illustrations and reproductions of old prints and of the monuments of the time.

The patrician whom M. Yriarte chose as a type belonged to that important school of Venetian diplomats who have left us, in their despatches, the most important documents for the history of the sixteenth century. Marc Antonio Barbaro was one of the negotiators of the peace which followed the battle of Lepanto; he was the representative of the republic to the King of France, and the envoy of the Senate to Sixtus Quintus; he became Procurator, Reformator of the University of Padua, Proveditor of Friuli. He was a patron of art, the friend of Palladio, of Paul Veronese. He was somewhat of an artist himself, having been the pupil of Alessandro Vittoria. Born in 1517, he died in 1595, and for fifty-two years he was actively mixed up with the affairs of his country.

M. Yriarte tells us that he read the name of Barbaro for the first time on the door of a villa situated at Masera, in the province of Treviso—a villa which was built and adorned by Palladio, Veronese, and Vittoria. Having been struck by the elegance and the splendor of this habitation, he had the curiosity to consult the 'Genealogie dei nobili Veneti' of Capellari and Marco Barbaro. He found only twenty lines consecrated to his patrician. He made researches, read the inscriptions of the Rialto, of the Giant's Staircase, the sepulchral urns of San Francesco della Vigna. Then he turned his attention to the archives, and looked for all the traces of the personage whom he had chosen as a type of a great nobleman of Venice. The registers of the secretary, the deliberations of the Senate and of the Great Council, revealed to him the functions which he had occupied; in the Secret State Paper Office he found his credentials, his instructions, his despatches, his *Relazioni;* the series classed under the name "Constantinople" showed him in his diplomatic campaign after Lepanto, and he was able to follow him through all his diplomatic career. He found the citizen, the man, in his relations with the members of his family, in the *Archivio notarile.* He recognized Marc Antonio himself in a portrait which is in the gallery of the Belvedere in Vienna, signed by Paul Veronese—a portrait which had been offered as a present by the Ambassador of Constantinople to the Grand Vizier of the Sultan Selim. The patrician is represented in it with a despatch in his hand; in the background is the coast of Istria. The patrician figures also in an allegorical picture, in one of the rooms of the Ducal Palace, which represents the reception of Henri III. in Venice. Marc Antonio carries the *umbrellino* over the head of the King of France.

The personality of Barbaro partly disappears in the work of M. Yriarte before a higher aim. The patrician has furnished him a sort of *cadre* in which he has been able to introduce a complete study of the institutions of Venice. At the beginning of the sixteenth century the Venetian aristocracy was in its full ascendant, and had made a sort of monopoly of the Government of the republic. The aristocratic heredity dated from the thirteenth century, and had become the law of the country; it had found its expression in the 'Golden Book'; but it was only in 1506 that the Senate had confided to certain servants of the republic the care of inscribing the children born in the noble families, their marriages and their deaths. In the sixteenth century the *cittadini* were admitted to some offices; the rights of citizenship were extended to certain foreigners, *originarii,* under severe conditions; afterward, during the war on Candia, the Senate scandalized the old patricians by selling letters of nobility, and by giving for a hundred thousand ducats the right of inscription in the 'Golden Book' to the merchants. The republic went even further in these calamitous times, and was obliged to sell the office of Procurator of Saint-Mark.

Marc Antonio Barbaro did not see this decadence of the aristocracy. In his time the Government was purely aristocratic; it had all the defects and all the merits of the system of selection. The patrician belonged from childhood to Venice; he was in turn a lawyer, a diplomat, a soldier; he could not refuse his services in any capacity—he was obliged to do the work of Venice. The patricians formed a reserve of administrators and of political leaders. The secretaries, under the orders of the Grand Chancellor, formed a special order in the republic; they began their education at twelve and were able at eighteen to register the decrees, to copy the despatches. The

young patricians entered by right the Great Council at the age of twenty-five. All the Barbaros, from father to son, were educated at Padua. Marc Antonio, before going there, stayed for some time at Verona, which had then one of the best schools in Italy. At the age of twenty-three he became *Savio alli ordini*, a sort of attaché to the college or council of ministers, which was composed of twenty-six persons—the Doge, his six councillors, and various members divided in groups with different attributions. The Doge was a sort of constitutional king. He received almost regal honors, he presided over the Great Council, the Senate, the Council of Ten.

Yriarte's book is very discursive. When Barbaro marries the daughter of the Senator Giustiniani, he has a chapter on the condition of women at Venice in the sixteenth century. While the women in France at that time already played a part, in Venice they only appeared in the great festivities; in common times they were invisible. Read all the chronicles of the time, you never find the name of a Venetian woman. We cannot even say whether the Venetian ambassadors took their wives with them or not to France; these wives are never mentioned in the Court ceremonies. When Henri III. came to Venice, however, he was invited to a great banquet:

"'On Sunday,' says the author of the 'Feste e Trionfi fatti della Signoria di Venezia nella venuta di Henrico III.' (Roma, 1574), 'the Prince was asked to a feast given in the Hall of the Council. He arrived with the Doge, the Grand Prior, and the gentlemen of his suite. Two hundred patrician ladies of great beauty, dressed in white, and covered with pearls and diamonds, had ranged themselves along the walls of the room. . . . This enormous room, with its gilded roof, and all around the marvellous pictures of Giovanni Bellini, of Titian, of Tintoretto, and other great artists, presented a fine aspect. The King sat between the Doge, the dukes, the gentlemen, the barons, and the Signoria; all around was a crowd of elegant young women who seemed like so many nymphs and goddesses. Before sitting down, the King glanced at this magnificent *ensemble*, and, followed by a little court, advanced toward the ladies, who rose and curtsied to him. His Majesty gracefully returned this salute. Then, by degrees, two by two, group by group, at the sound of music, they began to dance, each coming in turn before the King.'"

This picture reminds one of the beautiful scenes painted by Veronese. But this was the official life; the domestic life was very different. The patrician lady was not always, as she appears in the costumes of Cesare Vecellio, or in the pictures in the Ducal Palace, clad in silks and heavy with golden ornaments, with hair dyed red, with long strings of pearls, adorned like an actress or a Madonna. A Frenchman of the seventeenth century, the Sieur de St.-Didier, wrote a curious book on Venice, 'La Ville et la République de Venise' (1680). He described in it the "gentildonnes," the patrician ladies, as leading a very retired life—so retired that "elle tient quelque chose de sauvage." If it was so in 1680, you may imagine how cloistral was feminine existence in the preceding century. The Venetians were always in contact with the East, and their wives lived like the women of the harem: they made no visits, remained always at home; the great ladies did not even go to church, as they had chapels in their palaces. The men were extremely jealous, and if they had any ground of suspicion, they sometimes kept their wives in their houses for years. The ladies were only seen at the great ceremonies, at the great marriages; they appeared then dressed with a magnificence which was often blamed by the "Proveditori alle pompe," officials who had been created in order to check luxury in the republic. These Proveditori were great enemies of the pearl, which always appears in the pictures of Veronese, but the Oriental pearl defeated all their efforts. The women of rank are not those who appear in the 'Ragionamenti' of Aretino, in the 'Novelle' of Bandello; they lived in the greatest mystery, and their charms were constantly hidden. They never went out except on enormous and noisy wooden pattens, with an immense white *fazzuolo* on their head and shoulders, when they were young. The Venice which was described by St.-Didier changed rapidly. In 1739 we have another description by the President Debrosses: nothing is concealed any more, and we become acquainted with the inner life, the pleasures, the vices of the aristocratic class.

The description of the Villa Barbaro near Treviso forms one of the most interesting chapters in Yriarte's book. He gives curious details concerning the frescoes of Veronese. This painter, who was a friend of Barbaro's, belongs to what might be called the pagan school of Venice, in contradistinction to the Christian school of the Bellinis. He begins the line of artists who were great decorators, and who ended with Tiepolo and Ricci. This pagan school, though it has left so many brilliant works, marks the slow decadence of Venice; but Veronese must be placed at the culminating point between the old times and the new. He represents Venice at the height of its power, glory, and wealth. He is, as Yriarte well says, a patrician of art; his facility, his creative power, his *maestria*, are truly wonderful. At the Villa Barbaro (a villa which is quite worth visiting) Veronese treated chiefly mythological subjects, and it is quite evident that mythology always had his preference; but on Olympus, as well as in religious subjects, he always remains a realist, and surrounds himself with episodical personages, all taken from Venice—soldiers, musicians, buffoons, children, beasts, fine ladies, and gentlemen. He covers Minerva with silks of the East, and dresses Mars like a *condottiere*. He was not a lettered man, like Rubens or like Titian; he appeared once before the Tribunal of the Inquisition, and the Inquisition found fault with the way in which he had painted the *Cenacolo* in the Convent of Saint John and Saint Paul. Veronese explained that he had painted what he had seen, and spoke exactly as a modern impressionist would do. He was obliged, however, to modify some parts of his picture.

Yriarte's work is a mine of facts and documents on the Venice of Veronese, and all the lovers of art will do well to peruse it, as well as the lovers of history.

Correspondence.

"ADVICE AND CONSENT."

To the Editor of The Nation:

Sir: The exact function of the United States Senate in the appointment of Federal officials has always been a much debated point. The Constitution provides that the President "shall nominate, and *by and with the advice and consent* of the Senate shall appoint." This, in practice, has meant that the President sends in a name and the Senate votes on it. But Senators have continually been claiming that the Constitution contemplated some manner of consultation with members of their body prior to a nomination; that the presence of the word "advice," when "consent" would otherwise have been sufficient, shows them to be in some sense a privy council, or, as they are pleased to call it, the "constitutional advisers" of the President. The proceedings of the Constitutional Convention and the writings of Madison and other subsequent expounders have been cited on one side or the other. I do not know that any one has gone back and traced to its beginning the phrase "advice and consent," in order to ascertain whether it had any accepted meaning as a phrase, apart from the meaning of its separate terms, at the time when the Convention adopted it. Curiosity has led me to collect some historical facts which seem to me to cast considerable light upon the interpretation. I shall endeavor to show you that the phrase "advice and consent" had had an accepted meaning, as a phrase, for centuries before 1787; that it meant simply "affirmative vote"; that the separate signification of "advice" had long been lost sight of; and lastly, by a review of what is known of the Convention of that year, that we have no reason to believe any new use of the phrase to have been then in mind.

The history of the phrase "advice and consent" is nothing but the history of the gradual evolution of the English Parliament from the Anglo-Saxon Witenagemot, or Assembly of the wise men of the kingdom, and the Norman Great Council of the realm. Its ancestry is traced in the oldest document preserved by Kemble, wherein Aethilberht, King of Kent, in the year 604, grants a charter of lands "with the advice of Lawrence the Bishop and of all my principal men." Even in the oldest times the theory of English government, enforced only against the weaker rulers, but formally respected by the stronger, required the consent as well as the advice of the subject; and already, in 759, we find King Sigiraed giving land to Bishop Eardwulf "with the advice and consent of my principal men." Thenceforth, in the Heptarchic Kingdoms, and in the United Kingdoms of Egbert and Alfred which succeeded them, clear down to the Roman Conquest, we find this formula in continual use to express the action of the royal council, interchangeably indeed with others, such as "consent and license." The language is indeed Latin—"consilium" and "consensus" or "assensus," the words used. The former, when French became the tongue of statutes, was at once translated into "advis," or rarely "conseil." The actual force of the formula, as I have said, varied with the relative strength of Council and King. The theoretical meaning, since the Council was more then of a cabinet than of a parliament, must have been that which many of our modern Senators seem desirous of establishing—advice by those most competent or affected, consent by the majority. This was accurately expressed by Hlodhari, of Kent, in 675, "with the advice of the venerable Archbishop Theodore and the consent of my principal men." Perhaps the phrase was used in its more modern meaning when, in 774, according to the contemporary chronicle, Alcred, King of Northumbria, "by the advice and consent of all his people, deprived of the society of the royal family and of the principal men, exchanged the majesty of empire for exile."

During the first century of despotism after the Norman conquest "assent" appears in Bishop Stubbs's 'Select Charters' but once. But the "Witenagemot," as the Great Council of the King, still exists, and that the traditions of its former dignity are handed down is shown by the reappearance of the ancient form for expressing its will when the King's misfortunes have again made its will worth expressing. Henry II. issues the Forest Assize of 1184, "by the advice and assent of the archbishops, bishops, barons, earls, and nobles of England." John acknowledges that his subjects are to be taxed "by the common advice and assent of our council." The revolutionary "Provisions" of 1259 under Henry III. are made "by the common advice and consent of the said King and the magnates." In that century these words were evidently the technically accurate description of legislative action. The greatest English mediæval lawyer, Bracton, says: "The laws of England cannot be changed or destroyed without the common advice and consent of all those by whose advice and consent they were promulgated." They are so familiar in statutes of this period

that learned jurists and historians, like Lord Campbell and Bishop Stubbs, sometimes unconsciously import them into documents where they do not belong.

A peculiarity of English struggles for progress was always that they purported to be struggles to regain privileges, real or supposed, of olden time. Under the Normans the people strove for the laws of King Alfred or King Ethelred. They stood out for the old rights and for the old formulas. Their liberties were reëstablished during the long contests of Plantagenet days, and during these the Great Council changed from a cabinet into the present Parliament. It is characteristic that when the contest was won, although the Assembly's original advisory duties had passed to its offshoot, the Privy Council or Ministry, and although the monarch no longer presided or assisted in initiating or shaping its measures, but had himself become rather the advising and consenting party, nevertheless the enacting clause of the legislative decree settled back into the ancient form which had pronounced the deposition of Alcred and the humiliation of John. The changes which had made this form delusive had been so gradual as to be unnoticed. The King, through his Chancellor, asked the "advice" of his great Council; the two houses "advised" each other, although now by the established method of first, second, and third reading and final vote; together they sent up their combined "advice" to the King, although now in the shape of a bill which must be taken whole or not at all. This last and crowning victory of the Commons, the substitution of the unalterable "bill" for the ancient "petition," which the King could mangle before signing, was achieved in the reign of Henry VI.; and simultaneously the enacting clause takes much its present shape: "De ladvis et assent des Seigneurs espirituelx et temporelx & les communes d'Engleterre esteantz en le dit Parlement, & par auctorite de mesme le Parlement." And so, except for variations between Henry VII. and Charles II., it has remained to the present year of Queen Victoria, under whom the enacting clause of every statute reads, "Be it therefore enacted and declared by the Queen's most Excellent Majesty, *by and with the advice and consent* of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same." When a lawyer familiar with British statute-books means to express the action of a legislative body in acting on a recommendation from the executive he naturally falls into the formula "*by and with the advice and consent.*" That statute-book was thumbed by every American lawyer in 1787. It has not even yet disappeared from the law of our land. Mr. Alexander, in his recent collection of British statutes still in force in the State of Maryland, indexes fifty-three of the period since the Restoration alone.

Nearly the same form had been used before the Revolution in the Parliamentary enactments of New York, Delaware, Maryland, North Carolina, South Carolina, and Georgia. Thus the old statutes of North Carolina opened: "Be it enacted by His Excellency Gabriel Johnston, Esq., Governour, by and with the advice and consent of his Majesty's Council and General Assembly of this Province, and it is hereby enacted by the authority of the same." At first in South Carolina: "Be it enacted by His Excellency John Lord Granville Palatine and the rest of the true and absolute Lords and Proprietors of this Province, by and with the advice and consent of the General Assembly now met at Charleston."

The words "advice and consent" had been less familiarly used before 1787 to express the action of a council or legislative body in confirming nominations, because such action was not common. It had never become a settled right of the English Parliament. St. Dunstan was made Archbishop by the King "with the respect of God and the advice of the wise men." By the ephemeral Ordinances forced upon Edward II. in 1310 he was to appoint officers "with the advice and assent of the baronage." Earls were sometimes so created in that century. Knights of the Shire, or representatives in Parliament, were "elected" by the Sheriff with the "assent and arbitrament" of the county court. By a curious sporadic use of the term the by-laws of Belfast were to be made by the "sovereign and burgesses" of that city, with the "advice and consent" of Arthur Lord Chichester and his heirs. None of the above instances can have any bearing on our Constitution. But the words "advice and consent" were used in the Constitutions of four States—Massachusetts, New York, Maryland, and South Carolina—to express the action of the Council in confirming the appointments of the Governor. It remains to examine whether in these cases the words had any other meaning than the usual one of "affirmance by vote," and, if so, how large an element such altered meaning constituted in the mind of the Convention.

Of the practice in Maryland and South Carolina I have no information. That in New York, under the Constitution of 1777, it was the settled practice for the Governor first to nominate and the Council subsequently to vote, we have on the high authority of its early Governors Clinton and Jay. But the provision in the Federal Constitution grew probably out of a motion of Mr. Nathaniel Gorham, of Massachusetts, and it is therefore to the latter State that we must principally look. On July 18, 1787, Mr. Gorham moved "that the judges be *nominated and appointed* by the Executive, by and with the *advice and consent* of the second branch; and every such *nomination* shall be made at least —— days prior to such *appointment.*" "This mode," the mover said, "had been ratified by the experience of a hundred and forty years in Massachusetts." We shall see that no one could have been better informed than himself as to the Massachusetts practice, and that in his mind the nomination was an affair of the Governor alone.

The Massachusetts Council was established in 1644. Its part in the appointing power was first formally recognized in the charter of 1691 as follows: "And wee doe further Grant and Ordeyne that it shall and may be lawfull for the said Governour, with the *advice and consent* of the Council or assistants, from time to time to *nominate and appoint* Judges . . . *Provided alwayes* that noe such *nominacion or appointment* of officers be made without notice first given or summons yssued out seaven dayes before such *Nominacion or Appointment* vnto such of the said Councillors or Assistants as shall be at that time resideing within Our said Province." We may notice here that the present distinction between "nomination" and "appointment" was not recognized in the seventeenth century. Thus in Maryland, in 1639, the Assembly provided that certain officers should be "nominated and appointed" by the Lieutenant Governor or Chief Judge. In 1642 the Governor was authorized by Lord Baltimore to "nominate, elect, and appoint" a Lieutenant Governor. In New Hampshire, in 1680, the President and Council were together to "choose, nominate, and appoint" such officers as they should think fit and necessary. Thus, too, back in 1304, King Edward I., combining the operations of a modern political campaign, "nominated and elected" William de Hamilton to be his Lord Chancellor.

From the wording of the old charter the Massachusetts practice was not clear. But Mr. Gorham had long held high official position in colony and State, and his statement that the practice had been unvaried shows that the nomination and appointment had become regarded as separate acts. The same statement shows that the nomination had been the exclusive privilege of the Executive, for in 1780, when the colonial charter was recast into a State Constitution, the proviso above quoted had been rewritten, on the proposition, apparently unopposed, of a committee, of which Mr. Gorham himself was a prominent member, to read as follows: "*Every such nomination shall be made by the Governor,* and made at least seven days prior to such appointment." The word "advice" must therefore have been a superfluity in the Council's equipment. And although the constitutional schemes of Hamilton and Pinckney contained in their corresponding provisions the word "consent" alone, I have not found that any comment was made on the addition of "advice" in Mr. Gorham's motion, or in the clause as finally adopted. Mr. Gorham's motion was lost, however, by a tie vote, and in the draft afterward submitted to the Convention by the "Committee of Detail," some offices were to be filled by the Senate alone, some by the President alone. Consideration of these clauses was postponed, and they were finally recommitted to the eleven selected on August 31, to revise all passages not yet acted upon. The latter Committee adopted Mr. Gorham's proposal in the amended form which has now become the fundamental law of the land.

We have seen that from the formula, "The President, by and with the advice and consent of the Senate," a signature by the President and a vote by the Senate, just as in the case of a legislative enactment, would naturally be inferred by the lawyers of the Convention. But the first impression would be that, as in the case of a legislative enactment, the vote would come first and the signature afterward; in other words, that the Senate would pass a resolution naming somebody, which the President might then approve or veto. It is noteworthy that the principal change made by the Committee of Eleven in Mr. Gorham's proposition was to give the President distinctly the right to nominate alone, and to make the "advice and consent," or affirmative vote of the Senate, a subsequent matter. Mr. Gouverneur Morris, the special champion of this clause, answered the objection that the Senate were given too much power by saying: "They are now to appoint judges *nominated to them* by the President"; and again, that "as the President was to *nominate*, there would be responsibility; as the Senate was to *concur*, there would be security."

The word "advice" is therefore to be treated historically, and not literally. It is interesting to note the result of past experiments at a literal treatment. The Council in New York which I have spoken of was a council of appointment exclusively. Having no other powers, it sought every means of increasing this particular power. It has the main credit in history of introducing the "spoils system" into this country. The Federalist Council of 1794 seized hold of the word "advice," and against the solemn protest of the Republican Governor, George Clinton, made the Federalist Benson a Supreme Court Judge without any previous nomination, allowing to Clinton but an equal vote with each other member of the Council. The Republican "Clinton-Spencer Council" of 1801, which marks an epoch in the development of the spoils system, turned the tables on the Federalist Governor, John Jay. It refused to vote on his nominations. Jay refused to put to vote any nomination by a councilman. To break the deadlock a convention was called, of which Aaron Burr was the presiding officer, and which, as the politicians of both parties were now committed, passed a declaratory act in the

Council's favor. The working was such that the Constitutional Convention of 1821 resolved unanimously, without debate, to abolish the Council altogether.

We may, perhaps, give social standing to the word "advice" in constitutions and enacting clauses by considering it to be used in its reflexive or intransitive sense, referring to the mature deliberation of the parliamentary action. In this sense it appears in the now disused English royal veto, "*le roy s'avisera*"; and in the note made on the English court records when decision after an argument is reserved, "*Curia advisari vult*"; and in the exclamation of a famous Gentleman of Verona,

> "How shall I dote on her with more advice
> That thus without advice begin to love her?"

In a few constitutions the word advice is used of the Council, standing alone. This is the case in New Hampshire and Massachusetts. It would be interesting to learn whether the Council's prerogative of advice has any practical value. I do not know that the question has ever been mooted in this country. It would be hard to find a remedy for a snubbed majority of councillors. They are an Advisory Board of Pardons in Massachusetts; but, as a disrespectful delegate said of them in the last Constitutional Convention, "they have not got the consenting power, and if they have not got that they have not got the forbidding power." In Canada the Council has similar advisory powers by the Dominion Constitution or "British North America Act, 1867." The Governor-General has always claimed the right to decide on his own responsibility, and this right was endorsed by the home Government in its instructions to Lord Dufferin and the Marquis of Lorne. The same practice holds throughout the British colonies. Their privy councils are modelled after that of the mother country, by and with whose advice her Majesty does business; like it, they are composed for executive purposes of the Ministry for the time being; like it, they consider their advice in no way legally binding; but like it, when their advice is not taken, they think it proper immediately to retire into private life. Perhaps it was merely in the logical sequence of their privy-council theory of their own position that those unfortunate New York Senators acted, whose resignation because their unasked advice was not respected by President Garfield will be, from the sad event which followed, so long remembered by this nation.

EDWARD B. WHITNEY.

NEW YORK, January 29.

REALISM AND IDEALISM.

TO THE EDITOR OF THE NATION:

SIR: Mr. Kenyon Cox's challenge of my position as to the above subject is one which it gives me unusual pleasure to take up, for it is not often that one can find a disputant on art matters who is at once practically learned and theoretically wise enough to make a discussion really fruitful, and because the objections of a man who, like Mr. Cox, is both, enable me to see my own system of art philosophy more clearly. But to cover the ground so completely as to answer all the objections that I myself can foresee, would require a treatise, and I will try only to answer those which Mr. Cox has raised.

He admits that music is the most purely ideal of the arts, and that no relation to the real can be found in it. But if art in any form is governed by the same law and the same abstract definition, then plastic art, like music, must abide by the law as to the relation of nature with art. The whole difficulty lies in the determining exactly what in any art-production is due to nature and what to art. In music this is easy. If a composer should write, say, a pastorale, in which the songs of birds and the bleating of sheep came in, he would inevitably isolate them, for the most uneducated ear would reject them from a harmony, and see that in a musical sense they do not wed with any melody—they are natural, and the reproduction of them will not be art but artifice, *i. e.*, imitation, which is the more successful as it is more deceptive, or, in other words, the more it resembles nature the less it partakes of the ideal.

I have not used the word naturalistic, the meaning of which Mr. Cox makes crucial, in any exact sense, but as indicating a general tendency to receive inspiration from nature rather than from the ideal, the source of pure art. The antithesis I make is realism and idealism, and in the three cases of the occurrence of the word "naturalistic" I might have used "realistic" without affecting my argument: it means simply a larger kind of realism, not necessarily illusive, as all pure and successful realism must be. The true meaning of naturalism is, of course, that which looks to nature, and so may be used of the art of painting as opposed to that of music, or the art of Greece as opposed to that of Assyria.

Mr. Cox's "contribution to the desired solution" will help me to answer more fully all his objections to mine. "[The art of] painting has two distinct sides: a purely ideal side, corresponding to music, and a purely realistic or imitative side. A work of absolute idealism would have to be confined to the mere *musical* arrangement of colors and lines. . . . On the contrary, a work of pure realism would be the literal imitation, as closely as possible, of natural objects without any choice, arrangement, or composition. *This we should recognize as painting.but not as art.*" Here, and not in the meaning of naturalism, is the crux of the problem. "The art of painting" is, accurately speaking, a misnomer, though so universally used as to make it seem scientific as it may be indispensable; but in an investigation like the present the proper term would be "art *in* painting," because art is a constant term which combines with various elements, and makes what we loosely call the art of painting, of music, of dancing, of poetry, etc., but in every case the art is to be separated from the variable element—which may be thought, as in poetry; motion, as in dancing; external nature, the visible creation, as in painting; or sound, as in music. In every case art must have material to work with, in default of which it remains not merely ideal but incommunicable, like pictures conceived or music thought over to one's self, of which we cannot judge and can say nothing. But as music may avoid all naturalistic suggestion, so may painting avoid all natural form, as when Turner painted an illustration of Goethe's theory of colors, which I have never seen, but which I am told was "very beautiful" in color, and, *pace* Mr. Cox, it was painting, and any such work in pigment would be nothing but painting, though a Turkish rug would not.

Now idealism (in painting) is that form of color-art in which the materials, whether in harmonies of line or color, or of the arrangements in light and dark, are objects existing in nature, possibly, and possibly purely fantastic, but in the production of which the reproduction of nature is not the object, but in which the expression of ideal qualities or conceptions is aimed at alone, nature being only a means. Naturalism is simply the acceptation of nature as the dominant but not necessarily exclusive source of inspiration; while realism is the negation of art, devotion to the reproduction of Nature as they see and know her generally who have correct vision: its extreme expression is illusion. Now painting may be either of these, or, as Mr. Cox puts it, "we have in the art of painting these two elements constantly combined in constantly varying degrees"; but I do not agree with him in his succeeding statement about "*pure* realism and *pure* idealism being almost impossible to find," because they are perfectly easy to find, though for obvious reasons not common; few people caring to have pictures like Turner's illustration of Goethe, or those merely realistic, *i. e.*, illusive—work which is possible only with ignoble objects and pleases only ignoble tastes People will accept music which is purely ideal, but they will not look at pictures of which they do not recognize some element of nature, because they have not yet learned to dissociate art and nature in painting as they have in music. But if ever the time should come when the public taste should be so highly cultivated that we might recognize synchromies as we now do symphonies, and enjoy passages of color as we do movements in a sonata, we should find that color-art was quite as ideal as sound-art—*i. e.*, quite as capable of existence dissociated from nature.

I do not accept Mr. Cox's definition of naturalism—viz., "the reconciliation and presence, in the same work of art, of the two elements, realism and idealism"—because I should maintain that naturalism has not necessarily any relation whatever to idealism, but is, on the contrary, the parent of realism; and Mr. Cox admits this logically when he goes on to say that a perfect work of art should be idealistic and yet "carried out with an almost [why not quite?] deceptive realism." In this case the ideal, and the strain of the imagination, would be to reproduce nature, which is not the end of art. Anything approaching deceptive color cannot be art color. It may be more pleasing to the mind of the observer, it *may be* better, but it is not the same or mistakable for it. A nature without the possibility of an accidental imperfection, and free from the encumbrance of matter, may be ideal, but we do not know of any such, and so we must fall back on that we are familiar with. I regard naturalism as a tendency of the mind which must underlie all plastic art, simply because nature is the aggregate of what we see and from which we derive our impressions; but I can conceive no great art limited by nature, much less as realistic. The color of Turner in its highest artistic development is distinctly non-natural; it would be impossible for nature, dealing with the laws of matter, to produce the color which Turner developed from his ideal world. Nor would Titian's color be consistent with a realistic landscape. He might have painted a Venus which, both in form and color, should be realistic, but it could not have been Titianesque at the same time. The glow of his flesh color is distinctly non-naturalistic—much more, then, unreal; and in my judgment Turner and Titian are the highest reaches of ideal color we know of. Mr. Cox might differ with me in this, but it would be a difference of illustration, not of principle, I believe.

It is only possible to treat such questions in the abstract. We may use concrete examples as illustrations, but not as arguments, since no two men will agree in the way of looking at any artist or work of art. Mr. Cox speaks of Pheidias as "having attained a resemblance to the actual quality of flesh never equalled before or since in sculpture," though we know of no piece of work from the hand of Pheidias by which we can judge; but, according to the evidence of Greek critics, this was not the attribute of his work, but of that of later artists, Praxiteles and Scopas; and certainly, of the statues remaining to us, the "Venus of Milo" surpasses in this quality all others. Giotto, again, did not return to nature in the sense of drawing from nature, for to my mind there is abundant internal evidence that he never studied direct from nature. But the idea that he was separated from the Byzantine school

by being less "ideal" is one which is inconsistent with the history of the arts. The Byzantine school was not ideal, but conventional and prescriptive. The artists had set types to follow, for all sacred themes, and Giotto conceived them independently and otherwise than the set types; but the distinction does not touch the question of realism and idealism. However, I do not admit to Mr. Cox "that the succeeding artists were constantly approaching nearer and nearer to realistic truth," because their method was purely and simply ideal, according to the distinction which Mr. Cox accepts between the actual and the ideal. We see no internal evidence of a realistic method of study until Titian, and with him only in portraiture. The artists after Giotto became more intellectual, and art had much greater vitality, but did not change its method. What "made possible" the great ideal work of the Cinquecento was the gradual development of higher technical excellence than Italian art had ever known, and a quite unprecedented encouragement of art in all directions, bringing in many more artists and of a higher intellectual power than ever before. It was, as in the time of Pericles in Greece, collective effort, vigorous emulation, and cumulative triumphs—a live movement of a real school, in which men were inspired by a common enthusiasm. These are what "made possible" Titian and Raphael as well as a sound ideal method of study.

I have trespassed too far on the number of the *Nation* which may contain this to follow out all the suggestions and questions of Mr. Cox's thoughtful letter; but one more point I cannot leave unnoticed in justice to my own views. I consider the *best* period of Italian ideal art that from Masaccio to Raphael, but not at all *because* of the "lack of expression and individuality of head," but because these are the indications of a pure idealistic method and noble ideal types. The Greek sculptors of the best period show the same characteristics, and I should therefore go back further even than Cimabue; but Giotto is far enough, and he marks the advent of the distinctively Italian school of painting, and is generally considered, incorrectly, a naturalistic painter. For that reason I singled him out as purely idealistic. W. J. STILLMAN.

LONDON, January 23, 1886.

SOUTHERN OPPOSITION TO THE BLAIR BILL.

TO THE EDITOR OF THE NATION:

SIR: While renewing my subscription to the *Nation* for the ensuing year, permit me, a native of the South and a resident of New Orleans for twenty years, to express my earnest approval of your editorial in No. 1073 on "Federal Aid to Education." I withdrew from the Louisiana Educational Society because its directors persisted in clamoring for an appropriation from the Federal Treasury and advocated the passage of the Blair Bill. More than a year ago I maintained, in a public session of the Society, that if we could have free trade and free ships, and could teach the people of Louisiana to rely on themselves, instead of looking to the Federal Government as a *deus ex machina*, from whom all blessings flow, we could easily raise at home all the money we needed for schools, with the immense advantage of having the people realize that the money comes out of their own pockets, and have them look after its expenditure themselves.

There are thousands of Southern people heartily with you in your efforts for (1) civil-service reform, (2) elimination of the "protective" features of the tariff, *i. e.*, a tariff only for revenue, and (3) a repeal of the Bland silver-coinage act of 1878. Many of your subscribers here would be glad to see more discussion of the tariff, synthetic and constructive, as well as analytic and destructive. When the free-traders, Professor Sumner, Mr. Philpott, and others, appeared before the Tariff Commission in 1882, they had admirable criticisms of the existing tariff, destructive of the arguments of the protectionists; but when asked to propose a system of revenue to substitute for it, they, with the exception of Mr. Thomas G. Shearman, of New York, had no plan to offer.

In closing, I venture to protest against the injurious remarks you make in No. 1073 about the trade of New Orleans. In many directions New Orleans has advanced during the last seven years. The city never exported 70 per cent. of the cotton, and now exports more than 26 per cent. including through-trade—that is, cotton compressed in the interior and transferred direct from cars to ships. It never imported 80 per cent. of the coffee. It is not going down hill relatively nor absolutely. Not one-tenth of the sums spent upon the harbor of New York has been spent upon the harbor of New Orleans. You say: "The badness of the soil and climate and the harbor are killing New Orleans by inches." The soil for one hundred miles down and many hundred miles up the river is of the most inexhaustible fertility. I was brought up in the blue-grass region of Kentucky, and know what good soil is, and after wide observation I think that no soil is of such deep and inexhaustible fertility as that of the country tributary to New Orleans. The harbor here is very fine—deep and perfectly safe, and is fuller of ships than ever.

The greatest drawback to our port is the high war tariff, which compels the ships to come here in ballast for outward cargo. As to the climate, it is cool in summer, fanned by the Gulf breezes, temperature often never rising above 87° during the summer, and rarely above 90°; no sunstrokes; usually warm in winter. In no city in the United States are the variations of temperature so small. The death-rate among the whites is only 22 per 1,000 per annum. The proportion of people past eighty years is very large. I have brought up a family of six children, usually staying here all the year round, and never had a case of malarial or other fever.

I do not ask you to publish this letter, but in view of your wide circulation and immense influence, I do ask you to correct the injustice you have done our city.

Respectfully, your obedient servant,

B. P. FORMAN.

NEW ORLEANS, January 25, 1886.

A GREEK PLAY AT THE UNIVERSITY OF PENNSYLVANIA.

TO THE EDITOR OF THE NATION:

SIR: I wish to call the attention of those readers of the *Nation* who are interested in the study of the Greek language and life, to the efforts which are being made at the University of Pennsylvania to diffuse the knowledge of Hellenic life and character by bringing out a Greek play in Philadelphia. This project was first mooted among the students before the last summer vacation. The professor of Comparative Philology, Dr. Morton W. Easton, immediately set about the preliminary arrangements. It was at once decided that the play to be performed should be a comedy of Aristophanes, and after some discussion the play selected was "The Acharnians." Mr. Hugh A. Clarke, the Professor of Music, devoted his summer vacation to the composition of suitable music for the choruses. It was understood that the principal parts in the cast would be filled by competition, and some of the students therefore spent the summer in preparing themselves for it.

Early in the winter a large meeting was held of the alumni interested in the matter, together with some of the professors and the principal competitors among the students. At this meeting the selection of the play was ratified; and it was decided to give two performances, the first on the evening of Friday, May 14th, and the second—a matinée—on the following day. Various sub-committees to aid in the work were appointed by Provost Pepper, who presided. A short time afterwards the first competition took place, and those students who were the most promising were assigned to the principal speaking characters. Since then the entire cast has been filled from a list of over seventy competitors. A chorus of twenty-four voices has been selected in like manner, but inasmuch as this number would hardly give a sufficient volume of sound to fill the Academy of Music, where the performance is to take place, it is proposed to have a supplementary chorus of about fifty voices seated in front of the stage. The training of the orchestra will begin in due time. Those having the play in charge have endeavored to be beforehand in their preparations; and as far as the actors and chorus are concerned, no effort has been spared to give to the inexperienced amateurs who take part all the time they need for preparation. The costumes and properties are now being made. The scenery, which is now being painted by Mr. Russell Smith, will give a perfect representation of an Athenian street, and will include some of the best examples of plain Doric and Ionic buildings, such as the Theseion, the Erechtheion, and the Temple of Ilyssus, with a distant view of the Acropolis. The selection of a comedy is of course of the nature of an experiment. Representations of the Greek tragedies have been given in England; but comedies have not been by any means so frequently produced, and even in Germany such performances are comparatively rare. So far as my knowledge goes a Greek comedy has never been given in America.

Among the comedies of Aristophanes, "The Acharnians" is beyond all question the best for a modern audience. It is comparatively free from coarseness, and not more than twenty lines will have to be omitted on that account. There is great variety of action; there are no long dialogues, as in other comedies of Aristophanes. Historically, it is extremely interesting, although "The Clouds" is more frequently read in colleges because of its interest for students of philosophy. I believe that "The Acharnians" is a better educator for a nineteenth-century audience composed of people who, if they take any interest in the matter at all, are likely to take more in the thirty years' struggle between Athens and Sparta than in the estimate placed upon Socrates and his philosophy by the Athenian rabble.

The committee in charge of the play will be extremely happy to receive suggestions from those who take an interest in the performance; and they will gladly furnish any information to those who desire to witness the play.

Respectfully yours,

THOMAS ROBINS, jr.

729 WALNUT ST., PHILADELPHIA, February 2, 1886.

A SWARTHMORE CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: You have given much of your valuable space to the subject of the Johns Hopkins House of Commons. I hope you will find room for a short account of an institution we have here at Swarthmore College that we consider more American and practicable. It is a Congress, composed of a Senate and House of Representatives, chosen in the following manner: Each of the four classes elects a certain number of delegates to the Electoral College. This body elects a Presi-

dent, who writes a message, and signs or vetoes bills, from the Faculty. Then the delegations from the different classes ballot separately for members of the upper chamber, the Freshman class electing two, Sophomores three, Juniors four, and Seniors five. This makes fourteen Senators. The remaining delegates, numbering twenty-five, compose the House of Representatives. Each Congressman is assigned to a certain State, whose interests it is his duty to look after. The States are fairly distributed geographically. The rules of the national House and Senate, slightly modified, govern the two bodies. The roll of States is called for the introduction of bills on the first meeting in each month, and all bills are referred to the appropriate committees. We meet about once a week in the large study hall, where the galleries are set apart for visitors. The President, Senators, and Representatives hold their office for one year. Among other bills passed was one "To Suspend the Coinage of Silver," "To Improve the Civil Service," "To Regulate the Salaries of United States Deputy Marshals," and to appropriate money to build a monument to General Grant. W.

SWARTHMORE COLLEGE.

THE SILVER FRAUD.

TO THE EDITOR OF THE NATION:

SIR: Please pardon me the egotism of opening this letter with some words about myself. I do so because my case is typical of many belonging to my class, and serves to place in a strong light the helplessness of non-voting taxpayers against fraud of every description, especially a great national fraud such as the champions of silver are seeking to perpetrate.

I have been supporting myself for thirteen years, and during that time have made, by my own labor, without speculation of any sort, near $12,000; yet to-day I am still a working woman, with barely $3,000 between me and utter poverty should sickness put a stop to my activity. This, you may say, is the result of my own bad management; but the only mistake committed in any of my investments, so far as I can see, is due to the fact that they were all based upon the necessary assumption that somebody or something could be trusted.

My first loss was in an Alabama cotton mill, whose president speculated with the funds, and contrived, through some legal sleight of hand which I never understood, to shift his losses upon the stockholders. I next invested in railroad stock of one of the oldest and solidest corporations in the State. I bought at 96, and in a few months the stock had dropped to 66. I afterward tried bank stock, with results akin to my cotton-mill experiment.

I now determined to invest in land, as the only absolutely safe thing. I accordingly purchased, for $3,000, one hundred and forty acres on the outskirts of a pretty village, intending there to establish a dairy farm. After laying out several hundred dollars in improvements, I suddenly lost my health, and spent the better part of fourteen months in bed, supporting myself by writing with my hands propped on a pillow, and by having pupils come and recite at my bedside. In the meantime, my land was uncultivated, my fences burnt by negroes for fire-wood, and one hundred choice fruit trees I had planted trampled down by other people's cattle, so that I was glad to sell out at a loss of $500. The purchaser paid $500 cash, giving for the remainder his notes secured by the land. I have not collected these notes as they fell due, because good notes, secured by real estate, seemed to me a safer investment than the land itself, and, like women generally, I care more for safety than for large returns from capital. Now, if our Solons at Washington decree that eighty cents shall be a dollar, will some friend of silver explain to me the equity of taking from a sick woman twenty per cent. of what she has worked for, and giving it to a man who has not worked for it? or what ultimate benefit would accrue to the country thereby? I do not know that my debtor would defraud me under any circumstances, but, in the light of past experience, I should prefer to know that he *could* not.

I have spoken of myself only, but I am one of thousands like me who are interested in having an honest dollar. It is the flattest demagogism to talk about a conspiracy of bondholders and bankers against silver. For one "bloated bondholder" who would be injured by a depreciated currency, thousands of women and children and thrifty laborers who have invested their little all in bonds and mortgages for safety would be robbed. All this outcry about the poor debtor is mere political clap-trap—as if debt could be wiped out by merely transferring the deficiency to somebody else's pocket! It is an absolute mathematical truth that every debt will assuredly be paid to the uttermost farthing, the only question being whether by the one who justly owes it or by somebody else. A LABORING WOMAN.

MACON, GA., February 4, 1886.

MITHRA THE MEDIATOR.

TO THE EDITOR OF THE NATION:

SIR: If no one else has answered the question of your correspondent "H. C. L.," in No. 1071 of your issue, respecting the character of Mithra as a mediator between Hormazd and Ahriman, may I be allowed to refer him to cap. 46 of Plutarch's 'Isis and Osiris'? He is there called a μεσίτης; and I think he was undoubtedly so regarded by Manes, who speaks of him as *Christ.*—Yours faithfully, S. B.

WARK, NORTHUMBERLAND, ENGLAND, January 22, 1886.

THE COLD IN FLORIDA.

TO THE EDITOR OF THE NATION:

SIR: It is fair to say that the full effects of the late freeze in Florida are now known. There has been a loss in income, but practically no loss in capital. The greater part of the oranges on the trees were frozen, except along the Indian River and to a certain extent in the high pine groves. From fifteen to fifty per cent. of the young nursery stock was killed. Bearing trees and those coming into bearing were practically uninjured. Some vegetables were lost, but there is time to grow another crop this season. The first feeling of alarm has passed away, and every day the injury done grows less.—Yours respectfully,

ALFRED BISHOP MASON.

JACKSONVILLE, TAMPA AND KEY WEST RAILWAY CO., JACKSONVILLE, FLA., February 1, 1886.

RADISSON'S VOYAGES.

TO THE EDITOR OF THE NATION:

SIR: It may be of interest to some readers of the *Nation* to know that in Radisson's 'Voyages'—the latest publication of the Prince Society—are references to aboriginal occupation of some places on the Richelieu River and Lake Champlain, hitherto supposed prehistoric. In 1652 Radisson was taken prisoner by some "Irokoits." While being carried by them up the "River of Richelieu," he says: "At 3 of the clock in the afternoone we came into a rappid streame, where we weare forced to land and carry our Equipages and boats thorough a dangerous place." This was evidently the rapids at and below St. Johns. "Att night, where we found Cottages ready made," reasonably points to an aboriginal village site found by me in 1883, about twelve miles above St. Johns, near Isle aux Noix. "The morning early following we marched. . . . Sejourning awhile, we came to a lake 6 leagues wide. . . . Wee arrived to a fine sandy bancke, where not long before many Cabbanes weare errected and places made where Prisoners weare tyed." This "fine sandy bancke," it seems to me, was no other than that on the bay in Plattsburgh, about thirty miles from Isle aux Noix. During the last seven years, on this bank, thousands of stone implements and weapons and bushels of fragments of pottery have been found. This sand ridge has no equal in size, location, and evidence of aboriginal occupation between St. Johns and Plattsburgh. In the night "our wild people sweated" themselves, and caroused and feasted on two bears they had killed during the day. Then they were frightened, and "embarked themselves speedily." Radisson was made to lie down "whilst they rowed very hard. I slept securely till the morning, where I found meselfe in great high rushes." He probably was in the marsh between the mouths of the Au Sable rivers, about ten miles from the "fine sandy bancke."

Radisson's different voyages and experiences are quaintly and graphically described, and may be considered fairly reliable. He twice went to the country of the "Irokoits," visited the great lakes, and also Hudson's Bay.

Yours truly, D. S. KELLOGG.

PLATTSBURGH, N. Y., February 1, 1886.

Notes.

A MEMOIR of the Rev. Manasseh Cutter, the patron saint of Ohio and the Northwest, as he might be called, is in preparation at the hands of descendants living in Marietta. In the October proceedings of the American Antiquarian Society, from which we learn this, there is a curious revelation of Sparks's apotheosis of Washington, in suppressing a sentence from a letter showing his interest in a certain Philadelphia lottery. According to the Rev. E. E. Hale, he held tickets in it; and the Rev. A. P. Peabody tells, in a report read before the Society, of Washington having been the manager of a Mountain Road lottery in 1768.

According to No. 2 of the Johns Hopkins *Modern Language Notes*, Prof. James Morgan Hart, of the University of Cincinnati, is making an exhaustive collection of Anglo-Saxon words from all existing separate lexicons, special glossaries, grammars, scientific periodicals, reviews, etc., to form ultimately a complete Anglo-Saxon lexicon.

Besides writing the life of Izaak Walton for his own series of 'English Worthies,' Mr. Andrew Lang will write the volume on St. Andrew's for the new series of 'Historic Towns.' A French translation of his sketch of Mythology, by M. Léon Parmentier, has just been published in Paris (A. Dupret; New York: F. W. Christern), with an introduction and notes by M. Charles Michel.

Ginn & Co., Boston, have in press an unabridged edition of 'Guy Mannering,' annotated for schools.

Archdeacon Farrar's new book, containing Sermons and Addresses delivered in America, a Lecture on Dante, and Farewell Thoughts on America, will be published in London on February 20, and simultaneously in New York by E. P. Dutton & Co.

Ten years ago the 'Canterbury Tales' of Harriet and Sophia Lee, revived in the edition of 1866 published by Hurd & Houghton, were already out of print, so far as the editors of the 'American Catalogue' could discover. Houghton, Mifflin & Co., the successors of that firm, have reprinted the three volumes from the plates, and whether or not the Tales will be found to have "come into fashion again," as the publish-

ers hoped and predicted in 1866, they can be read with pleasure either for their own sakes or for the light they throw on the times in which they first appeared. There is a fashion in the making as well as in the writing and reading of books, and the typography of the Tales, though only two decades old, has a certain antiquity of taste not unsuited to a revival.

The title of Dr. Henry M. Field's latest book of travels, 'The Greek Islands, and Turkey After the War,' has disappointment for readers who take a special interest in the Greek Islands, seeing that his description of them occupies scarcely a dozen pages. Of their present condition and prospects he says not a word, nor does he attempt to picture their scenery except in the case of Mitylene, which, he inadvertently says, "lies midway between the shores of Asia Minor and the mainland of Greece," the fact being that it is only eight miles from the coast of Asia Minor at its nearest point. Dr. Field's impressions of Constantinople in 1882 are interesting, as he not only is a good observer, but had unusually favorable opportunities for forming an intelligent opinion. The closing chapters relate briefly the causes and principal events in the war of 1877, and a few unimportant incidents and impressions during his ride across Bulgaria and Rumania.

The huge memorial volume, 'One Hundred Years of Temperance, 1785-1885' (National Temperance Society), is a haystack of facts which cannot be called readable in their present form, and which ought to be worked over by one mind into something distinct and impressive. No editor's name is attached to the book, and there is little evidence of editing except in the mere arrangement. We will give one example of the imperfection of the present scheme. A chapter on the temperance press might naturally have been looked for, but it is lacking, and where shall one turn to find the first temperance paper? There is no index, and one must know that the name of that paper was the *National Philanthropist*, and its editor William Collier, a Baptist clergyman, to seek the desired information under "A Century of Church Work—The Baptist Church."

The Earl of Iddesleigh has published (New York: Scribner & Welford) a discourse on 'The Pleasures, the Dangers, and the Uses of Desultory Reading,' which he read as Lord Rector to the students of the University of Edinburgh last November. The newly-ennobled lecturer dwelt on the advantages of varying the kind of books one should read, citing Dr. Johnson, Bacon, Carlyle, and Arnold, of Rugby, as to the absolute utility of desultory reading, and its indisputable advantage over reading rigidly restricted to the main work of a man's life. Incidentally he gave interesting evidence as to his own actions: "I never read so many novels in succession as during the months that I was working for my degree at the rate of ten or twelve hours a day; and in the week when I was actually under examination I read through the 'Arabian Nights' in the evening." Sir Stafford urges again the sound advice that the student should "master at least one subject of study by sheer hard work, without the aid of any of the ingenious inventions for saving time and trouble which are so dangerously tempting." As to the mass of new books of more or less value, his suggestions are equally sound, if not more novel; he does not quote Emerson's advice, not to read anything not a year old; but he does quote Lowell's kindred epigram: "For reading new books is like eating new bread: one can bear it at first, but by gradual steps he is brought to death's door by mental dyspepsy."

The bound volumes of the *Critic* for last year are numbered III. and IV. of the new series. The chief feature of our weekly contemporary, apart from its reviews and its selections from other periodicals, is a leading article, generally signed, and generally on a literary subject. The papers called "Authors at Home" have been extended from five to fifteen, and with them may be classed one on Bret Harte's estimation in Germany, a celebration of Mark Twain's fiftieth birthday, Mr. Gosse's notes on America, a talk with Froude on his arrival, etc. Sometimes the article becomes an obituary, as in the case of Richard Grant White, Victor Hugo, Grant, McClellan, and "H. H." Sometimes it touches on politics, as when treating of the Riel rebellion, the Anglo-Russian crisis last spring, the Caroline Islands dispute, the abolition of duties on works of art, etc. Arbor Day forms another topic, and Francis Parkman commemorates the 200th anniversary of the Revocation of the Edict of Nantes.

Two volumes of the *Sanitarian*, also, the 14th and 15th (New York: A. N. Bell), are on our table. The contents consist to a large extent of papers by professional men, which are at least suggestive when not authoritative. We cannot well summarize the topics, but we have been especially interested in a paper on "The Ultimate of Sanitation by Fire."

Mr. Francis Rawle's paper on "Car Trust Securities" (Philadelphia: Thos. S. Dando & Co.), read at the meeting of the American Bar Association last August, has been reprinted from the transactions of that body, in a fair pamphlet of nearly fifty pages. It is a clear and valuable presentation of the law on a novel and useful but perilous form of security. There are some remarks, near the end, "as to the commercial aspect" of this sort of investment, which will have a bitter but wholesome interest for many investors; for it is certain that car trusts have in particular instances proved to be an engine for hoisting money out of the investor hardly inferior to the mock auction itself. That the analogy here suggested is not a necessary one, Mr. Rawle plainly shows. Indeed, the victims themselves would probably confess it; and after reserving, perhaps, a certain quantity of peculiar damnation for their advisers, even they would allow that the fault was not (if we may be pardoned the expression) in their cars, but in themselves, that they were taken in. Very interesting questions as to the law of conditional sales and chattel mortgages are illustrated in this pamphlet, and we commend its brief and intelligent discussion to the legal reader.

The second edition of the 'Random Recollections' of Mr. Henry B. Stanton has been considerably enlarged, and repairs to some extent the most noticeable defect in the first edition, viz.: its slurring over the author's connection with the anti-slavery agitation. In this portion we remark an erroneous date, on page 37—"1839" for "1836." But our octogenarian's mind, unlike that of old people in general, prefers to linger on his later experience, as a lawyer, a politician, or journalist, and no one will deny that he has much that is entertaining to recall. He attended the most epoch-making party conventions; he saw John Quincy Adams stricken with death in the House of Representatives; he has written the obituaries of many famous men and women—he enumerates them with a survivor's satisfaction. Gerrit Smith's was one of these. Mr. Stanton took the risk of printing it in the *Sun* on the morning of the day when (as it proved) the venerable philanthropist breathed his last. "Mr. Stanton," said the night editor that afternoon, "that was one of the grandest newspaper beats that ever happened in New York! And how fortunate it is for us that Mr. Smith died to-day! It would have been very embarrassing if he had recovered." Alas for the truth of history! As we have heard Mr. Stanton relate the story, the words were: "Glorious old Gerrit Smith! he never went back on us!"

D. C. Heath & Co., Boston, send us an outline map of the United States, in four sections and as many sheets, the joint product of Dr. Albert B. Hart and Mr. Edward Channing. The size is large, each sheet measuring 29 by 42 inches, with the intent to be tacked to a wall and colored or inscribed according to the lecturer's needs. In this way history, geography, and geology can be taught progressively, by a liberal use of sheets. The idea is an excellent one, and the publication deserves the support of teachers.

From D. Lothrop & Co., Boston, we have two more examples of their series of "*Wide Awake* Art Prints"—"Wild Ducks," by Charles Volkmar, and "In Holland," by F. Childe Hassam. These, like their predecessors, are a reproduction in photogravure by the Lewis Co. of original designs in color for *Wide Awake;* and as the latter have already been engraved on wood, a very interesting comparison is afforded.

"But why this talk about 'compulsory' prayers?" asks the *Unitarian*, the new sectarian monthly of Chicago, apropos of "the annual movement against morning prayers at Harvard." "No! Let the question be argued fairly—simply of 'prayers.'" But why "annual" movement (we ask in turn), and not daily or perennial movement? We cite this absurd language merely because the *Unitarian* purports to offer (in the words of Channing displayed at its head) "a purer, higher form of Christianity, . . . such as will approve itself to men of profound *thinking* and feeling."

We have received from David G. Francis the January number of the *Antiquary*, containing at least two articles of first-rate importance. The opening article is by Hubert Hall, and is entitled "Notes on the History of the Crown-Lands." The present article, "Part I., Introduction," treats of the external history of these lands—that is, their origin (principally in the conversion of Folk-land into *Terra Regis*), and their disposition—the gradual misappropriation of this property by being bestowed upon courtiers and favorites, until its alienation was prohibited by an act passed after the Revolution. The crown-lands, he thinks it probable, reached their greatest extent in the reign of Henry II. The other principal article is one of Mr. Bickley's upon "Celebrated Birth-places," this being a visit to Fenny Drayton, the birth-place of George Fox. It is a very interesting description of this out-of-the-way Leicestershire village, accompanied with a number of personal incidents and memorials of Fox. Mr. Brailsford's paper, "The Wyatts of Allington Castle, Kent," is also of value, especially in the account of the poet Sir Thomas Wyatt. Other articles are: "Glimpses of Old London," "Quaint Conceits in Pottery," both well illustrated; "An Unpublished Letter from Baron Wainwright to Lady Sundon," "Wandering Englishmen," by J. Theodore Bent, and part of a series by Mr. Round, upon "Municipal Offices"; the present article being the conclusion of Colchester, and treating only of certain inferior and generally unimportant offices.

Mr. Alfred E. T. Watson ("Rapier" of the *Illustrated Sporting and Dramatic News* of which he is the editor), and the assistant editor of the "Badminton Library of Sports and Pastimes," has prepared for Messrs. Longman 'The Year's Sport: A Review of British Sports and Pastimes for the Year 1885,' a year-book which will appear regularly hereafter. In view of the enormous interest which the Englishman at home and the Briton abroad take in sport of all kinds, it is curious that such a work has not been undertaken long ago.

Curious also is it, considering the very important place held by the theatre in French life, that hitherto there has been no weekly or monthly periodical in France devoted to the drama. The

Revue des Deux Mondes, the *Nouvelle Revue*, the *Revue Bleue*, and the other leading reviews give careful consideration to the stage. But while there were many journals of art, pictorial and plastic, and of music, there was none for the theatre. To fill this want M. Edmond Stoullig, the energetic editor of the ten-year-old 'Annales du Théâtre et de la Musique,' has now undertaken the *Revue d'Art Dramatique* (Paris: A. Dupret; New York: F.W. Christern), which is to appear on the first and fifteenth of every month. The monthly parts contain each sixty-four pages; and in make-up the new review is not unlike the *Revue des Deux Mondes* or the *Nouvelle Revue*. It is intended to discuss in its pages everything relating to the theatre, ancient and modern, in France and throughout the world. In addition to the contributed magazine essays there is a review of the current French stage, and a department for the criticism of new books about the stage. To the first two numbers M. Sarcey contributes an acute study of the actor, his peculiar qualifications and his position in society. Among the other regular contributors are M. Vitu, M. Thierry, M. Mézières, M. Charles Garnier, and M. Camille Saint-Saëns.

The custom of offering a dinner to all the persons engaged in a play on its one hundredth performance is going out in Paris; hundredth performances are too common. Dumas is thought to have given it the *coup de grâce* by substituting the gift of a copy of the play, well bound, and made precious by a copy in the author's own hand of the most striking lines of the actor to whom it is given. But M. Courtois asks how those unfortunate actors are pleased whose only speech was "Madame la baronne est servie," or "La voiture de M. le comte est avancée." Will their descendants be likely to preserve the volume as a proof of their ancestor's glory? Probably such monologists would prefer the good supper which they have lost to the best bound copy of a play in which they had so little part.

Dickens and Dumas furnish the subjects of the two leading papers in *Le Livre* for January. M. R. Du Pontavice de Heussey treats of Dickens's first visit to Paris, ingeniously piecing together, in the form of a diary or connected letters, extracts from the novelist's correspondence with Lady Blessington, Count d'Orsay, John Forster, Landor, etc. The period was 1846–'47. Among Dickens's observations, which seldom go below the surface, his impressions of persons are the most noteworthy, as in the case of Victor Hugo and the elder Dumas. The latter was already a "colossus," yet, as it happens, the portrait of him fourteen years earlier, by Déveria, accompanying the succeeding paper on his "Tour de Nesles," shows a quite slender figure and a face in which intellect predominates over sensuousness. There are two portraits of Dickens—one anonymous, at eighteen, as alleged, and the other after D'Orsay's pen sketch in 1845. His present eulogistic biographer annotates his letters intelligently for the most part, but when Dickens writes Lady Blessington of having met "Bruffum," we are told that this was the surname (*surnom*) of Lord Brougham. For surname read nickname, as a late member of the New York bar was sometimes disrespectfully called "Stufton" for Stoughton.

We have received the first issue of a *Bollettino* proceeding from the Biblioteca Nazionale Centrale of Florence. It records the accessions to that library of Italian publications derived from the copyright obligation to deposit copies (*diritto di stampo*). On the last page is an index of authors, a convenient innovation. The Victor Emanuel Library will publish periodically a complementary list of foreign works acquired by the libraries of the kingdom.

The invaluable Index of Articles upon American Local History now publishing in the Bulletin of the Boston Public Library is carried as far as the letter M in No. 72. The same number contains a classified index to the maps in the publications of the London Geological Society; an index to the pictures and plans of library buildings in the possession of the Boston Public Library; and a selected list of the subjects treated in the Parliamentary sessional papers of 1884. The gifts to this noble institution continue to be numerous and princely.

"Reference Notes on Journalism" are to be found in No. 13 of the Library Bulletin of Cornell University, which concludes, by the way, the first volume.

The commercial statistics for Chili for the year 1884, just published by the proper department, show a falling off in importations from Great Britain and France, but an increase from Germany, the United States, and Italy respectively. Though Germany exports to the republic just one-half what Great Britain does, her traders are making prodigious advances in competition with the English. They have quadrupled their exports to Chili in five years (1879-1884). In the same period the United States has tripled her exports, which are still less than half those of Germany. By far the greatest amount (about two-thirds) of Chili's exports goes to England.

Among the numerous tributes to Bismarck on his seventieth birthday was a Latin poem, recounting his various services to Germany. The following stanza celebrates the latest:

> "Prosperent Imperii
> Nunc intratæ viæ;
> Valeat tellus amoena
> Camerun, Angra-Pequena;
> Vivant coloniæ."

The last German expedition into the interior of Eastern Africa, by the way, has taken six libraries for the stations, which have been specially selected and given for that purpose by a German publishing house.

—The second number of *Modern Language Notes* (Baltimore) opens with an article on native and foreign words in De Quincey, by Professor Albert S. Cook, of the University of California. Mr. Todd, one of the associate editors, writes pleasantly about Tilley's 'Literature of the French Renaissance,' a very weak book, which the reviewer is generous enough to praise without dwelling upon its slightness. Then follows a discriminating notice of Gummere's 'Handbook of Poetics,' by Professor Hart, of the University of Cincinnati. The review by Dr. Goebel of Paulsen's 'Geschichte des gelehrten Unterrichts,' as it deals with a work of the highest excellence, is more ambitious in its tone than other articles in the present number. Professor Bancroft has an interesting notice of Mr. Gosse's 'From Shakespeare to Pope.' There are, besides, philological notes and personal items giving information acceptable to those who are engaged in the teaching of modern languages. The six columns headed "Brief Mention" contain very short notices of new books, mostly German, all of a pedagogical character. There is a very good select list of recent publications, which will be found useful even to instructors who have access to the special periodicals of France or Germany. On the whole, the second number is a decided improvement upon the first. We hope the editors will not overlook the literary part of their work; the philological seems to take care of itself. There is a tendency in special journals to neglect the language in which they are written. In this respect the Germans are the greatest sinners. There is no harder, no more repulsive reading than is to be found in some of the philological journals of Germany, particularly those whose specialty is Romance languages. Let us trust that this new American monthly, devoted to the modern languages, will recognize the claims of the native speech by presenting in clear and correct English whatever subject is treated in its pages. The general appearance of the *Notes* is not as good as the contents. The typography is, to say the least, unattractive: what is gained by departing from the custom of distinguishing titles at the head of the notices by italics?

—In the notes to his recently published edition of selections from Sainte-Beuve Mr. Saintsbury translates *ne s'était trouvée à pareille fête* 'had had such a glorious time of it'; and adds, "in good old English, which some people probably think to be American." The last sentence is pleasantly ambiguous, but as Mr. Saintsbury's own English in his "George Borrow" article has recently had a severe rasping, it may be a comfort to some other foolish people to know that such a master of modern English as Dr. Jowett says, in his 'Politics of Aristotle,' page ciii: "Both women and slaves are partial to tyrannies and democracies because *they have a good time* under them." In any case, Americans are too pervasive to be kept out of the English language. The Americanism of yesterday becomes conversational English to-day and classic to-morrow. Of course this irritates people of a certain sort on both sides of the water, and an unreasonable suspicion is engendered as to every unusual word. So "aloofness" was some time since picked out for animadversion as an American coinage, whereas a reference to the Philological Society's Dictionary would have shown the critic that it is used by Coleridge among other high English authorities—Coleridge, who had no patience with the American coinage of words, and declaimed against the injury Americans were doing the language.

—An interesting addition to Shakspere literature is a beautifully printed volume, 'The Merry Wives of Windsor, a Comedy. By William Shakespeare. Edited, with Notes from the Collections of the late John Frederick Stanford, M.A., F.R.S., by Henry B. Wheatley, F.S.A.' (London: George Bell & Sons. 1886). This play is one of those which most need and best reward illustration, as the single comedy of contemporary manners from Shakspere's hand; and it was to be hoped that Mr. Stanford, who had especially devoted himself to collecting material for this purpose, had made some curious if not important finds. The result only shows that the field is too thoroughly traversed to make it worth while for any amateur to enter it. The editor of this volume found it necessary to avail himself freely of previous work, and the consequence is an excellent edition, but distinguished only by its completeness. The part which Mr. Stanford's collections play in it is not very visible or notable. The text, however, which is in a very bad state, has been treated with rare judiciousness, and the Introduction is to be praised as a fully-informed study of the play itself, without criticism, and just what it should be. The editor differs from Mr. Daniel, the latest scholar who has written with authority on the subject, in believing that in the vague and apparently compressed misadventure of the *Host* with his horses, reference is had to the visit of Count Mümpelgart to England, and makes out an excellent case for his own view. The discussions of the opinion that *Fenton* is Shakspere's self, and of the topography of Windsor, are in the highest degree excellent. But in the very full notes one looks in vain for those "illustrations" which he is led to expect. They are usually sensible, but not often original or fresh with instruction. Sometimes the fatuity that seems to attend all commentators is to be found, as in the suggested emendation which, in the line, "half-stewed in grease, like a Dutch dish," would read *fish*. The interest shown in the puns is superfluous, as is the school-boy slang de-

scribing one of them as "tolerably bad"; and here and there, as so often happens, attention is attracted by explanation of words still common in America, as, for example, *taking*, both in the sense of *worry* and of *infectious*. The work, notwithstanding small defects, is the most complete, intelligent, and "up-to-date" edition of the play.

—In war history we have in this month's *Century* another instalment of General Grant's memoirs, in advance of the publication of the book, an article by General Longstreet on the campaign against Pope, with a lively paper by Mr. Redwood on a private soldier's experience in Stonewall Jackson's "foot cavalry." In addition to these formal articles, the "Memoranda" contain a number of comments and corrections of former papers, among which are two of considerable importance, viz.: Gen. W. F. Smith's statement regarding the maturing of plans for the reopening of communication with Chattanooga before General Grant assumed command there, and General Keyes's explanation of the actual organization and work of the rear guard of the Army of the Potomac, which he commanded on the retreat from Malvern Hill to Harrison's Landing. General Grant's chapter relates to his assumption of command as Lieutenant-General at the beginning of the Wilderness campaign in 1864. It is sharply and strongly characteristic, as everything from his pen has been. General Longstreet's paper is admirably written, making it hard to see how a more attractive presentation of the campaign of the "second Bull Run" could be made in the space assigned him. It contains some interesting revisions of statements formerly made by him, while maintaining in substance the views he expressed in the Porter investigation. His point of view is, of course, the Confederate one, and is based upon incomplete knowledge of Halleck's relations to Pope's movements, but is strikingly clear and unquestionably candid.

—A correspondent writes that in 1871 he went with an army paymaster on his tour of duty. An ambulance with soldiers met them in Nebraska at Grand Island Station and escorted them forty miles through an uninhabited country to Camp Ruggles on the Loup fork of the Platte. In paying the troops, the officer induced some of the men to accept certificates of deposit, with promise of interest, from the most reputable banker in Omaha, for something of their pay. He told his civilian companion that unless the privates laid up their money in some such way, it would directly burn a hole through their pockets. Safeguards against dissipation seemed absurd in such a wilderness, and in a camp where the severest penalties would be sure to smite a sutler who should sell anything stronger than boiled cider. Yet the very next morning most of the men who had made no deposits, and were not on duty, were discovered to be more or less dead drunk, and, of course, moneyless. Wherever the carcass is eagles gather; and so whiskey venders, dogging the steps of the paymaster, had broached their kegs in some neighboring lurking-place, and through sneaking go-betweens had enticed their victims from the camp. The paymaster, while glad that he had prevented something of that wilful waste which is mother of woful want, lamented that he had long labored in vain for organizing a soldiers' savings bank. The next winter that officer, Gen. Benjamin Alvord, became Paymaster-General, promoted to that position because Grant knew him to be, as Sherman had said, "as honest as God." He said that his advancement pleased him best because it would help him carry out his pet plan for the profit of private soldiers. His banking bill, disguised as "An act to prevent desertion, and to elevate the condition of the rank and file of the army," was passed, May 15, 1872. It provided that any sum from five dollars upwards should be received by paymasters, and receipted for, to be repaid on the depositor's discharge, with four per cent. interest for all sums amounting to fifty dollars—not liable for the soldier's debts, and only forfeitable in case of his desertion. It was added that, if he drew less than his allowance of clothing, its money value should be paid him with his deposit.

—After the lapse of six years Alvord, still Paymaster-General, reported the soldiers' deposits for the year ending June 30, 1878, as $346,243.94. This sum had been laid up by 5,524 men, or about one-fourth of all the enlisted men. The average for that year, which was $62 68 for each depositor, was greater by eleven dollars than that for the whole six years since the act passed. The number of desertions, also (1,672), in that year was less than in any previous year since the close of the war. Up to that time the deposits and interest had aggregated more than two millions. Three-fourths of a million remained on interest, and the rest had been disbursed to discharged soldiers, giving them a good start in civil life. Four years later, says the Secretary of War, "the enlisted men continue to a large extent to avail themselves of the deposit system, which it is believed encourages habits of economy and checks desertion." During the ten years it had been in operation the deposits had amounted to well-nigh four millions, more than one-fourth of which was still drawing interest. On the whole, Secretary Lincoln declared the experiment a signal success, and begged Congress to allow the officers to share in its benefits with enlisted men. Holding it good policy to encourage small deposits, he recommended that interest be allowed from its date on the minimum deposit, which is $5. Alvord saw the desire of his heart before going to his final rest.

—The death, in 1879, of that profound scholar and clear-headed statesman, Jón Sigurdsson, apparently left no one capable of filling his place as head of the Copenhagen section of the Icelandic Literary Society (Bókmentafèlag), an organization which, under his direction, became a centre of intellectual activity, and gave to the limited public which it served a continuous and carefully edited (if somewhat restricted) series of useful publications. The chauvinistic debates which followed his demise, relative to the transfer of the funds and collections of the Copenhagen section to Reykjavík, as well as the lack of efficacious executive control, have contributed to the cessation of the Society's old energy. Meanwhile a younger generation of Icelandic writers is coming on, and is seeking new avenues of publicity. The most prominent and promising of these are perhaps Björn Magnússen Ólsen and Thorvaldur Thoroddsen, both professors in the flourishing college at Reykjavík. The former was born in 1850, graduated at the college in 1869, and spent the next ten years at the University of Copenhagen and in travel, visiting even the countries of the Mediterranean. In 1879 he was appointed to his present chair, and by universal accord is regarded as the ultimate successor of the college's venerated rector, Dr. Jón Thorkelsson. Ólsen's first notable publication was in Danish, appearing as a separate reprint from the *Aarböger* of the Royal Society of Northern Antiquaries of Copenhagen in 1878. It comprised some acute observations on the chronology of Olaf Tryggvason's reign ('Kronologiske Bemærkninger om Olaf Tryggvason's Regeringshistorie'), and attracted the general notice of Scandinavian historical students. Soon after his return to Reykjavík he began to contribute to various periodicals, such as the *Árbók* of the Icelandic Archæological Society, the *Timarit*, a quarterly issued by the Reykjavík section of the Literary Society, Karl Bartsch's *Germania*, and the Norwegian *Archiv for nordisk Filologi*—his articles being either of an antiquarian or of a linguistic character, and always evincing mature scholarship. In 1883 the Arna-magnæan Commission published his 'Runerne i den oldislandske Literatur,' an exhaustive inquiry into the use of the Runic letters in Iceland during the saga period and before the introduction of the Latin alphabet. It was an ingenious effort, and showed, as do all of Ólsen's writings, an easy, fresh, and limpid style, and a logical and lucid arrangement of his material. To this succeeded, a year later, his best and largest work, likewise in Danish, brought out by the Copenhagen "Samfund til vdgivelse af gammel nordisk Literatur." It is an edition of the last two of the four ancient grammatical treatises which have come down to us as a part of that singular manual of skaldic verse known as the younger or prose Edda—Snorri Sturluson's Edda. The introduction is a systematic account of the grammatical literature of the 12th–14th centuries, Icelandic and foreign, so far as either illustrates the works under consideration. The texts of the two essays—the author of the first being Thórdr Sturluson (born about 1212), a member of Iceland's most illustrious family and nephew of Snorri, while the second is ascribed to Bergr Sokkason, who became abbot of the convent of Thverá in 1325—are based upon all the existing codices, and are accompanied by notes citing the sources consulted by the writers. These are principally the institutes of Priscian and the rudimentary syntactical rules which bear the name of Donatus, and, for the later treatise, the 'Doctrinale' of Alexander de Villa Dei and the 'Græcismus' of Ebrardus. Careful interpretations of the skaldic verses quoted as examples by the grammarians, and valuable indexes, complete what may be characterized as a model of text-editing. The same "Samfund" has now in press a similar edition by Ólsen of the 'Reykholtsmáldagi,' a valuable cartulary of the thirteenth century. Professor Ólsen has utilized the last two long vacations of summer in making excursions into various portions of Iceland for the purpose of collecting words and studying dialectic variations, with a view to the compilation of a complete grammar and lexicon of the new Icelandic. This field, in consequence of the engrossing interest of the old language and its literature, has hitherto been lamentably neglected.

—Thorvaldur Thoroddsen is a novel apparition in the literature of his native country—the first Icelandic scientist; for the title, in its broadest sense, can hardly be applied to either Björn Gunnlaugsson or the Hjaltalíns, who were virtually his sole predecessors. Born in 1855, he is a son of Jón Thoroddsen, author of 'Piltur og Stúlka,' the only strikingly original work of fiction yet produced in the island—a half-idyllic, half-humorous, but wholly faithful picture of Icelandic manners, which is constantly read and reread at home, and has been translated into Danish, Swedish, and German. Young Thoroddsen passed in 1875 from the Reykjavík College to the University of Copenhagen, where he devoted himself with great ardor to the natural sciences. Inheriting his father's literary facility, he became as early as 1878 a fertile contributor to various periodicals, among them the Icelandic *Andvari* and *Timarit*, the Danish *Geografisk Tidskrift*, the Swedish *Ymer*, and the proceedings of the Stockholm "Geologisk Forening," the London *Nature*, and the German Petermann's *Mittheilungen*. In these he has treated of the recent volcanic eruptions in Iceland, the lakes, mountains, and lava plains of the island, the effects of the Gulf Stream upon its coast-

line, vegetation and climate, the Greenlandic drift-ice, and many similar topics, always with the same astonishing thoroughness. Appointed in 1880 teacher of natural history in the technical school at Mödruvellir, he published in 1881 his 'Lysing Íslands,' which, though designed to be merely an elementary handbook to accompany a map prepared by a popular printing-club, is actually the best compact scientific description of Iceland. In the following year appeared at Copenhagen his 'Oversigt over de islandske Vulkaners Historie,' with maps, a bibliography, and a résumé in French, which threw a flood of light on the story of Iceland's thermal activity, and was reproduced in abstract by many of the geological and geographical journals of Europe. The Icelandic Althing, in the same year, made an appropriation for a natural history survey of the country, and intrusted its expenditure wholly to Thoroddsen. He accordingly spent the three following summers at work in different provinces, measuring heights, examining the endless heaths and tracts of lava, visiting glaciers and geysers, collecting plants, insects, geological specimens, correcting the maps of Iceland in innumerable particulars, discovering unknown valleys, lakes, and streams, and largely increasing the known flora, fauna, and mineral productions. As the results of his successive expeditions were partially made public, they aroused a general interest among European scientists, and Professor Lange and Count Strömfelt, of Copenhagen, Doctor Schierlitz, of Naples, and Doctor Schuster, of Vienna, with others, volunteered to relieve him in great part of the necessary laboratory work. His toilsome examination, in the warm months of 1884, of the immense lava desert (Ódádahraun) of Southern Iceland, possibly the most extensive in the world, and about which so much mystery and so many legends cluster, was a task rewarded by constantly occurring surprises. In a monograph of less than a hundred pages he has given a preliminary sketch of this land of black mists and gloomy tarns, of caverns and whitening bones, of whirlwinds of snow and storms of sand, of yawning craters and sulphurous morasses—the home of the *útilegumenn*, the fabled outlaws of the desert. The spring months of 1885 were passed in Leipsic, deducing and classifying his observations, and preparing for new journeys. During the summer he made a trip to Southern Italy to compare the volcanic structure, the sulphur-yielding *fumaroli*, and the hot springs of that region with those of Iceland, writing by the way a series of descriptive letters for a Reykjavík journal. In the meantime he had been transferred from the Mödruvellir School to the National College, and the Althing of this year had voted a liberal sum for the continuance of his investigations, which are ultimately to be embodied in a work embracing several volumes.

LOWE'S BISMARCK.

Prince Bismarck: An Historical Biography. By Charles Lowe, M.A. Vol. I. From Waterloo to Versailles. Vol. II. The German Empire. Cassell & Co. 1886.

It would not be easy to find an historic character whose career, superficially regarded, displays more inconsistencies than that of Prince Bismarck. When he first appears in public life, at the age of thirty-two, he is a Tory of the Tories, a champion of the divine right of kings, strenuous in his opposition to every grant of political power to the people. He is the admirer and defender of Austria, because Austria is the chief bulwark of European conservatism. Within less than twenty years, this Austrophil forces a reluctant king and a protesting people into war with Austria; this advocate of *jure divino* sovereignty despoils three German princes of their crowns; this enemy of popular liberty establishes a German Parliament based upon manhood suffrage. Not less striking is his change of front upon numerous minor questions. In 1847, for example, Bismarck is opposed, upon religious grounds, to the emancipation of the Jews and to civil marriage; upon economic grounds, to artificially stimulating the industries of the nation. In 1869 he accepts a law abolishing all religious disabilities; in 1873 he supports a law establishing compulsory civil marriages; and in 1879 he carries through Parliament a protective tariff.

But, given the true point of view, the careful student of Bismarck's career will find it thoroughly consistent. Every act of Bismarck's official life, from his appointment in 1851 to represent Prussia at Frankfort, has been in perfect accord with a single dominant motive—the establishment of a strong Germany under the hegemony of Prussia. With him all other purposes have been secondary to this; and to this supreme end all inconsistent secondary aims, however dear to him, have been sacrificed. His minor aims have never influenced even the choice of the means by which his chief end was to be accomplished. Bismarck entered public life with as many and as firmly-rooted opinions and prejudices as any educated man of his time. There is no evidence that he has changed his opinions or abandoned his prejudices upon any important matter. There is abundant evidence to the contrary. But, however strong his predisposition, it seems never to have colored his view of any practical question. Given a thing to do, he has always seen and chosen the best—*i. e.*, the most efficient—means of doing it. Such perfect mental achromatism arouses in the ordinary mind a mixed feeling of admiration and repulsion. The latter emotion finds expression in charges of inconsistency and unscrupulousness; both feelings are blended in the French reproach of Bismarck as a "realist."

The history of such a man should be written objectively, without zeal and without hate, as the plans and achievements of Cæsar Borgia—no comparison between Bismarck and Borgia being intended—were described by Machiavelli. To praise or to blame is alike dangerous, particularly when the man whose deeds are described stands so near the historian. It cannot be said that Mr. Lowe has written such a biography. He is visibly under the charm of Bismarck's genius. But he has come nearer to writing such a book than any of the Chancellor's previous biographers; for these have written either from a German or from an anti-German point of view—*i. e.*, either with unbounded zeal or ill-disguised hate. Mr. Lowe has the advantage of his nationality. An Englishman is less touched by the warring political interests of Europe than any other European, and is to just that extent better able to describe impartially the career of the man who has changed the face of the Continent.

But however impartial the writer, a wholly satisfactory life of Bismarck cannot be written until the historian obtains the original material which is still secreted in the state-archives of Germany and its neighbors. It is probable that the greater part of this material will remain inaccessible for half a century. The recent publication of Bismarck's despatches from Frankfort (1851–59) was generally regarded as a breach of diplomatic usage, although the events of 1866 had made the affairs of the old Federal Diet ancient history. For the period since 1859 we have only isolated state papers, made public by chance or for special purposes. Fortunately for the historian, Bismarck has always regarded the publication of his own and his enemies' correspondence as a most efficient instrument of diplomatic warfare, and has availed himself of such arms more freely than the traditions of diplomacy authorize. To this we owe the publication of Benedetti's notes and drafts of treaties (1866–67), of Bismarck's notes to the Curia in 1880, and of the English-German correspondence on colonial matters in 1884. In his speeches, also, Bismarck has frequently astonished the German Diet and the European courts with disclosures of singular frankness. Finally, Bismarck's publications and speeches have regularly called forth counter-revelations of a more or less interesting character. Mr. Lowe has made diligent study and excellent use of all this material, and, so far as we can see, of all other sources of information; and has given, on the whole, a clearer and more intelligible history of Bismarck's public life than any of the Prince's other biographers.

Bismarck's youth and early manhood (chapter i), and his parliamentary career (chapters ii and iii) are described with judiciously sparing use of the numerous anecdote-biographies produced by German admirers. His diplomatic activity at Frankfort (chapter iv) and at St. Petersburg and Paris (chapter v) is set forth with due subordination of the minor details to the point of central importance—his growing hostility to Austria, and his preparations for an anti-Austrian policy. With his acceptance of the Minister-Presidency of Prussia (1862) begins the "conflict-time" (chapters vi and vii). The author employs this phrase in a wider sense than the accepted usage justifies. By the "Conflictzeit" Germans mean the period during which Bismarck, confronted by a parliamentary majority which did not understand his aims and to which he could not explain them, governed, in defiance of the spirit and intent of the Constitution, without a budget. The fact that the Danish and Austrian wars fall in the same period does not, according to the accepted meaning of the word, make these wars a part of the (constitutional) "Conflikt."

Mr. Lowe's description of the Schleswig-Holstein imbroglio is clear and accurate, but he fails to see, or at least to make the reader see, how much of the darkness surrounding this famous question is due to the tortuous policy of the Prussian Minister-President, and in particular to the way in which he played fast and loose with the London Treaty of 1852. His object, of course, was to get possession of the duchies, and to do this he had to shut out both the Danish and Augustenburg claimants. To exclude Denmark, it was necessary to repudiate the London Treaty; to exclude the Augustenburg prince, it was necessary to recognize it. The London settlement was therefore recognized at the beginning of the war, repudiated during the negotiations for peace, and set up again, after the cession of the duchies to Prussia and Austria, as the legal basis of their (derivative) title.

In describing the attitude of Napoleon III. before and during the Austrian war of 1866, our author fails to recognize that the French Emperor was actuated by any but the most practical and materialistic considerations. It is doubtless true that Napoleon thought Austria stronger than Prussia, and believed that the extension of Prussian influence in Germany would create a more perfect balance of power. It is doubtless true that he expected some reward from Prussia for his support—something in the way of a German Savoy. But it is also true that Napoleon was in part controlled by more idealistic motives. The author of the 'Idées Napoléoniennes' believed in the reorganization of Europe according to the "principle of nationality," and thought that it would be better for France to help on this inevitable result than to oppose it. This side of the Emperor's policy has been most clearly brought out by Leroy-Beaulieu, in his 'L'Empereur Napoléon III. et la Politique du Second Empire.' The fact that the two sides of Napoleon's policy were absolutely and fatally antago-

nistic—that the attempt to gain territorial cessions from a unified Germany would bring him into immediate conflict with the "principle of nationality" and the new nation—this fact does not make it any the less true that Napoleon remained half politician and half dreamer until roughly awakened by Sadowa, and that the Napoleonic dreams formed an important element in Bismarck's calculations.

In Mr. Lowe's account of the Prussian negotiations with France and the South-German States after Sadowa, he misses one of the cleverest and most characteristic points of Bismarck's diplomacy. France demanded the improvement of her eastern frontier by the cession of Prussian and South-German territory. Benedetti put the French propositions into writing on the 5th of August. Bismarck negotiated with the South-German States with Benedetti's propositions in his pocket. He demanded at first not only heavy war-indemnities but considerable cessions of territory. The South-German States appealed to France for protection, and the French Government directed Benedetti to use his good offices in their behalf. Bismarck thereupon revealed to the Bavarian plenipotentiary (Von der Pfordten) the fact that Benedetti had asked Prussia to consent to the seizure by France of the entire Bavarian palatinate. This revelation was accompanied by the offer of an offensive and defensive alliance, and a great reduction of Prussia's previous demands. Confronted with conclusive evidence of France's perfidy, the South-German States had no alternative; they accepted the Prussian terms (August 22). Mr. Lowe entirely confounds cause and effect in his account of these negotiations. He makes it appear that Bismarck, alarmed by the French demands, sought alliances with the South-German States, and to obtain these alliances materially modified his terms of peace. But that these alliances were obtained by the revelation of the French demands—this he does not seem to know.

In the remaining chapters of the first volume the author describes the organization of the North-German Confederation, the increasing tension between Prussia and France, and the Franco-German war. The second volume treats of the foreign and domestic policy of the Chancellor from the establishment of the Empire to the spring of 1885. The events described are of less dramatic interest than those narrated in the first volume, but not of less importance; and this part of Mr. Lowe's work is the more valuable because no other English book covers the same ground. In this, as in the preceding volume, the author shows a familiarity with German politics which can have been acquired only by long residence in Germany, and which greatly increases the value of his book. Very naïve, however, is the remark made in the preface, that "when any constitutional controversy is agitating the Parliaments of Berlin," English readers need only turn to the translations of the Prussian and Imperial Constitutions (printed in the appendix) in order to "at once perceive on which side lies the balance of right and wrong." Were Mr. Lowe's nationality otherwise in doubt, this sentence would reveal it. Only in a land governed by unwritten usage is such faith to be found in the certainty of written law.

The author seems to be perfectly familiar with the German language. We have found him at fault but once; and then the German idiom is veiled in dog-Latin:

"'The King,' said Bismarck one day, 'still has his difficulties between "German Emperor" and "Emperor of Germany," but he rather inclines to the latter. I cannot see much difference between the two. It is a little like the question of the Homousians and the Homoioousians, in the days of the Councils.' On another occasion, when the conversation drifted into a learned discussion on the same subject, Bismarck asked: 'Does any gentleman know the Latin for sausage?' '*Farcimentum*,' replied one. '*Farcimen*,' said another. '*Farcimentum* or *farcimen*, whichever you please,' said the chief, smiling; '*nescio quid mihi magis farcimentum esset*' (I don't know which of the two I should consider the more made-up name)" (Vol. I., p. 613.)

If Mr. Lowe had first translated Bismarck's Latin back into the German in which Bismarck was thinking, he would then, doubtless, have seen the meaning of the sentence. "Ich weiss nicht welches (von den Beiden) mir mehr Wurst wäre" means "I don't know which of the two is more indifferent to me."

Mr. Lowe's familiarity with the German language is in fact so great that it has bred in him an apparent contempt for his own, which he disfigures with numerous Teutonisms; *e. g.*, "had the *brow* to argue," "all but opening a *pulse-vein*," and other similar expressions. The author's English is often exceedingly faulty, and his style is at times turgid and at other times overcolloquial. Occasionally he shows that he can express himself tersely and clearly, and that the prevailing viciousness of his style is due to carelessness. It can be nothing but carelessness when Bismarck is described as quoting "*Wheatstone* and Kent." "Wheatstone" appears to be a composite mental photograph of Wheaton and Story. Mr. Lowe's carelessness about his diction and about such little matters as the name of a great American jurist is the more unfortunate because the reader is always inclined to infer that a carelessly written book is not likely to have been carefully prepared. In this case the inference would be unjust. Mr. Lowe has studied the sources of information at present available with great care; has arranged and presented the results of his investigation with no little art and skill; and has written not merely a very readable book, but a very creditable history of Bismarck and his times.

BANCROFT'S ALASKA.

The Works of Hubert Howe Bancroft. History of Alaska. 1730-1885. Vol. xxxiii, 8vo, xxxviii, 773 pp. San Francisco: A. L. Bancroft & Co.; New York: J. C. Derby & Son. 1886.

THE task set himself by Mr. Bancroft, beginning with his 'Native Races' and continued in the historical series of which this volume forms a part, is truly prodigious. His methods are not concealed, and, whether they be deemed adequate to the production of the best type of historical work or not, it would be difficult to devise other methods by which his desired result could be attained within the compass of a lifetime. The elimination of the personal equation of subordinate compilers must always be a task of difficulty, and upon success in this particular the homogeneity and literary quality of the product must depend. When, as in the present instance, the rough-hewing of much of the material has necessarily been confided to one pair of hands, a Russian translator, the personal equation becomes an element which fairly forces itself upon the analytical reviewer. Its effect upon the work, beneficial, or otherwise, will be considered later. Putting this aside, there can be no question as to the value and importance of the volume for all engaged in historical studies, and especially when the lapse of time shall have given an historical perspective to the later scenes of its panorama.

Mr. Bancroft remarks in the preface—"Almost untenanted except by savages, can a country without a people furnish material for a history?" a question which he answers: "This America of the Russians has its little century or two of history, . . . interesting to the story of future life and progress on its borders, as to every nation its infancy should be." Can we paint in a few bold strokes the initiation and the impact of the premonitory groundswell of civilization on these rock-bound shores? It began, like the earthquake waves of Krakatoa, in a far-distant land. The interests and passions involved in the conquest of Siberia, the flood of patriotism, avarice, ambition, duty, lust, and the spirit of adventure—embodied in a horde of coarse and sturdy Cossacks—its sluices shattered by the sword of Yermak, swept eastward across half a world of tundra, and only culminated on the further borders of the North Pacific. Arrived at the Kamtchatkan seaboard, the return of the enfeebled remnants of Bering's expedition gave the signal to which the Siberian traders responded like an advancing column of predatory ants. In frail shallops, tied together with strips of raw hide and calked with moss, they pushed out into the almost unknown sea to the islands of the sea otter and fur seal. Blood and rapine marked their tracks. Individuals or whole companies bit the dust beneath the darts of the savage, hurled in desperate but ineffectual resistance. But the progress of the column was not stayed. Fortunes were grasped, of which ocean, by shipwreck, took toll. With success came internal conflict; as the supply of fur animals became precarious, different expeditions fought for territory. The craft of the merchant took up its rôle of conciliator, or monopolizer, and the power of law, the influence of rulers, began to make itself felt. Exploring expeditions were organized, information reached high places, the Russian American Company came into existence by imperial will. This great monopoly, like its counterparts in Hudson Bay or the East Indies, represented another stage of the tide, with myriad fluctuations. It found its Warren Hastings in Alexander Baranoff, a bankrupt Siberian trader, who for thirty years controlled its destinies. Shrewd, far-sighted, energetic, unsparing of himself in service, liberal in potations, coarse of life, but of unshaken probity, this man raised towns and villages, fought savages and mutinous Russians, built a fleet of sea-going ships, established stations from Bering Sea to California; would, but for mishaps, have annexed the Sandwich Islands; laid a basis for trade with American and Asiatic ports, enabled the regular payment of dividends by his company, and died at Batavia on his way to Russia, poor and superseded, in his seventy-second year.

To the natural difficulties of his position were added the scarcity of supplies, often cut off by shipwreck; innumerable quarrels of subordinates; difficulties with imperial officials bent on reforms, or with missionary priests hardly less coarse-fibred than himself, and the insulting conduct of naval officers to him as a man not ennobled. Foreign traders came upon the coast, largely from the United States, and carried off cargoes of valuable furs, besides raising prices. In the main, this indomitable man conquered his way, and, rude and brutal as he was at times, must be acknowledged to have been of no ordinary calibre. After Baranoff's reign the internal affairs of the company were much after the usual rule of great monopolies. Reforms were instituted; a better class of officers improved the colonial direction. Explorations of a rude sort were carried far and wide. A saint, large-hearted and of mighty frame, appeared in the person of the missionary Veniaminoff. Naval officers and naturalists enlarged the boundaries of knowledge. The scientific Wrangell governed wisely and investigated widely. Annual ships circumnavigated the globe, and, after a fashion, the pulse of Cronstadt was felt at New Archangel. Politics concerned with the northwest coast

were discussed in Europe and reacted on colonial affairs. Foreign exploring expeditions followed the lead of Cook and Vancouver. An impracticable boundary line was devised by treaty. Trade fluctuated; charges of mismanagement were frequent at court. In brief, after investigations and recriminations, terms offered and declined, the charter of the Company lapsed in 1862 and was not renewed. Business was carried on for a few more years, and in 1867 the Territory became the property of the United States.

The list of authorities preceding the text of this volume, though bibliographically somewhat slovenly, is full enough for most purposes, and is especially rich in MS. titles. From these, and from a host of original Russian sources, the history of the early adventurers has been extracted with remarkable fulness. There is not in any European language so thorough and minute a record of this period, and it is never likely to be much improved upon. There may be inaccuracies, but the original sources are frequently inaccurate. Moreover, with rare exceptions, the story is well told, and one does not need a microscope to perceive that the compiler has felt a personal pride in the sturdy endurance of his countrymen. For any one not interested in the region, the annals of these multitudinous petty expeditions soon become tedious; but the spirit shown in the narration has made readable even this chronicle of misery, adventure, and crime. The struggles of Baranoff with adverse fortune enlist the sympathies of the reader, but at last the small details of the Company's business become almost repellant. Nevertheless, it is a task on the whole well accomplished, and that this storehouse of facts should have been gathered and presented in a readable tongue is highly creditable to the historian and his staff.

It would seem, from the manner in which the work has been done, that Mr. Bancroft's plan did not contemplate a comprehensive history of the exploration of Alaska, or at least not in this volume. Only on this hypothesis can we account for the omission or barely casual mention of some of the more important voyages of discovery and exploring expeditions by land. The North Pacific exploring expedition under Rodgers, the long series of Franklin search expeditions, which added so much to our knowledge of the region, are only referred to where they touch upon Russian affairs, if at all. The Western Union Telegraph expedition, so important in its results, not only for its relation to exploration, but its bearing on the subsequent purchase and development of the Territory, is dismissed in three pages—a space less than that assigned to the discussion of some petty blackmailers of the Alaska Commercial Company. Many later explorers fare still worse.

That part of the work referring to the history of the Territory since the American occupation is treated in a most unsatisfactory manner and with evident bias. It is in any event rather too near the present time for successful treatment, and had better have been omitted. A large mass of facts has been collected, but their sequence and relation to each other and to the circumstances of the time are not indicated in a satisfactory way, and there are many important omissions and not a few errors. Of the latter we indicate a portion. The naturalist, Robert Kennicott, in charge of the Yukon explorations, did not die before the expedition set out (p. 576), but in May, 1866, after it had been in the field some nine months. A statement by W. G. Morris, to the effect that in 1868 there were four or five companies engaged in sealing on the Pribiloff Islands, that the commander of one of them would not work his men on Sunday, etc., is ridiculed (p. 637, note 14), and it is stated that there were but two companies in the business. The truth is, that in August, 1868, the Pioneer Fur Co., Taylor & Bendel, and Hutchinson, Kohl & Co., together with parties left by a fourth expedition, were sealing on St. George, represented severally by Messrs. Fisher, Adams, Liuneffski, and Howes; while on the island of St. Paul, Hutchinson, Kohl & Co. and E. Morgan, the latter assisted by Mr. Pfluger, of Petropavlovsk, were in operation. Captain Morgan was the person who would not work his men on Sunday. A number of these parties subsequently united their interests, but this did not take place until later, and they all landed on the islands as independent expeditions in the spring of 1868. The first paper printed in Alaska was called the *Alaska Times*, and not (p. 677) the *Sitka Times*. No new island rose from the sea north of Umnak in 1820, or thereabouts (p. 684), and the statement, by Peter Kostromittinoff, "an octogenarian," in 1880, that he witnessed an event which took place in 1796, was doubtless due to a failure of memory on his part, which, as stated in the footnote (No. 28), "will not bear quoting." No mention is made of the Territorial Convention of August 16, 1881, followed by the election, September 5, of a delegate, Col. M. D. Ball, to represent the interests of the Territory at Washington, which, as the first united action of the white inhabitants of Alaska, has certainly an historic interest.

On page 732 we read as follows: "The middle Yukon, as far as the junction of that river with the Porcupine and the Lower Yukon, extending from this point to the delta, had already been explored, as we have seen (*sic*), by the servants of the Russian American Company, who occasionally ascended above Fort Yukon, and only one, a half-breed (Ivan Lukeen), ever ascended above the junction of the Yukon and the Tananah. The uncivil allusion to Lieutenant Schwatka in this connection is entirely unwarranted by any Russian explorations. The intimation that the liquor commonly called "hoochinoo" was introduced by the Americans, is also an error. It was well known to the Russians long before the sale of the Territory, and a regulation of the Russian American Company imposed a penalty on any one of their servants who should make it.

A rock of difficulty for any one dealing with Alaskan matters exists in the transliteration of the Russian nomenclature. In the present case, Mr. Bancroft is to be congratulated for the, on the whole, very satisfactory manner in which this task has been accomplished. The only constant error we have noticed is the omission of the *h* in Unalashka. Occasional lapses are found, as on p. 684, where we have *Oumnak*, *Unalaska*, and *Oonimak* in the course of six lines, but these are creditably rare. The endeavor to transliterate exactly, which adopts Petr for Peter and Pavel for Paul, should hardly admit Wrangell for Vrangel on the same basis.

The maps in the text are fairly good, but the general Alaskan map is not worthy of the text; its nomenclature is discrepant; it contains several glaring blunders; in omitting the Diomede Islands, the Kowak River, and all the later explorations, it is lamentably out of date. This is probably due in part to its having been engraved some years before the text was completed.

DR. F. E. ABBOT'S PHILOSOPHY.

Organic Scientific Philosophy: Scientific Theism. By Francis Ellingwood Abbot, Ph.D. Boston: Little, Brown & Co. 1885.

Dr. Abbot is one of the many thinkers who believe that science is destined to produce a theism, and he belongs also to the smaller number who think that it is already possible to say what that doctrine shall be. Considerably more than half of his 'Scientific Theism' is taken up with the proof that the world is intelligible; but this lengthy and metaphysical argumentation will convince nobody for whom very simple considerations would not have sufficed. How is it that one who believes he has the message of a new religion to announce to humanity should choose so roundabout a way of setting it forth? The following is one of the author's own summaries of his line of argument:

"1. Because the universe is in some measure actually known in human science, it must be in itself both absolutely self-existent and infinitely intelligible: that is, it must be a noumenon because it is a phenomenon.

"2. Because it is infinitely intelligible, it must be likewise infinitely intelligent.

"3. Because it is at the same time both infinitely intelligible and infinitely intelligent, it must be an infinite subject-object or self-conscious intellect.

"4. Because it is an infinitely intelligible object, it must possess throughout an immanent relational constitution.

"5. Because it possesses an infinitely intelligible relational constitution, it must be an absolutely perfect system.

"6. Because it is an absolutely perfect system, it cannot be an infinite machine, but must be an infinite organism.

"7. Because it is an infinite organism, its life principle must be an infinite immanent Power, acting everywhere and always by organic means for organic ends, and subordinating every event to its own infinite life: in other words, it must be infinite Will directed by infinite Wisdom.

"8. Because it is an infinite organism, its existent organic end disappears as such, but reappears as infinite Love of itself and infinite Love of the finite.

"9. Because it is an infinite organism, its immanent organic end appears as the eternal realization of the ideal, and therefore as infinite Holiness.

"10. Because, as an infinite organism, it thus manifests infinite Wisdom, Power, and Goodness, or thought, feeling, and will in their infinite fulness, and because these three constitute the essential manifestations of personality, it must be conceived as Infinite Person, Absolute Spirit, Creative Source, and Eternal Home of the derivative finite personalities which depend upon it, but are no less real than itself."

If this last conclusion really follows from the original premise, why need the proof have been so long? It is not like a geometrical demonstration, where there is a complicated diagram, every part of which has to be separately considered. In this case the premise is as simple a fact as can be—that something is known; the conclusion that the universe is an infinite person is also not very complex, and the intricacy of the argument to connect them affords ground for a suspicion that there is a fallacy somewhere. It would be a flattery of metaphysics to say that its history gives any warrant for holding that no more than one deduction in ten as plausible as the above turns out to be fallacious; and therefore the probability that there is no fallacy in the whole of the above chain of ten consequences is only 9-10ths to the tenth power, which is about 1-3. In advance of the verdict of posterity, then, the odds are two to one against Dr. Abbot's argument being sound. The subtlety of Nature, as Bacon says, far exceeds that of the human mind, and has a way of eluding our *must-bes*. To look no further than Dr. Abbot's first consequence, may it not be that nature is sufficiently intelligible to account for the degree of success that natural science has met with, without being necessarily *infinitely* intelligible?

The religion of the book seems to be only an appendage to a system of metaphysics. Whether true or false, this system is certainly valuable as presenting Objectivism, or the doctrine of an existence over against thought, in its extremest form. Its most striking philosophical charac-

teristic is an energetic dualism. It makes the fundamental doctrines of philosophy consist in distinctions, crystalline, sharp, and unyielding; and the oppositions of things to which these distinctions refer go down to the bottom of being. The appearance and the thing are sundered by an impassable gulf, and the element of concrete outward reaction in sense and volition is much more emphasized than in other philosophical theories. The same spirit affects the author's whole style of thought and writing, which is clear and hard, and impels him to destroy every opposing tendency of thought "root and branch," instead of imitating other recent revolutionizers of philosophy in wishing to show that the error need only to receive complete development in order to be turned to the truth. Everything like uniting the members of his main distinctions by insensible gradations, by a deeper underlying unity, or by any mediating cause, except the Divine Mind which creates the relations but not the related things, is foreign to his idea.

Dr. Abbot holds that things, as they are known to physical science, possess absolute existence in themselves, not relative to or dependent upon thought of any kind. He holds that the relations of these things are hard facts, equally independent of all thought. There seems, however, to be some vagueness in his theory of relations, for on page 28 he seems to say that relations are something over and above the related things—"things and relations constitute two great distinct orders of objective reality"; while on page 63 we are told that "the affirmation of the objectivity of the relation [must not be misconceived] as an affirmation that the relation is an entity apart from the things it relates." He holds that relations inhere in groups; but whether the existence of these groups consists in the existence of the relations, or the existence of the relations consists in that of the groups, or whether groups form a third order of reality distinct alike from things and relations, he does not inform us. And it will be one of his difficulties that his system, from the nature of it, at once opens a multitude of questions of this sort, the consideration of which cannot be shirked. The author is so remarkably loath to admit mediation that he will not admit there is any such thing as a symbolical conception (p. 139):

"The universal notion, or concept proper, is a pure thought-system of relations, reproducing only the objective system of relations of resemblance among many individuals—never the image or mental picture of one individual."

The doctrine seems to be that the relations are reproduced, without being embodied in any diagram, as "concepts of relations, dropping out of consideration the things related." The knowledge of relations depends upon a special "perceptive use of the understanding." This view, although it is not adequately set forth, is the centre of all that is original in the book, and is sure to excite a fruitful discussion of the question of the mode of our discernment of relations. Of all the sciences—at least of those whose reality no one disputes—mathematics is the one which deals with relations in the abstractest form; and it never deals with them except as embodied in a diagram or construction, geometrical or algebraical. The mathematical study of a construction consists in experimenting with it; after a number of such experiments, their separate results suddenly become united in one rule, and our immediate consciousness of this rule is our discernment of the relation. It is a strong secondary sensation, like the sense of beauty. To call it a perception may perhaps be understood as implying that to discern each special relation requires a special faculty, or determination of our nature. But it should not be overlooked that we come to it by a process analogous to induction.

The one great argument which Doctor Abbot uses to support his "noumenism," as he calls it, is that the existence of natural science supposes it. But the physicist always talks and thinks of phenomena or appearances, and makes not the slightest pretension to have anywhere got down to the noumena, bottom facts, or ultimate subjects of appearances. He discovers, for instance, that air is viscous, and viscosity is a non-conservative force. It is a reality; but yet, according to the physicist, only a phenomenal reality. Matter in itself is not viscous: but this phenomenon is due to the air being composed of countless molecules moving very rapidly in nearly rectilinear paths. These molecules themselves are not necessarily the bottom subjects; they may be mere systems of atoms, which in turn may be merely phenomena due to the vortex-motions of an underlying fluid. This fluid may come to be studied in time, and physicists will be quite prepared to learn that it again is only phenomenal. The physicist certainly holds that he reaches real facts, which no more depend upon anybody's thought of them for their existence than the coach in the fable depended on the fly for its motion. For example, he holds this to be true of the laws of the mixture of colors. These laws are realities, which remain what they are whatever our opinions about them may be. But to say this, is not to say that the colors themselves are anything more than appearances. Further, altho gh science must hold the facts it discovers to be independent of the opinion of any person or persons, it by no means follows that it need insist on their being independent of the final upshot of sufficient investigation, nor that it need hold them to be independent of the creative thought of the Deity. As yet, science does not decide either for or against any of the current systems of philosophy. Some are undoubtedly more in harmony with its spirit than others; but we can hardly reckon among the former a theory so averse to the conceptions of the differential calculus, and so prone to hard and discrete distinctions, as the one we have noticed. It is, however, a strongly characterized and scholarly piece of work, doing honor to American thought; and it is much to be desired that the world should see the system developed in its entirety.

Myrtilla Miner: a Memoir. By Ellen M. O'Connor. Boston: Houghton, Mifflin & Co. 1885.

The Story of Archer Alexander: From Slavery to Freedom, March 30, 1863. By William G. Eliot. Boston: Cupples, Upham & Co. 1885.

THESE two monographs may be read where larger histories of the anti-slavery epoch would pass unheeded, and each will serve to excite the reader's wonder and pity, and to strengthen his humane instincts. Miss Miner was a native of this State—a New Englander "once removed," as we may say, her father having been born in Norwich, Conn. She educated herself with the greatest resolution and the greatest difficulty, both on account of her poverty and of her frail physique, and began to teach, first at the North and afterward, for a short time, at the South, where she imbibed a horror of slavery. Mrs. O'Connor leaves much to be desired (by herself as well as by her readers, we dare say) in precision of dates, but, as well as we can make out, an interval of seventeen years elapsed between her return from Mississippi and her first steps toward setting up a school in 1851 in the District of Columbia for free colored children. The hardihood of this attempt can be realized only by those who have paid some attention to anti-slavery history, and Miss Miner necessarily encountered bitter opposition and no little persecution. Her case has been likened to Prudence Crandall's, and there was some similarity in their treatment, though Miss Miner's was the milder, and in place of a Quaker non-resistance she was prepared to defend herself with arms, and let herself be "seen practising shooting with a pistol," and again at an open window with a pointed revolver. In time, the benevolent came to her support and gave her enterprise a solid backing, and in 1863 the school was made an incorporated institution, and is now the flourishing Miner Normal School and a part of the colored school system of the District. It marks the gain to Washington which the war and freedom brought, that the square of ground purchased by Miss Miner in 1853 for $4,000 was sold in 1872 by the corporators for $40,000. Unhappily an accident on the Pacific coast in 1864 proved fatal to the heroic founder.

Dr. Eliot, a revered clergyman of St. Louis, bases his narrative, at once charming and pathetic, on the bronze group in Washington representing Lincoln emancipating a kneeling slave, of which a replica is set up in Boston. This slave is a portrait of Archer Alexander, "as correct as that of Mr. Lincoln himself," and Archer was "the last fugitive slave captured under civil law in Missouri." Dr. Eliot's narrative possesses absorbing interest, and in a literary point of view merits high praise. He closes it with chapters on slavery in the Border States and on Elijah P. Lovejoy, illustrating his general statement that, "notwithstanding the comparative humanity of slavery as an institution in Missouri, I can truthfully say that there is nothing in all the scenes of 'Uncle Tom's Cabin,' as given by Mrs. Stowe, to which I cannot find a parallel in what I have myself seen and known in St. Louis itself, previously to the war of secession." An appendix recalls the declarations of Methodist, Baptist, and Presbyterian churches "that the separation of husband and wife under the laws of slavery, by the removal of either party, was to be regarded as 'civil death,' sundering the bonds, and leaving both parties free to make another marriage contract." On the irregular authorization of the Western Sanitary Commission by General Frémont, Dr. Eliot remarks: "It is my confident opinion, from familiarity with all the facts at the time, that it his emancipation order had been equally sustained, notwithstanding its alleged irregularity, instead of being countermanded with censure, the State of Missouri would have been saved from more than two years of destructive guerilla warfare."

BOOKS OF THE WEEK.

Amiel's Journal. Translated by Mrs. Humphry Ward. Macmillan & Co. $2.50.
Armstrong's Primer of English History, for School and Family Use. A. C. Armstrong & Son.
A Crimson Stain. Cassell & Co. 25 cents.
Bates, C. R. The Diacritical Speller. Syracuse: C. W. Bardeen. 50 cents.
Butler, F. G. History of Farmington, Me., from the Earliest Explorations to the Present Time. 1776-1885. Farmington: Knowlton, McLeary & Co.
Caron, P. French Dishes for American Tables. D. Appleton & Co. $1.
Clarke, J. F. Ten Great Religions. New ed. Boston: Houghton, Mifflin & Co. 2 vols. $4.
Davidson, J. W. The Correspondent. D. Appleton & Co. 60 cents.
Froude, J. A. Oceana: or, England and her Colonies. Charles Scribner's Sons. $2.50.
Genone, H. Inquirendo Island. G. P. Putnam's Sons. $1.50.
Greene, B. Reflections and Modern Maxims. G. P. Putnam's Sons. 75 cents.
Gillespie, Rev. C. G. K. Revision Reasons. I. The Pentateuch. London: John Heywood.
Gillig, C. A. New Guide to London. Chicago: Rand, McNally & Co.
Gneist, Dr. R. The History of the English Constitution. Translated by Philip A. Ashworth. 2 vols. G. P. Putnam's Sons. $8.
Gréville, H. Markof the Russian Violinist. Philadelphia: T. B. Peterson & Brothers.
Harley, Rev. T. Moon Lore. London: Sonnenschein: Philadelphia; J. B. Lippincott Co. $2.75.
Jacob Schuyler's Millions: A Novel. D. Appleton & Co. 50 cents.
Lee, S. L. Stories of Provence. From the French of Alphonse Daudet. Harper's Handy Series. 25 cents.
Lord, A. M. A Book of Verses. Boston: Cupples, Upham & Co.
Lotze, H. Outlines of Psychology. Translated by G. T. Ladd. Boston: Ginn & Co.
Lyman, H. M. Insomnia and Other Disorders of Sleep. Chicago: W. T. Keener.
Mother's Songs, Games, and Stories. Translated from Froebel by Frances and Emily Lord. London: William Rice & Co.

Henry Holt & Co.,

29 West 23d St., New York,

HAVE RECENTLY PUBLISHED:

SIR HENRY SUMNER MAINE'S

POPULAR GOVERNMENT. Four Essays. I. Prospects of Popular Government. II. Nature of Democracy. III. Age of Progress. IV. Constitution of the United States. 8vo. $2.75.

*** Sir Henry's earlier works, 'Ancient Law,' 'Early History of Institutions,' 'Village Communities,' etc., and Early Law and Custom.' 8vo. $3.50 each.

DR. EDWARD ZELLER'S

OUTLINES OF THE HISTORY of Greek Philosophy. Translated with the Author's sanction by Sarah Frances Alleyne and Evelyn Abbott. 12mo. $1.75.

FROM DR. ZELLER'S PREFACE:

"My object has been primarily to provide students with a help for academical lectures, which would facilitate preparation and save the time wasted in writing down facts, without interfering with the lecturer's work or imposing any fetters upon it. Hence, I have made it my task to give my readers a picture of the contents of the philosophical systems, and the course of their historical development, which should contain all the essential traits, and also put into their hands the more important literary references and sources."

A CARDINAL SIN, by Hugh Conway. 16mo, Leisure Hour Series, $1; Leisure Moment Series, 30 cents.

AFTER HIS KIND: By "John Coventry." 16mo. Leisure Hour Series.

This is a Romantic Novel of English Rural Life with an American hero. The characters and scenes are in many cases taken from reality with changed names.

"The real beauty and genius of the story cannot be justly indicated in a few hasty words."—*Book Chat.*

"By all odds the best novel of the season."—*Baltimore Sun.*

OBLIVION. An Episode by M. G. McClelland. 16mo. Leisure Hour Series. $1.

"So freshly and delicately outlined as to give it the charm of an idyl. . . . So touches the sympathy of the reader that the conclusion comes as a positive pain."—*The Nation.*

TENTH EDITION.

STUDENTS' SONGS.

PUBLISHED BY

MOSES KING,

Harvard Square, CAMBRIDGE, MASS. No. 279 Broadway, NEW YORK CITY.

A copy of this book of "Students' Songs" will be sent, postpaid, on receipt of FIFTY CENTS.

'Students' Songs' is a collection of sixty songs—words and music—nearly all copyrighted, and comprises the best and most popular songs as actually sung nowadays at all American colleges.

'Students' Songs,' compiled by W. H. Hills and published by Moses King, has had the most noteworthy success ever attained by a book of its class.

Almost FIFTY THOUSAND copies sold already.

"STUDENTS' SONGS."

MOSES KING, Publisher, New York.

It is a *Handsome Book of* 128 *Pages*, with hundreds of new illustrations, two *Colored Plates*, and tells all about *the Best Garden, Farm*, and *Flower Seeds, Bulbs, Plants, Thoroughbred Stock*, and *Fancy Poultry*. It is the only complete catalogue of the kind published, and describes RARE NOVELTIES in VEGETABLES and FLOWERS, of *real value*, which cannot be obtained elsewhere. Send address on a postal to W. ATLEE BURPEE & CO., Philadelphia, Pa.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital Phosphite, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

D. Lothrop & Co.'s

NEW BOOKS:

TREASURE THOUGHTS FROM CANON FARRAR.

Spare Minute Series. 12mo, cloth, $1.

An admirable compilation of vital thoughts gathered from the discourses, addresses, and writings of this popular divine. Edited, with introduction, by Rose Porter.

ENGLAND: AS SEEN BY AN AMERICAN BANKER.

12mo, cloth, $1.50.

The author of this book, an unusually observant, wide-awake business man, walked from one end of England to the other, and saw much that other travellers have failed to notice.

DIVINE SOVEREIGNTY AND OTHER SERMONS.

By Reuen Thomas, D.D. 12mo, cloth, $1.50.

Strong, eloquent sermons, of popular interest, by the celebrated pastor of Harvard Church, Brookline, Mass.

IN THE KING'S GARDEN AND OTHER POEMS.

By James Berry Bensel, 16mo, cloth, $1.

The first published book of a young man already recognized by the poets Whittier, Holmes, Hayne, Stedman, O'Reilly, and others as a poet of rare gifts and great promise.

SOCIAL STUDIES IN ENGLAND.

By Sarah K. Bolton. 12mo, cloth, $1.

The talented author of this volume, during her residence in England, had unusual opportunities for observing social conditions at present existing there, and has aoly succeeded in reproducing her impressions in this volume.

LIFE OF GENERAL GRANT.

By E. E. Brown. 12mo, cloth, $1.50.

A carefully written life of the hero of Vicksburg, from his boyhood to his death at Mt. McGregor. Its style, as well as its subject, entitles this volume to a place among the most popular biographies of the time.

THROUGH THE YEAR WITH THE POETS.

December, January, and February now ready. 16mo, cloth, 75 cents a volume.

The freshest and most popular compilation of poetry yet issued.

For sale by booksellers, or sent, postpaid, on receipt of price.

D. LOTHROP & CO., Boston.

The Acropolis of Athens.

A selection of 13 views from the negatives of W. J. Stillman, enlarged by the Autotype Company of London to about 14x18 inches, will be sent, postpaid, for $15 to any address in the United States. These views have received the commendation of the highest archæological authorities, including Professor Michaelis, and, as photographs, received the medal of the Photographic Society of Great Britain at their last exhibition. Orders may be sent with remittance to W. P. Garrison, *Nation* office, New York. Examples may be seen at the office of the New York *Evening Post*, New York.

The Bostonians.

A Novel. By Henry James.

THE PORTRAIT OF A HUMAN SOUL

AMIEL'S JOURNAL.

The Journal Intime of Henri-Frédéric Amiel. Translated, with an Introduction and Notes, by Mrs. Humphry Ward. Crown 8vo, $2.50.

"A record of his intellectual attitudes—a minute and marvellous though unstudied chronicle of mental impressions, the publication of which was an event in the history of literature, and has insured his name an immortality that might have escaped the most finished conscious performance within the limit of his powers. . . . This marvellous and fascinating production."—*N. Y. Commercial Advertiser.*

"In this volume Mrs. Ward has executed admirably a very difficult task. If there were no other reason to wish it a wide circulation, its technical merit as a model of translation would in this age of schooling be reason sufficient. . . . It is only fair to add that, in our judgment, Mrs. Ward's English is worth having for itself, and that Amiel by her means has increased the literary wealth of two languages. . . . Mrs. Ward has, we hope, secured him plenty of English readers."—*Athenæum.*

MACMILLAN & CO., 112 Fourth Avenue, New York.

When Doctors Disagree!

Margaret Kent.

The *Critic* says:

"It is a dainty story, full of grace and tenderness and color. . . . We feel her bewitching beauty to our finger-tips."

The *Nation* says:

"The story of Margaret Kent is neither a new nor a pleasant one. . . . One remembers that—

'Not failure, but low aim is crime.'"

But the *Literary World* says:

"The author is at work with aims and impulses that are lofty. The book is uplifting. . . . It is lifelike. It is vivid, real, and to be real is more than to be realistic. It is admirably written, interesting, strong, impressive, helpful."

The Hartford *Courant* says:

"The story is neither very good in itself, nor very well told. The author must try again if he would succeed."

The Boston *Advertiser* says:

"In 'The Story of Margaret Kent' we have that rare thing in current literature, a really good novel. . . . Aside from the other merits which we have noted, this novel is to be praised for its artistic earnestness and sincerity."

The New York *Tribune* says:

"The writer exhibits no particular theory of conduct, and her personages have no distinct traits of character."

But the Chicago *Inter-Ocean* says:

"It is a story whose panorama contrasts life in its highest aspect of aristocratic luxury and in artistic Bohemia. Margaret Kent, a woman wonderfully fascinating and beautiful."

And the Buffalo *Courier* praises

"Margaret's intense personality. The reader is fascinated by her, feels with her in her joy, throbs with her in her grief, and follows her with bated breath through the cruel fire of her life's crucible. Her character is developed with masterly skill and profound psychological insight."

And the Boston *Herald* says:

"Whoever the unknown magician may be, she has leaped at a bound into the front rank of those who are making our best American fiction. Here is the realism which Mr. Howells is master of, but here is also the constructing imagination which weaves into realism all the finer issues of life."

And the Boston *Traveller* says:

"The great American novel which has been always believed in, but has been a matter of faith rather than sight. If we mistake not, this novel in many respects has come in the shape of 'The Story of Margaret Kent.'"

MORAL:

Buy the book, and judge for yourself.

The Bradstreet Company,

Executive Offices, 279, 281, 283 Broadway.

New York, Feb. 1st, 1886.

Public Library as 29½86

To Professional and Business Men:

Dear Sirs:

In addition to our Mercantile Agency Reports, we are now publishing a weekly commercial and financial newspaper in our name of "Bradstreet's." This paper is made unquestionably of value and interest to observing business men, particularly merchants, bankers, and manufacturers. It does not deal with credits or furnish ratings, but reports, reviews, and discusses those matters, domestic and foreign, that have any bearing upon the business of this country. Reporting the crops in detail, investigating numerous industries, criticising various investment securities, and reviewing the markets are its special features, while the tariff, monetary, transportation, legal, bankruptcy, partnership, and hundreds of other topics are ably treated, not in the interest of political parties or geographical sections, but in the best interest of the business men of the whole country. It is emphatically the newspaper for the business man, investor, economist, and politician.

We solicit a trial subscription for one year, the price being five dollars.

Anticipating your interest in the enterprise, we are,

Very truly yours,

The Bradstreet Company.

"The Bradstreet Bindery"—"The Bradstreet Press"—"The Bradstreet Journal"—"The Bradstreet Mercantile Agency."

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

A FEW FLOWERS.

In common with most plantsmen, it has been our custom to issue every Spring a catalogue of the plants we have for sale. This catalogue is necessarily a repetition, and we fear of little value to plant buyers. It has occurred to us that this annual expense might be better incurred in the issuing of pamphlets, describing a few of the very best plants, giving practical cultural directions and suggesting new and better arrangements for gardens than those commonly used. At present we are sending out the new edition of our book, "A FEW FLOWERS WORTHY OF GENERAL CULTURE," in which we have endeavored to show how a most beautiful and fascinating garden can be made with hardy plants, and how great a mistake the present almost universal custom is of using nothing but the so-called bedding plants, geraniums, coleus, etc., for gardening purposes. The book is superbly printed, and among its contents are the following illustrated pages: "Hardy Plants are Best;" "Hardy Plants and the Modes of Arranging Them;" "Rhododendrons, Kalmias, and Hardy Azaleas;" "Splendid Garden Effects with Hardy Lilies;" "Clematises, their Culture and Uses;" "Decorative Possibilities of Hardy Climbers;" "Success with Hardy Roses;" "Tropical Garden Effects;" and "Some Fine Lawn Trees." The illustrations are profuse and most artistic, and are made to show the garden effects of different plants.

This book is of real merit and exquisite beauty, and will be sent free with a splendid colored lithograph, made by Messrs. Armstrong, of Boston, of the wonderful new hardy English Rose, "Her Majesty," on receipt of ten cents in stamps for postage. This new Rose has received the highest award of merit at every principal rose exhibition in England the past two seasons.

A new American Rose of equal merit is the AMERICAN BEAUTY. It is extra large and fine, and remarkable for its ever-blooming qualities and ease of culture. We offer strong plants at a low price.

B. A. ELLIOTT CO., Pittsburgh, Pa.

ON THE PRESENT CONDITION AND PROSPECTS OF ARCHITECTURE. Henry Van Brunt.
GRANT. Thomas Wentworth Higginson.
IN THE CLOUDS. V.-VII. Charles Egbert Craddock.
A SHAKESPEAREAN SCHOLAR.
GENERAL J. E. B. STUART.
CONTRIBUTORS' CLUB.

35 cents; $4.00 a year.

HOUGHTON, MIFFLIN & CO.,

BOSTON;

11 East 17th St., New York.

The Harvard University Catalogue for 1885-6.

Is for sale by CHAS. W. SEVER, Cambridge, CUPPLES, UPHAM & CO., 283 Washington St., Boston: and F. W. CHRISTERN, 37 West 23d St., New York. Price, post-paid, 60 cents.

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, post-paid, on receipt of price.

HENRY HOLT & CO., New York.

Scribner & Welford's

NEW BOOKS.

Letters of George Sand.

Translated and Edited by Raphaël Ledos de Beaufort. With Preface and Biographical Sketch by the Translator. Illustrated with six portraits of George Sand at various periods of her life. 3 vols., 8vo, cloth, $15.

*** "These letters will greatly modify the views held by many people respecting their author. They will also throw new light upon her moral and religious ideas. Further, they contain many interesting details relating to the chief social, political, and literary events of the last fifty years."

Yacht Architecture.

By Dixon Kemp, Associate of the Institution of Naval Architects and Member of the Council. 1 Vol. Super Royal 8vo. Cloth, $16.80.

THIS WORK enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance.

It also deals comprehensively with the subject of STEAM PROPULSION as applied to Yachts.

An easy SYSTEM for DESIGNING is provided, and every necessary calculation is explained in detail.

The latter part of the work is devoted to YACHT BUILDING, and engravings are given of every detail of construction and fitting, including laying off, taking bevels, &c.

The List of Plates (exclusively of over thirty devoted to the elucidation of the text, and nearly two hundred wood-cuts) exceeds fifty, and comprise the LINES of some of the most CELEBRATED YACHTS AFLOAT by the most successful builders and designers.

Ancient Rome in 1885.

By J. Henry Middleton.

Contents:—1. SITE.—2. PREHISTORIC PERIOD.—3 and 4. The PALATINE HILL.—5 and 6. The FORUM MAGNUM.—7. The CAPITOLINE HILL.—8. IMPERIAL FORA.—9 and 10. PLACES of AMUSEMENT.—11. BATHS.—12. REMAINS in ROME.—13. TOMBS and MONUMENTS, &c.

Illustrated with 3 Colored Plates and 57 Wood Engravings. Post 8vo. Cloth, $8 40.

Madame de Maintenon:

An Etude. By J. Cotter Morison. Square 16mo, parchment, 50 cents.

*** A vivid sketch of the life and times of Madame de Maintenon.

A Dictionary of Islam;

Being a Cyclopædia of the Doctrines, Rites, Ceremonies, and Customs, together with the Technical and Theological Terms, of the Muhammadan Religion. By Thomas Patrick Hughes, B.D., M.R.A.S., Fellow of the Punjab University, Missionary of the Church Missionary Society, Peshawar, Afghanistan. With numerous Illustrations. Royal 8vo, cloth, $16.80.

Bohn's Libraries.

A Series of Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

HENFREY'S GUIDE TO ENGLISH COINS. Revised Edition. By C. F. Keary, M.A., F.S.A., with Historical Introduction. $2.40.

FAIRHOLT'S COSTUME IN ENGLAND. Third Edition. Enlarged and Revised by the Hon. H. A. Dillon, F.S.A. With more than 700 Engravings. 2 vols., $4. Vol. I. History. Vol. II. Glossary.

DIDRON'S CHRISTIAN ICONOGRAPHY. Vol. II., containing a continuation of the Work, by Margaret M. Stokes. With numerous illustrations. (*Immediately.*)

GOLDSMITH'S WORKS. A New Edition containing pieces hitherto uncollected, and a Life of the Author, with Notes from various sources. By J. W. M. Gibbs. In five volumes. Vol. IV., containing Biographies, Criticisms, and Essays. *Now Ready*, $1.40. Vol. V., Completing the work. (*Immediately.*)

COLERIDGE'S MISCELLANIES, ÆSTHETIC and Literary: to which is added The Theory of Life. Corrected and arranged by T. Ashe, B.A. $1.40.

TALFOURD'S MEMORIALS AND LETTERS of Lamb. Enlarged Edition. By W. Carew Hazlitt. 2 vols., $2.80. (*Immediately.*)

HAZLITT'S THE SPIRIT OF THE AGE. Edited by W. Carew Hazlitt. $1.40. (*Immediately.*)

WALTON'S LIVES OF DONNE, HOOKER, etc. New Edition. Revised by A. H. Bullen. With numerous illustrations. $2.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang, M.A. 2 vols. $2.80.

BURNEY'S NOVELS. EVELINA. 1 Vol., Cecilia, 2 vols. By Frances Burney (Mme. D'Arblay). With Introductions and Notes by A. R. Ellis, author of 'Sylvestra,' 'Marie,' etc. Price per volume, $1.40.

CENTENARY EDITION.

BOSWELL'S LIFE OF JOHNSON, with the Tour in the Hebrides and Johnsoniana. New Edition, with Notes and Appendices by the Rev. A. Napier, M.A., Trinity College, Cambridge. With Frontispiece to each vol. 6 vols., $8.40.

COLERIDGE'S LECTURES AND NOTES ON Shakespeare and other English Poets, including Mr. Collier's transcript of the Lectures of 1811, and the Bristol Lectures of 1813, now first collected. By T. Ashe, B.A. $1.40.

COLERIDGE'S TABLE-TALK and OMNIANA. Edited by T. Ashe, B.A. $1.40.

GILBART'S THE HISTORY, PRINCIPLES, and Practice of Banking. Revised to the Year 1881 by A. S. Michie, Deputy Manager of the Royal Bank of Scotland, London. With Portrait of Gilbart. 2 vols. $4.

SPINOZA'S CHIEF WORKS. Translated, with Introduction, by R. H. M. Elwes. 2 vols. Vol. I.—Tractatus Theologico-Politicus, Political Treatise. II.—Improvement of the Understanding, Ethics, Letters. $4.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

*LESSING'S WORKS. Translated from the Ger-*man. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

*KANT'S PROLEGOMENA AND METAPHYSI-*cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H Wall. With a short Life and a Portrait. 3 vols. $4.20.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. New Catalogue of Choice, Rare, and Second-hand Books nearly ready. New Catalogue of Musical Literature ready.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Important Theological Books.

*GOD'S REVELATIONS OF HIM-*self to Men. As successively made in the Patriarchal, Jewish, and Christian Dispensations, and in the Messianic Kingdom. By Samuel J. Andrews, author of 'The Life of Our Lord Upon Earth.' 1 vol., crown 8vo, $2.50.

"The author has his large theme well in hand, discerns its law of order, and makes a clean and luminous presentation of the whole subject. His style is simple, lucid, and forcible, a scholarly style, and the entire essay is fragrant with the incense which a reverend mind forms on the altar of a holy and gracious God. It is an able and noble treatise."—*Hartford Courant.*

THE DOCTRINE OF ENDLESS Punishment. By Professor W. G. T. Shedd, D.D. 1 vol., 8vo, $1.50.

"Prof. Shedd deserves the thanks of the whole Christian community for his masterly defence of fundamental truth . . . in this valuable and timely volume."—*Christian Intelligencer.*

A LAYMAN'S STUDY OF THE English Bible Considered in its Literary and Secular Aspects. By Francis Bowen, LL.D. 1 vol., 12mo, $1.00.

"The work forms a valuable addition to our Biblical literature, and as such we heartily commend it. It is a credit to the author's scholarship; it cannot be read without pleasure and profit."—*Church Press.*

SERMONS ON THE CHRISTIAN Life. By John De Witt, D.D., Professor in Lane Theological Seminary. 1 vol., 8vo, $2.50.

"We are inclined to consider these sermons as among the most notable productions of the American pulpit. The thought is exceptionally fresh and stimulating, while its comprehensive sweep indicates unusual strength of mental vision. The reader will find in these sermons spiritual enrichment and mental invigoration."—*Chicago Interior.*

MOVEMENTS OF RELIGIOUS Thought in Britain during the Nineteenth Century. By John Tulloch, D.D. 1 vol., 12mo, $1.50.

"An interesting, notable, and extremely readable volume. It will not only attract and interest—it will be a potent factor in the further progress of that process of doctrinal amelioration which it so happily describes."—*New York Evening Post.*

THE PENTATEUCH: Its Origin and Structure; An Examination of Recent Theories. By Edwin C. Bissell, D.D. 1 vol., 8vo, $3.

"The most systematic examination of the laws of the Pentateuch yet presented to the English public. It is a contribution to the defence of the Pentateuch which no English-speaking student can afford to ignore."—*Sunday School Times.*

*THE BLOOD COVENANT: A Pri-*mitive Rite and its Bearings on Scripture. By H. Clay Trumbull, D.D. 1 vol., 12mo, net $2.

"A deeply interesting volume, and one that will command wide attention on the part of scholars, who will find it teeming with facts now for the first time brought to their notice."—*Christian at Work.*

*MY STUDY, AND OTHER ES-*says. By Prof. Austin Phelps, D.D, author of 'The Theory of Preaching,' 'Men and Books,' etc. 1 vol., 12mo, $1 50.

"The volume is full of hopefulness and suggestion, and . . . has a real historical value. Its interest, too, is much enhanced by the fairness and breadth and manifest sincerity throughout, and its freedom from the bitter partisanship too common among ecclesiastical controversialists."—*New York Commercial Advertiser.*

FAITH AND RATIONALISM. With short supplementary essays on Related Topics. By George P. Fisher, D.D. 1 vol., 12mo, 75 cents.

"A new edition of this valuable book for popular circulation. Prof. Fisher has thoroughly revised the text and added notes and much interesting new matter."

*** *These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

Charles Scribner's Sons,

The Nation.

NEW YORK, THURSDAY, FEBRUARY 18, 1886.

The Week.

THE Republican majority in the Senate are still backing and filling about the confirmation of nominations made to fill vacancies caused by the removal of the previous incumbents. It is now two months and a half since Congress met, and yet the Senate has reached no decision. The trouble appears to be that the Republicans want to score a partisan advantage by insisting upon publicity on the President's part regarding the causes for which he made the changes, and yet fear that they would lose more than they would gain as a party by thorough-going publicity, with the consideration of everything bearing upon the subject in open session which that involves. The Republican Senators might as well understand that the public will be satisfied with no half-way business in the matter. It may support them in insisting upon knowing what the public records show in any case where an official has been removed; but when they call for these facts as something to which, as representatives of the people, they are entitled, they are bound to keep the facts before the people when they get them. It will not do for them to claim that the President must send them the papers, and yet announce that they will conceal the papers in executive session.

Meanwhile it is interesting and encouraging to note that the standard of appointments by the President is raised rather than lowered, as the months pass by. Mr. Cleveland is a man who is not ashamed to learn wisdom from his mistakes. Take his course with reference to the chief offices in New England as an illustration. A few weeks after his inauguration he was persuaded by Democratic politicians who abused his confidence to appoint Pillsbury, Chase, and Troup as internal-revenue collectors in Massachusetts, Maine, and Connecticut. The protests of the better class of citizens showed their effect when the President came to fill such important offices as the Boston Collectorship and the Massachusetts District-Attorneyship; his selections of Leverett Saltonstall for the former position and of George M. Stearns for the latter having been so excellent as to extort hearty commendation from even the most narrow-minded Republican organs. The same thing holds true throughout the country. The average level of appointments during the second half-year of the Administration is distinctly higher than during the first six months. This is shown by the fact that whenever the Republican organs set out to make a list of the bad appointments, they fill it up chiefly from the first few weeks after the 4th of last March, and always cite Pillsbury and Higgins as the worst cases. The Congressional canvass of the fall of 1886 is approaching, and the chief ammunition in the way of appointments which the Republican organs find available consists of a few bad selections in the spring of 1885.

Mr. Morrison's new tariff bill is a much less radical measure than that recommended by the Hayes-Oliver Commission three years ago, but it promises some relief to oppressed industries and burdened taxpayers. It will not meet the approval of Professor Thompson, of the University of Pennsylvania, because it removes the taxes from a number of raw materials instead of increasing them. The same objection was raised against the Hayes-Oliver Commission. The Morrison bill does not put so many articles on the free list as the Hayes-Oliver bill did, but it puts in more important ones—such, for instance, as salt, timber, and iron, copper and lead ores. The other changes in the bill do not make an average reduction equal to that proposed by the Hayes-Oliver Commission, which recommended knocking off 20 to 25 per cent., but Mr. Morrison's are very carefully made with a view to relieving manufacturing industry of its more manifest burdens. It is an extremely conservative measure, the most radical feature being the reduction of 25 per cent. on sugar and molasses. This is a feature which cannot be altogether commended, since it cuts $10,000,000 out of the revenue at once, and at a time when expenditures, especially for pensions, are on the increase. The margin between revenue and expenditure is now very narrow, and it happens at a time when the House of Representatives are bullying the Secretary of the Treasury in reference to what they call the surplus, pressing him to pour it out as fast as possible.

The reply of the Secretary of the Treasury to the inquiry of the Committee of Ways and Means, asking his opinion on the proposed joint resolution directing the payment of the "surplus or balance" in the Treasury in excess of $100,000,000 on the public debt, is a very clear and very dignified statement of the financial conditions which constrain him to be cautious in lowering his reserve fund. It is humiliating in the extreme that he should be called upon to answer any such question. No other finance minister in the world is so harried with ignorant questioning and impertinent public gossip. The Bland resolution, passed the other day, asking him what policy he intended to pursue with reference to the payment of silver on the public debt, might justly be considered insulting, and was probably intended to be so by Bland, although not by the majority of those who voted for it. The Secretary's policy in regard to silver was amply stated and defined in his annual report, and Bland understood it well, but the majority of those who voted with him either would not take the trouble to understand it, or were moved to vote for the resolution because it had something to do with silver, and they were oblivious equally of the fact that it imposed a new and burdensome task on the head of the Treasury and his assistants in the preparation of statistical information already sufficiently presented, and of the fact that it carried an implied censure upon the Secretary.

There appears to be some misapprehension regarding the change in the time for the meeting of Congress proposed by Senator Hoar. The Boston *Herald*, for example, propounds this inquiry: "How much business does Senator Hoar think Congress would be likely to do in the month of October, with political campaigns progressing in two-thirds of the States?" The *Herald* has probably not observed that Mr. Hoar's scheme contemplates the meeting of Congress in October only in the "odd" years, the date selected for the "even" years being the second Monday in November. In the odd years, so far from "two-thirds of the States" having political campaigns in progress in October, not one-third elect State officers of any sort in November. In 1885 only eleven States held such elections, and of these, Colorado chose only a Judge of the Supreme Court; Pennsylvania, a State Treasurer; Nebraska, a Supreme Judge and two University Regents; Maryland, a Comptroller, Clerk of the Appeals Court, and Legislature; Connecticut and New Jersey, Legislatures; and only New York, Massachusetts, Iowa, Mississippi, and Virginia, Governors and other State officers and Legislatures. It is evident, therefore, that but few Congressmen would have been kept at home by the engrossing character of the political canvasses in their States last October, and there is good reason to hope that the number of State elections in the odd years will be still further diminished before long. Connecticut will hereafter choose all State officers and Legislatures in the even years; Massachusetts seems likely to adopt the biennial plan, which would take her out of the list; we hope here in New York to change our system so that all State elections will be held in the even years; and there is a drift in the same direction elsewhere. Indeed, there is good reason for confidence that at no distant period the country will enjoy complete repose from the stress of national and State contests every other year.

There is still a disposition, we observe, although it is not as strong as it was, to assail the Bell Telephone patent because the charges of the company are extortionate. The answer of the company might be that every great and notably useful and valuable patent has to be defended at heavy expense against infringers, and sometimes even against the Government that granted it, and that the company has no means to pay these expenses except the revenues derived from the use of its instruments. It is perhaps a defect of the patent laws that they contain no provision restricting the granting of patents to good, unselfish men. Why does not the *Times* take advantage of the present opportunity, while the public mind is alive to this evil, to urge the passage of a bill requiring all caveators to prove that they are not of a grasping and wicked nature? If this should be thought to be going too far, it might be sufficient to require every patentee to enter into a written agreement that his charges should not be high. The patentee might say that if anybody thought his charges too high, they need not use his invention, but that would be clearly a subterfuge.

The *Times* supplies fresh evidence of the defects of our patent system and of the necessity of amending it so as to confine the granting of patents to good men. The fact that the Bell

Telephone Company made a contract with the Western Union Co. by which "the development of the art of telephony has been checked," and by which the two have agreed not to compete with each other beyond twenty-five miles from any common centre, discloses a sad state of things. Evidently the patent law is in an extremely disordered and unscientific state. Not only should it be changed so as to secure that all patents shall be kept under the control of liberal-minded corporations, but special provision should be made to prevent them from falling under the influence of the Western Union Company and Jay Gould. That provision which restricts competition to twenty-five miles is most reprehensible, because everybody can see, although the *Times* does not point it out, that a contract might have been made under our present lax system to prevent all competition between the two companies. "There are other features of this remarkable agreement," says the *Times*, "which deserve attention. . . . Gould and his company practically control telephone rates." It is painful to reflect that Congress cannot repeal this remarkable agreement, the Supreme Court having decided recently that the provision of the Constitution which prohibits the State Legislatures from impairing the obligation of contracts is equally binding upon the National Legislature. But we can easily make provision for the future by an act providing that patentees shall not make contracts with "Gould and his company." Perhaps it would be more comprehensive and satisfactory to provide that Gould should not make any contracts at all.

The declaration of the Hartford *Courant* against the Blair bill is of unusual significance and importance, not only because the *Courant* is the leading newspaper of Connecticut, but also because its editor, General Hawley, is a colleague and party associate of Mr. Blair's. Our Hartford contemporary lays great stress upon the fact that the fundamental principle of the measure really offers a premium on ignorance. The money is to be distributed out of the Federal Treasury in proportion to illiteracy, and this is the way it would work:

> "If two States get each, say, the same large slice on the first year, and if one State squanders the money and teaches nobody, and the other State really does encourage education and begins the good work of instructing, then, at the second distribution, the State which has begun the good work will get less money to carry it on with, while the State which has gone backward will get even more than at first. This is simply paying a premium for delay, malfeasance, and neglect of work. The less got for the money, the more money to be got for that."

General Hawley did himself great credit by voting, alone among New England Senators, against the Blair bill when it passed the Senate two years ago, and we trust that the present attitude of his paper foreshadows his purpose to make active opposition to the ill-considered scheme, now that it is again before the body.

The great question of the "tariff on dirt" has come up again, this time most appropriately in Philadelphia, where the *Press* can look after it. It is charged that carpet manufacturers in that city have been buying wool in Russia, getting it invoiced as wool merely, then surreptitiously removing the dirt (or, as the *Press* prefers, the "grease and dirt") and entering it here at a duty of 2½ cents instead of 7½ cents per pound that clean wool ought to pay. In this way it is "claimed," by the wool-growers and others, that 6,000,000 pounds of wool have been fraudulently entered without the corresponding amount of dirt. Testimony is offered to show that Russian Donskoi wool in its natural state contains 50 per cent. of dirt and grease. Consequently, 6,000,000 pounds of refuse matter, upon which freight and duty ought to have been paid, have been left in the valley of the Don, instead of being brought to the wharves of Philadelphia. The indignation produced by this discovery was of course intense, and the Secretary of the Treasury was appealed to. He referred the matter to a commission of experts to decide whether the wool was dirty enough to come in at a duty of 2½ cents per pound. They decided that it was. But the National Wool Growers' Association were not to be headed off in that way. They took an appeal from the Secretary to the Assistant Secretary, and hired "two Philadelphia tariff lawyers" to help them prove that the wool is clean enough to be taxed 7½ cents per pound. The country will await the result with bated breath.

The doctrine of protection to native industry as now understood has received its scientific statement at the hands of Professor Thompson, of the University of Pennsylvania, in a lecture which he was invited to deliver to the students of Yale College. It is summed up in two sentences: "The tariff is not for manufactures, but for industrial independence. We should increase the raw materials in the tariff list instead of decreasing them." In other words, protection has boxed the compass since the death of Henry Clay. Both Clay and Greeley would be heterodox and out of the pale if they were alive to-day. Protection to home industry and protection to home manufactures were identical and corresponding terms in their time. We have gone a long way beyond them, but we cannot say that Mr. Thompson's ideas are not logically deduced from theirs. Digging iron ore is industry just as much as melting it in a furnace or rolling it in a mill. The Knights of Labor understand all this just as well as the smelters and the mill-owners, and perhaps better. They understand, too, the significance of the wage theory as it stands related to the protective theory. They have been told so often that protection is for their benefit and not for the benefit of the manufacturers, that they have determined to get the whole of it, whether in the production of raw materials or of finished products. They have learned their lesson none too well. Their intention is to get *all* that the protective tariff gives. We hope they may succeed, and we have little doubt that they will succeed. We expect to see all the manufacturers, in the course of a few years, working on small salaries for the benefit of their employees, giving to the latter the profits of the good years and bearing themselves the losses of the bad ones. This is an ideal system of industry, but it is what we are coming to, and coming all the faster in proportion as the market for our manufactures is limited, by duties on raw materials, to our own territory.

The Hennepin Canal scheme, which is now in the nursing-room of the River and Harbor Committee, is an impudent and unconstitutional job and swindle. It is simply the forerunner of a long line of canal jobs, which will eventually bankrupt the National Treasury. If it is passed by Congress, we hope that the President will veto it upon the clearest constitutional and business considerations. The Hennepin Canal is neither a river nor a harbor. It has no more claims upon the nation than any other ditch or sewer that can be drawn upon the map by private speculators. The State of Illinois would no more think of putting a dollar of her own money into it than she would of tunnelling Lake Michigan. Nor would the State of Iowa or the State of Minnesota.

The "valued policy" law which the New Hampshire Legislature passed last summer has had a curious and unexpected sequel. This law forbade any outside insurance company to apply for the removal of a suit to which it was a party from the State to the Federal courts, on penalty of a revocation of its license, and provided that in any suit brought in the State courts against an insurance company to recover for a total loss sustained by fire or other casualty to real estate or to buildings on the land of another, the amount of the damage should be the amount expressed in the contract as the sum insured, and no other evidence should be admitted on trial as to the value of the property insured. The outside insurance companies claimed, as they always have done, when similar legislation was proposed in other States, that the result of the law would be a great increase of incendiarism, since, they maintained, it puts a premium upon over-insurance, with a view to fraudulent profit by incendiarism. They threatened to leave the State if the measure should become a law, and promptly executed the threat when the Legislature enacted it. Several months have passed, and it is now found that the number of fires in New Hampshire has decreased by 60 per cent. as compared with the corresponding period of previous years. The withdrawal of the outside companies left the State without any effective local system of insurance, and business men were thrown into a condition of great alarm and uncertainty by the general impossibility of renewing their old policies in outside companies, or getting new ones in home companies. Some progress has been made in organizing new companies within the State, but it is, of course, impracticable for New Hampshire to insure her own citizens generally. The State manifests no intention of repealing the law, nor the outside companies of returning, but the situation has this unexpectedly hopeful element, that the number of fires has fallen off more than one-half since the difficulty of getting insurance has forced people to exercise unaccustomed precautions against fire, while the dismal predictions of wholesale incendiarism have happily not come true.

Mr. Blaine's great scheme of issuing a series of stirring campaign documents and calling

them "History" is made exceedingly comical by Senator's Logan's close imitation. A fortnight ago we were favored with a two-column instalment from the advance sheets of Mr. Blaine's work; and last week along came a similar instalment from Logan's advance sheets. Just at present Blaine is showing the statesmanlike grasp of his mind by discussing the fisheries question, while Logan is giving us, in his own vivid colors, a fresh picture of the awfulness of the secession movement. The strain upon the space of the loyal Republican organs which feel bound to print all this amusing stuff is very severe, but they bear it with commendable complacency. We may be in error, but we seem to detect a slight bias against Logan on the part of some of the organs. They give the Blaine instalments a more conspicuous position, and refer to them editorially in the sort of article which usually goes with paid "reading matter," and is known as a "favorable notice." Perhaps both historians or their publishers are paying to have the matter published, and if they are, Logan should see to it that he gets the usual editorial mention.

The death in the same week of two men who were prominent during the era of the rebellion, and who were the chosen leaders of the Democratic party in Presidential contests after the close of the war, would of itself be a noteworthy circumstance. Following within a few months the death of the first and of the last Commander-in-Chief of the Union Army, the country could hardly have a more striking reminder that a generation which has left an ineffaceable impress upon our history is so rapidly passing away that it is already almost gone. The death-roll which records within the short space of about half a year the names of Grant, McClellan, Hancock, Seymour, all of them Presidential candidates, three of them famous Generals, one of them President for eight years, thins out our great men at an almost unprecedented pace. Beginning with the canvass of 1856 and ending with that of 1880, fifteen candidates contested for the Presidency, who belonged to the generation which brought on or carried through the war. Buchanan and Fillmore; Lincoln, his three rivals in 1860, Douglas, Breckinridge, and Bell, and his sole opponent in 1864, McClellan; Grant, and the men whom he defeated in 1868 and 1872, Seymour and Greeley; Garfield and Hancock, the candidates in 1880, are all dead. There remain of the whole list only Frémont, no longer a "pathfinder," Tilden, and Hayes. The conspicuous men of Lincoln's Cabinet are mostly dead, like Seward, Chase, and Stanton, or in the retirement of old age, like Simon Cameron; "the war Governors" are nearly all gone, or where a stray one, like Curtin, of Pennsylvania, lingers, no longer powerful; the great leaders in Congress before, during, and immediately after the war are either dead, like Charles Sumner, Henry Wilson, William Pitt Fessenden, "Ben" Wade, Oliver P. Morton, Thomas F. Hendricks, "Thad" Stevens, and Schuyler Colfax, or remain only as political relics, like N. P. Banks and Lyman Trumbull. In Congress to-day sit but a few men who sat in that body before the war, and of these few John Sherman and John A. Logan alone retain a commanding position, while Secretary Lamar is the only man in the Cabinet whose political record dates back of 1861.

Imperceptibly, but hardly less surely, the humbler members of the war generation are departing along with its famous heroes. Many men will help to elect the next Congress in the fall of 1886 who were not born when Lee surrendered, and many more who retain only boyish memories of the war which that event ended. The few surviving politicians of that age have lost their old audiences. The great majority of the men whom they now address never shared in the emotions and the prejudices of the rebellion epoch, and cannot be stirred by the most fervid appeals to passions which, unlike their fathers, they have never known. The passing of the generation which fought the war involves the dropping of war politics. The election of Grover Cleveland, the first man ever nominated for the Presidency by either party whose public career did not begin until long after the rebellion, marked the end of an era in our history as clearly as have the deaths since his inauguration of Grant, Hendricks, McClellan, Hancock, and Seymour. The nation has entered upon another epoch as distinct from the last as that which began with the inauguration of John Quincy Adams, the first President who was not of the Revolutionary day, in 1825, and which ended in the organization of parties upon new lines.

It will be a surprise to most people to learn that American capital invested in the cattle industry has already pushed its way across the Rio Grande, and is seeking investment in the northern States of Mexico. The advantages of this region over even the southern portion of Texas are obvious, in the superior winter pasturage and milder climate, and great ranches have been recently purchased by New Yorkers, who count with reasonable assurance upon securing large returns. The *Mexican Financier* considers the movement so important that it regards the cattle interest as destined soon to equal, if not surpass, in importance the mining interest in the Northern States of the Republic, and it demands a repeal of the old law which prohibits the holding of real estate by foreigners within twenty leagues of the frontier, together with other encouragements to the coming of outside capital. It may prove an interesting question how our tariff will affect American investors in Mexican cattle ranges. The law permits the free importation of cattle for breeding purposes, but imposes a 20 per cent. duty on all others. It would hardly be held, however, that a man who drove an animal from Texas across the Rio Grande for pasturage must pay duty on the same animal when he drove it back, and it would be difficult to figure out the exact sum which ought to be paid as a tariff upon the Mexican grass which it had consumed.

M. de Lesseps's present journey to the scene of the Panama Canal enterprise, and his invitation, accepted by the New York Chamber of Commerce, to send a representative of the Chamber with his party of inspection, gives peculiar interest to an article just published in the *Pall Mall Gazette*, "written by one who probably knows as much about the subject [of the Canal] as anybody, M. de Lesseps himself alone excepted." This writer says that in July, 1880, M. de Lesseps announced that £44,000,000 for the supposed cost of the Canal, as the Paris Congress had suggested, was ridiculously too high; that a celebrated contracting firm would willingly undertake to cut a sea-level canal for £20,480,000, so that, including all accessories, the total cost could never exceed £28,000,000. The "International Technical Committee" early in that year had reported that instead of 46,000,000 cubic metres, which the Congress had estimated to cost £44,000,000, there were really 75,000,000 metres. The Lesseps estimate of cost, therefore, while 36 per cent. less than that of the Congress, was based upon an estimate of excavation 63 per cent. greater. What has happened to date is that £6,000,000 (50 per cent.) has been called from shareholders, and £24,600,000 has been raised by debentures—altogether £30,600,000, or, deducting discount, £23,227,000 net; and this sum has been exhausted. A call of 25 per cent. more on shares, or £3,000,000, has been made, and it is said will soon be followed by a further and final call for £3,000,000. The £6,000,000 added to the £30,600,000 make £36,600,000. That is already £8,600,000 beyond M. de Lesseps's estimated cost.

Now for the work accomplished. Besides the Panama Railway a vast amount of material has been acquired. But, says the *Pall Mall* writer, "much of this material cannot be used, for it has been badly selected. Any traveller in the Isthmus may have seen new locomotives turned over on the side of the road, and covered with detritus. Many excavators cannot work at all. There has been untold extravagance and waste." M. Bonaparte-Wyse, one of the *fondateurs* of the company, in his 'Le Canal de Panama,' just published in Paris by Hachette, accuses the company not only of a loss in interest of £4,000,000 through waste of time, but of wasting outright some £14,000,000 "en travaux inutiles ou trop payés et en contrats absurdes," and of over-payment for the Panama Railway. Of actual digging it is stated that though "£30,600,000 have been raised and spent (£23,000,000 in cash), yet only 16,000,000 cubic metres have been excavated, and that, too, from the easiest section, nearer to the Atlantic, where there are hardly any rocks." Three years ago M. de Lesseps estimated that from 1884 onward the average excavation would be at the monthly rate of 2,000,000 cubic metres. The number of the *Économiste Français* for January 23 states that in November, 1885, it was 687,000 cubic metres, and the writer of the article under mention asserts that it has never reached 850,000 in a single month, much less 2,000,000. It only remains to add, that according to the same authority, M. de Lesseps's present estimate of the total excavation is neither 46,000,000 nor 75,000,000, but 120,000,000, cubic metres; so the question of to-day is, if 16,000,000 cubic metres of easy digging cost £30,600,000, what will be the cost of 120,000,000 metres of all kinds, including much that is very difficult, and excluding the problem of the control of the Chagres River?

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 10, to TUESDAY, February 16, 1886, inclusive.]

DOMESTIC.

THE President on Wednesday afternoon nominated Stephen A. Walker to succeed Mr. Dorsheimer as United States District Attorney at New York city. Mr. Walker is now Superintendent of the Board of Education in New York, and is a lawyer.

Senator Mitchell (Rep., Ore.) on Thursday introduced a new anti-Chinese bill. It provides that all treaties between the United States and the Chinese Empire, in so far as they permit the coming of Chinese to the United States and inhibit the Government of the United States from absolutely prohibiting their coming, and all acts of Congress which in any manner permit the coming of Chinese, whether subjects of the Chinese Empire or otherwise, shall be abrogated. And it shall be unlawful for any Chinese, including those who are now within the limits of the United States, and who may hereafter leave the United States and attempt to return, excepting diplomatic representatives and other officers of the Chinese or other Governments travelling upon the business of that Government with their body and household servants, to come to or land at any port or place within the United States.

The Chair laid before the Senate on Monday a letter from the Secretary of the Interior, in reply to Mr. Dawes's recent resolution, adopted by the Senate, which called for all information in the Interior Department relating to Henry Ward, late Indian Inspector. The Secretary in his letter says: "I transmit all the official papers on file in the Department which I understand to be embraced by the resolution. The official reports made to this Department by Henry Ward, as United States Indian Inspector, are voluminous, and as the clerical force of this Department is limited and otherwise fully employed, I have deemed it best to transmit the original reports. As they are frequently consulted in the transaction of the business of the Department, I have the honor to request that they be returned to its files as soon as they are no longer required by the Senate. I am directed by the President to say that if the object of the resolution is to inquire into the reasons for the suspension of Mr. Ward, these papers are not to be considered as constituting all the evidence submitted to him in relation thereto. I am also directed by the President to say that he does not consider it consistent with the public interests to transmit copies of unofficial papers from private citizens held in my custody for him, which relate exclusively to the suspension of incumbents."

The House on Thursday afternoon passed the bill authorizing the Comptroller of the Currency to increase the stock of national banks and to change their names without the intervention of Congress—129 yeas to 120 nays. The Greenbackers moved to reconder and indicated a disposition to filibuster, when the morning hour expired and the bill went over. The vote is so close that the anti-national-bank men may possibly be able to defeat the bill.

Mr. Belmont, of New York, presented in the House on Friday petitions signed by over 1,247 art societies and artists throughout the United States, asking for the enactment of a law to admit works of art free of duty. They state that the law passed in 1883, by which duties were raised from 10 to 30 per cent., was not called for by artists, and was not advocated by the public press or demanded by the people, nor was the measure justified on the plea of public necessity; that the law has proved a failure, has restricted trade, and has diminished the public revenue.

Mr. Morrison introduced his tariff bill in the House of Representatives on Monday. It is expected that it will reduce the revenues $20,000,000 a year. Of this amount probably one-half is taken off of sugar, a little more than one-fourth is taken off by additions to the free list, and a little less than a fourth comes from various items scattered through the list. All wood and lumber not dressed is put on the free list, with this provision, that the abolition of the duty is not to apply to any wood or lumber imported from a country which imposes an export duty on those articles, as Canada now does. Among the other additions to the free list are hemp, jute, jute butts, sisal and other fibre grasses, coal, salt, iron, lead, copper, and other ores, unmanufactured stone; chicory, and other substitutes for coffee; corn, oats, hay, potatoes, extract of hemlock and other barks, crude glycerine, indigo extracts, sulphate of barytes, unmanufactured crude borax, saltpetre, logwood and other dye woods, ochery earths and unwrought clays. On the various grades of sugars there is a general reduction of 20 per cent., but, as in the case of the abolition of the lumber duty, this reduction does not apply to any sugars on which an export duty is levied, as is now the case in Cuba. On the finer grades of cotton goods, the duties on which are ad valorem, no changes are made. The duty on coarse cottons is reduced from 40 to 35 per cent. The duty on pig-iron is reduced from $6 72 to $5 60 per ton. The rate on steel and iron rails is reduced from about $17 to $12 50. The reduction on common window glass is about 20 per cent. There is little change in woollen goods.

In the House on Monday Mr. Hanback (Rep., Kan.) introduced a resolution for a sweeping investigation of the whole telephone scandal. It was referred.

The House Committee on Shipping on Monday substituted the original bill of Mr. Dunn to grant American registry to all vessels owned wholly in the United States, no matter where purchased or constructed, for the Beck bill on the same subject.

The House Coinage Committee at its meeting on Monday evening defeated—4 to 8—a motion to report in favor of Mr. Bland's bill providing for free coinage, the affirmative votes being thrown by Lanham, McCreary, Bynum, and Felton. On a motion that an adverse report be made on Mr. Wait's bill calling for the immediate suspension of the coinage of the silver dollar, Lanham, Norwood, McCreary, Bynum, Fuller, and Bland voted yea, and Seymour, Hemphill, Scott, James, Rockwell, and Little, no. Mr. Felton could not be found. The proposition was declared lost by a tie vote of 6 to 6. Mr. James moved to make an adverse report on Mr. Bland's bill for free coinage. Mr. Norwood voted with the six members who had opposed an adverse report on the Wait bill, and thus it was decided by 7 to 5 to reject the Bland bill. It was so reported on Tuesday.

Secretary Manning on Monday sent to Colonel Morrison, Chairman of the Committee on Ways and Means, a reply to a letter from that Committee asking his opinion of the resolution which provides that whenever the surplus or balance in the Treasury, including the amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be the duty of the Secretary of the Treasury to apply such excess, in sums of not less than $10,000,000 per month during the existence of such surplus, to the payment of the interest-bearing indebtedness of the United States, payable at the option of the Government. Secretary Manning does not approve this scheme, saying: "I cannot now foresee a state of things which will make it prudent to limit the surplus reserve in the Treasury to a sum ranging from nothing to a maximum of $10,000,000. The legislation now before Congress relating to pensions will, if perfected, increase the demands upon the Treasury to an amount which it is impossible to exactly estimate, and a late decision of the Supreme Court subjects the Government to the repayment of duties collected, the aggregate of which is large but altogether indefinite. These things are mentioned to remind the Committee that neither the calls upon the Treasury nor the exact time that such demands must be met can be precisely foreseen."

The House Committee on Public Lands on Tuesday decided to forfeit the grant to the California and Oregon and the Oregon and California Roads, except as to the lands to which patents issued to these companies prior to the date, in 1880, when the road should have been completed.

The House Committee will report favorably the Hennepin Canal scheme.

The Commissioner of Pensions has prepared a statement showing the amount called for by the Arrears of Pensions Act and by the bills now under consideration. He fixes the amount at the enormous sum of $482,242,073.

Minister Cox, at Constantinople, has obtained a furlough on account of poor health, and has gone to Egypt with his wife.

The anti-Chinese Congress at Portland, Oregon, Saturday, at which about 150 delegates were present, adopted resolutions calling upon "the citizens of every locality to peaceably assemble and politely request said Mongolian race to remove from this State and Territory to the city of San Francisco or any other place where they are desired by the people, and this within thirty days from the date of said meetings"; and appointing an executive committee in every community to carry out the spirit and intent of these resolutions.

The resolve abolishing the poll-tax as a prerequisite to voting was agreed to in the Massachusetts House on Thursday by a vote of 177 to 50.

Senator Reilly introduced in the New York Senate on Thursday a bill to reduce the price of gas in New York to $1 25 per 1,000 feet.

It is officially announced that Archbishop Gibbons, of Baltimore, will be made a Cardinal.

General Hancock died poor and a fund has been started for the benefit of his widow. S. J. Tilden headed the subscription with $1,000. The funeral of the dead General took place on Saturday. Unostentatious services were held in Trinity Church, in this city, and the body was then taken to Norristown, Pa., and interred in the family vault.

John B. Gough, the temperance orator, was stricken with apoplexy while lecturing on Monday night in Philadelphia. There is little hope of his recovery.

Henry Watterson, editor of the Louisville *Courier-Journal*, is critically ill.

John G. Thompson, formerly prominent in Ohio Democratic politics and ex-Sergeant-at-Arms of the House at Washington, died of heart disease on Wednesday at Seattle, Washington Territory, where he was appointed Land Claim Agent last August.

Laura Don, once a prominent actress and author of the play "A Daughter of the Nile," died at her home in Greenwich, N. Y., on Wednesday, at the age of thirty-four.

Horatio Seymour, ex-Governor of New York, died in Utica on Friday evening. He was born in Pompey, N. Y., May 31, 1810, educated at several good academies and Hobart College, and studied law. In 1842 he was elected to the New York Assembly, and was Speaker of that body in 1845. He was the Democratic candidate for Governor in 1850, but was defeated by Washington Hunt, whose majority was only 262. Two years later Mr. Seymour was elected Governor over Hunt and Tompkins. From that time he was considered an almost invincible leader of his party in this State. In 1854 he was defeated for Governor by Myron H. Clark, Prohibitionist, by 309 votes, there being four candidates in the field. Just before the outbreak of the war Governor Seymour for a time adhered to the Southern wing of the Democratic party, but when war was declared he became a strong Union Democrat. In 1862 he was elected Governor over the Union General Wadsworth by a majority of 10,000. His inaugural address

was reassuring to the Federal Government, but his course throughout the draft riots in this city has been severely criticised. The Democrats nominated Governor Seymour for President in 1868, but he was defeated by General Grant. His friends nominated him for Governor in 1876, but he declined the honor, and Lucius Robinson was substituted. Since then he has lived in honorable retirement, taking considerable interest in literary, political, and historical subjects. His last public appearance was in July, 1885, when he presided at the Utica Canal Conference. Mr. Seymour's funeral took place at Utica on Tuesday, and was attended by a large and distinguished assemblage.

Ex-State Senator Dennis McCarthy died at his home in Syracuse on Sunday at the age of seventy-two. Originally he was a Free-Soil Democrat, but became a Republican in 1862. He went to Congress in 1866, serving one term. In 1875 he entered the State Senate, and remained in it until last year. He was President pro tem. from 1881 to '85. Last year he was an unsuccessful candidate for the nomination for Lieutenant-Governor on the Republican ticket.

FOREIGN.

London was again excited on Wednesday when it was reported that a mob of ruffians was marching from Deptford toward the city. The mob was said to have been enormously increased on its march. They sacked, it was reported, several small shops and one large establishment. The police were ordered to take possession of all bridges and prevent the ruffians crossing into the city. Later in the day it became known that the reports were false. The city was quiet throughout the day and has since remained so.

Police summonses have been issued against the Socialist leaders who are blamed for inciting the riots.

The hosiery operatives at Leicester, Eng., are on a strike. On Thursday night they paraded the streets and smashed factory windows. The police charged, but were unable to disperse them. Four arrests were made. They continued their riotous demonstrations until a late hour on Friday night. Twenty-seven were arrested. The relief fund for the unemployed workingmen of London amounts to £20,000.

A meeting of unemployed workingmen held in Birmingham, England, on Monday was attended by 8,000 persons. The addresses delivered were of the most inflammatory nature, and the assemblage degenerated into a mob, which attempted to run riot in the streets and pillage the shops. The police, however, were prepared, and succeeded in suppressing rioting and preventing any acts of pillage.

A meeting of Englishmen, Scotchmen, and Irishmen favorable to the principle of the establishment of an Irish Parliament in Dublin, to deal with Irish affairs, was held at the Westminster Palace Hotel, in London, on Wednesday evening. Speeches were made by Lord Ashburnham, Mr. Justin McCarthy, and Mr. Joseph Cowen. The meeting formed the British Home-Rule Association, and passed a resolution supporting the Irish people in their demand for self-government. An executive committee was appointed to draft a constitution; it included the names of Lord Ashburnham, Lord Clifton, Mr. Joseph Cowen, M.P.; Mr. Justin McCarthy, M.P.; Sir James Marshall, Mr. W. Thompson, Q.C., and Mr. Wilfrid S. Blunt.

The Earl of Fife, the President of the Scotch Liberal Association, and hitherto a stanch friend and colleague of Mr. Gladstone, writes to the Secretary of that Association that he cannot hand over his political conscience to a Cabinet whose policy, so far as it is definable at all, is only a policy of surrender. He says he is strongly opposed to tampering with the Union, and must resign the Presidency.

The election in Galway, which took place on Thursday, resulted in the return of Captain O'Shea, who received 1,017 votes to 65 for Mr. Lynch. At a meeting in the evening Mr. Parnell congratulated the electors upon the unity they had displayed, and thanked them for the confidence they had shown in him. Mr. O'Connor also spoke, and predicted that an Irish Parliament would sit in Dublin within two years. It is said that a number of the Irish members of Parliament will refuse to recognize O'Shea.

Mr. Healy, in the course of an address delivered on Saturday at Mountrath on Home Rule, ridiculed the proposition to allow the Irish people a native Parliament without the control of the police of the country. He said: "An Irish Parliament without the control of the police would require police protection itself."

Mr. Gladstone is said to be preparing a bill providing for the expropriation of land in Ireland by means of state funds.

At a meeting of the British Cabinet on Monday it was decided that the first business of the Parliamentary session should be a scheme to reform the rules of procedure. Mr. Chamberlain urged the early consideration of a local government bill, but Mr. Gladstone overruled him, giving precedence to home-rule proposals, and postponing dealing with the Irish land question. Mr. Gladstone is sending letters of inquiry to all sorts and conditions of Irishmen in order to accumulate accurate knowledge on the Irish question.

A meeting of the Conservative leaders has been called for February 18 at the Carlton Club. The Marquis of Salisbury will preside. The meeting will be in the nature of a caucus to determine what policy the Conservatives shall pursue in Parliament. The principal question to be considered will be, What stand are the Conservatives to take in regard to Ireland and the proposed Irish legislation of the Liberals?

Lord Rosebery, the new Minister for Foreign Affairs, has reiterated to the Greek Government that England is firm in her resolution to oppose a war between Greece and Turkey.

The Porte has been informed that Lord Rosebery will maintain Lord Salisbury's Balkan policy.

It is rumored in well-informed circles that the Greek question has been temporarily settled by an agreement between Mr. Gladstone, the Earl of Rosebery, and Mr. Delyannis, the Greek Prime Minister, that Greece shall keep quiet now, on condition of securing the execution of the Berlin Treaty in a short time.

Mr. John Morley has been reëlected to Parliament, receiving 1,010 more votes than before. This is considered a popular endorsement of home rule.

The trial of the divorce case of Mr. Donald Crawford against his wife, in which Sir Charles Dilke is co-respondent, was held in London on Friday. The Court granted Mr. Crawford a divorce from his wife, and dismissed the charges against Sir Charles Dilke. The London press comment indignantly on the peculiar decision of the Court.

Sir Charles Dilke has decided to persevere in the policy of silence and to make no explanation to the Chelsea electors. It is certain that he will not receive a place in Mr. Gladstone's Cabinet.

The Chelsea Liberal Association has decided to permit Sir Charles Dilke to continue undisturbed as the representative of that constituency in Parliament.

Viscount Cardwell is dead. He was a Liberal, and was a member of several ministries. In 1859–61 he was Chief Secretary for Ireland, and later held office as Chancellor of the Duchy of Lancaster, Colonial Secretary, and War Secretary. Viscount Cardwell was in his seventy-third year.

The Rev. John Tulloch, D.D., Principal of St. Mary's College, St. Andrew's University, Scotland, is dead. He was born in 1823.

The Rev. Henry Burgess, of Glasgow, Scotland, author of many religious works, is dead at the age of seventy-eight. Among his works are: 'Truth or Orthodoxy, to which shall we sacrifice?' (1848), 'Poems' (1850), 'Disestablishment and Disendowment' (1875), and the 'Art of Preaching and Composition of Sermons' (1881). He was editor of the *Clerical Journal* for fourteen years, retiring in 1868.

The London Missionary Society has received advices from Zanzibar that two men who have returned to that place from Uganda report that they saw Bishop Hannington, with fifty men of his expedition, taken out for execution.

The rebellion in Kordofan is assuming large proportions. The French Prime Minister has radically changed that Government's policy, and will support the demands of the Porte for the formation of a Turco-Egyptian army to replace the British troops in Egypt, and urges the early evacuation of the country by the latter.

Lord Dufferin, Viceroy of India, has decided to garrison Burmah with 16,000 troops, under command of General Prendergast. The military occupation and martial law will be continued until November, as Lord Dufferin does not think the country is ripe yet for the establishment of civil law.

Bulgaria and Turkey, on the advice of the Powers, will forego their demands of an indemnity from Servia.

It is reported that King Milan has resolved to sign a treaty of peace with Bulgaria, no matter what action the Greek Government may decide to take. Servia will hereafter enter into a stronger agreement with Austria Hungary.

A conspiracy has been discovered in Belgrade, Servia, to overthrow King Milan, and place upon the throne Prince Karageorgevitch.

The Madrid *Progresso*, a Zorillist newspaper, says that when the Cortes meets it will be to receive the announcement of the abdication of the Queen Regent.

Twelve men were arrested in Madrid on Sunday charged with being members of a dynamite association and an anarchist committee. Dynamite bombs, cartridges, and red flags were found.

There is great excitement in Berlin over apparently well-authenticated reports that Prince Bismarck is preparing to yield entirely to the Vatican in the religious dispute which has been waged by Prussia against the Papacy for the past fifteen years. A bill has been deposited by the Government with the Upper House of the Landtag, revoking, with a few trivial exceptions, all the features of the May laws which have been so odious to the Catholics of Germany.

The German Reichstag has passed the motion, urged by the Conservatives, for a new and searching inquiry into the currency question, to ascertain whether it would be better to adhere to monometallism or return to the double standard. The vote was 145 to 119.

Since the recent riots in London the Russian Government has renewed negotiations with England, with the object of inducing that country to join the international league for the extradition of political criminals.

An excited crowd of French Canadians raided several stores in Paspebiac, Quebec, on Monday, and carried off 260 barrels of flour. The Government grant of one-half barrel each of flour and potatoes was offered them, but was indignantly rejected. The rioters helped themselves to whatever they wanted. It is feared that this is only the beginning of the trouble.

A BILL TO PROMOTE MENDICANCY.

MR. BLAIR, of New Hampshire, has succeeded in having his bill for Federal aid to education in the South made the regular order in the Senate, and this most important proposition is thus again before Congress for discussion. At the same time the press of the country manifests signs of giving the subject more careful attention than it has previously received, and there is evidence that many journals which have hastily endorsed the scheme in past years are now abating their confidence that it will prove a good thing in the long run. The Boston *Herald* is a newspaper which has hitherto favored the Blair bill, in the belief that it would stimulate the cause of common-school education, but which now says, "If it will not, let the aid be withheld," and scarcely conceals a growing doubt whether the scheme would not hinder rather than help. Its chief reason for still hoping that Federal aid to Southern schools might prove beneficial is based upon certain statements made by a Northern gentleman who has paid much attention to this question, and who strongly advocates the Blair bill. We quote his argument, as summarized by the *Herald*:

"Emancipation, the act of the nation, added one-third or more to the school population of the former slave States, and that after two-thirds of the property of that region, reckoning the slaves as part of it, had been destroyed by war. The freedmen and their children had been kept in compulsory ignorance under the authority of the National Constitution which recognized and protected slavery. It was, therefore, physically impossible for the people of the Southern States to assume the task of educating this mass of ignorance. The Rev. Mr. Mayo, an excellent authority on this question, says that 'There are now, in sixteen Southern States, 4,000,000 white and 2,000,000 colored children and youth of school age, of whom not one-third can be said to be in any effective school.' Seventy per cent. of the negroes over ten years of age are illiterate, and the ratio of illiteracy for blacks and whites alike is increasing. And this in spite of the fact, to which Mr. Mayo bears testimony, that 'no people in human history has made an effort so remarkable, all circumstances considered, as the people of the South have done during the past fifteen years, in what they have already done for the schooling of their children.' Last year the Southern States raised no less than $17,000,000 for school purposes, of which nearly one-third was for the education of the children of their former slaves. In many of the States the school tax is higher in proportion to the property than in Northern States that maintain a splendid school system. And yet more than one-half the children of school age are growing up illiterate, or without primary instruction that is worthy of the name."

The Rev. Dr. Mayo is a gentleman of the highest character, a clergyman of excellent standing in the Unitarian Church, and a life-long friend of education, who abandoned regular church work to devote himself to the cause of education in the South, and in that cause has labored with great zeal and entire unselfishness. He has thus enjoyed unusual opportunities for learning the state of things at the South, and he is entitled to be heard with great respect. But it is evident that the influence of his former environment causes him to view Southern schools through glasses which distort the situation. Dr. Mayo lived for a number of years, while his children were going to school, in Cincinnati, and for a number of years more in Springfield, Mass.—both cities with excellent systems of graded schools in session nine or ten months out of every twelve. He went down South, and found that in the rural districts the common schools were open only three or four months a year. He was naturally shocked, and jumped to the conclusion that the nation must go to the aid of the Southern States, or their children would never get a decent education. His radical mistake was in supposing that the situation in the rural regions of the South was much different from the situation in the rural regions of the North, or much worse. If he had gone from Springfield through the hill towns of western Massachusetts, and then journeyed through the mountain regions of Vermont, he would have found schools which are but little more "effective" than exist in the South and are in session but little longer. Less than 5 per cent. of all Vermont's inhabitants above the age of ten years in 1880 were unable to read, and yet an official report of 1870 shows that the schools in most towns were open only seventeen weeks in the year, which does not much exceed the present limit in the South.

When the *Herald* and other believers in Dr. Mayo quote his dictum that not one-third of the children in the South can be said to be in any "effective" schools, they must remember that it is the testimony of a man who would undoubtedly have pronounced the schools of 1870 in many Vermont towns ineffective, and yet that those schools kept the ratio of illiteracy in the State below one in twenty. The *Herald* does not make it quite plain whether the statement that "the ratio of illiteracy for blacks and whites alike [in the South] is increasing," was made by Dr. Mayo or is its own, but, whoever its author, it is obviously a gross and inexcusable misrepresentation. The official reports of the Superintendents of Education in every Southern State show that the number of attendants upon the public schools is increasing steadily and largely year by year, mounting in South Carolina from 110,416 in 1874 to 185,619 in 1884, and in Mississippi from 166,204 to 266,996 in the eight years ending with 1883. If illiteracy is really increasing with such extensions of school advantages, national aid would only aggravate the evil by enlarging the number of pupils, and the true thing to do would be to shut up the schools. But it is not true, and the census of 1890 will undoubtedly show a great diminution in the illiteracy of every Southern State. It is a scarcely less flagrant misrepresentation to give the impression, as Dr. Mayo does, that "not one-third" of the children in the South are getting a decent education. The truth, as shown by the reports of State Superintendents, is that the percentage of attendance to the whole population of the school age, even in States with so large a negro preponderance as Mississippi and South Carolina, has already reached as high a point as in thinly settled States at the North.

There remains only the plea that the schools are not as good as they ought to be, and still the Southern people cannot raise any more money for education, so that they must have help from the Federal Treasury if there is to be any further improvement, which everybody concedes is essential. It is a perfectly conclusive answer to this plea of Dr. Mayo's that it is now several years since he began telling the Southern people that they could not raise any more money for schools, and yet they have gone on raising more money all this while. For example, South Carolina increased the amount devoted to this purpose between 1880 and 1884 by nearly 33 per cent., Georgia, Alabama, and Virginia by almost 40 per cent., and North Carolina and Florida by more than 50 per cent.

If anything more were needed to show that the South is capable of "paddling her own canoe," it is furnished by the voluntary testimony of Southern men who are devoted to the cause of education in those States where the load is heaviest by reason of the large proportion of negroes in the population. In Mississippi almost 60 per cent. of the people are colored, yet this is what Governor Lowry of Mississippi said about education in that State in his message to the Legislature last month:

"It is a source of no little gratification to be able to state that the common-school system is in a healthier condition, and that the complicated machinery of the department is working more smoothly and satisfactorily than at any previous time in its history. My information from various sources satisfies me that the interest in favor of our system of public education as established and maintained by law is steadily increasing, and assuming a more intelligent and well-defined form of action. I learn from the able School Superintendent, General Smith, that the attendance of 1884 was largely in excess of that of any previous year, and will, he supposes, be greater for 1885. Especially is this increase marked among the colored people, showing more attention and concern about the education of their children than manifested heretofore. It may be truthfully said that the educational outlook of the State is hopeful, and the object of every one connected with legislation should be to revise, improve, and perfect our school system."

The proportion of negroes to whites is even larger in South Carolina than in Mississippi, more than two-thirds of all the people being colored, yet Governor Thompson—himself for years the State's efficient Superintendent of Education, and one of the most devoted friends of public schools in the whole South—was able to make this encouraging showing in his message to the Legislature last November:

"The report of the Superintendent of Education shows a most gratifying progress in the work of the public schools, and in the healthy growth of popular sentiment on the subject of education. Year by year the friction that attended the operation of the free public-school system in the earlier period of its establishment has been reduced, and in all particulars controllable by the school officers it has almost disappeared. The number of pupils enrolled in the public schools during the year just closed was 178,023, of which 78,458 were white and 99,565 were colored; the number of teachers employed was 3,773, being an increase of 89 over the number employed during the preceding year; and the number of schools was 3,462, being an increase of 80 over the number in operation during the year 1883-84. The length of the school-term was three and a half months. It was shown in the annual report for 1884 that the limit of ratio of enrolment to the school population of the State had been nearly reached, and that the increase in this respect would, in the absence of unfavorable conditions, only keep pace with the natural increase of population. This indicates that the schools have been brought within the reach of the people and are generally used by them. The average attendance of pupils for the school term shows an increase of 7,949, and has now reached nearly 69 per centum of the enrolment. That this percentage should be so high among a people mainly rural is highly encouraging, because it demonstrates that the work of the schools has become more effective and better appreciated."

We do not see how any candid person, who will take the trouble to investigate the facts, can avoid the conclusion that the work of public education in the South is now in a most

hopeful condition, and that the worst thing which could possibly befall the cause would be an assumption by the nation of a burden which the South has shown herself able to carry alone, and will be all the stronger in the end for having carried alone. There was a time when an appeal for national help might have been urged with force. Just after the war, when the South was plunged in poverty, when, as in South Carolina in 1869, not one child in ten attended public schools, it might have been fairly urged that Congress should come to the rescue. But half a generation has passed since that time, and the South, by her own confession, is now able to do the work, and will be able to do it better every year as she grows richer. The short-sighted Northern philanthropists who try to persuade her that she is too poor are her worst enemies. Mr. Blair's bill only needs to be seen in its true light, as a bill to promote educational mendicancy, to be sure to be rejected.

BROOKLYN AND PHILADELPHIA.

By a rather striking coincidence there has just been presented in two of our chief cities convincing evidence of the bitter hostility to civil-service reform which is entertained by the professional politicians of both parties. Brooklyn has long been a Democratic city in national politics, and has suffered from one of the worst systems of boss rule ever known in the country, except for the brief periods when the taxpayers, without regard to party, have joined in electing non-partisan officials, as notably during the recent Low régime. Philadelphia, on the other hand, has long been a Republican "stronghold" in national politics, and has been cursed with a ring second in corruption only to Tammany in New York, which has for years absolutely ruled the city, except when some peculiarly cynical abuse of power aroused the public for a brief season to a spasmodic revolt. The Democratic Machine is now in good running order in Brooklyn and the Republican Machine in Philadelphia, so that each party is able to manifest its attitude toward municipal reform with the utmost clearness.

Last fall the Brooklyn Democrats nominated for Mayor one of those well-meaning but weak-backed "business men," whom the party managers have found by long experience the most taking candidates to masquerade behind during a canvass, and the most subservient officials after election. Boss McLaughlin's dummy in this instance conclusively demonstrated his unfitness for responsibility by writing a letter of acceptance which sneered at the competitive system, that had long been in successful operation in his city, as an unpractical device, and virtually assured the "boys" that the examinations should be so changed, if the Democrats came into power, that the questions would not bother them. The dummy was elected, and his administration is already justifying the Machine's confidence in him. He turned over the departments which control the most "patronage" to Democrats distinguished more for partisan activity than for business qualifications, and these men have been quick to prove that they intended to run their departments primarily for the benefit of party strikers.

Last week the City Works Commissioner, who has several hundred subordinates, insisted upon their handing him their resignations for his acceptance at any time he may insist upon them. The law expressly gives the Commissioner the right to remove any subordinate during the first month of his incumbency without assigning any reason, and after that period upon filing a statement of the cause. The Department has been placed upon a good business footing under Mayor Low, and the interests of the public service would require or justify very few changes among the large force of subordinates. But the Commissioner scarcely veils his intention to be governed solely by partisan considerations in deciding whether or not to retain a man, and his almost openly avowed object, in asking wholesale resignations in blank, is to be able to get rid of employees from time to time, as places must be made for importunate "workers," without the check which the necessity of giving a sound reason after the expiration of the first month would impose. Meanwhile the new officials are making a desperate effort to secure the consent of the State Civil-Service Commissioners to changes in the system of examinations for filling the vacancies thus created, so that the competition will be a mere farce and "the right man" will be able to pull through every time. In short, the object of the new Democratic administration in Brooklyn is to break down, so far as possible, the system of conducting municipal affairs upon business principles which has been so successfully built up under Mr. Low.

The Republicans have an overwhelming majority in the City Council of Philadelphia. The term of the Chief Engineer of the Water Department is about expiring, and the City Council was called upon on Thursday to elect his successor. The incumbent, Col. William Ludlow, is a graduate of West Point, an accomplished civil engineer, an executive officer of rare ability, an official who has served for three years absolutely without reproach. He came very near to being the ideal man for the place, when the Council, in deference to an aroused public sentiment, originally elected him, and he now adds to natural qualifications the notable advantage of long experience with the Department and entire familiarity with its needs. Great improvements in the water service which are in immediate contemplation render his retention peculiarly desirable, as a complete assurance that the large amounts to be expended will be honestly applied. In the whole history of city government in this country there has seldom been a case where the reëlection of a competent and faithful official was more imperatively demanded by every consideration of the public interest.

There was but one possible pretext which could be advanced by Colonel Ludlow's most bitter enemy as a ground for rejecting him. He is personally a Democrat in national politics, and votes the Democratic ticket. It was not pretended that he had used his power to promote the interests of the Democratic party; or, rather, when such a charge was vaguely made, a careful investigation showed that it was absolutely without foundation, while a scrutiny of the political affiliations of all employees of the Department, after he had been for three years its head, showed that only 5 of the whole 326 were Democrats. He had simply conducted the Department upon business principles, and the most stalwart Republican could cite no case where he had done anything to help the Democratic party. Yet the Republican Councilmen met in caucus not long ago and decided to refuse Colonel Ludlow reëlection, solely because they were unwilling to have the Department run upon business principles, and were resolved to have it run as a part of the Republican Machine. Public sentiment protested against the movement. Even such a thorough-going Blaine organ as the *Press* joined in the outcry, and called upon Republican Councilmen to turn Mugwumps and reject the regular nominee. But it was all of no avail. When the Councilmen met, only two of the Republican members had independence enough to vote with the Democrats for Colonel Ludlow's reëlection; the other ninety-three supported the candidate of the Republican Machine. They did it, as one of them frankly confessed, "because he is a Republican," and because they believed in this speaker's patronage platform: "I say, let us keep the cake for ourselves, and if the Democrats get on top, we will turn it over to them." As the *Press* has the frankness to admit, Colonel Ludlow, "the most efficient and competent officer the Department has ever had," is "thrown overboard because he *is* a good officer, and because his office is administered strictly on business principles."

These Brooklyn and Philadelphia incidents are full of instruction. We have had a great deal of dispute the past year as to whether Republican or Democratic politicians are the more friendly to civil-service reform. The truth is that both sets are its bitter enemies, and that there is nothing to choose between them. Each crowd is, like Ensign Stebbins, "for the law, but agin' its enforcement." The Brooklyn Democratic City Convention last fall gave an "unqualified endorsement" to the principles of the Civil-Service Law "as enacted by the Legislature of this State, and now applicable to the city of Brooklyn," and further pledged the party "to modify them in no other respect than practical experience may show to be necessary for the more efficient carrying on of the public business." Philadelphia Republican conventions have repeatedly declared in favor of reform methods and the application of business principles to public affairs. Yet the Democratic ring in Brooklyn coolly repudiates its pledges and tries to break down the law, while the Republican Machine in Philadelphia rejects a faithful official simply for having lived up to the Republican platform.

The friends of reform have good reason to rejoice over these performances. Nothing could do so much to advance the cause which they have at heart as the open hostility of the corrupt rings and the party machines. The difference between the system of business principles in public affairs and the spoils system is here made plain to the comprehension of every voter. There is no chance to confuse the issue, and when the issue is once made plain, the eventual triumph of reform is assured.

CAREER OF THE SALISBURY MINISTRY.

LONDON, February 4, 1886.

Now that the Tory Ministry of 1885 has expired, your readers may expect to have some observations on its short but interesting life. It has been the briefest Ministry of the last half century, having lasted just seven months. When, on Mr. Gladstone's resignation last June, after the unexpected defeat which he suffered on the Budget, office was offered to Lord Salisbury, there was much difference of opinion in Tory circles as to whether it would or would not be better to remain in opposition. The common view in both parties was, that whichever party was in opposition would have the better chance at the general election, because it would be able to assail its adversaries, instead of standing on the defensive. This view made the Liberals well pleased to quit office, and equally dissuaded the Tories from coming in. But in a party which has been out of power for some years there are always many men eager for the spoils, even such limited spoils as our system awards to the victors. There are peerages and other titles of honor; there is the patronage of the civil-service posts that may fall vacant; there are the great offices of state themselves. The desire for these tells potently on the chiefs through their relatives and friends, and in this instance Lord Randolph Churchill, who had been the most active combatant in the House of Commons, was anxious at all hazards to come in and taste power. His counsels prevailed, and a Tory Cabinet was formed in which he held a place of influence scarcely second to that of Lord Salisbury. The result seems to have justified his boldness. Although the Tories have been beaten at the general election, their defeat is nowise due to their having taken office. So far as one can judge, they stood to be beaten in any case, and they have probably gained somewhat more than they lost by being the party in power. Their tenure had been too short to permit them to make serious blunders, or to make the blunders of their Liberal predecessors forgotten. The courage which they showed in taking office while in a minority in the House of Commons, inspired their supporters with zeal and hope. Some of their chief figures, and notably Lord Randolph Churchill himself, gained importance by their official status, which turned them from mere skirmishers into responsible statesmen.

I believe, therefore, that this general election has condemned the view held in June that the Liberals would gain and the Tories lose by the change of Ministry which then took place. That the latter did not carry the country at the election was due to other and preëxisting causes which were too strong for them. Scotland remained steadily Liberal. The new voters in the English counties went Liberal, partly because they felt that their admission to the franchise was a gift of the Liberals, partly, in the agricultural districts, out of hostility to the farmers, who have long been Tories. The Irish vote in the English boroughs gave Lord Salisbury twenty-five seats, but even with this gain he was left in a minority of eighty-four as against the Liberals. Yet their defeat was no disgrace to the Tory party. They fought with great spirit and developed an unexpectedly strong organization. The Established Church, acting not merely through its pastors, but also through the district visitors and other feminine agencies, did splendid work among the humbler class of voters. Toryism rejoices to find that it may be, if properly handled, just as vigorous and popular among the poor as among the rich, and, therefore, while political philosophers shake their heads over an extended suffrage, Tory party managers perceive that they have a better chance than they ever expected of fighting the Radicals on their own ground.

Of the personal qualities of the outgoing Ministry there is not very much to be said. When it was formed, it was deemed weak in comparison to that of Mr. Gladstone. It contained fewer men of acknowledged capacity either for speaking or for administration. Nor has its career developed any reputations. The nobodies of whom it largely consisted remain nobodies still. Only two persons have improved their position. Lord Salisbury has, by the confession of his opponents, done well as Foreign Secretary. He threw overboard, in the most hearty and unapologetic way, the Eastern policy of which he had been the organ in Lord Beaconsfield's Government from 1878 to 1880, and promoted, when he might have been expected to disapprove and retard, the union of the two Bulgarias. The irritation which had existed between the German Chancery and our Foreign Office under the previous Government disappeared, and Bismarck seems to have almost gone out of his way to make things smooth for the rivals of those whom he considered unfriendly to himself. The violent tone which Lord Salisbury had used toward Russia was quickly dropped, and the question of the Afghan frontier settled upon the lines which Mr. Gladstone's Government had approved; so that here, also, Liberal critics found nothing to condemn.

On the whole, Lord Salisbury stands now before the country with a character for administrative judgment, as well as vigor, which he never enjoyed before. It is the same with Lord Randolph Churchill. Whether or no he has really proved a good executive official, the public cannot tell, because it knows very little of what goes on inside the walls of our departments. But, at any rate, he has done better than might have been predicted from the reckless violence of his speeches in opposition. He has made no conspicuous mistakes. In the only large enterprise he has had to direct, the expedition against Burmah, he has acted, or allowed the Indian Viceroy to act, with promptitude and decision, and gains credit for these qualities even from those who doubt the need for the war and condemn the annexation to which it has led. In his Parliamentary, as well as his platform harangues, he has occasionally relapsed into the abusive vein by which he rose to eminence; but these lapses have been fewer and fewer, while his serious speeches have shown plenty of force and courage. Those who have watched him closely do not think any better of his statesmanship or patriotism than they did before, but they admit that he has made himself more than ever the fighting leader of the mass of the Tory party, the man whom its bolder spirits are prepared to follow in any new departure. Sir Michael Hicks-Beach, who was nominally leader of the House of Commons, has behaved very much as was expected, neither raising nor lowering his reputation as a solid, dry, resolute man, with little pliability and no brilliance. He was not severely tested in the House of Commons, because during last July and August the Ministry carried on its business at sufferance, the Liberals wishing to keep them in; and during the election campaign he did not shine, for his platform manner is heavy and his ideas want freshness.

On the domestic policy of the Salisbury Ministry there is nothing to say, because they did not develop any. They began by dropping the Irish Coercion Act, not alleging, as they might have done, that it would have been all but impossible to procure its renewal at so late a period of the session as the end of June, but declaring that they conceived coercion to be justified only by extreme necessity, and that no extreme necessity existed. Such a declaration, followed as it was by strictures upon Lord Spencer's government of Ireland, severely tried the aristocratic section of their followers, who would like to put Ireland under martial law. But the murmurs of disapproval soon died away, and nothing else arose to cause division in the Tory ranks. When the election campaign began, it became necessary to set some sort of policy before the country. This might have been expected to open fissures in the compact structure of the party. But Lord Salisbury confined himself to adopting, with considerable modifications, some of the proposals Mr. Gladstone had already made, and he was relieved from the necessity of doing more by the highly aggressive tactics of the advanced Liberals. Their hostility to the Established Church enabled him to pose, quite honestly, as the advocate of the principle of establishments, and to assume, with less justification, the position of Defender of the Faith. The whole Tory party rallied to the cry; the battle became a defensive one. There was no more risk of internal dissensions; there was no longer much need of an attractive programme. Had the Ministry obtained a majority, they would have had to frame a positive policy and submit it in the form of bills to Parliament. They would in particular have been forced to prepare a comprehensive scheme for rural local government, and would have found it extremely difficult to make such a scheme popular without alienating the landed aristocracy. But the Irish difficulty was nearer and more menacing. Having won from twenty to thirty seats by Parnellite votes, they were under a prima-facie obligation to adopt a friendly tone to the Nationalists, to abstain from coercive measures, and go as far as they dared in the direction of home rule. Lord Carnarvon seems to have been sent to Ireland as Viceroy in the hope of carrying out such a policy. But when the result of the elections showed that even with the aid of the Parnellites they would have a majority of only four in the House of Commons; when they had reason to think that Mr. Gladstone was willing to go at least as far toward home rule as their most loyal supporters would follow them; when the reception given in the press and by society to the scheme ascribed to him had shown how little the English people, and especially the upper class, were inclined toward Nationalist ideas, they could not but stop short. For a time they seemed to have hesitated, and it is a plausible conjecture that the Cabinet was divided. When they drew up the Queen's speech they were still in doubt whether or no to propose a coercion bill, and their plan was to amend the procedure rules of the House of Commons before attempting anything else. After the debate on the address had begun, and they had felt the pressure of their own supporters, anxious to see strong measures taken in Ireland, they resolved to gain a few days by sending over Mr. W. H. Smith as Irish Secretary to advise them on the state of the country. Two days later, when it was plain that they could not hope to keep office, because the Parnellites were going to vote against them, and the Liberals were sure to turn them out on some early day—these two parties being in so great a majority that an accidental defeat must come if an intentional one did not—they nerved themselves to a more decided course, and gave notice, without waiting for Mr. Smith's report, or even referring to his mission, that they would bring in an Irish coercion bill and ask precedence for it; whereupon they were forthwith turned out.

Nothing in their life became them so little as their entering it and quitting it. They entered it by throwing overboard their former advocacy of repressive legislation for Ireland, and determining to govern without it—a resolution laudable in itself, but less laudable in them, and rendered suspicious by the aid they had so frequently obtained against Mr. Gladstone's Cabinet from Irish votes. They died, or at least they hastened their death, by an equally sudden change of front to

the policy of repression, when it was plain that the Irish vote would be thrown against them, and that the best thing to play for was a reputation for vigor in the eyes of the English. The weakness, however, of their counsels during the previous week has been little redeemed by this death-bed resolution; and the comparative quiet of Ireland, where outrages have been few, and convictions generally obtained at the assizes, has made the proposal of a coercion bill seem more like a party stroke than a dictate of firm policy. Yet whoever considers the whole difficulties of the Irish problem will not judge harshly the faults of any English Government. Mr. Gladstone's Ministry also erred, every ministry is sure to err, in dealing with such a tangle. There is so much to be said against every course and so little for any course, that one cannot be surprised that fourteen men should find it hard to hold to the same course even for a week. This is the first and chief moral of the short but eventful annals of the departed Administration. It came in by Irish help, it lived so long as it kept aloof from Irish questions, it fell so soon as it was forced to touch them. The same Serbonian bog will probably engulf other English ministries before at last some one drains it off or fills it up.

The other moral is that Conservatism in its old sense, in the sense of Sir Robert Peel's days, has almost vanished from England. There was little or nothing, except their defence of the Established Church at the general election, to distinguish the Salisbury Government from a Liberal Government. It never took its stand on Conservative principles. It never talked Conservative language. Three of the measures which it passed in the closing weeks of the last Parliament savored of State Socialism at least as much as any that passed under Mr. Gladstone's auspices. Even when it was resisting the amendment (to the address) about allotments for agricultural laborers last week, it left the economic and Conservative view to be stated by Mr. Goschen and Lord Hartington, and declared itself willing to go in for an allotment scheme. Electoral power has now so completely passed to the working classes that no ministry, on either side, ventures to oppose what the working classes are believed to desire, and few are the politicians who have the courage even to tell the working classes that they are wrong in any wish they express.

Since their fall, little has been said or thought about the outgoing Cabinet, nor will any of their doings, except the annexation of Burmah, be long remembered. All eyes are turned toward the rising sun; and since the question whether Mr. Gladstone would form a Cabinet has been settled, curiosity is at work on the direction its Irish policy will take. The Tory party has this consolation for its defeat, that it marches out in good order, loyal to its leaders, unpledged to any particular Irish or English measures, full of fighting spirit, and hopeful of improving its position at that general election which every one believes to be not far distant. Y.

PAUL BAUDRY.

PARIS, January 28, 1886.

THE funeral of Paul Baudry took place yesterday at the Church of Notre Dame des Champs, not far from the house which was long the home of the man who may well be called the first artist of our modern French school. It was some consolation for those who had known him to see the immense concourse of people which was attracted by this funeral. There were not only the usual deputations from the Institute, from the Beaux-Arts, the official representatives of art; there were all the young *rapins* who live in the studios of the Latin quarter; there were workingmen mingled with men and women of the best society; there were models, and even small Italian children in their picturesque rags. Baudry was beloved by all those who knew him, and he will be regretted as a man as well as an artist.

His origin was of the most humble sort. His father made wooden shoes at Bourbon-Vendée, where Paul was born November 7, 1828. He entered the School of the Beaux-Arts in 1845, as one of the pupils of that great establishment. The young Vendean obtained a prize as the result of his three years' study, and this prize gave him entrance to the French School of Painting at Rome. It was certainly curious, in an ethnological point of view, to see a young Breton, a Celt, find himself so immediately at home in Rome and in Italy. Baudry was made, as it were, for Italy, and he found himself, at the age of twenty, in his own element, among the great works of art of Raphael and Michael Angelo. No painter of our time can be said to have assimilated so well, without being a mere copyist, Italian art, its color, its methods, its noble simplicity, its idealism. Baudry was completely seduced by Rome, and not only seduced, transformed. His first master had been Drolling, a classic of the classic, but one of those classics who had never understood the Italian genius, its elegance and its liberty. Drolling belonged to the school of David, a school which had rehabilitated the study of the nude, but which had, so to speak, no soul and no life. Baudry found masters in Rome who taught him new lessons, and his genius was all ready to receive them. A sort of preëstablished harmony placed him in direct communication with the greatest masters.

While he was at Rome (the pupils of the School of the Villa Medici remain there five years, at the expense of the state), he sent a few pictures to Paris. The best of them, the "Torture of a Vestal," is now at the Museum of Lille; it is dated 1857. There is every year an official report on these remittances from Rome. Speaking of this work of Baudry's, the reporter expressed the fear lest the painter should abandon too much the traditions of art—a singular judgment, as nobody has been, in one sense, more faithful to tradition than Baudry; only he found it where it really was, not with David, but with the great masters of the old times.

Besides his "Vestal," Baudry had sent, for his first public exhibition, a picture which is now in the Museum of the Luxembourg, and which is a true revelation of his own peculiar genius. It was "Fortune and the Child." It is a charming picture; the sleeping infant, the goddess in her chaste nudity, the landscape, all remind the spectator forcibly of the Venetian masters, of Palma Vecchio, of Giorgione, of Titian himself. Baudry had assimilated the grace, the golden color, the easy and harmonious lines, the *je ne sais quoi* of the school of Venice. He had sent also some smaller pictures—"Saint John the Baptist in his childhood," a lovely picture; the portrait of the young son of Mme. S——; and a "Leda." To this first period belong also the "Magdalene," painted in 1858 (which is now in the Museum of Nantes), and the "Toilet of Venus" (which is in the Museum of Bordeaux). These indications show that Baudry's pictures were bought, as an encouragement, by the state, and presented to the provincial museums; the public was not yet acquainted with him, though he had risen as it were almost immediately to the highest regions of art.

The Milanese and the Venetian painters were the first masters of Baudry. While he inspired himself with their works, he did not forget that nature is the greatest master after all, and he made portraits. I have sometimes heard people lament over the necessity under which some painters were placed to produce portraits in order to make a living. I cannot sympathize with this sentiment. I am convinced that the greatest painters lose nothing and can gain much by portrait making. Nothing is really so rare as a good portrait, one which shows not only the physical man, but the intellectual, the moral man. Raphael made portraits; those of Van Dyck, of Rembrandt, of Rubens are among the highest works of art. The portraits of Baudry are also worthy of all attention. He exhibited in the Salon of 1857 his portrait of Beulé, who was a professor and a member of the French Academy, the author of a life of Augustus and of the Cæsars. It is impossible to forget this picture, full of realism and of life, which gave all the character of the personage. We can see in it the essential characteristics of the talent of Baudry. Why is it that he was in the end equally admired and beloved by the disciples of the old classic schools and by the most advanced realists and impressionists? It is because he always copied life, he painted what he saw; but he saw it not only with his optic nerve, he saw it also with his mind. He was able to choose in nature what suited him best, and what could take a place in some preconceived harmony of form and of color, but he did not create in his mind a factitious nature, he was at the same time a realist and an idealist.

Baudry painted portraits, among other persons, of M. Guizot (and this may be considered a masterpiece), of Guillaume, the sculptor, of Charles Garnier, the architect of the new Opéra, of Edmond About. Curiously enough, his portraits of men are more admired and are perhaps better than his portraits of women, though he was essentially the painter of feminine grace and beauty. There was perhaps something in the modern fashions which offended or crossed his taste. He made his portraits of men somewhat in the Flemish style, generally on dark grounds; he adopted, however, the Clouet style in the portraits of small dimensions, such as those of About, of Garnier, with their bluish or greenish background. The portrait of About is a marvel. It is not a miniature—it has more life, more independence; it is a concentrated form of art. Baudry, who was disdainful of money, often refused to make portraits; he always wished to have interesting models—interesting to him for some reason or other.

While he painted portraits, he never forgot the form of art for which he was peculiarly fitted. His "Pearl and Wave," which was exhibited in 1863 and was bought by Mr. Stewart, is a conception of exquisite charm. The Pearl is a woman who has been rolled by the waves, the color of which is opaline and pearly. The atmosphere is clear; the color has the blueness, the transparency which characterizes what may be called the decorative part of this artist's work.

We now arrive at the great work of Baudry—the decorative painting of the foyer of the Opéra. He had tried his hand, in the decorative style, in the small hôtel of Mme. de Païva, in the Champs Élysées, where he had treated some ceilings. He had also painted two panels, "Cybele" and "Amphitrite," for Mme. de Nadaillac's house. He had made some figures, symbolizing the towns of Italy, for the Duchess of Galliera. From the year 1865 Baudry disappears, as it were, for eight years; he devotes himself completely to the largest decorative work of our time. He first went to Rome again, and shut himself up in the Sistine Chapel; he made some copies of the Sibyls and of other figures, which, though they are copies, are masterpieces in their way. They are now in the Palace of the Beaux-Arts. It was not possible, of course, to recommence the Sistine Chapel, or the famous Hall of the Ten of the Ducal Palace of Venice in a modern opera-house. Baudry had to make a new and complete programme: it was a sort of apotheosis of the fine

arts, personified, deified, and placed in ideal and mythological regions. Baudry first made all his drawings with nude figures (these drawings are truly admirable and have all been preserved), in order to have as much truth and harmony as possible in the movements, the attitudes, the groups. He had to treat three immense ceilings, on which he glorified the arts, and to tell in twelve irregular surfaces the whole history of music, and of the art of dancing from Apollo to Salomé. He painted the muses on great panels, and finally on ten medallions placed before the gigantic doors. He made groups of children, representing the instrumental music of all nations.

The cartoons of this gigantic work ought to be preserved in the Louvre. As for the pictures, which excited an immense movement of enthusiasm when they were first shown to the public, they were slowly blackened by the gas till they became almost indistinct. Lately they have been washed with much care, and they have recovered now all their beauty. Electric light has been substituted for gas light, and it is to be hoped that the electric light will do them no harm. Still, many people think that copies ought to be left in place of the original pictures, and that these ought to be transferred to the Louvre, as they are certainly the greatest monument of modern French art.

This immense work of the Opéra occupied eight entire years of the life of Baudry. During all this time he worked merely for glory, and not for money. The journeys, the studies for the paintings of the Opéra, absorbed completely the sum which was given him by the state. Baudry now began to make portraits again, but he always returned with much pleasure to his favorite decorative subjects. Among his works of the latter period we must cite the "Wedding of Psyche," a charming ceiling which was painted for the house of Mr. Vanderbilt in New York, and was exhibited in 1882 at the Orangerie of the Tuileries.

Baudry showed much originality in the ceiling of the great hall of the Court of Cassation, the "Glorification of Law." It is one of the boldest decorative pictures I know, as bold as a Tiepolo, but with a much higher and nobler feeling. The coloration is extraordinary: the red gown of the judge shines wonderfully on the clear blues and greens of the allegorical figures. The composition is extremely fine: there is a child worthy of Raphael. We can pass the same eulogy on the ceiling painted for Chantilly, representing Mercury carrying Psyche to heaven. There is an exquisite idealism in this scene—in the blue sky, the light clouds, the purity of Psyche, the despair of Cupid. It may be called the *chant du cygne*: Alas! Baudry had promised to come to Chantilly to put his name on the ceiling with his own hand, and now his hand is cold. But if his name is not there, his genius is visible in every detail of this masterpiece. Those who visit Chantilly will do well to look, also, on the "Saint Hubert," by Baudry, an extraordinary picture, which has been the subject of much discussion; and the little cupids playing with the emblems of the gods, which were transported by the Duc d'Aumale to Chantilly from the Hôtel Fould.

Correspondence.

THE PRESIDENT'S TREATMENT OF MARYLAND.

To the Editor of The Nation:

Sir: In Maryland we find it impossible to comprehend civil-service reform as practised in this State by the Administration.

We understand and agree perfectly with the views expressed by the President in his message, but the practice is incomprehensible. He was elected on the distinct pledge, made by the Democratic party and reiterated by him, that "public office is a public trust," and yet, as far as Maryland is concerned, the Federal patronage has been used to maintain the most corrupt and offensive spoils system that exists in the Union. It is announced in our press that the President has notified the Democratic Senators and members of Congress from this State that they must agree upon the principal Federal appointments, and that he will surrender his Constitutional prerogative of appointment and let them appoint whomever they agree upon. Our senior Senator Gorman has taken open and public ground against the civil-service principles of the President; and his friend, Representative Compton, in a public speech two days ago, declared his hostility to the existing law and his willingness to vote for its repeal. These two gentlemen daily frequent the departments in search of offices for their friends, and get them too. During the recent exciting canvass in this State, Senator Gorman's avowed advocacy of the spoils system, and the distinct understanding that he commanded the Federal patronage to secure his reëlection, did in fact secure his reelection. And to-day the whole power of the Federal patronage is as thoroughly used in support of the spoils system as that of New York ever was under Tweed.

There has been for years a body of Democrats here who have kept up a constant protest against the corrupt methods of Machine politics by which the party has been and is controlled. In 1881, while the President was Mayor of Buffalo, and in 1883, when he was Governor of New York, Governor Hamilton, of this State, appealed to the Democratic party against the bosses, to reform the grievous and corrupt practices then prevailing. For instance, in a General Assembly of 111 members, there were 105 employees whose wages exceeded those of the members. Of the sinking fund established by the Constitution, taxes to raise which were regularly collected, over three millions had been squandered, and no substantial part set aside in a sinking fund. The registration lists of the city of Baltimore contained 30,000 spurious names of voters, who had died, removed, or were fictitious or illegal. Governor Hamilton's appeal was backed by a strong body of brave and honest sentiment, but accomplished nothing against the Machine. A new registration was provided, which its sponsors confess is fraudulent, and the ballot-box produces results at command of the bosses. There is no fair election here, and the voice of the people is actually stifled. In the Legislature now in session violent resolutions are introduced denouncing civil-service reform and instructing our representatives to vote for the repeal of the law. They are received with great applause.

With these facts notorious, the Administration appoints Higgins, Thomas, and "lots of the boys." The Civil-Service Association, Governor Hamilton, and a large number of the leading Democrats of the State have besought the assistance of the Administration in favor of good government. They have explained to the President and Cabinet the real question in Maryland, which is between corrupt Machine politics and decent methods, between bad and good government. They are utterly ignored, and every appointment up to this time has been made in the interest of the spoils system. Workers, henchmen, and heelers are alone considered, and the whole *morale* of a civil-service-reform Administration is exerted against civil-service reform.

No man in Maryland will deny this. The cause of good government is prostrate before the patronage power of the Federal Government. I have been a reform Democrat, with positive ideas against the spoils system, before the President entered public life. I supported him earnestly in the canvass of 1884. But I cannot understand how he and his Cabinet delegate the appointing power to members of Congress, support the people who are hostile to his ideas, and ignore those who maintain his declared principles.

O. L. D.

Baltimore, February 6, 1886.

THE OHIO IMBROGLIO.

To the Editor of The Nation:

Sir: In your current issue you have something to say about the Ohio legislative imbroglio. Permit me to say that you share the misunderstanding of the facts involved which is common among outside observers, and which is not to be wondered at, as Ohio political affairs are perplexingly complicated.

The Cincinnati election frauds last October were of two kinds—(1) frauds at the polls and in the count, and (2) forgeries in the official returns after they had been signed by the judges. Republicans claim that but for the frauds they would have carried the county (Hamilton) by at least 5,000, and at this date there is little denial by the Democrats that the entire Republican ticket was legally elected by a large majority. But the Republicans go further—they claim that even on the face of the returns (minus the proved and, indeed, admitted forgeries) nine Republican candidates for the House of Representatives and two of the Republican Senatorial candidates were shown to have been elected. The County Clerk, who is a "gang" Democrat, insisted on counting the known forged additions to the returns. In the case of one Democratic candidate for the Senate, the forgers forgot to change the figure 7 into a 9 (as was done for all the other Democratic candidates, by putting a cipher on top of the 7); but the County Clerk was equal to the occasion, and of his own motion added the extra 200 necessary to elect this particular candidate.

Before the returns were certified to the Secretary of State, the Republicans sought by mandamus and injunction to compel the County Clerk to count only the legal returns—that is, to prevent his counting the known and confessed forgeries in the returns, made after they had been signed by the election judges. The Circuit Court decided in favor of the Republicans. A divided decision was given by the Supreme Court, the majority holding, however, that the courts could not interfere with the County Clerk—that he could count what he pleased; but the Court unanimously recognized that there had been forged additions to the returns. Thereupon the County Clerk issued his certificates to all the Democratic candidates, and the Secretary of State (a Republican) admitted those gentlemen on the *prima-facie* evidence of their certificates.

As in other States, each branch of the Legislature is the judge of "the election, *return*, and qualification of its members." In the House the question was raised that the Democratic delegation from Hamilton County were not entitled to their seats *on the face of the returns*. An investigation was held, and the Committee on Privileges and Elections reported that, on the face of the returns, nine of the Democrats holding certificates were defeated. Hence the ousting of nine Democrats and the seating of as many Republicans. On the face of the returns the tenth Republican candidate to the House was certainly defeated, but he is now contesting on the ground of fraud at the election.

Now as to the Senate. With the aid of the four holding seats by virtue of certificates from the Clerk of Hamilton County, the Democrats had just a majority. The first business they did, after electing Democratic clerks and sergeants-at-

arms, was to alter the rules from those in use by the last Senate (which was Democratic), so as to practically make the clerk the presiding officer of the Senate, and also to give contestees a right to vote on their own cases, the application of course being to the seats of the four Democrats from Hamilton County, against which contests had been filed. It was the adoption of these extraordinary rules which led to the deadlock. The Constitution of Ohio, in explicit terms, defines the duties of the Lieutenant-Governor. It states that he shall preside over the Senate, order roll-calls, and announce results of votes, etc. The clerk attempted to perform these duties, but the Lieutenant-Governor insisted on his constitutional rights. This was followed by the refusal of the Lieutenant-Governor to permit the four Democrats from Hamilton County to vote upon their own cases in contest, and his authority for so refusing was a statute of long standing, which no one branch of the Legislature could repeal by a mere rule. In addition, the Lieutenant-Governor is sustained by unbroken parliamentary precedent. Finally, a compromise was arrived at by which a committee, composed equally of Democrats and Republicans, will hold an investigation in Cincinnati. Each branch of the Legislature will, therefore, have its own investigation.—Very respectfully,

JAMES BOYLE.

CINCINNATI, O., February 7, 1886.

TENNESSEE "DOUBTFUL."

TO THE EDITOR OF THE NATION:

SIR: There is a phase in Tennessee politics to which I wish to call the attention of Republicans. I think it will gratify them. This phase is the fact that Tennessee is one of the "doubtful States." The Republican candidate will probably receive the electoral vote of this State in 1888. Democrats here recognize their danger. Their expedient for "saving the party" is characteristic. It is to have Mr. J. M. Keating, editor of the *Appeal*, of this city, appointed Public Printer of the United States. Mr. Keating was an applicant for the position of Postmaster at this point. It was regarded as a foregone conclusion that Senator Harris (who by the courtesy of the Senate had the appointing power, this being his home) would recommend Mr. Keating, who for twenty years has been trying to make a great man of Mr. Harris, and who undoubtedly caused his election to the United States Senate. But Mr. Harris appointed another man, a merchant thoroughly competent, but not at all "identified with the party." This has raised a hubbub among the "workers," who are reported as saying that Mr. Harris may get the merchants of Tennessee to work for the party hereafter. Keating is a "whole-souled, magnetic kind of fellow," who takes a pride in "sticking to his friends" through good and evil report, and who remained in Memphis during the yellow fever of 1877 and 1878. He is exceedingly popular with certain elements of "the party," and they are indignant over his defeat.

Here comes in the Republican opportunity. Tilden's majority over Hayes was about 43,000, Hancock's majority over Garfield was about 23,000, and Cleveland's over Blaine about 9,000. The Democratic candidate for Governor was elected by a still smaller majority. A change of 4,500 votes would give Tennessee to the Republicans. It must also be borne in mind that the total number of Democratic votes cast has been about 135,000, with but little variation since 1876, while the Republicans have grown from 87,000 to 125,000 or thereabouts. This speaks volumes. Now if Keating is not appointed Public Printer, the *Appeal*, which is "the organ of the party," will be very self-contained and have little to say. This State can only be made Democratic by the severest use of the party lash. If the *Appeal* is silent, the organization of the Democratic party, of which people are tired down here, grows weak at once, and I am certain it will effect a change of more than 4,500 votes.

As to whether Keating will be appointed, I do not know. But I have been reliably informed by one high in the Republican ranks that he will not be. At any rate, if he is appointed, Tennessee is still doubtful. VORTEX.

MEMPHIS, February 7, 1886.

COÖPERATIVE CATALOGUING.

TO THE EDITOR OF THE NATION:

SIR: The time has come for a change in the manner of cataloguing public libraries; and as I wish to reach the ear of those who direct our public libraries rather than of those who administer them, and of the general public itself, with some suggestions on this subject, I venture to offer what I have to say to the *Nation* rather than to the *Library Journal*, where it would reach few outside of the libraries themselves.

Of the money now expended on the support of libraries a considerable share goes to pay the expense of catalogues, either printed or written. This is as it should be, for no one can doubt that it were better to buy much fewer books and have them well catalogued, than to accumulate no matter how large an incoherent mass with no catalogues or with insufficient ones. But of this cataloguing expense it is not going too far to say that a very large share is wasted in the reduplication of that which ought to be done once for all. Nearly all our considerable libraries are making or keeping up elaborate catalogues which are, to a large extent, repetitions of one another. And as the libraries grow, and the public demands on them become more and more intelligent as well as numerous and pressing, catalogues necessarily become more elaborate and complex, especially in the direction of the bibliography of subjects. It is to the great credit of our American librarians as a body, as well as to the men, like Jewett and Noyes, who have so nobly responded to this need with labors far beyond the due call of their position, that we have such admirable catalogues of so many libraries. But our library system is but passing out of its infancy. The demands of the past are but a shadow of what is to come, and already this system of elaborate cataloguing, repeating itself in scores, even in hundreds, of libraries, is breaking down of its own weight. The only question now is, How can it be replaced with something more elastic, less expensive, and capable of meeting the needs of the twentieth century, when our libraries will be numbered by thousands and the volumes in scores of them by millions?

Coöperation furnishes the clue. For the ten years of its existence the American Library Association has had this as its watchword, and can point with pride to the work already done by its means. The new edition of Poole's 'Index to Periodicals' owes its existence to the labors of fifty librarians, each doing a share, where, under the old plan of cataloguing, each must have done the whole in manuscript, as many were doing before the coöperative scheme was arranged. The quarterly index to periodicals now being issued with the *Library Journal* is another step in the same direction. But these are only first steps, and merely hint at what must follow. The time must soon come when the libraries will no longer undertake to provide subject-catalogues of their own. The author catalogues will necessarily be kept up, as each library must have a *list* of its books. But in place of the subject-catalogues we shall have printed bibliographies of subjects, issued for the most part periodically, and serving equally for one library or another. A shelf (or, in the larger libraries, a series of shelves) of these bibliographies, properly arranged, with a handy index to the volumes, will show the reader what titles to look for on a certain subject, and the library's author-catalogue will give a clue to their shelf location if they are to be found in the particular library. In many cases such bibliographies will give an indication as to which of the leading public libraries contain the rarer publications. (This is admirably done in Dr. Bolton's list of scientific periodicals lately issued by the Smithsonian Institution.)

Now the point of what I have to say is, that such a scheme of bibliographies and subject-indexes is unquestionably feasible, while it furnishes the only possible solution of the problem. For its carrying out, all that is needed is that the directors of our public and college libraries should become alive to its immense economy as compared with the present wasteful system, and should be ready to vote money as subscriptions for this kind of work, in sums which will appear very large at first blush, but which will be much less than those now expended on manuscript work or on local printed catalogues, which can thus be superseded, and not only superseded but vastly improved upon. The time has fully come for an agitation of this matter. If the intelligent men who direct our libraries and care for the funds which support them can be led to look into it, it cannot be but that they will be quick to join in some scheme by which the results I have tried to outline can be accomplished. A somewhat captious criticism of present methods is already in vogue, and is certain to be destructive of much possible good work if not met by a readiness on the part of library managers to reform what it is certainly not extravagant language to call an abuse.

May I add yet a line to say that as Chairman of the Coöperation Committee of the American Library Association, I shall be pleased to receive from any quarter suggestions which may assist us in forwarding the proposed reform?—Very truly yours, WILLIAM I. FLETCHER.

AMHERST COLLEGE LIBRARY, February 13, 1886.

TWO DECADES OF YALE AND HARVARD —A RETROSPECT.

TO THE EDITOR OF THE NATION:

SIR: The year 1886 will witness the choice of a new President for Yale College. Fifteen years ago a change was made in the nominal head of the University, but in the actual policy of its management there has been no corresponding variation. Drs. Woolsey, Bacon, and Porter had at that time the credit of dictating the details of college administration, and their power has been broken by nothing save time and death. The resignation of President Porter makes the fit occasion for an account of their stewardship before it is decided whether the policy which they consistently carried out is to be pursued in future, or pushed aside by the counsels and energy of new blood and fresh ideas.

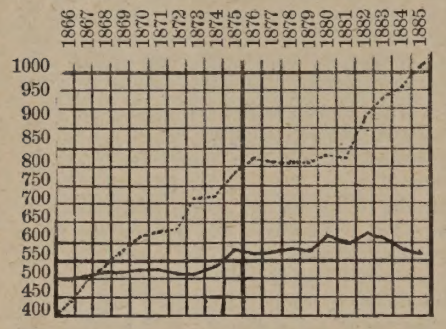
Results are the ultimate criterion by which all policies are judged. In this judgment no sentiment should be cherished save the just ideal of all Yale men, that their college is entitled to the position of the foremost. It is this plain question that many Yale men are asking to day: How has that position been filled by the College during the administration of President Porter? This period corresponds exactly enough with the span of the present government of Harvard University. It may be of interest to compare the history of fifteen years of Harvard with a decade and a half of Yale. Everybody knows that Harvard's policy has been nothing if not progressive;

Yale's, nothing if not conservative. What are the results?

Let us compare the catalogues of both universities for 1873 with those of the present day. At that time the policy of both new administrations was beginning to influence the whole body of college students, among whom the Seniors became Freshmen almost with the inauguration of their new rulers. The whole number of students in the colleges—excluding the strictly professional schools—was and is as follows:

	1873.	1885.	Increase.
Yale	818	856	4.6 per cent.
Harvard	803	1,162	44.7 per cent.

It therefore appears that the rate of increase at Harvard during the past twelve years has been no less than ten times the rate at Yale. This significant fact will lead us to examine the figures more in detail. The diagram below shows the fluctuations in the whole number of undergraduate academical students for the twenty years, 1866 to 1885:

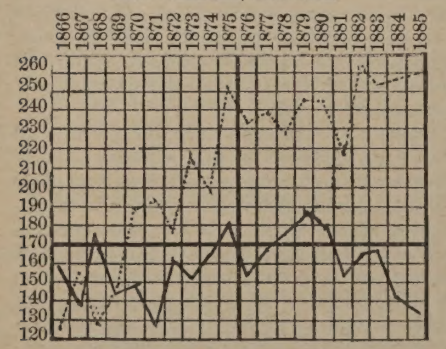


.....Number of students at Harvard (Acad. Dept.).
——— " " " Yale (Acad. Dept.).

The nearly horizontal line in the lower part of this diagram shows that the increase at Yale is from 500 to 563, or 12½ per cent., while the dotted line of Harvard's progress indicates an increase from 419 to 1,068, or 155 per cent. In other words, the mere *gain* at Harvard amounts to a greater number of students than Yale has ever had in its Academical Department! If for ten years longer these ratios of increase should remain unchanged, in 1895 Harvard College would be teaching over 1,700 students, while only about one-third of that number would seek the system of our fathers at Yale. Computed at the current rates charged for instruction at the respective colleges, Harvard will derive a revenue of $256,350 from these 1,708 students, while Yale will get but $83,580 from her 597, or an annual loss to her exchequer of nearly $175,000.

The curiosity which leads the Yale man to study the statistics of the Freshman classes of the last twenty years is equally sad in its results, foreboding fewer students in future rather than more:

FLUCTUATIONS IN THE NUMBERS OF THE FRESHMAN CLASSES, 1865-1886.



..... Size of Freshman class, Harvard.
——— " " " " Yale.

As before, the dotted lines represent Harvard's progress, while the heavy line measures Yale's standstill or decline. The latter's Freshman Class of this year is only 134, or 22 *less* than entered in 1865; while 258 entered this year at Cambridge, or 133 *more* than twenty years ago. It is impossible to mistake the import of these figures: more students are evidently being attracted to the Massachusetts university than to the Connecticut college.

Harvard, again, is not without honor in its own country. In twelve years the undergraduate attendance from Massachusetts has increased 27 per cent., or from 475 to 606. Yale, too, shows a small increase—less than 9 per cent.—in the Connecticut contingent. It used to be the old cry that Harvard was a local institution, while Yale was cosmopolitan. In 1873 no less than 62½ per cent. of the students that flocked to Yale, came from the West, the South, and the Middle States. To-day the proportion is about the same. But Harvard has in the same period increased its proportion of foreigners to New Englanders from 28 to 40 per cent. of the whole number. Of this class there were 215 in 1873, 422 in 1885—an increase of 96 per cent. At Yale the numbers have also increased, from 471 to 504, which is only 7 per cent. So we see that Harvard is getting every year a larger percentage of the best class of students—those who come from long distances in search of culture; and this in spite of Yale's immense influence *in partibus alienorum*, due to the fact that she has educated the great bulk of Eastern-bred men in the West and in the Middle States. Wherever one travels in the West he finds ten Yale men to one Harvard man. In New York the proportion must be two to one, and only a few years since it was much greater. Yet the metropolis, which in 1873 sent 52 men to all the classes in Yale College, and only 45 to Harvard, sends 79 in 1885 to the latter, and but 45 to the former. The Yale men are sending their boys to Harvard!

The resident graduates of a college are an index to the enthusiasm which its work inspires. In 1873 there were 60 of these at Yale; now there are but 42. Harvard in 1873 had 55 post-graduates; in 1885 the number had increased to 72. During this period the pecuniary allurements of post-graduate study had increased at New Haven over 300 per cent.; at Cambridge they had less than doubled.

Great parade has been made of the increase in the teaching staff of Yale College. In 1873 there were 80, now there are 114 instructors—an increase of 42½ per cent. At Harvard they have increased from 100 to 184, which nearly doubles Yale's percentage. Yale claims to have erected in fifteen years buildings costing $700,000. Harvard, between 1869 and 1881, used $2,307,305 for the same purpose. It is customary for Yale apologists to put forward many excuses for the college, which allege lack, not only of funds, but of any spirit among alumni that comes forward to ease the pecuniary path of their alma mater. But the graduates have never been asked to give; they are more often treated as interlopers in college affairs than persons whose support or backing is desirable. Yale men who will take the trouble to read Mr. Henry C. Kingsley's contribution to the November number of the *New Englander and Yale Review*, can easily learn the disposition of the "powers that be" toward the body of the alumni.

Such is the shameful history of Yale's decline and Harvard's progress. Was it only to be thus distanced in the short span of fifteen years that Yale, in generous emulation, kept pace for over a century and a half with its richer and older rival?

Yale College needs many things, but first and foremost it needs a new sort of President. He must be a man of commanding executive ability, proficient in pedagogy, a sound economist, unhampered by the details of professorial drudgery. Such ability commands high remuneration in the world of enterprise, and not less than ten thousand dollars should be the salary of this office. And I venture to predict that for such a man, with such a policy as such a description implies, the alumni of New York and vicinity could easily be persuaded to guarantee such a sum for a term of years. Are there not at least two hundred Yale men in New York whose pleasure it would be to spare fifty dollars apiece every year for the rehabilitation of their university?

EDWARD D. PAGE.

February 1, 1886.

MR. WILLIAM RENDLE ON JOHN HARVARD.

TO THE EDITOR OF THE NATION:

SIR: Your English contemporary, the *Athenæum*, in its issue for January 16, contains an article by my countryman, Mr. Rendle, in reference to his investigations concerning John Harvard. In it are these words:

"Dr. George E. Ellis, Massachusetts Historical Society, Boston. . . . I have suggested a recognition of the discoveries about Harvard recently made."

I assume this to mean the "discoveries" made by Mr. Rendle (who cannot be aware, I think, that his correspondent holds the distinguished office of President of the Society which he names), and also that the recognition which Dr. Ellis has suggested is of Mr. Rendle's own labors. This assumption is the more probable because the only other gentleman who is at all likely to be thought of in this sense has received a mark of recognition from Harvard University, to say nothing of recognition of another character. It will be perceived at once that I here speak of Mr. Waters, and as he is an American, I desire to say that I approach this matter without being conscious of any undue leaning to the side of my own countryman. The suggestion of the worthy President of the oldest literary society of New England touches a point of great interest, which it is due to him, to the gentleman immediately concerned, and to the literary world, should be treated in a judicial spirit. This is the spirit in which I proceed to lay before you, as briefly as may be, what Mr. Rendle had made public previous to July 8, 1885, first observing that both he and Mr. Waters are entire strangers to me.

Mr. Rendle's earliest paper appeared in the *Genealogist* for April, 1884, and his second in the same magazine for July of the same year. Of their contents it is sufficient to say that the first did not prevent the authorities of Emmanuel College perpetuating an error on one point concerning John Harvard, and using the language of vague uncertainty on another; nor did it enable a distinguished professor of Harvard to do more than lament, on a great occasion, that we were ignorant of the parentage, the birthplace, and the date of birth of the founder of his University. Dr. G. E. Ellis himself, with both papers combined, could only repeat, in words of identical meaning, the regret of his friend, Prof. Norton.

The only other article written by Mr. Rendle within the time I have mentioned was a letter which assumed a two-fold form: first, which I designate as A, with the date April 7, 1885, it appeared in the *South London Press* of April 11, 1885; and secondly, which I describe as B, under date April 11, 1885, it was published in the *Athenæum* of April 18, 1885.

In A we read:

"I think I have got the clue."

In B, written only four days later, and not containing one fresh fact:

"The clue, or rather the result of the clue, is before me."

In A, printed in italics, and also in B, with a verbal alteration:

"*John, son of Robert, and, I suppose, brother of this Thomas, baptized November* 29, 1607, *I believe to be the founder.*"

This is all, and the question now arises, What does it amount to? The articles in the *Genealogist* are "merely as a gathering of material, with suggestions," and as for the letter, "here, and in my notes open to inspection, are clues enough, I should hope, to help us to settle this question once for all—that is, if this does not settle it." These are Mr. Rendle's own words, and I presume not to alter one of them. They show—and they are his last words—that he felt the question was still open, and as to his belief, why, ever since July, 1882, those who had any belief at all on the subject believed that the founder was the son of Robert and had a brother Thomas. What was wanted was proof, and this is just what Mr. Rendle does not give. In his communication published January 16, to which I have already referred, is a sentence of which I give the beginning and the end:

"My proof . . . is . . . and this belief of mine is . . ."

So that, strange as it may seem, he does not, or will not, perceive the vast difference between his own individual belief, which others may share or not, and actual proof which enforces belief by all reasonable creatures.

It will be seen that in dealing with the recognition of what Mr. Rendle has done, I confine myself to what he had made public previous to July 8, 1885. On that day (see his letter in the *Athenæum* of July 11, 1885) he received a copy of Mr. Waters's paper, in which the parentage and birth of John Harvard, as well as various other facts respecting him, are not only stated, but are proved by evidence which is not less conclusive than it is abundant, and in both these respects it leaves nothing to be desired. What Mr. Rendle had done up to the publication of Mr. Waters's paper is accurately characterized in his own words, which have been quoted, and how far anything of the kind is worthy of a special mark of recognition, is a point which I will not discuss. What he has done since is beside the question, unless, indeed, those to whom Dr. Ellis made his suggestion are prepared to treat the very delicate ground of offering recognition to a man for that which he kept in his desk until after the leading facts had been published to the world by another. Now that there is a solid foundation upon which to build, I feel sure there are not wanting those who will gladly contribute materials until an edifice shall be raised not unworthy of the name and fame of John Harvard. If the result of the voyage of Columbus had merely been to enable him to express his belief that he had sailed to within ten leagues of the New World, he would never have received the honors due to the man who discovered the continent of America.

ANGLUS.

THE MASSACHUSETTS METROPOLITAN POLICE SYSTEM.

TO THE EDITOR OF THE NATION:

SIR: In your last issue you incidentally give a gentle thrust at those "respectable" citizens of Boston who were instrumental in securing the enactment of a law providing for the establishment of a Metropolitan Board of Police for the city of Boston. Without attempting to assume a general defence of the system, which in its practical working has thus far certainly had a tendency to improve the public morals of this community, will you allow me to suggest that the adoption of the measure was by no means so wide a departure from the theory of "home rule" as is commonly supposed? With one exception, the control of what is now known as the Police Department has never been wholly in the hands of the local authorities in Massachusetts, until about the middle of the present century. In an article published in the Boston *Daily Herald* for December 26, 1885, the writer had occasion to collect the authorities on this point. It is there shown that Boston did not secure the appointment of its own "watch" by its Selectmen as town officers until 1766, while the other towns did not obtain this privilege until 1836. Prior to these changes in the law, justices of the peace, formerly officers of some dignity and importance, shared with the Selectmen in the duty of regulating the police force.

From the nature of the functions which they are called upon to perform, the powers of police commissioners must always be largely judicial. While the Mayor and Aldermen are concerned with the welfare and prosperity of a municipality in its corporate or business capacity, and in matters which affect its own citizens, the Board of Police, especially in a large city like Boston, forming a great part of the population of the State, must to a certain extent consult the interests of non-residents. Hence it was very proper that the power of appointing Commissioners, being in keeping with certain provisions of the law which have prevailed in this commonwealth through every change in its form of government down to the present day, should be placed in the hands of the Governor. While I regret exceedingly the tendency toward centralization in the management of local affairs which is developing so rapidly in this country, it does not seem to me that any great impetus has been given to that movement by the present method of appointing the Police Commissioners for the city of Boston.

A. B. E.

BOSTON, February 12, 1886.

MEANING OF THE WORD "BANTER."

TO THE EDITOR OF THE NATION:

SIR: In the review of the Philological Society's new dictionary, which appeared in your last issue, the writer makes the statement that the use of the word "banter" in the sense of "challenge" would be as strange to the great majority of people in this country as to Englishmen.

For aught I know this may be true, as I cannot tell how strange such use would appear to Englishmen; but I do not believe such use of the word entirely unknown in very many portions of the United States. Is it not too much for any individual to say of at least the colloquial use of any word that it is unknown to the majority of the people of this country? In southern Ohio, "banter" and "dare" are almost universally used synonymously, while the word "challenge" would be almost unknown among the common people there. I feel confident that this use of the word banter is quite common throughout all the Southwestern States, including probably portions of New York and Pennsylvania, while the other use is probably universal in New England and in the States peopled mainly from New England.—Yours very respectfully,

DAVID UTTER.

CHICAGO, ILL., February 10, 1886.

INTERNATIONAL PARCELS POST.

TO THE EDITOR OF THE NATION:

SIR: As another contribution to the "International Parcels Post" question, I would state that I have just received from my correspondents in Frankfort a book the cost of which at second-hand was twenty-four marks (six dollars about). One mark (twenty-five cents) was the express charge from Frankfort to Hamburg. To this was added $3.90, made up as follows: Freight and charges from Hamburg to destination, $2.65; New York Custom-house expenses, forwarding, and commission, $1.25=$3.90; so that the cost of getting the book here was more than two-thirds of the price of the book.

It should be added that there was no duty to pay, as the book was printed more than twenty years ago. Had duty been charged, it could have amounted, under our present admirable system of taxing brains, to $1.50, and the cost of getting the notary's certificate and seal for the privilege of signing a certain oath would have been, in this State, $1.50 more—so that the total expenses would have much exceeded the cost of the book itself.

How long must last this paternal treatment of its poor teachers by "the best government the world ever saw"?—Respectfully,

JAMES M. GARNETT.

UNIVERSITY OF VIRGINIA, VA., February 13, 1886.

A COPYRIGHT SUGGESTION.

TO THE EDITOR OF THE NATION:

SIR: It seems some compromise must be accepted if we are to have international copyright. I beg leave to offer a suggestion. Let domestic manufacture be insisted upon as a condition precedent to the payment of percentages to foreign authors; let a limit of compensation be agreed upon below which such percentages must not fall; then permit foreign editions to come in under, if the protectionists please, a rack-duty, so to speak. I venture to think such a plan were a solution of the difficulty. Marketable articles would be copyrighted here; the booksellers would compete for that; a tax on foreign books would avoid what I believe is Mr. H. C. Lea's great fear, the treasonable preference which he foresees American writers are like to bestow on English (who knows but Chinese or Hungarian?) type-setters and binders; and our pirates might be made welcome to unsalable matter of all kinds. Nor, in case of a new author succeeding with a first book, would it be difficult to argue that copyright should have an *ex-post-facto* effect. As things stand, it is a pity that all the imagination should be found with the authors, and all the ratiocination (to say nothing of the money) with the booksellers.

In regard to authors' profits, the question would be perhaps involved, owing to the firmness with which publishers would probably insist on having their honor accepted as accountant-general. I think it must strike every one familiar with the legal theory of partnership, that the simple and fair method of distributing profits between the man with the idea and the man with the printing-press is to apply a sliding scale. That one should receive $50 and the other $500 on the sale of any given book, is not unjust; but the difference between $500 and $5,000, unless the profits accrue very slowly, is another matter.

I am, sir, etc., T. W.

PHILADELPHIA, February 14, 1886.

Notes.

MRS. FRANCES BROOKS, the translator of 'Heidi,' will shortly issue, through Cupples, Upham & Co., Boston, a brochure entitled 'A Year's Sonnets.' The edition will consist of but 200 copies. The same publishers will bring out immediately a new edition, freshly annotated, of 'Light on the Path,' a work having the official endorsement of the Theosophical Society.

A new edition, largely rewritten, of Mr. George P. Upton's 'Woman in Music,' is in the press of Jansen, McClurg & Co., Chicago.

M. Paul Bert's excellent 'First Year of Scientific Knowledge,' which we noticed a fortnight ago, is to be adapted for American use by G. A. Went-

worth and G. A. Hill, and published by Ginn & Co., together with the 'Second Year in Science,' and 'Third Year in Science,' of the same author.

A 'Teacher's Manual,' to accompany Sheldon's 'Studies in General History,' is promised in April by D. C. Heath & Co.

Henry Holt & Co. will soon add to their "Leisure Hour" and "Leisure Moment" series a new novel by Mrs. L. B. Walford, entitled 'The History of a Week.' It will have six full-page illustrations.

D. Appleton & Co.'s February announcements include 'The Aliens,' by H. F. Keenan, author of 'Trajan'; 'We Two,' by the author of 'Donovan'; 'Class Interests'; and 'Mammalia in their Relation to Primeval Times,' by Oscar Schmidt. They have in preparation 'Creation or Evolution,' by George Ticknor Curtis; 'The Development of the English Constitution,' by Ambrose Tighe; and a 'History of Education,' by Professor F. V. N. Painter.

Ticknor & Co. publish immediately Mr. Howells's 'Indian Summer,' and 'Every-Day Religion,' discourses by the Rev. James Freeman Clarke.

Macmillan & Co. will publish for the American market a cheap paper edition of Mr. Frederic Harrison's new volume, 'The Choice of Books, and Other Literary Pieces,' which consists of essays and lectures written at various times during the last twenty years, and dealing solely with books, art, and history. We may name those on Mr. Froude's Life of Carlyle, on the Life of George Eliot, on Bernard of Clairvaux, on historic London, and on the French Revolution.

Very vivid, and sadder far than the cold print, is 'General Gordon's Last Journal'—No. 6, printed in facsimile of his manuscript (London: Kegan Paul; New York: Scribner & Welford). The folio form was determined by the size of the telegraphic blanks on the backs of which Gordon kept his melancholy record from November 5 to December 14, 1884. Once we have the blank form reproduced, and more than once it is shown pasted over with extracts from the Egyptian correspondence of the London papers, with Gordon's sarcastic underscoring and comments. Here and there we meet with a humorous entry, as where Gordon is amused that one of his servants who already has one wife (which most men find enough), wants leave to go and take another; or where he recalls the Crimean officer who, remembering that he was a family man, was not ashamed to duck when shot was flying overhead. The postscript is bitter: "You send me no information, though you have lots of money! C. G. G." This handsome volume will ever be an extraordinary memorial of human daring and human folly.

We are glad to perceive that another edition of the 'Memoir of Ole Bull' (Houghton, Mifflin & Co.) has been called for. We observe no changes in the text.

'Childe Harold's Pilgrimage' and Franklin's Autobiography form Nos. 2 and 3 of Cassell's pocket "National Library" under Prof. H. Morley's editorship.

The size and costliness of the State Capitol at Hartford, Conn., as well as Mr. R. M. Upjohn's standing in his profession, made it proper to include this great pile in the 'Monographs of American Architecture,' No. 2 (Boston: Ticknor & Co.). Twenty-one heliotype plates show in varying scales and detail all that is needful for a judgment in the premises. We wish we could think the design beautiful, either in the air or as here on paper. In one sense it may be called incomplete, as provision has been made for a large number of portrait statues and medallion heads. Noah Webster has been provided for among the latter. The excellent bronze statue of Governor Buckingham is well taken in Plate 21.

'Whitaker's Almanack' for 1886 promises a great overhauling of its scheme next year, relegating the geographical data to the appendix, restoring old features, and considerably enlarging the size of this indispensable work. Most significant in the present issue are the election returns for the reformed Parliament by counties—an historic body, as the editor truly remarks.

Westermann & Co. send us the concluding numbers of Professor Droysen's 'Historical Handatlas,' of which we have heretofore spoken. Noteworthy in Part 8 is the sheet showing the successive fortunes of Switzerland, and the map of Russia's aggrandizement in Central Asia, shown year by year in colors. In Part 9 we remark Germany in 1812, with maps of the battlefields of Leipzig and Waterloo; the territorial development of Prussia; in Part 10, Napoleon's State erections—a Joseph's coat for colored patchwork; a companion map, Europe at the height of Napoleon's dominion; and a map of Paris in 1784.

Supplementary to the information already given regarding the Lick Observatory in *Harper's Magazine* by Professor Newcomb, and in *Science* by Professor Todd, the *Overland Monthly* contains this very interesting statement with regard to the eccentric millionaire, James Lick, from the pen of Professor Holden: "There is no doubt that a desire to be remembered by his fellow-men influenced him largely. He wished to do something which should be important in itself, and which should be done in a way to strike the imagination. He was only restrained from building a marble pyramid, larger than that of Cheops, on the shores of San Francisco Bay, by the fear that in some future war the pyramid might perish in a possible bombardment of the place. The observatory took the place of the pyramid. . . . He has been most fortunate in having his desires studied, and given an ultimate form, by successive sets of trustees who had no ends in view but to make this strangely acquired gift most useful to the city, the State, and the country. He will be buried in the base of the pier of the great equatorial on Mount Hamilton, and will have such a tomb as no Old World Emperor could have commanded or imagined."

The *Harvard Advocate* has fulfilled the term of twenty years, and celebrates this event in its last number by drawing on its past editors for contributions. It has well maintained its literary quality in this long interval, and remains also, in our opinion, typographically the most attractive of college journals. A second volume of 'Verses from the *Advocate*' is announced to be published at the cost of Mr. W. G. Peckham, of this city, a former editor.

We are pleased to meet with the *Academy*, a journal of secondary education, issued monthly under the auspices of the Associated Academic Principals of the State of New York (Syracuse: George A. Bacon). Its modest and taking preface sets forth its aim to be of practical service to those engaged in teaching children in their 'teens. It will have found a reason for existing if it merely carries out its intention to make a specialty of reviewing books designed for secondary schools. This is wretchedly attended to, in general, in all the educational periodicals with which we are acquainted, yet it is a most necessary task.

The first number of the *Citizen* (Boston: D. C. Heath & Co.) has for its motto, "Good government through good citizenship." It is a well-printed quarto filled with a certain number of leading articles, signed; paragraphs on current topics, under the heading "The Outlook"; an "Editor's Table," in which the paragraphs are still germane to the leading idea of this publication; a "Council Table," and a "Forum." Mr. Woodrow Wilson discourses on the "Courtesy of the Senate"; Prof. H. C. Adams on "Public Debts." Col. H. B. Carrington gives a brief history of the Indian Question. Mr. E. E. White explains the meaning and scope of the term "civics," and very sensibly warns the new American Institute of Civics of the danger of vagueness in planning its work. Altogether, the paper may be said to have made a good start.

A fortnight ago a correspondent called the attention of our readers to the Paris École Libre des Sciences Politiques—a training school for the higher walks of the civil service. On the 15th of January appeared the first number of a quarterly *Annales*, conducted by the professors and graduates of the École Libre (Paris: Germer Baillière). It may already be pronounced a periodical which cannot be overlooked by students either of political history or of current politics. M. Léon Say takes the lead in the number before us with an article on the French Treasury's appearances on the Street (*interventions à la Bourse*) during the past hundred years. M. Glasson follows with a discussion of the abuses liable to result from the conflicting statutes in regard to marriage. M. Albert Sorel treats of disestablishment and disendowment in England; M. Louis Ayral, of the political plans of Mirabeau; M. Raymond Kœchlin, of the French policy at the Congress of Rastadt; M. Léon Poinsard, of the real-estate schedules of the income tax in England. At the head of the book notices stands Professor Dicey's 'Law of the Constitution,' which is analyzed by M. Boutmy, the director of the school. There is also a summary of reviews, called "Mouvement des Périodiques." Let us add that the typography of this new journal is excellent.

We are glad to observe that the *Réforme Sociale* has acquired the right to use its old title, and has already dropped the less distinctive one of *Bulletin*.

The French have been making various efforts of late to establish an illustrated magazine on the American model. The latest of these is the *Revue Illustrée* (Paris: Baschet; New York: F. W. Christern), edited by M. F. G. Dumas, editor of the illustrated catalogue of the Salon. The *Revue Illustrée* is to appear twice a month like the other French reviews, will be abundantly illustrated in black-and-white and colors, and will rely, like an American magazine, on the short story and the illustrated descriptive article. Three numbers have already reached this country, revealing an amusingly French modification of the American model, and also a use of actual American material, for Mr. Juengling's engraving of Mr. Chase's "Burgomaster" and Mr. Davis's engraving of Mr. F. Hopkinson Smith's "Effet de Neige" are both borrowed from the Tile Club's *Christmas*, while a promised paper on Frédéric Mistral, by M. Alphonse Daudet, is apparently the essay which has already been published in English in the *Century*. M. Luc Olivier Merson is to contribute a series of twelve drawings on wood, illustrating the months of the year, and M. A. Sandier will provide a hundred sketches to illustrate 'La Maison Moderne,' a series of papers on household decoration. There are also, once a month, pieces of music by leading composers; indeed, music and the drama, if we may judge by these earlier numbers, will receive abundant attention.

For "*romancier Oliver Wendell Holmer*" in our last, says the Bulletin No. 2 (1886) of the Paris Cercle Saint-Simon, read "*essayiste Oliver Wendell Holmes.*" But having corrected the literal error in the poet's name, the Bulletin can now safely write "romancier *et* essayiste."

The *Revue Scientifique* publishes the paper read by M. Coudreau on November 20 before the Paris Geographical Society on the disputed territory lying between French Guiana and the Ama-

zon. Brazil, it appears from his account, has for some time offered to give up half the country in dispute, but France has hitherto demanded two-thirds. M. Coudreau proposes now to relinquish all the western part to Brazil, in order to get the tract of fertile savannah on the coast as far as the Araguary. This, he claims, is far more healthy than French Guiana, and would prove a valuable accession to the French colonial possessions. As it has never been thoroughly explored, few travellers besides himself having visited it, he advocates the appointment of a Government commission to examine it. He asserts that Brazil will do the same, being anxious for a speedy and amicable settlement of the question.

Polybiblion for January tells of a very select International Society for the Reproduction of Old Engravings, whose membership is limited to 250, and which counts among its founders such connoisseurs as the Duc d'Aumale, Count Henri Delaborde, Baron Edmond de Rothschild, Messrs. Georges Duplessis, Sidney Colvin, etc. Every precaution will be taken to limit the number of copies to the members. The facsimiles will be drawn from rare impressions of the fifteenth and sixteenth centuries.

There is much that is new and valuable in M. Ernest Combe's 'Réfugiés de la Révocation en Suisse." He tells again, but with many additions from original and unpublished sources, the dramatic story of the flight of the Huguenots and their reception in Switzerland, and, in an interesting closing chapter, shows their influence, both industrial, intellectual, and religious, upon the country of their adoption. The address of the Consistory of the National Church at Geneva to the French Protestants, dwelling especially upon the value and extent of the religious influence of the refugees, and the responses of the French churches, are also about to be published. There have also appeared in France works on the Revocation in Béarn, Champagne, and Rouen, and the first volume of the 'Synodes du Désert,' containing the acts of the Synods held between the death of Louis XIV. and the French Revolution. This work will consist of three volumes, and the edition is limited to 299 copies. The price is 120 francs.

One of our readers possessing a better memory than our own corrects our recent statement that no English translation of Victor Hugo's "Djinns" had been attempted. He says: "In one of the earlier volumes of the *Democratic Review* you will find an English version of the 'Djinns' in the metre of the original, made by John L. O'Sullivan, the editor. I have no copy of the *Review*, and cannot now give you a nearer reference. I remember greatly admiring it at the time, and, on comparing it many years ago with the original, thinking it singularly felicitous, considering the enormous difficulty of the task. I have now no copy of the original within reach, and cannot say whether I should still be of the same opinion. At any rate, Mr. C. A. Dana has considered it worthy of a place in his 'Household Book of Poetry' (p. 589 of the edition of 1875)."

—Prof. James Bryce having accepted the post of Under Foreign Secretary in Mr. Gladstone's Government, the readers of the *Nation* will be deprived of his admirable political letters during his term of office or that of the Ministry. The aptness of his appointment cannot be questioned by those who know how extensive have been his travels and how profound his observation of foreign lands and peoples. Few Englishmen have anything like the knowledge of this country, for example, that Professor Bryce has; and his acquaintance with the continent of Europe and with England's possessions in the East is also exceptionally solid. His public services in his new capacity make it almost unbecoming to regret this interruption of what has been, perhaps, the most impartial and fair-minded chronicle of contemporary British politics to be found in print.

—The supporters of the international-copyright bill introduced into the Senate by Mr. Chace, of Rhode Island, assert, in defending the clause which prohibits the importation of books that have obtained copyright in the United States under the bill, that such prohibition of importation is "the invariable rule in all countries where copyright exists." Senator Chace, also, is quoted as saying, when interviewed in regard to his bill, that "to protect [prohibit?] the importation of works copyrighted here is simply to make effective the regulation universal in all countries where copyright laws exist." In all countries where there is a domestic copyright law such law undoubtedly prohibits the circulation and sale of *unauthorized* copies of the work protected, whether such copies are manufactured at home or abroad. This prohibition is to protect the author or proprietor of the copyright from infringement, and is a very different thing from prohibiting the importation or contemporaneous sale of other editions authorized by the author or the copyright owner. This last is what the clause in Mr. Chace's bill really attempts to do, and so far is it from being the "invariable rule in all countries" that we do not know of any country whose international-copyright law contains such a provision, nor of any international-copyright treaty with a stipulation to such purpose. In England, copyright is secured to foreigners by the International-Copyright Act of May 10, 1844, which was passed in order to carry out the stipulations of international-copyright treaties. By the provisions of this act the Queen may, by an order in council, which must be published in the *London Gazette*, and usually takes effect upon the day following such publication, grant to authors and artists who shall first publish their works in the foreign country named in the order, copyright in such works within her Majesty's dominions, for any term not exceeding that for which authors or artists first publishing in the United Kingdom would be entitled. Exclusive right of representation or performance of dramatic pieces or musical compositions may also be secured under this act, and by the amendatory act of May 28, 1852, authorized translations are protected for a term not exceeding five years, during which term the printing or importing of unauthorized translations is prohibited. Both these laws, however, allowed "fair imitations or adaptations to the English stage" of any dramatic composition published in a foreign country, notwithstanding the original work was copyrighted in England. But the agitation on this subject begun so vigorously by Mr. Charles Reade, in his work 'The Eighth Commandment' (which may be recommended as good reading to the opponents of international copyright), finally resulted in the passage of the act of May 13, 1875, protecting the original drama against such "adaptation."

—The statute and treaty regulations necessary to be complied with in order to secure copyright for foreign works in England are not burdensome, consisting of entry, upon the register-book of the Company of Stationers in London, of the title, name, and place of abode of author or composer (unless the work be anonymous), name and place of the proprietor of the copyright, and time and place of first publication in the foreign country. For articles of sculpture a descriptive title must be registered, and of books one copy of the foreign edition must be deposited, which copy is sent to the British Museum. The usual time allowed for such registration and deposit is three months from the first publication abroad. Returning to the question of prohibition of importation, we find that the act of 1844 contains the following clause: "And be it enacted, that all copies of books wherein there shall be any subsisting copyright under or by virtue of this act, or of any order in council made in pursuance thereof, printed or reprinted in any foreign country *except that in which such books were first published*, shall be and the same are hereby absolutely prohibited to be imported into any part of the British dominions except by or with the consent of the registered proprietor of the copyright thereof, or his agent authorized in writing." The words which we have italicized make it very clear that there was here no intention to forbid the introduction of the authorized foreign edition. Similar provisions are made a part of English copyright treaties, but as the above-quoted clause of the act of 1844 does not provide against the importation of piratical copies from the country of first publication, the copyright treaty stipulations are more especially directed against the importation of piratical copies, as is well shown in the following terse article quoted from the treaty between Great Britain and Spain of August 11, 1880: "The importation into and the sale in either of the two countries of piratical copies of works which are protected from piracy under the articles of the present Convention, are prohibited, whether such piratical copies originate in the country where the work was published or in any other country." Similar stipulations occur in copyright treaties between other European nations, good examples of which are the twelfth article of the convention between Germany and Italy of June 20, 1884, and the second article of the treaty between Italy and France of July 9, 1884. In Canada, where the obtaining of copyright, by the law of 1875, is conditioned upon printing the book in that country, the law contains a distinct proviso that nothing in the act shall be held to prohibit the importation of the authorized English edition.

— Prof. F. L. Ritter has prepared a short 'Manual of Musical History' (Scribners), to serve students as an introduction to more voluminous works on the subject, and teachers and lecturers as a brief text-book. The 'History' takes up only forty-four pages, and is followed by several appendices containing lists of the principal musical forms, vocal and instrumental, with brief explanations, and a list of the principal modern orchestral instruments, showing their compass. The book gives a very clear and entertaining bird's-eye view of this extensive subject, and the author has avoided the error, so common in musical as in other histories, of paying too much attention to names at the expense of the subject-matter. One of the best features of the book lies in the special emphasis placed on the consecutive national phases of musical development. At the beginning of modern music the Netherlands school led; then came the Italians, to be in turn displaced by the Germans, who are at present even invading Italy, while in Spain such music as there is is a mixture of the Italian and French styles. Hungary has been brought forward through Liszt, Bohemia through Dvorák, Russia through Glinka, Lvoff, Rubinstein, and Tchaikoffsky. Rubinstein, however, is practically a German composer, with a few Jewish and Slavic traits, just as in the Polish Chopin French and German influences are conspicuous. The Hebrews have always shown special musical talent; but their art is marked by this peculiarity, that in Italy they are Italians, in Germany Germans, in France Frenchmen. In America Dr. Ritter fails to see as yet any indication of an original national style.

— In the fortieth annual report of the director of the astronomical observatory of Har-

vard College, Professor Pickering records the decrease in the amount of work done, owing to the fact that the resources of the observatory have been materially diminished. By the death of Mr. R. T. Paine, however, while the observatory has lost a friend who was always deeply interested in its work, it has fallen heir to his entire fortune of more than a quarter of a million dollars, one-half of which sum will become immediately available upon the settlement of the estate. The devotion of the observatory mainly to photometry continues, and the large equatorial has been occupied in observations of the eclipses of Jupiter's satellites, faint stars selected as standards of magnitude, comparison-stars for variables, and of the temporary star in the nebula of Andromeda. Mr. Chandler has continued his observations with the new instrument of his invention called the *almucantar*, and which in his hands exhibits, Professor Pickering says, a surprising efficiency and accuracy. The meridian photometer shows a large increase of work over previous years, the number of separate settings somewhat exceeding 50,000. The list of objects observed has been somewhat extended, and the accordance of the results continues satisfactory. The height and velocity of clouds have been the subject of study with Mr. W. M. Davis, about three hundred series of measures being obtained at a pair of stations connected by telephone. The measured altitudes varied from 2,000 to 25,000 feet. The observatory remains the American centre of telegraphic distribution of important astronomical announcements, the discovery of nine small planets, five comets, and one new star being promulgated during the year. By the aid of the Bache Fund of the National Academy of Sciences, an important investigation in stellar photography has been undertaken. Many photographs of the trails left by stars have been taken with the camera stationary; and an equatorial star no brighter than the sixth magnitude leaves its mark in this way, while stars much fainter near the pole will leave an impression, since their motion is slow. Stars as faint as the fourteenth magnitude have thus been photographed without clock-work to move the instrument. The trails of the faint polar stars are very well defined and minute, and afford an excellent measure of stellar brightness, besides furnishing the means of determining the stars' positions with great accuracy. Also, the attempt has been made to prepare star-charts by photography; but the most striking results have been obtained with stellar spectra. By means of a large prism mounted in front of the lens, photographs of spectra have been obtained of stars as faint as the eighth magnitude, in which lines are shown with sufficient distinctness to be clearly seen in a paper positive. As all the stars in a large region are thus obtained with one exposure, more than a hundred spectra have been secured on a single plate.

— The principal paper in the December proceedings of the Royal Geographical Society is a summary of a report made to the Government of the United States of Colombia, on the Goajira Indians, by Mr. F. A. A. Simons These Indians inhabit that large peninsula which, "projecting for some 120 miles out into the Caribbean Sea, forms the extensive Gulf of Maracaybo. This peninsula is known as the Goajira. It was ceded by the State of Magdalena in 1872, to form a national territory, for the better civilization of its Indians. One-half of it, however, is claimed by the Venezuelans, and a dispute that at one time threatened to culminate in war between the two nations, was amicably settled by referring the question to the King of Spain, as arbitrator. His decision has not yet been made public." The northern half of this hitherto unexplored region is a sterile, hilly country, the southern a grassy plain, elevated but slightly above the sea-level. The population consists of about 20,000 Indians, who, although belonging to one tribe, are divided into some thirty "families or castes, bearing much analogy to the ancient 'clans' of Scotland." In addition to these are the Cocinas, who are simply bands of robbers, outlaw members of the various families, who wage an indiscriminate war upon the rest. Intermarriages are permitted, but in these cases the children belong to the mother's caste, and her relations can demand compensation in case of injury to the children. This custom of requiring "tear or blood-money" costs the lives of about one-quarter of the male population. "The laws that govern these compensation cases are very intricate; their number is legion. First is the terrible law of retribution, that makes a whole caste responsible for the acts of any single member. As the Spaniards or white men are considered by the Indians as belonging to one large family, the country is very unsafe for travelling, for every white man is a sort of hostage for the good behavior of the others. If an Indian should be killed in a quarrel by a white man, the life of another white man, living leagues away, depends upon whether the foe (relations of the dead Indian) or a friend brings the news first." Blood-money is also demanded for "personally inflicted wounds" If, for instance, an Indian accidentally cuts himself, his mother's relations demand compensation. "Everybody selling rum or anything else is answerable for all the damage done by its instrumentality. . . . I was lent a servant as guide by a trader, who requested me not to let the man have any drink, for should anything happen to him he would be responsible to the family." Other cases arise from the singular objection of the Indians to having their true names mentioned (they generally go by a Spanish name). "To mention the dead before the relations is a dreadful offence, often punished by death; for if it happens in the dead man's rancho, with nephew or uncle present, they will assuredly kill the offender on the spot if possible." They have also a curious custom of shutting up their young girls on arriving at womanhood, the poor for a few weeks, the rich "for one, two, or even three years." At this time they are taught the domestic arts, as weaving, making dresses, hammocks, etc. They are, as a rule, virtuous, and are held in great respect by the men, whom they often prevent from blood-shedding. When the husband dies "the wife becomes a legacy to his brother, usually the youngest; if there are none, then his nephew inherits her." Mr. Simons also refers to the singular custom "of parents assuming the names of their children with the prefix *nushi* or *sushi* if the father, and *ni* or *si* if the mother. Thus the father of Juan would call himself 'Nushijuan,' or of a daughter 'Sushijuana.' The mother of Juan would be called 'Nijuan,' and of a daughter 'Sijuana.'" Though the Indians have rifles, they also still use the bow and poisoned arrows. Their occupation is principally cattle-breeding and collecting salt.

—The first volume of the *Law Quarterly* is now finished, and number five, for January, 1886, lies before us. This excellent magazine (London: Stevens & Sons; Boston: C. C. Soule) is edited by Professor Pollock, and gives expression to some of the very best legal learning and thought of the present day. It deserves the support of every lawyer who is interested in perfecting the science of law. In its first number, a year ago, it presented a most valuable "Digest" of the law relating to section 17 of the Statute of Frauds, the combined work of Mr. Justice Stephen and the editor. Of like immediate use to the practising lawyer have been the articles of the editor on "Certain Topics in the Law of Torts," and of Dr. Melville M. Bigelow on "Mistakes of Law," to say nothing of many short and good book notices, and the presentation of the contents of foreign law journals. But the marked excellence of the *Review* has been in its contributions to the learning of the law. Mr. Maitland's really delightful article (the phrase is not too strong) on "The Seisin of Chattels"; Judge Holmes's paper on "Early English Equity"; Mr. Pike's article on "Common Law and Conscience in the Ancient Court of Chancery"; Vinogradoff's on "The Text of Bracton," with its incidental crucifixion of Sir Travers Twiss for his shameful edition of Bracton; Dicey's "Federal Government," since incorporated into his book on 'The Law of the Constitution'—these are among the treasures of the first volume. There is no law journal within our knowledge that represents the higher walks of legal study with anything like the ability of the *Law Quarterly*. That there are, here and there, articles of small merit, and that a specialist may sometimes grumble at what seems to him to fall short as touching his subject, are things to be expected in all such undertakings.

— Interesting statistics of Mexican suicides are given in a recent number of *La Escuela de Medecina*, the organ of the Academy of Medicine in the city of Mexico. The tables cover the years 1860-84, and constitute, it is believed, the first considerable attempt to collate material for this branch of vital statistics in Mexico. Very striking is the smallness of the ratio of suicides to population here revealed. The lowest ratio given by Morselli, whose standard work on this subject was reviewed in No. 861 of the *Nation*, is that of the Slavs of Southern Europe, viz.: 20 per 1,000,000 yearly. These Mexican tables, however, yield a total for the entire twenty-four years of only 487 suicides, or no more than 3 per 1,000,000. Even making allowance for serious incompleteness in the statistics given, as probably ought to be done, remembering how crudely such things are attended to in Mexico, the showing is remarkable. It is only the presence in a high degree of intensity of all the influences which tend to depress the ratio, that can have reduced it to so small a figure. Given a race-inheritance such as that of the Mexicans, the Catholic religion held in the most blind and fanatical fashion, illiteracy almost incredible (even to-day the Mexican press thinks it a matter of boasting that 25 per cent. of the population can read and write), and a scale of living at once wretchedly low and easily attained, and all the recognized conditions for reducing suicide to a minimum are present.

— The details presented are in the main in accordance with the general laws laid down by Morselli, though some notable exceptions are to be observed. Thus the law is followed which produces more suicides where the country is low than upon high ground, the States of Vera Cruz, Nuevo Leon, Tamaulipas, and Jalisco showing a greater number of suicides than the States of the table-lands (the Federal District excepted). So also, according to the general law, spring and summer claim more victims than fall and winter, 267 and 220 being the respective figures, although the differences between the various seasons in Mexico are slight. Men more than hold good their proportion to women, the ratio being six to one, instead of the usual three or four to one. About the proper ratio of unmarried to married is observed. The age of strongest suicidal tendency is abnormally early, appearing to be between twenty and thirty, in place of Morselli's fifty to sixty-five. Noteworthy in the tables is one suicide at the age of nine, and seven between the ages of ten and fifteen. Among the professions

we find soldiers and artisans holding the relative prominence which would be expected. The attention is caught by the order of the causes of suicide, both love and remorse having a more fatal effect than want, while family quarrels, shame, anger, pride, and *ennui* have each a place in the list. Probably the greatest divergence of all from the laws of Morselli is seen in the means of suicide chosen. His order of preference "in all countries" is: the rope, drowning, firearms. The Mexican order is: fire-arms, poison (*longo intervallo*), the rope. Peculiar local conditions are no doubt sufficient to account for these last differences. Every one carries firearms in Mexico, and so they would be at hand for almost every case of suicidal mania. Loose laws governing the sale of poisons, together probably with a widely diffused knowledge of the poisonous properties of common herbs, would bring poison higher in the list than its average place. Drowning, instead of holding the second place, is far down the column, only eight out of all the 487 deaths being reported as so caused. The great comparative scarcity of rivers and lakes in Mexico at once comes to mind as partly accounting for this. And it is certainly suggestive of the topography of the country that no less than twenty-one suicides are said to have been effected by leaping over a precipice.

RECENT LAW BOOKS.

THERE appears from the Clarendon Press (New York: Macmillan), in a beautiful octavo volume of some four hundred pages, Sir John Fortescue's treatise on Monarchy: such is its ordinary designation. It is here entitled, following one of the manuscripts, "The Governance of England," and it has been very carefully edited by Charles Plummer, M.A., Fellow and Chaplain of Corpus Christi College, Oxford. The curious and most interesting little tract itself fills up less than fifty pages of the present volume; while a hundred pages are devoted to a valuable historical and critical introduction, and nearly two hundred pages to a very full series of notes. The reader has thus every help to the appreciation of the "earliest treatise on the English Constitution written in the English language." This appears to have been the last of Fortescue's writings, dating from 1471-1476, later by a few years than his famous Latin dialogue "De Laudibus Legum Angliæ." That is a book of the greatest value as regards English law, or rather legal administration, at a period which, for England, was still mediæval. Fortescue's active life had been almost exactly coeval with the period of the three Lancastrian Henries. He had held the highest legal and state offices under Henry the Sixth. In the little treatise now republished, which was written after Edward IV. was finally seated on the throne, the main purpose was to set forth a method for bettering and securing the royal revenues, consistently with the welfare and convenience of the people.

Fortescue points out that England is not, like France, an absolute monarchy, but that the King reigns by consent of his people. The French financial methods which strip the people and keep them poor will not do in England; the King, indeed, must not be poor; but also the commoner must not be poor. For the King's ordinary expenses, it is thought that he has now provision enough to meet his "extraordinarie charges" (of which a curious summary is made out). Fortescue proposes that the Crown be endowed with lands. He roughly estimates the amount to be provided for these by considering that they should be greater than the resources of any of the wealthiest subjects; consider, then, what their resources are. The income of certain great estates, together with the feudal profits coming regularly to the King, will serve the purpose. How to get these estates? Fortescue proposes that the King, by consent of Parliament, resume some of the improvident gifts and grants that have heretofore been made of the royal estates, that these be settled upon the Crown and made inalienable, and that some proper money allowance be made to the present owners of these estates instead of these excessive and unmerited grants; any deficiencies are to be supplied by subsidies granted by the people. And then for the future adjustment of royal gifts and grants (as well as other things) the writer proposes a reorganization of the Privy Council, by which it shall consist of "xii spirituell men and xii temporell men" to be permanent members, and to be paid for their services; and of four lords of each kind, temporal and spiritual, chosen yearly by the King, and to serve like sheriffs with "litle and all most nothynge ffor thair seruice."

The reader of this little book is likely to be surprised at its assertion of popular principles of government. But the editor reminds us that the necessities of the House of Lancaster had familiarized England with notions not unlike those which brought on the English Revolution two or three centuries later. Another point that will strike the reader is the fresh and first-hand comments on the customs of other nations, particularly of the French, with whom Fortescue had sojourned in his exile. "Fortescue," says the editor, "first of mediæval political philosophers, based his reasonings mainly on observation of existing constitutions, instead of merely copying or commenting on Aristotle."

"Thai drinken water," he tells us of the French common people; "thai eyten apples, with brede right browne made of rye; thai eaten no flesshe but yf it be right seldon a litle larde, or of the entrales and heydes of beastis, slayn for the nobles and marchauntes of the land. Thai weren no wolen, but yf it be a pouere cote vndir their uttermest garnement, made of grete caunuas and callid a frokke. Thair hausyn beth of lyke caunuas and passyn not thair kne, wherfore thai beth gartered and ther theis bare. Thair wyfes and childeren gone bare foote; thai mowe in non other wyse leve. . . . Wher thrugh . . . thair nature is wasted, and the kynde of hem broght to noght. Thai gon crokyd, and ben feble, not able to fight nor to defende the realme; nor thai haue wepen, nor money to bie thaim wepen withall."

Fortescue discusses the French salt tax: "Ther is no man in Ffraunce that mey eyte salte, but yff he bie it off the Kyng: and that is now sett to so grete prise, that the bushell, wich the Kyng bieth ffor iij d. or iiij d., is solde to his peple ffor ij s. and a j d., and other while more." This, he says, would never do in England: the merchants here have been used to freedom in buying and selling; and the "peple that vsen moche to salte thair meytis more than do ye Ffrenchmen . . . woll than at euery mele groche with the Kynge, that entreteth hem more rygoursly than his progenitors haue done. *And so his hyghnes shall haue thereoff, but as hadd the man that sherid is hogge, muche cry and litil woll.*" The italics are ours.

Again, in dealing with an argument that it is well to keep the commons poor in order to prevent them from rising, Fortescue borrows illustration from the French:

"It is not poverty that keepes the French commons down," he says, "but cowardisse and lakke of hartes and corage, wich no Ffrenchman hath like vnto an Englyshman. It hath ben offten tymes sene in Englande that iij or iiij theves ffor pouerte haue sett apon vj or vij trewe men and robbed hem all. But it hath not bene sene in Ffraunce, that vj or vij haue be hardy to robbe iij or iiij trewe men. Wherfore it is right selde that Ffrenchmen be hanged ffor robbery, ffor thai haue no hartes to do so terable an acte. Ther bith therfore mo men hanged in Englande in a yere ffor robbery and manslaughter, then ther be hanged in Ffraunce ffor such maner of crime in vij yeres."

And so, he says, it is in Scotland as in France; "but the Englysh man is off another corage."

One other passage we must quote, of a different sort. Fortescue urges that when the King shall have got his own again, he shall settle it permanently on the crown; and he grows eloquent, and even rises to an exquisite little touch of poetry, over the good that will come of it. This proposition was truly, as the editor points out, one of great "constitutional importance," and it is happy for England that it was not adopted and that the kings were kept dependent on popular grants.

"And when the Kyng," says Fortescue, "be the meanes afor said or other wyse, hath goten ayen his lyuelod, yff then it wolde lyke is most noble grace to establysh, and as who sayth, amortyse the same lyuelod to is crowne, so as it mey neuer be alvened therfro, without the assent off his parlement, wych than wold be as a newe ffundacion of is crowne he shall be therby the grettest ffounder off the world. . . . He shall do therby dayly more almes, than shallbe do be all the ffundacions that euer were made in England. Ffor euery man off the lande shal by this ffundacion euery day be the meryer, the surer, ffare the better in is body and all is godis, as euery wyse man may well conseyue. The ffundacion of abeys, of hospitales, and suche other houses, is nothyng in comparisoun herof. For this shalbe a collage in whiche shul syng and pray for euermore al the men of Ingland spirituel and temporel."

Mr. Plummer deserves the heartiest thanks for bringing to light again this extremely valuable essay, and for the careful and abundant apparatus of notes and illustrations with which he has furnished it.

Col. Sir Edmund F. DuCane's 'Punishment and Prevention of Crime' (Macmillan) belongs to the "English Citizen" series. It is a brief and interesting account of the penal, preventive, and reformatory system of England, past and present. The position of the author, as Chairman of the Commissioners of Prisons and a member of other similar boards, seems to justify confidence in the accuracy of his statements. It is a curious fact which he states in speaking of "the large decrease of crime continuously after the age of thirty-four." The author's suggestion of the benefits that would come about if persons "whose career evidences in them marked criminal tendencies could either be locked up or kept under supervision until they had passed, say, the age of forty," might justify various remarks; one of them would be that this thing is easier said than done. The author says generally of accused persons who refuse to plead, that "in the time of Queen Anne their thumbs might be tied together till they entered their plea." This was only a local practice at Newgate—one which existed long before Anne's time, as well as later. In 1662 it was spoken of as "the constant practice"; and cases are mentioned as late as 1734. The writer's accounts of the system of transportation and of the modern reformatory and preventive methods are full of interest.

'Legal Education, its Aim and Method' (Macmillan), is the title of the inaugural lecture of Mr. Gerard B. Finch, the new law lecturer at Cambridge, in England. This is a thoughtful contribution to a subject which has until lately attracted much less attention in England than in this country. It is not a little interesting to find that Mr. Finch, in beginning a course of lectures on Contracts, has thought it well to adopt a method which Professor Langdell, the very learned and able Dean at the Harvard Law School, introduced there some fifteen years ago, viz., that of requiring the student to study a selected volume of cases. The value of this auxiliary to the usual methods of teaching law is now thoroughly well recognized wherever it has been tried. There is no doubt that it has contributed much to the modern improvement in the law-teaching at Harvard. Mr. Finch's praise of this teaching is very hearty.

"During my stay in Boston last spring," he says, "men engaged in legal practice spoke to me of the great value of the law-teaching at Harvard University. Mr. Sidney Bartlett, the Father of the Massachusetts Bar, told me that the three-years' course at Harvard was equal to seven years' work in an office. Mr. Justice Oliver Wendell Holmes and Dr. Eliot, President of the University, spoke to the same effect. Dr. Eliot related with pardonable pride that at a recent dinner of old Harvard men a prominent young advocate had declared that, when he was a student, he had often heard it said that the course at Harvard was equal to ten years' actual work; that he was then incredulous, but that after being in practice for ten years he came to know it as a fact."

We shall watch with interest for the result of Mr. Finch's labors. It is, of course, an important fact, to the disadvantage of a legal instructor at the English Cambridge, that he is dealing with undergraduates.

'The Theory of the State,' a translation of Bluntschli's 'Allgemeine Statslehre,' "undertaken primarily in the interests of the School of Modern History," by D. G. Ritchie, P. E. Matheson, and R. Lodge, fellows and tutors at Oxford, is lately published at the Clarendon Press New York: Macmillan). The work of which this is a part "may be described," say the translators, "as an attempt to do for the European state what Aristotle accomplished for the Hellenic. . . . This first part goes over the whole ground of what we call political science, though some subjects are treated in much greater detail in the two other parts." The 'Allgemeines Statsrecht' and 'Politik' are not translated. Students of politics who do not read German will be grateful to the translators for bringing this very valuable treatise within their reach. There is, to be sure, something in it of the dry, formal, and over-condensed method which German professors have been known to adopt, as if their countrymen were fitted out with a sort of intellectual gizzard. But the wide range of historical illustration and allusion, and the searching analysis in this book, will commend it to all genuine students. The absence of an index is a very grave fault; no "analytical table of contents" can ever take its place.

Mr. David Stewart's two books, 'Marriage and Divorce,' and 'The Law of Husband and Wife' (San Francisco: Sumner Whitney & Co.), are compact little duodecimos, of the sort with which the San Francisco publishers have familiarized us during the last ten years or so. They are too closely printed, wretchedly bound, and have that fatal defect, no index of cases. On the other hand, they are so much the cheaper, and they pack away in the brief statements of the text a great mass of matter, and have an almost overwhelming mass of citations, both English and American. It is, however, in our judgment, but a poor fashion of a book. Mr. Stewart's work appears to be done very intelligently.

Robert Ralston's 'Discharge of Contracts' (Philadelphia: T. & J. W. Johnson & Co.) was hardly worth publishing. The writer shows small sign of perceiving the real difficulties of his subject or how to meet them. The book "is meant to be read in connection with that of Mr. Smith"—Smith on Contracts.

RECENT FRENCH BOOKS.

'Madame Saint-Huberty' (Paris: Charpentier; New York: Christern) is the second of the series of biographies of actresses of the eighteenth century which M. Edmond de Goncourt has published. In it he recounts the life of Anne Antoinette Clavel, known on the stage as La Saint-Huberty. The volume, like the preceding one on Sophie Arnould, is made up in great part of hitherto unpublished material, the papers and letters of the singer which are in the author's possession. There are many rather too realistic details about her life which have not the excuse of being interesting; but when he comes to her great success in the opera of "Didon," by Piccini, for which the words were written by Marmontel, the author shows his mastery of his subject, and the chapters devoted to the various operas of the rivals, Gluck and Piccini, in which she achieved her reputation, abound in information on the lyric stage of France in the eighteenth century. She, like other singers of this period, owed her success rather to her acting than to her singing, as is well shown in a fragment of one of her letters. She writes: "The part of *Dido* is all action, *est tout jeu;* the recitative is so well done that it is impossible to sing it." The tameness of the existence of La Saint-Huberty when off the stage makes her biography less interesting than those of most of the actresses whose lives M. de Goncourt intends to relate; but the volume has a very dramatic conclusion, and all the latter part, from the time of her marriage with the Comte d'Antraigues, is full of interest.

The story of Henri Quatre and the beautiful Charlotte de Montmorency, afterward the mother of the great Condé, has often been told, but never so fully, and with such an abundance of documents and citations in confirmation of every step, as by M. Paul Henrard in his 'Henri IV. et la Princesse de Condé' (Paris: Alcain; New York: Christern). In the second volume of the Duc d'Aumale's 'Histoire des Princes de Condé' the story is told from a different point of view, but the impression made by the present volume is no more romantic than that by the graver historian. All the strange events of this first year of the marriage of the young princess, who became at fifteen the centre around which the diplomacy of France and Spain revolved, are related by M. Henrard in the simplest and most straightforward manner, and with an impartiality that leaves the sympathies of the reader with the young Prince of Condé throughout. The numerous extracts from contemporary letters and state papers, and the constant citation of authorities and documents, are very different from the dry details that might be expected, and give life and animation to the story instead of making it dull and uninteresting. From the moment the extravagant admiration for the young Charlotte de Montmorency takes possession of the King down to the day of his assassination, the interest never flags. The scene changes from the court of Henri IV. and Marie de Médicis, full of storms and passions and intrigues, to that of the stately *archiducs* Albert and Isabella at Brussels; while for his secondary personages the author brings forward now the Montmorencies, Sully, or Malherbe; now the papal nuncio, the picturesque Marquis of Spinola, or the ambassador extraordinary of France, the brilliant and daring Annibal d'Estrées. The impression produced is always as vivid as if it were a romance we were reading, and the personages of the drama, from the sovereigns down to the waiting-women, speak and act with as much reality as if it were not history from contemporary documents which presented them, but a work of free imagination.

A beautiful octavo volume, with sixteen full-page aquarelles and about one hundred and fifty smaller illustrations that half fill every other page, often jutting out very peculiarly far into the margins—such is the setting and the main attraction of M. Alphonse Daudet's new work, 'Tartarin sur les Alpes' (Paris: Calmann Lévy; Boston: Schoenhof). The author has not been to any great expense of imagination in preparing this work, mainly intended, it is said, to bring into vogue a new and really beautiful process of illustration. He has utilized his old hero, Tartarin de Tarascon, whose heroism is all in his own imagination, and his genial Bompard, "who never uttered a word of truth in his life," made them the heroes of new mock-heroic adventure in a Switzerland depicted with *provençal* veracity, and (it must be added) with the author's *provençal* vivacity and poetic fancy. There is a long episode in which Tartarin meets some Russian Nihilists, is for a time under the charm of a sort of Vera Zasulitch, who promises much if he will only "deserve it"; but Tartarin is not inclined to czaricide. This is all in M. Daudet's best manner. The book is full of a kind of extravagant humor, if it is humor, full of the *galejades* characteristic of the south of France; but it requires a peculiar state of mind to enjoy it thoroughly.

M. Jules Claretie, the new director of the Théâtre-Français, has written a book which may be said to owe its existence to Dostoyevsky's 'Crime et Châtiment,' or possibly, even, only to a page of M. de Vogüé's account of it in his article upon that author, where everything in 'Jean Mornas' (Dentu; New York: Christern) is suggested, even its primary idea, the famous paradox: "Si l'on tuait le mandarin?" and, more vaguely, even the machinery of the crime. 'Jean Mornas' is a curious specimen of mere bookmaking by a man of ability. The hero is a reminiscence of the days when the then youthful journalist wrote for *La Rue*, and frequented the anarchist society of that paper. He constantly recalls to the reader Jules Vallès, who was its editor and ruling spirit. Whoever has read the semi-autobiographical novel of Vallès, 'Jacques Vingtras,' can easily imagine the cynical, unprincipled, and entirely disagreeable copy of the author's former associate which is presented in Jean Mornas. If M. Claretie's purpose was to create a hero every characteristic of whom should be utterly repugnant to his readers (and possibly this was his intention in the interest of his story), he has certainly succeeded. The copy is almost equal to the original in these respects, though it is very far from being as complete and finished a work of art as Cherbuliez has succeeded in making from the same model, in the anarchist orator of his 'Olivier Maugant.' The machinery of the story is taken from the new medical sensation, hypnotic suggestion, but the author's processes in its development are all imitated from Dostoyevsky. There is in M. Claretie's book, however, none of the sympathy and compassion and faith in humanity which brightens the darkness of 'Crime et Châtiment' almost from the beginning. In that there is not one character fatally and irredeemably bad, not even Svidrigaïloff; but Jean Mornas, the only character in M. Claretie's book, is without a redeeming trait; the work is pure pessimism. Even the old doctor is left, without any compelling necessity, to suffer unmerited reproach through the perverse baseness of human nature alone. The hypnotism is interesting, however, though the deviations from actuality are unfortunate, with realities at his command so much stranger than anything M. Claretie has made use of.

M. André Theuriet's last story, 'Péché Mortel' (Paris: Lemerre; New York: Christern), has all his charm of style and manner. The pictures of the mill of La Lineuse and all its surroundings; the accounts of the hours spent in the woods, by the canal, in the garden, in the mill itself; the personages of the story, so minutely and delicately described in appearance and in character—all are in his best manner. It is a pity that such exquisite workmanship, such fine art, such poetic imagination, should be spent upon material so coarse and vulgar as M. Theuriet has chosen to fashion his story from.

M. Henry Rabusson is a young writer to whom the *Revue des Deux Mondes* has opened its pages, which implies much in regard to the literary promise of his work. 'Le Roman d'un Fataliste'

(Paris: Calmann Lévy; New York: Christern) is the third of his stories, and, like 'Dans le Monde' and 'Madame de Givré,' it is a picture of what is called *la vie mondaine*. M. Rabusson's present story is fresh and unhackneyed, although his young *procureur* recalls M. Theuriet's Eusèbe Lombard unmistakably, and his Mlle. de la Rue is an unsatisfactory reflection of Mlle. Bourrienne in 'War and Peace,' and the central third of the story, upon which everything turns, is inspired by the 'Sapho' and the 'Nabab' of Alphonse Daudet. In spite of all this, M. Henry Rabusson is a writer of undoubted talent, and his books are both interesting and well written.

In 'L'Aventure de Mademoiselle de Saint-Alais' (Paris: Calmann Lévy; New York: Christern), M. Rabusson has shown his customary distaste for the well-trampled paths to which the writer of the *roman de mœurs* generally confines himself; but in this case it cannot be said that his wanderings have been fortunate. His story is not an agreeable one, though it is written with his usual grace and ease of manner.

M. Hector Malot has recently published his forty-fourth novel, 'Le lieutenant Bonnet' (Paris: Charpentier; New York: Christern). As a story of garrison life in a small town somewhere in the centre of France it possesses a certain amount of interest, but its literary value is very slight. Its scenes of family and social life, under the new military organization of the French army, present in a crude but not uninteresting manner a series of pictures of an existence no longer nomadic and adventurous, but fixed and commonplace. The officers of the regiment have many of them married in the neighborhood, and they lead as calm and uneventful lives as the most *bourgeois* of their fellow-citizens, varied, however, by a few melodramatic and not very probable episodes. The book seems to owe its existence to some facts recently published in regard to the relation between the pay and the necessary expenses of young officers: not a very promising foundation for a novel; but M. Hector Malot always finds readers and even admirers for whatever he may write.

'L'Attelage de la Marquise' (Calmann Lévy; Boston: Schoenhof), the first of three collected stories, gives the title to a volume by a writer signing himself, or perhaps herself, Léon de Tinseau. Very royalist, very Catholic, and very unobjectionable, the stories seem made for the amusement and instruction of young women who read nothing but what is advised by their spiritual directors. They will find much that is good in the book, and will certainly enjoy making the acquaintance of both the young men and the young women they will be introduced to, who are charming if rather unreal examples of that aristocracy of which Thackeray has given so exquisite a portrait in Mme. de Florac. The longest and best of the stories is the one entitled 'Le secret de l'abbé Césaire,' of which the plot is interesting and the actors full of vivacity.

M. H. Lafontaine, "sociétaire retraité de la Comédie-Française," has sung the praises of *la cameraderie* in a pleasant little story, 'Les bons Camerades' (Calmann Lévy; Boston: Schoenhof), in which the intentions are all so good and their execution so inoffensive, that you forgive the author for having nothing else to offer.

'Le trésor du Guèbre,' by Charles Edmond (Calmann Lévy; Boston: Schoenhof), is a combination of the most touching disinterestedness and the most repulsive self-seeking. A Parsee diamond merchant, with a marvellous collar of diamonds gathered together through centuries by his ancestors and finally completed by himself; a young French savant who has more than anticipated all the modern discoveries in the artificial creation of precious stones, and to whom diamond dust is no more than any other dust, and the diamonds of the Oriental only pretty crystals; and between them the lovely daughter of the Parsee, who becomes the wife of the young man and finally the possessor of the fabulous necklace—these are the promising materials out of which M. Charles Edmond has developed a very commonplace story, filled with lessons of disinterestedness, morality, and patriotism, but not entirely devoid of interest.

Oceana; or, England and Her Colonies. By James Anthony Froude. Charles Scribner's Sons. 1886.

THIS volume is a political tract. It makes some pretension to being a book of travels, but in that regard it is only a miserable make-believe. Its author has given some direct attention to the British colonial policy at the Cape, and discusses the incidents of that capital instance of mismanagement with clearness and force. Things are in a bad way there, he thinks; and being thus interested in the relation of the colonies to the mother-country, he endeavored to find out the public opinion of the Australians and New Zealanders on the spot. He was pledged in mind, before he started, to the view that some sort of Federation should be attempted as the only mode of maintaining English influence in the world; and he held in detestation the doctrines of the Separatists and the administration of Downing Street. He merely touched at the Cape, and remained long enough to revive his former opinion to a glowing intensity, and to see that the state of affairs was as unpromising as the worst pessimist could wish, and then he hied on to the great English islands. There he was taken in hand by dignitaries and officials, sent about in special trains, treated to champagne, dinners, and speeches, and generally, between the clubs and the great houses, enjoyed the welcome of a visiting statesman. He found the colonies very loyal to the Queen, very angry with Gladstone, very thoroughly unwilling to be cast off to shift for themselves, and especially hurt at the "bar sinister" in the colonial flag. He found what he went to find, and he preaches page after page the gospel of the British Federation. Yet one notices that, even under these conditions, moving always in this elderly, official English-bred and millionaire class, he found no practical answer as to how the Federation should be brought about and what it should consist in. Every suggestion of seats in Parliament, of a new Imperial Senate, of colonial life-peers, of colonial agents in Parliament without votes, etc., was ridiculous to the colonial mind. In fact, the only proposition treated with favor was that the royal navy should be charged with protection of the coasts, on condition of a colonial subsidy; and to this he himself adds the suggestion that the ribbon of the Bath be conferred on deserving colonists, and place and promotion in the general Imperial service be opened to them. This is the only measure he recommends. The plea will go for what it is worth, and material circumstances will continue to rule political agglomerations.

The volume, however, though a contribution to political controversy, offers some other phases of interest. As a book of travels, one must dismiss it briefly, for in its landscape views it is not novel, and of the people and the country in the American sense Mr. Froude evidently saw nothing. In the sentence in which he speaks of our Indian Territory as a plain where nothing grows "save a miserable scanty scrub as if on a soil that was sown with salt—left to the Redskins, I suppose, because no white man could make a living there," we have an appreciable instance of his inaccuracy. The "boomers" would do well, if that is so, to emigrate to Adelaide, where, says Mr. Froude, are a hundred and fifty thousand people, "not one of whom has ever known, or will know, a moment's anxiety as to the recurring regularity of his three meals a day." But such statements may be passed by. As to the institutions of the country, its schools, prisons, manners and customs, business, industrial interests, and the doings of the bulk of the inhabitants, the volume is silent. Not so, however, with moral and spiritual welfare. The pages teem with denunciation. If not the mantle, certainly the growl of Carlyle has fallen on his pupil-prophet. For all things modern, liberal, democratic, Gladstonian, there is a ready word of wrath. We will give a sentence or two, for most readers will tire of the interminable tirade which interrupts the political oratory: "I could not share his opinion [an Irish priest's] that it was right for average people to go by their own judgment in so serious a matter as religion. Average men are too ignorant to be capable of forming a judgment on such subjects." "The greatest fool in the House of Commons, if left to himself and to his own small understanding, would steer the ship of state better than the galaxy of genius had done which formed Mr. Gladstone's Administration."

But there is not space to multiply examples of the extremities of expression to which Mr. Froude goes in denouncing democracy, whether in its religious, political, or social manifestations. A more amusing characteristic is the unconscious assumption that the excellence of the race is only to be rationally looked for at London. He does not hesitate to say roundly in one place that an "able" man from the home country deputed as Governor would lead the colonial policy by virtue of his "mental superiority." Along the whole route the author looks with insular eyes, and jaundiced besides; he has been round the world, and "there an end," as the Elizabethans say. The sketch of Sir George Grey—one of the most admirable men of our time—is the only chapter really worth while.

Outlines of Universal History. Designed as a text-book and for private reading. By George Park Fisher, D.D., LL.D., Professor in Yale College. Ivison, Blakeman, Taylor & Co. 8vo. Pp. 674.

PROFESSOR FISHER'S 'Universal History' is a book of very great merit, which will abundantly satisfy the wants of those who desire a complete and accurate compendium of the world's history. There really has been no book of this character, of higher ambition than a school text-book, and recent enough to contain at once the results of the latest scholarship and the events of the latest years. It was a formidable task that the author undertook, and he has performed it in a manner worthy of all praise. The plan of his work is that of a carefully arranged and well proportioned survey of the entire field of history, with constant reference to philosophical principles and great controlling movements, but with a very considerable amount of detail. One is, indeed, constantly astonished to find so *complete* a sketch in so small a compass. There is too much of the necessary detail for it to be available as a book to read through; but the general portions may well be taken by themselves, and will be found to contain a survey of the entire field of history admirable for its breadth and insight. The controlling idea of the work, as stated in the preface, is that of the *unity of history*.

The completeness of view, which is so striking a feature of the book, is shown in every direction—the discussions upon ethnology, geography, and mythology; the sections upon religion, literature, and art; the entire *equipment* of the work, in the way of maps, genealogical tables, lists of books, and index. The feature in which we find it least satisfactory is the discussion of economic causes.

In the Roman Republic, and in the history of the Middle Ages, these deserve more attention than they have received.

Along with this symmetry aud proportion, which are the most striking characteristics of the book, we find great accuracy in the minutiæ. We have not noticed any mistakes or misprints in such matters as dates, proper names, or order of events. Naturally there will be oversights and errors here and there. Thus, it was not the augur (p. 132) who took the auspices, marking off the heavens into four quarters, etc. The auspices were sent to the magistrate, and solely to him; the function of the augur was merely to interpret them. The reader would suppose (p. 174) that *confarreatio* was a form of marriage employed by all Romans at their choice. It was, on the other hand, the exclusively patrician form of marriage. It is misleading also to speak of "two kinds of marriage," by one of which the wife passed from the hands of the father to those of the husband. This was the result of all *three* forms of marriage; only, in case of civil marriage (*usus*), the wife could escape the *manus* by absenting herself for three nights (*jus trinoctii*) from the husband's house. Neither is it technically correct to speak of the *manus* of the father, but his *potestas*; *manus* was of the husband alone.

The maps are excellent, clear, and accurate. Even here, however, there are defects. In the map of the Empire of the Saracens (p. 228) for A. D. 750, the Exarchate of Ravenna is not given. In the map of Central Europe in 1360 (p. 328), the States of the Church are not given, while Flanders receives the same color as Burgundy, with which it was not united until 1384. And why *Lausitz* any more than *Schlesien* and *Mähren?* Why, moreover, give the long-extinct duchies of Franconia and Swabia in the map of Italy in the sixteenth century (p. 410)? The Index, from some random experiments, appears to be carefully prepared; but occasionally a page must have been overlooked—*e. g.*, we find none of the names on page 370. On the very last page of the text, we are surprised, in a list of books on the socialism of the present day, not to find so excellent a book, of American authorship, as Dr. Ely's 'French and German Socialism.'

Practical Economics: A collection of essays respecting certain of the recent economic experiences of the United States. By David A. Wells. G. P. Putnam's Sons. 1885. 8vo.

It is to be regretted that the publishers of this volume should have found it necessary to allow it to appear in a shape so ill-suited for popular use, as it is a practical treatise, written not for the edification of scholars, but for the public enlightenment, and it ought to have been made attractive to the public. It cannot be denied that those who like to look at everything through a rosy medium will not enjoy these pages. The history that is here detailed is not of the kind on which patriots dwell with pride. Much of it is a record of the imbecility of our legislators and the corruption of our administrative officers—not but that, to paraphrase Thurlow's remark about one of his judges, there was a deal of corruption about the legislative imbecility. As Mr. Wells says, his essays illustrate "an experience in which questions of the highest importance in respect to the use and issue of currency, the imposition of taxes, the collection of revenue, and the regulation of trade and commerce—all involving transactions of enormous magnitude and infinite detail—have been discussed, regulated by legal enactments, and carried to practical results, without, for the most part, any reference whatever to accepted economic principles, and often mainly under the influence of selfish and sometimes of corrupt motives and agencies."

Altogether the most remarkable, indeed we may say the most awful, series of events here detailed relates to our experience in taxing distilled spirits, concerning which the author remarks that nothing similar ever before occurred in any country of modern civilization, or is likely to occur again. As Mr. Wells was Chairman of the Revenue Commission of 1865, and afterward Special Commissioner of the Revenue, he has an inside knowledge of this experience probably more extensive than that of any other person in existence. It was owing to him that the system of collecting internal-revenue taxes by means of stamps affixed to the packages containing the articles taxed was adopted—a system that has proved in the highest degree successful. It was largely owing to his efforts, also, that the tax upon spirits was reduced from $2 a gallon to 50 cents, with the result of increasing the revenue from this source threefold. In fact, the revenue derived from a tax at this rate seems to have been greater than that produced by higher rates either before or since the year 1872, the last year during which it prevailed.

That extraordinary episode, the attack made upon the Whiskey Ring by Secretary Bristow, was of too dramatic a character to be easily forgotten, nor is the present time the most suitable for dwelling upon it. We need only say that Mr. Wells gives a calm and dispassionate account of it. We prefer to allude to what was less dramatic, although hardly less remarkable—the gift by Congress to the distillers of a sum estimated at $100,000,000, under the guise of an increased tax upon their product. If an intelligent child were asked as to the probable effect of imposing a tax upon the production of an article, exempting, however, all that should have been produced at the time the tax went into effect, he would probably reason that the price of the article would be raised by at least the amount of the tax, and that the owners of the exempted goods would not consider the fact that they had paid no tax as any reason why they should not collect it from their customers. If a legislative body failed to reason with equal profundity, but found, after making the experiment, that precisely this result followed, and that those upon whose business the tax had been thus imposed had been enormously enriched thereby, it might be expected that it would not repeat its folly. The Congress of the United States, however, upon no less than five occasions did repeat this folly. What motives influenced its action it is impossible to tell. Those were evil days, and enormous sums were to be made by such legislation. The best we can say is that if our legislators were not corrupt, they were imbecile.

Under this policy the number of distilleries, which was 1,138 in 1860, increased to 4,721 in 1868, with a probable capacity of over 200,000,000 gallons a year. Nevertheless, in the latter year the Government collected its tax upon less than 7,000,000 gallons. As the consumption of spirits could hardly have been less than 50,000,000 gallons at that time, the sale of untaxed spirits at the current market price must have brought in about $80,000,000 of dishonest gain. As the market price was less than the tax and the cost of manufacture, an honest distiller was an impossibility. Into the particulars of the frauds we cannot enter, but Mr. Wells's account of them shows how widely diffused the corruption arising from this ruinous legislation had become. It is instructive to learn that reform was postponed for a whole year, at an expense to the Government estimated by Mr. Wells at $26,000,000, in consequence of the scruples of an influential statesman, who declared that it would be derogatory to the honor of a great nation to confess, "after having put down a great rebellion, that it could not collect a tax of $2 per gallon on whiskey."

The essays upon the recent phases of the tariff question are of a somewhat more cheerful character than those of which we have been speaking; not that the legislation described is much more enlightened than that which prevailed during the war period, but on account of the evident hopefulness of the writer. It seems that the oppressive league that controls Congress is now held together not by hope of gain but by fear of loss. The margin of profit has been in many ways so reduced that almost all manufacturers are compelled to think about the possibility of lessening the cost of their raw material, and of securing a foreign market. While the tariff remains as it is, these possibilities cannot be realized, but the producers of raw materials threaten that if they are molested the whole structure of protection shall come down. Although this might not prove to be so great a calamity as is generally supposed, it is not surprising that most manufacturers dread any serious disturbance of existing laws. They will eventually find that these threats cannot be carried out, and that the revenue reformers have no idea of abolishing protective duties with one blow. We apprehend, however, that the process of reform is likely to be somewhat slower than Mr. Wells anticipates, owing to the protectionist spirit that seems to animate the labor unions.

Several matters of present interest are discussed in this volume besides those to which we have referred, the silver question for example; but we can do no more than mention the fact. Readers who are not unwilling to be instructed provided they are entertained, may be safely recommended to read the book for themselves. The story of the "Leaden Statuary" is not the less delightful because it has a moral; and the history of the paper currency of Texas is at least as interesting as the rest of its annals. We cannot deny the existence of numerous tables of statistics among the other contents of these essays, but, under the skilful management of Mr. Wells, figures lose half their terror. There is upon the whole very little in the book that the ordinary citizen ought not to know, and very little that he would not be interested in knowing if his attention were once aroused. Perhaps the very republication of these essays is a sign that economic questions are at last beginning to arouse a genuine public interest.

The Contemporary Evolution of Religious Thought in England, America, and India. By Count Goblet D'Alviella, Professor of Comparative Theology in the University of Brussels and formerly member of the Belgian House of Representatives. Translated by J. Moden. G. P. Putnam's Sons. 1886.

The original of this translation, 'L'Évolution Religeuse Contemporaine,' was mentioned by the *Nation* at the time of its appearance about two years ago, and our note of praise was only one of many that have sounded from the most various quarters from that day to this. The character of the book, so bright, so readable, so sympathetic in its tone, was sure to bring it into general notice and to insure its translation into English and its republication in England and America. It has been extremely fortunate in its translator. Apparently there is no phase of the religious evolution which Count D'Alviella has described with which Mr. Moden is not equally well acquainted. If there is an exception, it is in respect to the American part. He has corrected a number of mistakes in the original which were not unnatural for an author writing, as it were, with his left hand, as one must do when dealing with contemporary matters in a foreign country. One of the most amusing was the mixing up of the Rev. George H. Hepworth with Mr. Hep-

worth Dixon, who wrote, as Mr. Arnold says, 'The Mormons, by one of themselves.' Mr. Moden was attracted to the book by his sympathy with its general drift, and especially by its recognition of the religiousness of Mr. Herbert Spencer's philosophical position. He has written a preface in which he brings to this position a commendation of its profound religiousness in comparison with which even that of Mr. John Fiske is lukewarm, if not cold. His translation never impresses us as being one, it is so good; yet here and there a word is so inapt that we wonder whether the translator or the author is at fault. The American edition was evidently printed in England. For "Salvation is of the Jews" we have on page 126, "is of Jesus"! This is in connection with Mr. Conway, who is represented as withdrawing from the South at the time of the civil war "with his young wife," when, in fact, he had been an anti-slavery preacher in Cincinnati, where he married, and in Washington, for some years before.

Mr. Moden's notes, especially upon the English part, are very full, and are a valuable addition to the author's text. One of the fullest is that upon the Spencer-Harrison controversy, concerning which Count D'Alviella has written a pamphlet. In the American part the author has had good authorities, but he would have done well to submit his proofs to some competent American for revision. Failing to do this, Mr. Moden should have bettered his instructions. On p. 173 we read of the Transcendentalists in 1838: "They soon had their centre of propagandism, the Transcendental Club." Now the Transcendental Club held its first meeting September 19, 1836. The absence of all mention of Dr. Hedge in this connection is a serious defect, for he was certainly the first to bring the German influence to bear upon the Boston mind. It was at Hedge's torch that Ripley lighted his. To say that Parker "played a preponderating part in the abolitionist movement" is incorrect. The sphere of Parker's activity was that of political anti-slavery agitation. "Triumphant acquittal" does not describe the upshot of his criminal indictment at the time of the attempted rescue of Anthony Burns. The indictment was quashed. The fear that Samuel Johnson's society in Lynn "may have disappeared with him" is a decided slip. It disappeared twelve years before his death. In the account of Unitarianism the National Conference, which has no "official list of ministers," is confounded with the American Unitarian Association, and the story that the Unitarians "collected in a few days by private subscriptions the sum of £100,000 to found a new theological institution," is purely mythical. A Cleveland gentleman, not a Unitarian, offered an indefinite sum on certain conditions which were never realized, and the denomination did not collect a cent. These are but trifling matters, but they could have been set right so easily that it is a pity they were not. The interest of Count D'Alviella's chapters is not a little enhanced by the fact that his studies in England, in America, and India are based on personal observation, but apparently his travels in the United States were of short duration. His simplicity and sincerity are so engaging that no one, orthodox or heterodox, can help being interested in his narration and his comments on the notes he has made. He is a Transcendentalist with the Transcendentalists, a Theist with the Theists, a Comtist with the Comtists, and so on. He is never bent on making out a case, and does not conceal the limitations of positions to which he is particularly drawn. But he is clearly not without opinions of his own, and he is confident at last that without special pleading he has made it plain that there is a tendency in religious thought and life to a religiousness which, however undogmatic, will not be unreal. It will have its God—a Supreme Reality transcending all definitions—whose most fitting service will be the service of mankind.

Le Style Louis XIV.: Charles Le Brun, Décorateur, ses Œuvres, son Influence, ses Collaborateurs et son Temps. Paris: J. Rouam.

THIS new volume of the "Bibliothèque Internationale de l'Art," devoted to the architectural decoration of the Grand Siècle, forms a quarto of some 250 pages, and is really valuable, not because of its illustrations (for these are not very numerous, and are no better than one finds in the cheap periodicals of the day, German and French), but because of the carefully considered and often weighty historical criticism to be found in the text. M. Genevay had already recommended himself to all readers of *L'Art*, but we were not prepared for so good a book as this. Anybody who will read Dussieux's 'Versailles' for the facts and the dates, and this book for analysis and criticism, will find himself pretty well equipped for any excursions into the epoch of Le Brun, and not in the fine arts only of the period, but in knowledge of its customs, its standards of thought, and its local color generally.

There is considerable danger that the architects in England and America will be trying the style Louis XIV. next; as just now the demand is for Renaissance details, which cannot fail to pall upon the jaded appetite. Our designers are all, or nearly all, busied in hashing up carved panels and pilasters of the sixteenth century; they will soon get tired of that—the flavor is much too delicate; the highly peppered style of the later time will come next. It is a wonder that it has not come already, and that the Union League Club-house in New York (which perhaps we ought to call Louis XV.) should have had so few imitators. Now this much-to-be-deprecated but very probable new departure in archæological architecture will be aided in no way by this book; for the stimulus is to be found in the publications which give larger plates of details all ready to be appropriated. This book, on the contrary, will help the public to appreciate the Louis XIV. style when it comes, which, admirable in its place and as a thing for us to contemplate as we contemplate absolute monarchy at its apogee, religious bigotry in its perfection, and other magnificences of the time, will be found to adapt itself very ill to modern requirements, having little dignity and no splendor nor beauty, unless employed on a great scale, with space and cost unlimited. That the community may prepare itself to judge it aright if it comes, is much to be desired.

BOOKS OF THE WEEK.

Morris, Prof. E. E. Epochs of Modern History: The Hanoverians. With Maps and Plans. Charles Scribner's Sons.
Morley, J. Voltaire. New ed. Macmillan & Co. $1.50.
Murray, D. C. Rainbow Gold: A Novel. Harper's Franklin Square Library. 20 cents.
Pellico, Silvio. My Ten Years' Imprisonment. Cassell & Co. 10 cents.
Walworth, Mrs. J. H. Without Blemish: To-Day's Problem. Cassell & Co. $1.25.
Starkweather, A. An Aid to English Grammar. Syracuse: C. W. Bardeen. 15 cents.
Sully-Reinhart. Outlines of Psychology, with Special Reference to the Theory of Education. Syracuse: C. W. Bardeen. $1.50.
Sankey, C. Epochs of Ancient History: The Spartan and Theban Supremacies. With Maps. Charles Scribner's Sons.
Porter, C. T. Mechanics and Faith: A Study of Spiritual Truth in Nature. G. P. Putnam's Sons. $1.50.
Remsen, D. S. Intestate Succession in the State of New York. Baker, Voorhis & Co. $1.50.
Ponce de Leon, N. Diccionario Tecnológico Inglés-Español y Español-Inglés. Part XV. N. Ponce de Leon. 50 cents
Seeley, J. R. A Short History of Napoleon the First. Boston: Roberts Bros. $1.50.
Shaw, Prof. H. S. H. Mechanical Integrators, including the Various Forms of Planimeters. D. Van Nostrand. 50 cents.
Starrett, Helen E. Letters to a Daughter, and a Little Sermon to School Girls. Chicago: Jansen, McClurg & Co. 75 cents.
The Gibbet of Regina: The Truth About Riel. Thompson & Moreau. 50 cents.
Thompson, S. The Humbler Poets. A Collection of Newspaper and Periodical Verse, 1870 to 1885. Chicago: Jansen, McClurg & Co. $2.
The Critic. Vols 3 and 4. The *Critic* Company.

NEW YORK.

SHEPARD'S

Elements of Chemistry,

though issued quite recently, and in the middle of the term, has been already adopted, solely on its merits, in 11 Colleges and 29 High Schools.

It is prepared with special reference to the needs of those schools where the new methods are employed. Its distinctive features are: experimental and inductive methods; the union of Descriptive and Qualitative Chemistry, thus allowing these kindred branches to supplement and illustrate each other; a practical course of laboratory work, illustrating the general principles of the science and their application; a fair presentation of chemical theories; a conciseness confining the work to the required limits; and full and explicit directions for successfully and economically equipping the laboratory and preparing the needed reagents and solutions.

We publish also an *EXPERIMENT BLANK-BOOK* for students' notes, to accompany this or any other Chemistry.

Introduction Price of Note-Book, 35 cts.; Introduction Price of Chemistry, $1.12.

Sample Copies of either sent post-paid on receipt of the Introduction Price.

D. C. HEATH & CO., Publishers,
